Fairbanks, Inventor of the Platform Scale

Our correspondent Mrs. Orta Langhorne, (who is a niece of Mrs. Dr. Ruffin, instead of sister of Dr. R., as was stated in our last number,) writes us that the following interesting contribution from her pen, which first appeared in the *Woman's Journal*, is "a true story, almost literal."

## AN AFRICAN IN VIRGINIA.

BY ORTA LANGHORNE.

As we were talking of the colored people, the other day, our old white-haired doctor said, "My mammy was native of Africa. She had a strange looking mark, something like a double cross on each cheek and each arm. She was very kind and loving to us all, and sometimes when we asked her to tell us a story, she would take my youngest sister in her arms, and the rest of us would cuddle round her, and she would push back her speck and say, 'Children, do you see those marks? Well, that was the sign of our tribe or family, in the country where I was born, over the sea. They meant something in our language, just as letters do in books here. But I have forgotten what it was, and all about it, except that my father was a chief, and he and all our folks had marks just like mine. That is a beautiful country to live in. There are grander looking trees and finer flowers and more beautiful birds than I ever saw in old Virginia. But there are big snakes and fierce beasts, that you all never see, 'cept when the show comes along. We lived in funny, little houses without no windows, and the roofs were made of leaves like your mother's big fan, only a heap bigger. At night we fastened our doors tight for fear some beast or snake would get in. We had no nice clothes or furniture nor a heap of things we have here, but we were happy all day long, and at night too, when we sat by a big fire and had plenty of nuts to eat, and the old folks would tell tales, or some one would sing and we would all dance. My mother had a great many children, and we were happy playing from morning till night, for nobody does much work here. One day my mother said she was going away all day on a visit, and she told me to bring a big gourd of water from the spring to boil the plentiful fruit for supper. I went out on her visit just like your ma does here, 'cept your ma takes her knitting and my mother carried along a big basket so she was weaving. She did not wear any clothes but a piece of red calico round her waist, and a string of blue beads round her neck.

"Well, when children played on, and I forgot all about the water mother had told me to fetch, till most dark, and then I jerked up a gourd that would hold as much as two tin buckets here, and ran down to the spring under the big palm tree.

"Laws! children, I can't remember everything 'bout that evening like it was yesterday. Mammy would say, 'Our village was near the sea-shore, and the sun was setting, and the water of the ocean looked like gold. I stood still a minute and thought how splendid it looked, and wondered if the sun went right into the water and how it got out again in the morning.

"Then I thought I heard mother's voice, and I run on to the spring. I saw a shadow seemed to fall on the water, which was clear and bright as a looking glass, and then a strong hand caught hold of each of my arms. I let my gourd fall, and was going to scream, though my heart seemed to jump into my throat. But two white men were holding me, and one stuffing a handkerchief in my mouth, and then they dragged me down to the sea-shore and put me into a boat. In a few minutes they rowed to the side of a big ship, and carried me on board. I was so scared I was almost out of my senses, but all the time I felt as if I had all happened because I did not mind my mother.

"Mammy always seemed much agitated at this point," said the doctor, "and she would rock her chair and shake her head and say, 'Laws, laws, children, all of you remember what your parents say. Maybe you won't be stole away from your home, but you may be sure something will happen to you if you do not mind your mother.'

"Then we would all beg her to go on and tell about the ship, and the old woman would say, 'Well, my darling, you may be sure I felt mighty bad, but after a while a man took my cloth out of my mouth and gave me some supper, but I was too much scared to eat then. There were other black folks on the ship and some of them talked so I could not understand them. Every day the boat would go on, and the men would bring back the people they had caught. Sometimes children, sometimes grown folks. About once a week the ship would move to a new place, until at last they had a good load, and then we sailed to this country. We had an easy time and plenty to eat, and when we got to port, the captain gave us all bright colored gowns and striped caps to wear. We often talked to each other and wondered what the white folks wanted with us. One day a man who could talk a little English, asked the captain if the

white folks were going to eat us. The captain laughed and said he was a fool. I never could tell what port we came to, for I could not talk English then, but the man who brought me and all the other children took us to Richmond. Your grandpa bought me from him and carried me home to his wife.

"All this time I had felt very sad, often cried at night, when other folks thought I was asleep. I was always thinking about my little brothers and sisters, and kept wishing I had gone to the spring early, as mother told me to do.

"When your grandpa bought me he took me home, and we went first into your grandpa's room and old master picked up the pretty little white baby out of the cradle and put it in my arms. This child was used to black folks, and he was not a bit afraid of me, and he put his little white hands on these marks on my face and patted my cheeks, and it purred like a great loud roared off my heart then, and I laughed out loud. And then my mistis, that was your grandma, children, she patted my head too, and gave me some supper. I sat down with the baby in my lap, and I would eat some, and he would eat some. And then mistis gave me a nice little bed, and I still held on to the baby, and we both went to sleep.

"After that, mistis was very good to me, and taught me to talk English, and then she taught me to read, and I learned how she good Lord died for all. When the Bishop came around, mistis had me baptised along with her baby, and so I got used to this country and was happy again. When I was grown up, me and my old man was married in mistis' parlor; and master gave us a good little cabin of our own to live in, and I raised ten children of mistis' and ten of my own. And before your grandma, my blessed mistis, died, she said, 'Judy, I want you and all my children and to your children to meet me in heaven, and then she went home to glory.'

"Your grandpa had died first, and after mistis died the black folks was divided out 'mong the white children by drawing lots. I said they could not draw no lots for me, for I going with Mas' Charles, cause he was mistis' baby when I came in the family, and had put his little hands on my face and kissed me when my heart was like to break.

"And that was your father, children, and you must all grow up good like him, and be sure you mind your mother."

## SAVING A WIDOW.

A PLUCKY WOMAN.

The following interesting letter from Mrs. Nettie C. Constant, teacher for many years in the Seminole tribe in Indian Territory, though sent in August was not received till the return of the editor in October, and was crowded out of our last number. It is written with the intensity of the remarkable experience which it relates, and which of course demands the consideration of the proper authorities.

Wewoka, Sem. Na. Ind. Territory, Aug. 28, 1880.  
Gen. Armstrong, Hampton, Va.

My dear sir:—I feel like sending you a line from the Indian Country, believing you will be interested in hearing what the old people of these wide fields of Indian civilization and the education of colored youths, have to endure for the "word's sake."

My school last year had an enrollment of sixty-six names. There was greater interest, and harder work, than in any previous year of my stay among this people. My examination passed off very creditably to all. One class in arithmetic passed through percentages and interest. They here also studied grammar, common school geography, natural science, U. S. history, reading, writing and composition. Their essays were very creditable indeed. When we consider the situation of our day schools, the undisciplined minds, together with the demoralizing home influence surrounding our pupils, I can not but say they did well!

My school closed the last day of May. The Sunday School Concert was on the last Sabbath of May. This closed my seventh year of work among this people.

Not far from a sensation in my Indian life, and if you "SOUTHERN WORKMAN" wants to weave it into a web to help carry on the work, they can rely on all I have to say.

There was brought before the Seminole Council, last May, all old women of the Micco-au-ku tribe, to be tried for "Witchcraft." She was an old feeble woman, almost blind and quite gray. She was a young woman during Gen. Jackson's War in 1818. The "Clan" to which she belonged "Clan of the Wind"—was not allowed a voice in her defence on Council. "Be it ever said to the honor of the national interpreter and Gen. Bruns, Councilmen, men members of her Clan, that they stood alone in her defense, but could do her no good. She was finally condemned by the

Indians, with not a dissenting voice of those present, to be shot as a witch, June 8th, 1880, at 1 o'clock, p. m. The Chief alleged that death warrant June 2nd. She was kept in chains, and compelled to walk for miles to the council house, the light horsemen riding. I could not remain indifferent and fold my hands and close my eyes when humanity called and civilization demanded of me, as a woman standing for women and girls of this nation, to act when no one else would dare to for a sensitive man, John Brown, to use his influence to save her. He wrote in reply that he was in full sympathy with my appeal but "feared she must suffer the penalty of a cruel superstition." I then appealed to the chief and members of council, but they paid no attention to it. I asked the missionary here to speak to the Council and see if he could not do something for her, inasmuch as he had been missionary among them for thirty years.

But he said, "no use." What could I do? I appealed to the U. S. Indian Agent, Colonel Tufts, at Muskogee, to interpose his official authority to save her and this nation from disgrace. I knew full well when my action was known, all the friendship now entertained for me by the Chief and members of Council would be turned into Indian hatred, and my place as teacher and worker among this people he supplied by another. I dared to stand for the right as I thought it would be, when no one else did. I waited with nervous anxiety the result. This day of her execution the time was on the ground in chains, guns ready in all sight of my home. At 9 o'clock a. m. there was a rap at my door, and on opening it, a special messenger from the U. S. Indian Agent entered with a note for me and also a message to the Chief. The man had rode very hard, swimming swollen streams and heading others in order to reach me. The note from the Agent was sent directly to the Chief, to whom it was delivered, read and interpreted. It felt like a thunderbolt on them. What right has the Agent to interfere with our laws? said the Chief. The Chief asked my husband "Who wrote to the Agent?" He looked him squarely in the face and said "Mrs. Constant, with my approval!" He was mad. The Indians were all mad. The problem was "not executed." In two hours she was a free woman. She is still alive and has been to see me. She wept aloud when she saw me for the first time. I took her in my arms, talked to her, told her all the particulars, told her to trust alone in God, for He only was her helper and deliverer. She and I sang an Indian hymn together, with organ accompaniment, first she ever heard. The hymn was "Hallelujah to God" or "High up in heaven."

She seemed very happy, and to me it was a never to be forgotten pleasure, to feel and know that I had given pleasure and helped to make happy one of God's most despoiled and forsaken creatures, for whom Christ died. Thus I stood alone among those Indians, who represented a "civilized tribe." The Chief who have been my former friends and patrons. The Chief has requested my removal, and the Supt. of Schools, John Brown, gave my school to three different teachers before the summer ended, and finally gave it to a young lady from Emporia, Kansas.

The colored people have never had any one to interest themselves in behalf of their elevation, and now that I have been removed against the wish of that race, who has no voice in the school matters, they feel that all is lost to them here, but I hope earnest workers will come into the field and take up and carry on the work which we have tried to do for that people. There is hope for the children if we can bring them under civilizing influences in time to overcome the "wild nature," but so long as these tribal relations exist, and habits, Indian civilization will be a tedious if not a doubtful problem. A vast fund is spent annually here for school purposes, but very little interest is taken to give them a Christian education, which alone will stand the test, combined with habits of industry. My work is ended here; I leave it with Him who rules and overrules all things and who will, I believe, cause order to come out of this dense chaos.

With God's blessing upon your work, and hoping that friends may ever sustain you in your school, I am,

Yours truly,

Mrs. Nettie C. Constant.

How DORN THE LITTLE BABY BE.—California shipping honey to Europe, on a vessel recently taking out eighty-seven and a half tons, valued at \$13,000. It seems a strange thing to talk about honey by the ton, but it is in proportion to her big trees and other huge features. California sends large quantities of honey overland to the Eastern States, but the production is so large that she must seek new markets.

## A NEGRO BISHOP IN WESTMINSTER ABBEY.

Among the most interesting features of the recent gathering of the Bishops of the Anglican Communion in London was the presence of the Bishop of Hayti, an African, born in the United States, and consecrated in Grace Church, New York, in 1874. Bishop James Theodore Holly, the present Bishop of Hayti, is a man of excellent gifts and of a genuine missionary spirit. He received an especially cordial welcome on his appearance among the English and American Bishops at Lambeth, and he won the respect and esteem of all who came to know him. While in London Dean Stanley invited him to preach in Westminster Abbey, on St. James, and his sermon, founded on the request of the mother of James that her two sons might sit respectively at the right and left hand of Christ in His Kingdom, ended with the following prayer:

"And now on the shores of Old England, the cradle of that Anglo-Saxon Christianity which I have been in part, at least, illuminated, standing beneath the vaulted roof of this monumental pile, redolent with the piety of bygone generations during so many ages, in the presence of the

"Storied urn and animated bust," that hold the sacred ashes and commemorate the buried grandeur of so many illustrious personages, I catch a fresh inspiration and new impulse of the divine missionary spirit of our common Christianity; and here, in the presence of God, of angels and of men, on this day sacred to the memory of an apostle whose blessed name was called over me at my baptism, and as I lift up my voice for the first time, I have only time in any of England's sainted shrines, I dedicate myself anew to the work of God, of the Gospel of Christ, and of the salvation of my fellowmen in the far distant isle of the Caribbean sea, that has become the chosen field of my Gospel labors."

"O thou Savior Christ, Son of the living God, who, when thou wast spurned by the Jews of the race of Shaddai, hasten to have lived up without cause by the Romans of the race of Japheth, on the day of thy crucifixion, hast thou ponderous cross borne to Golgotha's summit on the skullart shoulder of Simon, the Cyrenian of the race of Ham, I pray thee, O Precious Savior, remember that forlorn, despised and rejected race, whose son thou bore thy cross, when thou shalt come in the power and majesty of thy eternal Kingdom to distribute thy crowns of everlasting glory!"

"And give to me, then, not a place at thy right hand or at thy left, but only the place of a gatekeeper at the entrance of thy holy city, the New Jerusalem, that I may behold my redeemed brethren, the servants of the Lord, entering therein to be partakers with Abraham, Isaac and Jacob of all the joys of thy glorious and everlasting kingdom."

## A BEAUTIFUL INCIDENT.

On board the ill-fated steamer *Sontagahaka* was one of the Fisk University singers. Before leaving the hugging steamer and committing himself to the merciless waves, he carelessly fastened upon himself and wife life preservers. Some one cruelly dragged away that life, leaving her without hope, except as she could cling to her husband. This she did, placing her hands firmly on his shoulders and resting there until her strength becoming exhausted, she said, "I can hold on no longer!" "Try a little longer," was the response of the wearied and agonized husband, "let us sing 'Rock of Ages.'" And as the sweet strains floated over those who troubled waters reaching the ears of the sinking and dying, little did they know, those sweet singers of Israel, whom they comforted.

But lo! as they sang, one after another of the exhausted ones were seen raising their heads above the overwhelming waves, joining with a last effort in this sweet, dying, pleading prayer:

"Rock of ages, cleave for me,  
Let me hide myself in Thee."

With the song seemed to come strength; another and yet another was encouraged to renewed effort.

Soon, in the distance, a boat was seen approaching! Could they hold out a little longer! Singing still, they tried, and soon with supernatural strength held hold of the life-boat, upon which they were borne in safety to land. This was no fiction; it was related by the singer himself, who said he "believed Toplady's sweet 'Rock of Ages' saved many another besides himself and wife."—*African American Presbyterian*.

It is folly for an eminent man to think of escaping censure, and weakness to be affected by it. All the illustrious persons of antiquity, and, indeed, of every age in the world, have passed through the fiery persecutions. There is no defence against reproach, but obscurity; it is a kind of concomitant to greatness, as satires and invectives were an essential part of Roman triumphs.

# Southern Workman.

ISSUED MONTHLY.

S. C. ARMSTRONG, Editors.  
H. W. LUDLOW,Regular Contributors.  
Mrs. M. F. ARMSTRONG,  
Mr. W. N. ARMSTRONG,  
Mr. T. T. BRYCE,  
Mr. B. T. WASHINGTON.

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent. For further information, address

J. F. B. MARSHALL,  
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute, and printed on the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work, from all parts of the country is solicited, and will be done cheaply and well. Estimates will be sent on application.

With this number the "SOUTHERN WORKMAN" commences its tenth year. Its total circulation is 2180 copies, of which 592 are free, and 1588 are paid for. There has been a steady increase of paid subscriptions the past year, and more than usual expressions of interest in the contents of the paper.

The debtor balance of the WORKMAN for the year closing June 30th, 1878, was \$655.17; for the year closing June 30th, 1879, it was \$644.55; for the year closing June 30th, 1880, it was \$93.23. Eight hundred and sixty seven subscriptions have been secured since last February, through the efforts of a young colored man, formerly a student of this institution, who, on a small salary, has worked with fidelity and success.

This year's balance is expected to be on the right side of the account, in spite of a free list of nearly six hundred.

It will be fortunate and unusual for a paper which is devoted chiefly to the claims of the poor and ignorant upon the charities of the country, to find itself self-supporting.

Editorial labor has been without charge, and is an extra burden upon those who have other important duties to do.

The WORKMAN has long been under obligations to HARPER BROTHERS, of New York, for illustrations without charge, and to the CHRISTIAN WEEKLY, for pictures at cost of electrotyping.

THE NORMAL SCHOOL PRINTING OFFICE, in which the WORKMAN is printed, is in charge of Mr. Charles W. Butts, of Wilmington, Delaware. In October last he relieved Mr. M. B. Crowell, who, after five years of faithful and acceptable service, was compelled, by sickness, to resign. The present office is in the basement of Virginia Hall, and in some seasons is unhealthy; it is now crowded and uncomfortable. New rooms are urgently needed, and are provided in this proposed industrial building, intended chiefly for colored girls, which will cost \$15,000, and should the funds be provided, will be erected next summer.

The "AMERICAN REPOSITORY," the organ of the American Colonization Society, is still printed here. A steady run of job work comes from the National Soldiers' Home, close by, and from Hampton, although there are two competing offices in the town.

The Employees are as follows: four colored young men, two of them journeymen (trained here) and two apprentices; one white apprentice boy, and two Indian apprentice boys. All are or have been students of this Institute.

With this number commences "Sketches of Missionary Life," by Mrs. C. C. Armstrong, formerly of Blandford, Mass., who since 1832, has been laboring at the Hawaiian Islands.

This series will be continued from month to month, interspersed, we hope, with similar contributions from her missionary compatriots.

There is a rich unwritten literature of noble work for a savage race in that land, from which we shall gather extracts, believing that they will be full of interest, instruction and stimulus to all of our readers.

The Hawaiian Islands have been the grand experiment station of missionary labor in the world. The efforts on the one hand and on the other, the difficulties, disappointments and setbacks have been extraordinary. This tender, feeble beginning of Christian living there have been blighted by powerful influences, such as the annual visits of thousands of rollicking pleasure seeking sailors, and an inundation of nearly ten thousand Chinese male adults, and by bad examples in high places. Virtue and decency have had almost hopeless gauntlet to run, and not many have escaped from the moral dangers that have beset them.

This people would have been fortunate with only inherited vices, and local degradation to contend with.

Difficulties only developed the strength or weakness of the Christian methods employed by the missionaries.

We believe that there was a lack of education in the art of living, of pressure on the practical side, of social organization, of tact and skill in dealing with a low form of life. Such work was not neglected, but under rated. There is now a broader recognition everywhere that missionary work is social reconstruction, working chiefly from the moral and religious sides. Hawaiian civilization in but few cases touches a high standard of right living. It has after all, made wonderful progress since 1820, but it has a good way yet to go, and is beset by obstacles.

The reflections of the veteran workers incline to sadness; the letter of this month is in a minor key.

On these islands, where an eastern and western wave of civilization have met, the best and the worst elements of both mingling, one finds a somewhat disappointing but most instructive phase of missionary effort.

In a land where the vital statistics of the native born white population are among the most favorable and remarkable in the world, the aborigines, from selfish indulgence and neglect, are steadily dying out.

Several hundred extra copies of this number are printed. To all friends who are willing to distribute them, whatever copies they may call for (while the supply lasts) will be sent, in the hope that the list of subscribers may be enlarged, and a wider interest be taken in the Hampton school, and in the Negro and Indian.

Hereafter the students will speak more for themselves.

"The Hampton Students' Own," is the title of a page of this paper, which is written by undergraduates of both races.

Not only "Hampton," but all institutions of the colored youth are this year filled to their utmost capacity.

Rev. E. A. Ware, President of the Atlanta University, Georgia, writes: "We are crowded with students. Over 80 girls now in this family, and many more coming; so that our addition to the girls' hall, now just finishing, is full already. Matters in this state never look so bright for education than now."

The educational movement for all classes throughout the south is forward. Never did it pay better than now to invest time and money in efforts for the colored man.

The South is full of disintegrating forces. There is no "solid south," except on Presidential elections. The Bible and the spelling book should be put into every hand that holds a ballot. The need of the times is intelligence and consciences, through sound education. This

is the true reconstructive force; very slow but very sure; and too slow for hungry office seekers, but full of stimulus for the educator, who counts his own life but a little period in the line of grand development that is coming. We invite attention to the encouraging letter of Mr. Edward Atkinson, reprinted in this number.

Give Negro schools the buildings and the money they ask for. Prejudice is dying out. Even where Negroes are cheated out of their votes they get their schooling. Building school houses and stuffing ballot boxes go together. He may learn but he must not rule, seems to be the doctrine of the day. Never were Negro schools more fruitful of good than now. Their graduates are in demand everywhere as teachers.

Read the November No. of the "American Missionary," published at 58 Reade street, New York City, for an account of the great work and plans of the "American Missionary Association," in the south. It has eight Collegiate and twelve Normal Institutes for the colored race. Under an overwhelming Democratic majority, the proffer of aid is renewed to the Negro College at Tougaloo, Mississippi, from which, on the first accession of southerners to power, aid was cut off.

The school-master is abroad. The ultra-abolition spirit that founded the American Missionary Association, (which would not use slave holders' money to spread the gospel,) that led it to expend since 1860, four millions of dollars for the freedmen, is in union with the better thought of the south. "Our work is not done in a corner, nor under the han of good people north or south," says the "Missionary."

Its agents are well treated; its College Presidents are the most honored of all Northern men in the south, for they recognize and reinforce the true reconstruction that steadily moves on.

One hundred and fifty thousand dollars have just been put, as a special help, into their higher institutions.

Aside from this, the Baptist, Methodist, Presbyterian, and Episcopalian churches are maintaining scores of schools of a high grade; all in increasing harmony with the sentiment around them.

In the year 1863, when the need of the freed people was most extensive and pressing, General B. F. Butler, being then chief in command at Fortress Monroe, erected, with government funds, the large wooden building which has ever since been known as the "Butler School."

By the end of that year, above six hundred pupils were gathered within its walls, under the care Rev. Charles A. Raymond, chaplain of the military post, who conducted it upon the Lancasterian plan—that is, by a system of monitors who, after receiving instruction from the principal, would not once convey it to their pupils.

It has become a free, county school, the building, however, remaining the property of the Hampton Institute, whose officers and teachers have kept a watchful eye upon an institution, many of whose pupils naturally pass into the more advanced system of Hampton, and graduate from there. The school as it now stands is preparatory to the "Normal."

For the past two years it has been conducted as a free public school from October till February, with an attendance of over two hundred children, when, owing to the failure of public funds, it has been kept up from February till July, partly by a weekly tuition fee of ten cents paid by the children, but chiefly by the aid of friends in the North, through the appeals of the officers of the Hampton Institute. The attendance after February diminishes to about one hundred and fifty, but the teaching is done to excellent advantage, and the children make more progress than when the class-rooms were over-crowded with pupils of all sizes and ages.

Mr. O. M. MacAdoo of Greensboro, N. C. and Mr. J. S. White of Matthews, Co. Va. are the regular teachers. An assistant is employed part of the year. Both are graduates of the Hampton Institute and are competent teachers.

Miss Elizabeth Hyde, graduate of the Framingham Normal School, Massachusetts, superintends the work, and conducts one division of the school, employing members of the Senior class of the Hampton Institute for that purpose, who are thus drilled in the art of teaching.

The Butler School building is in the form of a Greek cross, each arm being 30x 150 feet, with capacity for 800 pupils. Part of it is used as a residence; another portion affords valuable storage room for farm products, it being situated at the extremity of the farm farthest from the barn.

It rests on a brick foundation and its framework is solid; but it needs reshingling, having stood seventeen years.

By finishing off a lecture room in the large central portion of the building, a series of cheap and good evening lectures could be given to the extensive and thrifty neighborhood of colored people, and a night class for adults could be opened.

The Trustees of the Hampton Normal and Agricultural Institute, at their annual meeting in May, 1880, voted that an effort be made to raise \$1,000 to reshingle and repair the Butler School house, and finish off a room for lectures, meetings, and a night class.

Since 1863, some five thousand children have been taught to read in this school, and many more will enter it should it be saved from decay by proper repairs.

The Normal School is unable to draw on its resources to do this work. It is hoped that some of our readers will be interested in this account and help to save this noble and useful school house.

It is fitting that this building, close by which may be seen the Live Oak tree under which the first school for "Contrabands" was opened by Mrs. Beck, a colored woman who had learned to read in slavery times, should stand for years on the ground where the first blow was given to the chains of the American slave.

Good wholesome reading is an excellent thing for the formation of character. Our Hampton students, especially the young colored men, have a decided taste for biographical reading, history, and books of travel, of which this school supply is limited and poor.

This is published in the hope that some spare books and dollars may be sent for the enlargement of the resources for good reading in the Hampton Institute.

In August, 1869, a few months after the Hampton Institute was opened, a committee, was appointed to visit and report upon it, with a view to securing the confidence and support of the public.

The committee consisted of Rev. Mark Hopkins, D. D., President of Williams' College, Mass., Gen'l J. A. Garfield, Hon. B. G. Northrop, Supt. Public schools of Connecticut, and Mr. Alexander Hyde, of Mass.

The report was favorable, and its circulation was of material benefit to the institution.

General Garfield was one of its original Trustees, but after four years resigned, from inability to attend the annual meetings, which always occurred in the press of Congressional work.

We recognize in the President elect, an able educator; one who appreciates the teacher as a power in the land; he being himself singularly gifted with the faculty of imparting knowledge, and of inspiring pupils. At Williams' College, under Dr. Hopkins, he received the impress of the most powerful and skillful formative mind in the land.

General Garfield has never lost the inspirations of his alma mater. They will be felt through him by the nation. On the wooden benches of Williams' College he was fitted for the Presidency.

Time is ripe for making the illiteracy of the south a national question. This public conscience, that, since 1865, has slept so comfortably over a million of ignorant Negro voters, as powerful for evil as for good, is quickened. Our new President is fitted to be a leader in the movement.

The outgoing President has given his strongest support to the cause of national education. Mr. Hayes has signally

shown his appreciation of the nation's duty to those whom it has enfranchised but not enlightened.

There other crimes against the Negro than bulldozing. Politicians who have had the power to light up the dark places of the south, and conquer cruelty by the spread of ideas and of truth through aid to the cause of education, caring more for votes than for manhood, have rolled more on bayonets than on spelling books. Had they relied on the latter rather than on the former, and given the ex-slave education with the ballot, he could have taken better care of himself, and been for better fitted for the vantage ground toward which circumstances are now pushing him. The Negro will have the balance of power in more than one state. The constitutional question involved is a weak apology for neglect. They did not care any more than they tried and they did not try to supply the deepest need of the Negro.

The coming danger in the south is from throngs of voters too ignorant to realize their duty, who will sell their ballots to the man who shall give them the biggest bribe or barbacue.

This evil is growing in the land; checked only by intelligence and morality. It threatens New England, where bargaining for votes is on the increase. There is a terror to come from that source, anything in the past. Under injustice men react, and may be ennobled, while the persecutor is sure to suffer in the end.

From self-indulgence there is no reaction. It pushes men down as no wrong ever does. Luxury, and not oppression, has ruined the nations. In the recent hard times our country gained more in character than it lost in money.

The Negro and the Country will suffer more from bribery than from intimidation.

Rights first, but not rights alone, for the Negro and the Indian in our land.

There is, in these days in the South, a good deal of thinking and plain talk; illustrated by a recent statement of Judge O. A. Loomance, of Georgia, to an interviewer, published in the Philadelphia Times, from which we quote:

"It was natural for those who had fought four years and had been overwhelmed when they came back to find lonely chimneys representing their homes and the fields still wet with blood that they should be indignant at the leaders who had promised such widely different results. Their country was demoralized, bleeding and in ruins, their wives in rags and their children beggars. Southern opinion amid such surroundings could not have been expected to regard the authors of all these disasters with loyalty or affection. It would be unjust to them to say that they felt either loyalty to the government or kindness toward its representatives."

"The South is not loyal as to sentiment, but like the Scythian is obedient to law; but it is growing loyal in sentiment and nationality. Love for the Constitution and the government is gradually but firmly on the increase. They are proud of their memories, are these people—of their history, of family, of the name, of their sectionalism; but day by day they see and feel the logic of events—that loyalty means prosperity, that sectionalism means ruin. They grow wiser, and the end is not far distant when the Solid South will dissolve; the political leaders will be driven by the people instead of driving them, and loyalty will be as warm in the South as in New England."

There is a prospect that many thousands acres of land owned by the "Chesapeake and Ohio Railroad Company" on this Peninsula, within thirty miles of Hampton, will soon be opened to settlers and that "exterminating" colored men will have a chance. The soil is especially adapted to the cultivation of early fruits, vegeta-

bles and tobacco, although it has been somewhat impoverished by the slash-and-burn system of agriculture followed by the natives for over 200 years. Much of it is covered with a second growth of cedar and pine. The land will be divided into small farms, and sold or leased to settlers. A road is to be constructed from Fortress Monroe to a point on the Richmond and York River Railway, and as Fortress Monroe is but twenty-four hours' distance from New York by water, the farmers are assured of an accessible market.

Mr. and Mrs. George Dixon, of England, whose twelve years of labor for the freedmen of America, part of that time at Hampton, insured them a warm welcome back, have just returned, bringing a small but valuable collection of philosophical apparatus given by English Friends to the Hampton Institute.

Writing of his efforts in behalf of the school, Mr. Dixon said:

"We hoped, by waiting, the Irish famine would get over; so it has, but in its place, two dreadful pit accidents have happened, leaving hundreds of widows and orphans unprotected for also the terrible cyclone in Jamaica; for these sufferers subscription lists have been opened. These having a closer claim, leave little hope of much for Hampton. Most of what we have received has been given by our personal friends; chiefly in the region of our former home, in the North of England. They complain that America is drawing from England large amounts of gold, for breadstuffs, cattle, beef, bacon, cheese, canned goods, and fruits, which come in free of duty, while English manufactured goods are shut out from America by high tariffs. Thus America, they say, is becoming richer and England poorer. The farmers are suffering from three successive bad harvests and the present year promises little better—continuous rains are injuring the crops."

At this late date appears the Report of the United States Commissioner of Education, for 1878, from which we extract as follows:

There are seventeen different school ages in the States and Territories, 17 years being the longest period and 6 years the shortest. The earliest age at which pupils are admitted to the public schools in any State is 4 years. In nine States the school age is 0-21 and in eight States 5-21.

The total school population in the States for 1878 is 14,418,923; number enrolled in public schools, 9,204,316; average daily attendance, 5,063,298, seven States not reporting.

The total number of teachers in the States was 200,132. The wages of men vary from \$23.32 a month in South Carolina to \$100 in Nevada; the wages of women, from \$15.92 in Maine to \$54 in Nevada; the average of wages of teachers of both sexes is \$17.44 in Alabama and \$71.56 in Wyoming. In Maryland, Mississippi, and Indian Territory the salary of males and females is the same. The greatest difference between the salaries of males and females is in Massachusetts, where the former receive \$75.04; the latter, \$33.04.

The total annual school income reported by all the States and Territories is \$88,978,101; annual expenditure, \$30,329,938, of which \$8,483,690 were expended for buildings, apparatus, &c.; \$1,083,042 for salary of superintendents, and \$11,853,655 for teachers' salaries. The estimated value of site, buildings, and all other school property is \$170,512,177, 10 States and 4 Territories not reporting. The expenditure per capita of the school population varied from 70 cents in North Carolina to \$21.75 among the Cheyokes, and per capita of average attendance in public schools from \$2.44 in North Carolina to \$62.76 among the Cheyokes.

In a table showing comparative population and enrollment of the white and colored races in public schools of the recent eleven States, are the following figures: School population, white, 3,003,084; colored, 1,378,920; enrolled, white, 2,404,046; colored, 675,150; total expenditure for both races, \$11,700,361.

There are reported 34 normal schools for the instruction of the colored race, with 100 instructors and 5,326 students; 28 institutes for secondary instruction, with 111 instructors and 5,200 students; 15 universities and colleges, with 120 instructors and 1,930 students; 10 theological schools, with 40 instructors and 620 students; 3 schools of law, with 9 instructors and 44 students; 4 schools of medicine, with 17 instructors and 94 students; 2 schools for the deaf and dumb and the blind, with 30 teachers and 121 pupils; and 14,247 public schools, with 675,150 scholars. There are al-

so 403 schools for the colored pupils, having an enrollment of 20,675, in reporting five States, making total number of colored public schools 14,680 and total enrollment in the same 905,823. The Commissioner observes that the difficulties encountered in the progress of educating the colored race which originate from race prejudice are gradually disappearing; the whites are beginning to see that idleness, vice, and crime are the inevitable results, among the colored people, of neglect, and that these evils decrease when the proper kind of training is afforded.

Houses for colored schools are generally needed, and there is also pressing need of competent teachers. There are encouraging evidences of improvement in school-houses and in the qualifications of teachers for white schools in the South.

The Burnside Educational bill, which has now passed the Senate by a strong vote, provides for setting apart as an educational fund, the net proceeds of the sales of public lands, and of patents, the income of which, at the rate of four per cent. interest, is to be distributed among the States in aid of popular education; and for the first ten years the apportionment is to be made in proportion to the number of the population of ten years old, and upward who cannot read and write. This is to give no advantage to the States in which there is now the most illiteracy.

An act like this should have been passed immediately after emancipation. It would have been a piece of long delayed justice. Such legislation never received serious attention or favor from the party managers previous to the present administration. To give rights without knowledge is like giving freedom of property for seventeen years in a darkness, relieved only by Northern charity and by the aid of the impoverished Southern States. The English, we said a third of a century before educating the ex-slaves of Jamaica. Our government has delayed half that time.

#### THE PRESIDENT'S PARTING-WORD FOR HAMPTON AND CARLISLE.

In every Message since the new effort for Indian education was begun at Hampton and Carlisle, President Hayes has manifested his interest in it by enlisting special attention to its success and significance. His last Message reiterates his views and urges upon Congress the duty of encouraging it. He says: "Much care and attention has been devoted to the enlargement of educational facilities for the Indians. The means available for this important object have been very inadequate. A few additional boarding-schools at Indian agencies have been established, and the erection of buildings has been begun for several more, but on the scale of the appropriations for this interesting undertaking is greatly needed to accommodate the large number of Indian children of school age. The number offered by their parents from all parts of the country for education in the Government schools is much larger than can be accommodated with the means at present available for that purpose. The number of Indian pupils at the Normal School at Hampton, Va., under the direction of Gen. Armstrong, has been considerably increased, and their progress is highly encouraging. The Indian school established by the Interior Department in 1879, at Carlisle, Penn., under the direction of Capt. Pratt, has been equally successful. It has now nearly 200 pupils of both sexes, representing a great variety of the tribes east of the Rocky Mountains. The pupils in both these institutions receive not only an elementary English education, but are also instructed in house-work, agriculture, and useful mechanical pursuits. A similar school was established this year at Forest Grove, Oregon, for the education of Indian youth on the Pacific coast. In addition to this, 30 Indian boys and girls were selected from the Eastern Cherokees and placed in boarding schools in North Carolina, where they are to receive an elementary English education and training in industrial pursuits. The interest shown by Indian parents, even among the so-called wild tribes, in the education of their children is very gratifying, and gives promise that the results accomplished by the efforts now making will be of lasting benefit. The expenses of Indian education have so far been drawn from the permanent civil appropriation fund at the disposal of the Department of the Interior; but the fund is now so much reduced that the continuance of this beneficial work will in the future depend on specific appropriations by Congress for the purpose, and I venture to express the hope that Congress will not permit institutions so fruitful of good results to perish for want of means for their support. On the contrary, an increase of the number of such schools appears to me highly advisable."

#### A NEW DEPARTURE TOWARDS INDIAN CITIZENSHIP.

The President says:

"The past year has been unusually free from disturbances among the Indian tribes. An agreement has been made with the Utes by which they surrender their large reservation in Colorado in consideration of an annuity to be paid to them, and agree to settle in severity on certain lands designated for that purpose, as farmers, holding individual title to their land in fee-simple, inalienable for a certain period. In this way a costly Indian war has been avoided, which at one time seemed imminent, and for the first time in the history of the country an Indian nation has given up its tribal existence to be settled in severity, and to live as individuals under the common protection of the laws of the country. The conduct of the Indians throughout the country during the past year, with but few noteworthy exceptions, has been orderly and peaceful. The terrible warfare carried on for two years by Victoria and his band of Southern Apaches has virtually come to an end by the death of that chief and most of his followers, on Mexican soil. The disturbances caused on our northern frontier by Sitting Bull and his men, who had taken refuge in the British Dominions, are also likely to cease. A large majority of his followers have surrendered to our military forces, and the remainder are apparently in progress of disintegration. I concur with the Secretary of the Interior in expressing the earnest hope that Congress will at this session take favorable action on the bill providing for the allotment of lands on the different reservations in severity to the Indians, with patents conferring fee-simple title inalienable for a certain period, and the eventual disposition of the residue of the reservations for general settlement, with the consent and for the benefit of the Indians, placing the latter under the equal protection of the laws of the country. The action, together with a vigorous prosecution of our educational efforts, will work the most important, effective advance towards the solution of the Indian problem, in preparing for the gradual merging of our Indian population in the great body of American citizenship."

#### AN EDUCATIONAL FUND FOR THE SOUTH AND WEST.

The President has always maintained the duty of the Nation to secure the education of its citizens. His recommendations may be debated by those who fear centralization, though centralization, in the shape of Government aid is usually not hard to take.

The President says, "The Commissioner of Education reports a continued increase of public interest in educational affairs, and that the public schools generally throughout the country are well sustained. Industrial training is attracting deserved attention, and collection for instruction, theoretical and practical, in agriculture and mechanical arts, including the Government schools recently established for the instruction of Indian youth, are gaining steadily in public estimation. The Commissioner asks special attention to the deprivations committed on the lands reserved for the future support of public instruction, and to the very great need of help from the Nation for schools in the Territories and in the Southern States." The recommendation heretofore made, is repeated and urged, that an educational fund be set apart from the net proceeds of the sale of the public lands annually, the income of which, and the remainder of the net annual proceeds, to be distributed on some satisfactory plan to the States and Territories, and the District of Columbia.

#### REPORT ON EDUCATION IN SOUTH CAROLINA.

A full answer to the criticisms in the "Foot's Errand" upon the policy of reconstruction and universal suffrage forced by circumstances upon the country at the close of the war, is contained in a few sentences in the last annual report of the State Supt. of Education in South Carolina.

They are at the same time in full agreement with Dr. Tourge's views for the future.

Col. Hugh Thompson, State Supt., in his twelfth report says emphatically: "However men may differ as to the right and duty of the state to control education, that question has been settled in South Carolina. Our people are beginning to realize, fully that the peace and prosperity which they have enjoyed for the last four years can best be continued and increased by providing for the education of all classes. Tax payers contribute cheerfully to the support of these schools. During the memorable political campaign of 1876 the pledge was repeatedly made that the Democratic party, if successful, would foster the public school system, and further opportunities of education would be afforded to all classes of our citizens. The foregoing statement of what has been done dur-

ing the show the the ph through pary the of public can avert the threats, our civiliza diffusion of ment of the State, and the prosperi all classes of The report for it. Is it has educated up to this

The recommendation heretofore made, is repeated and urged, that an educational fund be set apart from the net proceeds of the sale of the public lands annually, the income of which, and the remainder of the net annual proceeds, to be distributed on some satisfactory plan to the States and Territories, and the District of Columbia.

#### REPORT ON EDUCATION IN SOUTH CAROLINA.

A full answer to the criticisms in the "Foot's Errand" upon the policy of reconstruction and universal suffrage forced by circumstances upon the country at the close of the war, is contained in a few sentences in the last annual report of the State Supt. of Education in South Carolina.

They are at the same time in full agreement with Dr. Tourge's views for the future.

Col. Hugh Thompson, State Supt., in his twelfth report says emphatically: "However men may differ as to the right and duty of the state to control education, that question has been settled in South Carolina. Our people are beginning to realize, fully that the peace and prosperity which they have enjoyed for the last four years can best be continued and increased by providing for the education of all classes. Tax payers contribute cheerfully to the support of these schools. During the memorable political campaign of 1876 the pledge was repeatedly made that the Democratic party, if successful, would foster the public school system, and further opportunities of education would be afforded to all classes of our citizens. The foregoing statement of what has been done dur-

ing the show the the ph through pary the of public can avert the threats, our civiliza diffusion of ment of the State, and the prosperi all classes of The report for it. Is it has educated up to this

ing the past four years, brief as it is, will show that the promises have been kept and the pledges fulfilled.

The great social and political changes through which the people of this State have passed in the last fifteen years, make it necessary that we should have an efficient system of public schools. Universal education alone can avert the evils which universal ignorance threatens. We can best guard and protect our civilization by providing liberally for the diffusion of knowledge. The full development of the great material resources of the State, and the securing of continued peace and prosperity, demand the united efforts of all classes of our people.

The report confirms Col. Thompson's claims for it. Is the policy to be regretted which has educated the public sentiment of a state up to this point?

Col. Thompson's report contains some interesting statistics. Since 1876, the school attendance of white children has increased 14,775; of colored children, 16,901; the present attendance being, of white children, 11,218, of colored, 12,853. The school fund has increased from \$189,352; 80, to \$351,415.50.

The trustees of the Peabody fund, having determined to devote the interest of it henceforth to the education of teachers, South Carolina has been allowed to send eight white pupils to the Normal College at Nashville, Tenn., and ten colored pupils to the Hampton Institute. A. The pupils holding Peabody Scholarships at the Nashville College, receive tuition free and \$200 each during the session; those of the Hampton Institute receive tuition free and \$40 each during the session. A state teachers' institute was provided for by the Peabody fund at Spartanburg, and a county institute for colored teachers has been held in Charleston, presided over gratuitously by two of the most able Superintendents in that city. A teachers' Association was the result of this institute. A college of agriculture and mechanics was opened in October last, in the buildings of the South Carolina College. Claflin University at Orangeburg, for colored people, is supported in part by the state, an annual appropriation of \$7,500 being made for that purpose.

When sitting last August on the piazza of the Volcano House, Hawaii, writing the letters to the "SOUTHERN WORKMAN," we little expected that such an eruption as is described below, was so near at hand. The following account is from the *Hawaiian Gazette*.

It is evident that the eruption of lava from Mauna Loa upon the island of Hawaii, which is now progressing, is one of the most important in extent and grandeur which has been known in modern times.

We pitched our tent under the lee of the hill and along side of some fine Mamane trees, where we could see the whole slope of Mauna Loa, but not the whole plain. Clouds and fog had now enveloped the whole plain and mountains, and not a light could we see. We climbed up the hill-side however, and set down under the side of some bushes and awaited the clearing up of the fog and clouds. It was not long before old Mauna Loa lifted its bald head above the tops of the snowy clouds, and a brilliant light burst from the summit. In a few minutes, we could see the whole line of fire along the summit, [it is fifteen thousand feet high. Ed.] down to the terminal crater, where an intensely bright light showed us that old Pele was true to herself and was preparing a sight for all, seldom to be seen. As the fog gradually cleared from off the sides of the mountain, we saw a tremendous river of fire pouring down the steep sides. We could see it distinctly down the slope, till it ran into the fog bank, which had settled like a huge snow bed all over the lowlands. The fire was an intense, white light and was running furiously downward. After waiting till eleven o'clock, and the fog not clearing off the plain, we went back, down to the camp, and watched the magnificent show. About half past twelve, the fog lifting, two of us went up the side of the hill towards Puna to see the sight, and what a sight it was! Almost under our feet lay the end of the flow, slowly pushing its way along through the scrub-mamane. The whole stream lay before us. Soon the moon set, and still it was light enough to see to read. Away above us in the heavens shone the brilliant fountain head, and from thence to the end was a continuous stream of liquid lava, brighter by far than fire, as we could see how pale a fire looked in comparison whenever a bush took fire and burnt up alongside. There lay a river of fire before us at least thirty miles long, every inch of which was one bright rolling tide of fire. There was not a single break in the whole length. It formed a mile from the top and ran down forward a parallel stream, joined again, and ran five miles below. The whole front edge, being about three fourths of a mile wide, was a most intensely brilliant light, and as it slowly advanced and rolled

over the small trees and scrub, bright flames would flash up and die out along its whole edge.

As we sat there in the cool still night watching it, every now and then a report as of a cannon broke on the stillness, all along the whole line of fire, caused, I supposed, by the heating of air under the new lava in the old lava caverns and bursting up through the crust. Then too, occasionally, a deep, but loud rumbling noise would almost start us from our seats, evidently coming from the deep recesses of the old mountain, as if it was spouting forth its fiery flood. The cannonade was very frequent, now right close to us, and again coming from a distance away up the side of the mountain. I could compare the whole view, with nothing but a streak of chain lightning frozen in its tracks as the fire seemed to come out of the heavens, it was so far above us. As we sat there watching it, all at once a huge dome of molten lava was thrown up about half way up the mountain side, and continued to flow over like an immense fountain, as long as we watched it. We also saw another stream of molten lava, as it poured down the side of the mountain, and ran right along the top ridge of the mountain for about two miles, and then sparsely stop. There was no fountain throwing up lava on the top of the mountain only steady rushing stream. About half past two we descended to camp and turned in for a few hours sleep.

We crossed the old flow for about 1000 feet and then stood on the very edge of that flow and saw a sight that was a sight to see. Not twenty feet from us was this immense bed of lava, slowly moving forward with irresistible force, bearing on its surface huge rocks and hissing, hissing, hissing, as water would carry a toy boat. The whole front edge was one bright red mass of solid rock incessantly breaking off from the towering mass and rolling down to the foot of it, to be again covered up by another avalanche of white-hot rocks and sand. The whole mass was, at its front edge, from 12 to 20 feet in height. Along the whole line of its advance it was one crash of rolling, sliding, tumbling red-hot rock. We could see no fire or liquid lava at all, but the whole advance line of red-hot stones and scorches. The latter would frequently run down the slope like water, only all separate in red-hot grains. There were no explosions while we were near the flow, only a tremendous roaring like ten thousand blast furnaces all at work at once. The flow was only a few feet so far as we could see it. What a tremendous heat arose from its surface. The whole mass was, on top where no red-hot rock could be seen, a dull brick color. Its advance was very slow, but sure.

#### SALEM WITHOGRAPH AMONG THE SEMINOLLES.

The Seminoles of Indian Territory have not outstripped the Salem fathers in civilization yet, as is apparent from a letter in another column, from a lady who, after teaching among them for seven years, has incurred the displeasure of the chiefs and been turned out of her position, for rescuing a poor old woman sentenced by them to be shot as a witch. That her efforts were not backed up by any one on the spot, is a mystery for official investigation and dealing. She, naturally, takes a dark view of the case, and thinks it poor showing for thirty years' missionary work. The Salem fathers used up more witches in straightening out the morals of their human nature without the advantage, or disadvantage, of criticism by a superior race.

A race has constant tendency to return to its primitive types. To change this tendency is something more than to improve individuals. Misunderstanding this is a common mistake in missionary work and occasions unnecessary discouragement and misapprehension. After thirty years of missionary labor of any quality, or seven years of the most faithful of teaching, one may see the old nature of superstition and bloodthirstiness bursting through the crust of civilization, as it did in the Puritan fathers who represented the conscience and culture of a thousand years of progress. What then? There is nothing then but to go ahead as before, knowing that we are on the road which will bring us out all right in the end.

Dr. Dec. 5th, at her home in Hampton, Mrs. Sarah Weaver, wife of Mr. R. H. Hamilton, both graduates of Hampton Institute.

In her long and painful illness, borne with characteristic gentleness and sweetness, Mrs. Hamilton was surrounded with all the love and human skill could give her. Her schoolmates and friends bore her body to its last resting place in the school rural ground.

The funeral service was conducted by her pastor Rev. Mr. John of Hampton, and the Normal school chaplain, Mr. Friswell.

She died in the blessed hope of immortality through our Lord Jesus Christ. Her husband, long in the employ of the Normal School, has

the heartfelt sympathy of all its officers and members, in his great bereavement.

#### A NEW SOUTH.

We reprint from the New York Herald, part of a letter of Mr. Edward Atkinson of Boston, based on his recent personal observations in the South.

Negro suffrage will prove the great factor in reconstruction. It is the inspiration of the grand, slow, but forward movement in the Southern States, for the education of the ex-slaves; for there is no choice between an ignorant and an enlightened voter.

The South educates the black man as a measure of self-protection. The ballot, as Mr. Atkinson shows, is the cause of the great economic success of emancipation. He says, "Men in possession of the ballot cannot long be abused. There is more danger of corruption by catering to and dividing the black vote, than there is of intimidation on national questions."

Bribes will do more harm than bullets: free men have shot guns. Intelligence and education is the remedy, a slow one, but the only one.

Reconstruction is a question of moral, educational and industrial forces now being applied with comparative vigor and promise. A noble reconstruction, "A new South" is not very far off.

#### A COTTON EXHIBITION.

To the Editor of the Herald:—The reconstruction of the slave States and their first true union (not their reunion) with the other members of the nation, is in part accomplished. Political action and legislation were necessary in order that the process might be initiated, but alone are inadequate. The extensions of the right of suffrage by national statutes to the enfranchised slaves has given power of taxation, such as happened in the British West Indies after emancipation. In that case the ballot was limited to landholders and other persons possessing property, who straightway turned all the powers of taxation and legislation against the freedmen. Had not the ballot been given to the colored race the same attempt would have been made in the United States, to continue the plantation system in the cultivation of cotton by working the whole system of taxation and the whole internal policy of the several States in favor of the large landholder, and against the small farmer and laborer. The attempt utterly failed in Jamaica, and the islands were almost ruined; it would have failed here, with similar results; but instead of failure we have achieved a great economic success, and, although a short period of misgovernment has happened in our Southern States from the sudden exercise of power by the most ignorant classes, their temporary abuse of power has passed by. The South may now be "solid" in respect to national questions, and it is doubtless true that new methods of intimidation and of fraud have been used, and will be used again in several Southern States in the ensuing national election; but in respect to local questions and local elections the South is no longer solid, but is honeycombed with new forces. Men in possession of the ballot cannot long be abused. There is more danger of corruption to-day among the colored voters from the attempts that have been made to cater to and to divide the black vote on local issues than there is of intimidation on national questions. This has been made apparent in Virginia, in city elections in Charleston, and in many other cases; but this difficulty will finally be surmounted as intelligence, and education are promoted and extended.

#### THE REIGN OF COTTON.

The true forces now in action in the South are industrial forces; the opportunities to apply improvements and inventions, and for the accumulation of widely diffused wealth by rightful methods. The true reconstruction and the real union that are now being consummated are by means of these industrial forces, and in this work cotton has been and will be the most potent force of all. For a century limitations of slavery kept the treatment of the cotton plant subject to the most barbarous conditions, with the use of the rudest tools and most wasteful methods. When the crop now about to be gathered is numbered, if the season ends as propitiously as it has begun, it will be more than double the average of the fifteen ante-war crops, and at least twenty-five per cent. in excess of the largest crop ever raised by the labor of slaves.

#### NEW VALUES FOR THE CROP.

Nevertheless, what has been done is but a tithe of what remains; the present power of King Cotton is but the shadow of the substance yet to come. The value of the seed is yet an unknown quantity. It may seem al-

most the work of a visionary to compute it. If we make 6,000,000 bales of cotton flora a year the weight of cotton seed that will remain, after enough has been set aside for the next year's planting, will be 8,000,000 tons. If the whole of this seed be treated as a small portion is now treated, the waste of the cotton gin and of the oil press, with other waste of the cotton farm, will then suffice for not less than 14,000,000 to 20,000,000 sheep, probably for double that number. These sheep, folded upon the cotton field, would so fertilize the soil as to double the crop of cotton on any given acre of upland—the manure of animals fed on cotton seed meal being richer than that from any other known variety of food.

#### NEW TRADE FOR THE NORTH.

In connection with this industrial prophecy made possible by freedom, it should be considered that there never was so great a field suddenly opened for the introduction of new tools, new cotton gins, new presses and for every variety of implements and processes. Whence are they to come if not from the North? If the new conditions make the interdependence of the sections essential and imperative, what more is needed to fuse the solid South and the solid North into one solid nation? No misrepresentatives of a distant past who may for a time infect the houses of Congress can long delay the conclusion.

We have just time, before going to press, to announce the gift to the Hampton Institute, by Mrs. Valeria Stone of Malden Mass., through Rev. W. H. Willcox, D. D., the almoner of her charities, of the sum of twenty thousand dollars for the erection and complete outfit of an industrial building to be 140 feet in length, 40 in width, three stories, with a wing to the rear. It will be for colored girls chiefly.

While fifty young men have been provided for with ten hours work per day and two hours instruction each night, thus earning money, learning a useful trade and fitting themselves for the Junior class, destitute and worthy colored girls have had no such chance, while needing and deserving it quite as much as the men.

Mrs. Stone, by her noble gift, has created for them grand opportunities, through which Negro girls may every year earn from three to four thousand dollars, to be expended in board, clothing and books in the regular three year Normal Course, and graduate in every way fitted to take care of themselves, and become useful to their race.

Until all the room is needed for girls' industries, a portion of the new "Stone Hall" (to be built of brick) will be occupied by the Printing office, and for men's dormitories, (girls to be there only during the day for working purposes under proper officers.)

The Hampton Institute is encouraged greatly by this generous gift.

It remains to provide the building for Indian girls, (a dormitory) which will cost at least \$150,000, and to keep up a march of improvement along the whole line of effort for the races we are trying to help.

A correspondent sends, with a moderate donation, the following pleasant words:

"I took upon your Annual Report, particularly its book-keeping feature, as most admirable. It shows the need of the Institution better than could be done in any other way, and that some one is at the helm to put the forthcoming contributions into the right channel to do what the donors intend shall be done.

Even the mile I send, by your system has its place, and is encouraged to come forth."

#### A GOOD MOVE.

We understand that Mr. George Dixon, in starting his commission business again since his return from Europe, in a new store he is putting up opposite Darling's Mill, intends to add to it a temperance lunch counter, where his country customers may warm up with hot coffee after their long cold ride, while their horses or little steers are comfortably sheltered under sheds. Mr. Dixon intends also to open an account with the Home Savings Bank of Norfolk, through which the people's pennies may be safely deposited in that bank, drawing interest instead of going down their throats in cheap whisky.

This is an excellent move, in which we wish Mr. Dixon all success.

## LETTERS FROM HAMPTON GRADUATES

BEING DEAD, THEY TALK. GOD'S WORK IS HAPPY WORK. THE BEST TEACHER FOR A RACE. ROUGHING IT. A LETTER FROM KANSAS. HIS OWN CARPENTER. THE REFUGEES AS CIVILIZERS.

FROM MARIA MALLETT, AND J. B. TOWE.

A friend kindly sends us several letters received within the past two years from these beloved children of Hampton, who were both called last summer to the higher activities and services of Heaven. Their letters are full of the bright, earnest spirit of devotion which characterized their lives, and will surely be helpful, as well as touchingly interesting, to their friends and former comrades. Both were prominent members of the band of Hampton students, and since their return have been very enthusiastic and successful teachers; loving their work, and making their influence felt at their own homes.

"Wilmington, N. C. June 23, 1880.

Miss L. —, Dear Friend:—

I received through the mail, some time ago, your very kind and friendly letter, also the "Story of the Bible," for which I am very grateful to you. I have already been eagerly devouring its contents, and have reached the New Testament. It is indeed interesting, and a great help to us while reading our Bibles, so many things are made plain to us, and while reading, we are made to think often and deeply. I am not the only one who has found pleasure in reading, my friends also, and I have promised to lend it to quite a number, when I am through reading. My parents also find a great deal of comfort in having it read, and the younger portion of our family find a deal of pleasure in looking at the various pictures contained therein. I am not only engaged in teaching in the day school, but I am also a teacher in the Sunday School. I have a nice class of little boys, though I find them a little restless at times, I love them, and love to teach them. I also do all that I can in the line of church work, to help the church along. Whenever any festivals are held to aid the church, I do all that I can to help sustain the gospel of Jesus Christ. I find much comfort in all such work. I was very much interested in the account of the commencement at Hampton. I have a sister there whom I am trying to educate, I have been successful so far and hope that God will allow me to keep her there until she finishes.

We will close school Tuesday of next week, and we have promised to give the children a picnic at the close. This is my home, and I am here all the time. Though the place is dull, yet I love it simply because it is home. With much love and gratitude to you, for your great kindness to me, I am yours thankfully,

MARIA MALLETT.

Of his good work in Norfolk, into which he threw himself with remarkable enthusiasm and vigor, Mr. Towe wrote in December, 1879.

"I have been more than busy teaching week day, Sabbath and night schools. All of my time has been taken up in this work because I have devoted all of my attention to it.

I came home last September and opened my same school. The people were so anxious to have me teach night school for the laboring class who could not go to day school; I did so, and now I find my work is more than I can do. As all of my schools are very large; I feel as if I must try this term to carry out my plans as I had arranged them. But should I teach here again, I should not undertake such a heavy task.

Glad to let you know that my work has been satisfactory here among all classes.

I have made a special effort to train my pupils morally because that is the characteristic that needs to be improved, more in my estimation than any other. I have won the strongest white people on my side, so now I have no trouble to work in the Vineyard of my blessed Jesus.

How I do thank the good Lord for my successes here! It is a great comfort and pleasure to think over I went to Hampton on the 25th inst, and sang with the Hampton Students. We gave a good concert. I met with gratitude many of my good teachers.

We had a lively Christmas Tree on the 25th, which made the little ones happy. Sabbath School numbers 800, day school 140, and night school fifty.

Please accept my thanks for the papers you

have been sending, also the Little New Years card and other good things that you have sent me. I have not received the book yet that you sent to Hampton for me.

In my next letter I shall send you some money to get me a Concordance on the Old and New Testaments. I need one so much in my teaching.

If I did not work for our blessed Savior I would have no true pleasure. I wish that all men could come to this point.

I am yours in Christ. J. B. Towe."

His influence was not confined to the school room. He wrote in February '78.

"I am preparing my school for examination and a literary entertainment. I have been also preparing a lecture on religion and morality, to deliver tomorrow (Sunday) at our Young Men's Christian Association Room. About thirty of our best Christian and moral men have banded themselves together for the purpose of buying a library, establishing a good reading room and trying to let our influence go out through the City, that it may lift the people both morally and religiously. We have only a few who will approve our work, because we take no one in our Association who will visit the bar room &c., or do those evil and immoral deeds, which we hold is against our good Lord's commands.

I thank you kindly for your offer to send me a number of those little pamphlets. I do thank you for your kindness to me, and the little ones for whom I labor, to send me one of each kind.

I must tell you something about this beautiful book; the "Story of the Bible." It is the richest little work that I ever read. It is simplified and made so plain. I never read and prayed to my heavenly Father with more eagerness and faith than since I have had this book. I read it in my school.

Since I received the Concordance I can prepare my sabbath school lessons much easier and make them clearer.

Thanking you for all of your kindness I am your obliged friend,

J. B. Towe.

The last of his letters, written a few months before his death, is still more full of happy zeal in the Master's service.

"Norfolk, Va. Oct. 2, 1879.

Kind Friend:—

I came home from E— City, N. C., where I have spent a few months of earnest and successful labor among the youth of my people, on the 28th of September.

I had a very fine and appreciative school of thirty-eight girls and twenty-eight boys, of six to twenty years old. I had taught a great many of these four years ago.

It was the pleasantest vacation I ever spent though I came away and have now opened my regular school here. I shall send them some gospel hymn books and others, to add to their little Sabbath school library.

My school here is finer than ever. I had on the 2nd day one hundred and four pupils in school. I am so thankful that I can spend my life in the service of Jesus, imparting instruction to those who feast upon it, and put it into operation at once.

I feel better and happier every day, because I think I am doing my Master's will.

When I was at Hampton to be educated for a teacher, I had no idea that I could make my life so useful for my people and do such good work in my Master's vineyard. It is constantly developing before my eyes like a beautiful rose in the spring. I am real glad to let you know that the people in Norfolk and the vicinity are being aroused to their duties more and more concerning their intellectual and moral education. I think it is due to the work of our graduates who are scattered now quite thickly all around.

Please excuse my haste. I am yours most gratefully.

J. B. Towe."

Who will take the vacant places?

ROUGHING IT.

Last years valdicatorian writes cheerfully of his first experiences, and has the right idea as to the best teachers for his race.

S— Co. Va. November 5, 1880.

Dear Teachers:—

I meant to have written to you as soon as I got my school fairly started. But I had scarcely commenced before I was taken very ill, yet I am well now.

When I saw in my sister's letter your inquiry, request, and offer to help me, I felt very glad, and then a little sorry. I was glad of your interest and thoughts of me, but I felt badly to have written to be reminded to write.

I did not mean to appear so ungrateful and careless. I came here on the 22nd, with a mind fully made up to work, and I find here is plenty of it to do. I find lack of in-

terest, in those above the school age, to learn, but they appear to think the children ought to go to school, and send them, unless prevented by work or clothing. The school house is unusually poor and roughly made and on each side there is a large window in which there is neither wood nor glass, but I expect some of the letters in season, as the weather has been fine, I have not suffered though. I had good ventilators though not thus intended.

The parents are very slow in getting books, the children need, thus making it hard to classify them. This is a busy time and the people being unable to hire, stop their children to assist them, but I have been able to make a lawful average. I have thirty-seven on my roll now, and I will have more soon, I think.

The scholars are far behind, considering the length of time our state has had free schools, but I find it owing to the schools having been mainly taught by white teachers who either did not have the ability or the interest. I rather think the latter. Undoubtedly the best teachers for our people in the South are those who are not ashamed to be at their firesides and in their churches; the benefit is two-fold: you not only get at the children, but you get at the young men and women, who form the social circle of today, if not by actual teaching, by example. I find it very pleasant to teach, especially when the children are interested and appear to be learning, but when dull and careless, I must say it is not pleasant. But you do not think how it reminds me how I too was dull and careless. Would that I may be more dutiful in the future. I am well back in the country, where I spend most of my time reading and reviewing my studies, and in pleasant company. I miss newspapers very much.

I have started me a Sunday School and enjoy it very much. It has only five testaments and five old singing books, that are out of date. I have one of Moody and Sankey's small books and I use it. I am not a good singer, but I have to sing. As there is no one to laugh at me, it is all right. I have been so used to the school, that I did not want to ask for them. So you see your gift was timely.

I am not sure when I will be at Hampton, perhaps I may go to the Alumni Meeting. I hope school is getting on well and you are enjoying the work among our people.

Your scholar, class '80. S.

A LETTER FROM KANSAS.

The young man who writes the following interesting letter, went out as it is safest to do, with a definite purpose and prospect of work. He is an intelligent observer and may be expected to do good service among the refugees, some of whom he thinks are doing some civilizing rather than needing it.

Beaman, Morris Co. Kan. Nov. 26, 1880.

Dear Miss M.:—

As Thanksgiving day is over, and there yet remains a day not set apart for any particular work, I thought it a good time to tell some of my work.

In order that you may be fully informed as to the locality of my work, I clip the enclosed, from the second semi-annual report of the general superintendent of the Kansas Freedmen Relief Association. I will say, that my work is not altogether under the supervision of the above named association."

THE "WABANNEE COLONY."

"This Colony is located about fifty miles southwest of Topeka and fourteen miles north-west of Council Grove. There are thirty-one families in this colony, having in all twelve hundred and eighty acres of land. While thirty families have forty acres each, one of these families has eighty acres.

They all live in two large buildings, 20x60 feet each, divided into separate rooms. Five cook-stoves are used in each building. The colonists have dug two good wells. They have broken about sixty acres of their land and have sown thirty-five acres of it in wheat. They have rented thirty acres additional, which are also sown in wheat, making a total of sixty-five acres. They have sown a portion of the sixty acres which they broke, to plant with corn, and to be used for garden purposes. Their wheat crop looks well. They have two wagons, one span of horses and a pair of mules, and have gone as far as twenty miles from home to their labor. Many of them have got out stona enough to build small houses upon their lands. They are all in good spirits and are doing quite as well as

could be reasonably expected.

They say they are willing to have a hard time for a few years, if they can thus secure a home of their own, where they can live in peace. They have church worship and Sabbath school at their barracks every Sunday. These services are often attended by many of the white people living in the vicinity.

JOHN M. BROWN, Gen. Supt.

TOPEKA, Kan. April 10, 1880."

I began work October 26th. In coming to this place from Topeka, I came within eighteen miles here by railroad, the remainder of my journey had to be traveled in a wagon, via the old mormon trail. Having stopped over night at the railroad station. I loaded the wagon which was to be my future conveyance, with baggage, school room apparatus and three hundred feet of lumber, out of which my school room benches were to be made. I was then ready for traveling across prairie. The day after my arrival at the colony, I could find no better carpet than my own, who I am sure am not the best; at any rate at the end of two days, I made seats for forty-eight persons. That done, I found more to do. My school was to be in one end of a barracks, which had been used by the Refugees. It needed thorough cleaning which with a little help was done. Getting that far on the way, I had to go to Topeka, which is fifty miles northwest. The trip was made across the prairie in a wagon. During my pleasant journey, I was for the time favored with melodious music, by the sweet songsters, prairie wolves. After spending a fortnight in this kind of work, I was then prepared for opening my school upon the Western wilds.

My school opened with twenty-four, big and little school children. Southern refugees, and now numbers thirty-four. Many of them had never seen inside a school room, until they came inside of one of their own. Old men and women, who have good cotton field education, want to learn how to read and write. All of them, old and young, manifest much interest in this kind of improvement.

I have in connection with my day school, a Sunday school which is well attended. I enjoy teaching, and when so much interest is taken, I feel strengthened and can use more energy than ever. There is nothing here to impede these people. They are far from any town, the nearest being fourteen miles off.

At first it seemed to me, that this place is one of the neglected spots of our noble Republic, and I am constrained to say so. But here I find that men (white men) build houses, plough and do everything else on Sunday as well as during the week. How is that for civilization? Allow me to liberate Ham's sons of this section. No instance of their Christian fidelity will, I hope, suffice to clear them: One of the refugees was offered by a white citizen, what ten acres would yield in corn and the yield of three acres of wheat, for his services for twelve months. The white citizen worked on Sunday, and wanted the refugee to do the same, allowing him to stop when he did and go when he went. I do not suppose the refugee minded stopping or going, so long as he did not have to go on Sunday.

At any rate, rather than accept the offer and work Sunday, he takes work as he can get it. I think, not giving my refugee brethren an undue share of credit, that this is more like civilizing than needing to be civilized. It has been asserted by my fellow citizens of a fairer hue, that the negro is not civilized, I do not deny the assertion, but I do say he is on the road.

In reading the enclosed slip, please compare the second and third paragraphs, which were written April 10, 1880, with the following statement:

The thirty-two families belonging to the colony, have during the past six months been steadily at work. Ten of them have under adverse circumstances built houses of their own. Lumber and building material are high, and can not be had within fourteen miles of here. Of the twelve hundred and eighty acres owned by the colony, they have broken two hundred. Some have sown a portion in wheat, and others are buying teams and stock. They are supported no more by the association; it furnishes two teams for hauling wood etc. Many of colonists still walk great distances to obtain work during the winter. When these people came here they had little or no means; under these disadvantages they have made good progress. Yes, it is said, the refugees are a worthless set of people. I will not speak of the prejudice which I know to be very strong against these people.

There is a grand opportunity here for young men to build up their people and themselves, and I think if pluck and energy can be stirred up among the students, they can do well by coming West. Working out upon the prairie among their people. They can teach if they wish, or they can buy land very cheap and go to farming. The climate is a fine one.

I hope to hear from you soon.

G. W. D.

## CHRISTMAS NIGHT AND MORNING.

Little children in their bed,  
Both their stockings on the wall;  
Not a thought disturbs their dream—  
That is, if they dream at all.

When the Christmas morning comes,  
Both the children bounce from bed;  
"Wh—ee—"  
That was all the children said.

—St. Nicholas.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

A letter received recently from the U. S. commissioner of Indian affairs, informs us that a gentleman is now in the West, looking up more Indians to be educated at Hampton and Carlisle. These are to come from Arizona and New Mexico, and will probably reach here some time in January. As yet we have had no Indians from either of these territories, at this school. If a few representatives can be secured from these territories, they will no doubt in a few months, cause a general interest in the matter of education to be awakened in those parts.

"Strike while the iron is hot," is an old adage that will apply very properly to the Indian question now. The Indians, surging out the greater part of the Western plain, are now beginning to see the importance of education. While a part of them have begun to make efforts in the right direction, it is not the most auspicious time to move the whole Indian race at once! With the boat once started from the sand bar, no force must be relaxed—until she sails in the broad deep sea.

## THE HEALTH QUESTION.

A little experience with Indians will teach one that the trouble with their health comes not so much from a change of climate as from carelessness on their part. The Indians are slow to learn that when they adopt the white man's dress, they must also adopt his health laws. They must be taught that they can not wear two coats to-day, and to-morrow none, a dry shirt to-day, and to-morrow a wet one.

They appear to have an idea that their bodies are a weather proof. Some will seemingly take as much delight in playing out of doors when the rain pours as when the sun shines. To get their feet wet and keep them so all day is a small matter. Few think of changing clothes after getting wet. They do not mind going all over the building and even into doors in their naked feet. But a few minutes ago, I found a boy, already affected with a fearful cold, in the absence of a chair, sitting squarely down on a floor that had been scrubbed only about five minutes before. In summer it was their great delight to sleep in the open air with no covering but a bear skin.

A few nights ago, I made an inspection of the whole of the boys' building, about midnight, to see how far they observed the laws of health and neatness in their sleep. I found about half the forty-six boys fast asleep with their heads buried beneath two or three blankets. In many cases all ventilation was excluded from the room, making the air anything but healthy. It is a habit with them to cover up their heads when they sleep, if not other part of the body. Ask them about these practices and they will freely acknowledge that they are unwholesome. They do these things not because they do not care, but because the habit of carelessness about their bodies has grown upon them so that it is a hard task for them to reform. For a long time they will have to be carefully instructed, watched, and helped in regard to their health.

## FROM THE GIRL'S QUARTERS.

"Since the return of the twenty-five Indians who went to Massachusetts, last summer, there has been a marked improvement in those who remained at Hampton. The former, being taken altogether from those who could not speak the English language to any extent, and scattered among people who spoke nothing else, made rapid improvement in the expression of their thoughts. Learning to speak the English language more correctly was not the only thing accomplished by these Indians girls. They have fallen out with their old ways of doing things. The hair must now be arranged becomingly, the colors that adorn their persons must correspond, and there is a certain dignity exhibited in their carriage which rather encourages one. There is nothing that tends more to excite the ambition and draw out the best qualities of a race than the example of those who stand high in that race. 'The Massachusetts girls' ideas are the leading ideas among the girls here, and it is not one of them who would not gladly be a 'Massachusetts girl'."

The afternoon sewing school is quite an interesting branch of the girls department. Every afternoon, they must learn to make their own clothes, and other articles. Every evening but Wednesday, the girls who have not entered the

Preparatory Class meet to study their lessons for the next day.

This is quite new to them now, but it is hoped that after a while it will prove a success. The latter part of Tuesday and Friday evenings is given to Bible studies."

## THE TRAINING SHOP.

The following report made by Mr. J. H. McDowell, a thorough mechanic, in charge of the Indian Training shop, speaks well for the Indians:

"In complying with the request to furnish these columns with a brief statement of the progress of the Indians boys as mechanics, I wish to say before doing so that I came to the superintendency of the Indian work shop with no little prejudice against the race; prejudice (as I believe is mostly the case) the outgrowth of ignorance of the Indian character, and which unfortunately has been and is too often entertained and acted upon all the way to the extermination of the race.

My views have been radically changed in my brief intercourse with the Hampton Indian students, for instead of finding them indolent, indifferent, intractable and without interest in acquiring mechanical knowledge, as I was led to believe would be the case, I find the reverse to be the fact. In my experience of more than twenty years as a practical mechanic, most of which has been spent

CHRISTMAS NIGHT AND MORNING.

either as foreman, superintendent, or master mechanic, and consequently with much to do with the instruction of boys, I have not found any who, as a class, have learned me rapidly, been more eager to learn or more obedient to rules, and regulations of the shops, than those at present under my charge. Carpenter work, tin-smithing, shoemaking and locksmithing are being done by them, that would be highly creditable to any race, even with more experience in these branches; while a knowledge of painting, glazing, blacksmithing and wheel-wrighting is being rapidly acquired by them.

Taking into consideration their former mode of life, devoid as it has been of any system of labor, together with the fact of their limited knowledge of the English language in which their instructions are given, this progress is truly remarkable. I would not have understood that there are no exceptions as to interest and industry in their respective branches, but will say that the exceptions are as few as will be found in the same number taken from any class. This, to me, seems an opening for an early solution of the vexed 'Indian Question' for if interest in and application to educational, agricultural, and mechanical pursuits can be created and fostered in the race, they then have taken the first step in 'White man's ways' which should and must inevitably lead to the rights and privileges of white men, thus placing them in a position to settle their difficulties without recourse to retaliation by force of arms which has been the case in the history of the past."

## FARMING.

What ever else the Indians may not know, they ought to know something of practical farming. A few days ago, one of the boys here told me of two Indians at his home who accumulated quite a sum of money, left the reservation, bought themselves nice farms and supplied them well. This new movement was closely watched by their fellow Indians. At the end of four years, their farms were total wrecks; and they returned discouraged to the government reservation, laughed at by the other Indians. The cause and ef-

fect of this failure are apparent.

More book learning without some knowledge of farming and trades will benefit the Indians little on their return to the West.

It is to meet this difficulty that Hampton's efforts are mainly directed. The rule here is that no matter what other business a boy learns, he must know something of farming. At present, the boys here are taught farming in classes of two or three and are kept under the eye of a teacher, and made to understand each step as they go.

The following programme, kindly furnished by their farm teacher, Mr. Geo. J. Davis, will give an idea of what a class is taken through in a day:

"They begin with currying the horses, then watering, then cleaning stable, feeding for dinner. Then to the cow stable; cows are cleaned, and watered, cow-stable cleaned, cow-feed prepared for dinner. They are then taken through the school room and taught the names and uses of the different kinds of tools. For instance, a rake is taken and kept before them and they are questioned about it, till they understand that all tools made like it are called rakes, and used for certain purposes. Wagons are greased, and they are taught the different kinds and parts of wagons. The carriage house is next taken, and they are made to understand all about the different kinds of carriages. In the harness room next they are taught the names and uses of the dif-

ferent parts of the harness, beginning with the bridle, each part taken separately, the bit, throat-latch, head band, reins &c. &c. they are made to understand. They are told that the whole building is called a barn, then which the stable, stalls &c., are. They are shown how to cut and mix different kinds of food, and how to make beds for horses and cows. Harroesing and unharnessing horses is gone through with. At the proper season they will be taught about the cultivation of the ground. They are of course ignorant at first of the names and uses of tools &c."

Their teacher reports them as doing well and willing to learn.

B. T. W.

## HAMPTON AND CARLISLE.

Hon. Carl Schurz, Secretary of the Interior, in his last Annual Report, refers as follows to the educational effort for Indians at the Hampton and Carlisle Schools; the existence of which is largely due to the wisdom and zeal of Mr. Schurz:

"Expressions of an anxious desire on the part of the Indians belonging to the so-called wild tribes to have their children instructed in the ways of civilized life have grown so numerous and urgent, that the inadequacy of the means placed at the disposal of the department for this purpose has become particularly painful.

The Commissioner of Indian Affairs sets forth plainly how utterly insufficient the means at the disposal of the department have been to date, for to afford to even one-half of the Indian children on the different reservations the most necessary educational facilities; and I deem it my duty to repeat that false economy in this respect at the present moment, when the desire for the education of their children is so general and so urgent among the Indians, would be particularly unwise."

In my report of last year I spoke of the promising results of Indian education at the

Normal School at Hampton, Va., under the direction of General Armstrong. The number of Indian children at that establishment is being considerably increased. The institution has been visited by many persons interested in that important work, and the gratifying results gained have been evident to all.

Last year I spoke also of the Indian school at Carlisle, then just established by this department, under the superintendency of Captain Pratt, as an experiment. It may now be said that it is a mere experiment no longer. The progress made by the Indian pupils there as well as at Hampton, in the acquisition of natural and mechanical work, has been sufficient to demonstrate the capacity of the Indian for civilized pursuits.

A school committee of chiefs and headmen from nine Sioux Agencies on the Missouri River visited Carlisle and Hampton last summer. Likewise delegations from the Lake Superior Chippewas, the Crow, the Shoshones and Bannecks of Idaho, and the Cheyennes and Arapahoes of the Indian Territory. They were all highly delighted with the care taken of the children and the progress they had made in the arts of the white man, and promised their active support and co-operation.

The favor which these schools find with the influential men of the different Indian tribes is of great importance as to the effort to be produced upon the advancement of the Indians generally. Formerly it was thought that Indian children so educated would speedily relapse into the savage habits of their people as soon as they returned to them. This was true as long as all the home influences to be found among the Indian tribes were hostile to the education of any of their members, and those who had received such an education found themselves therefore isolated and despised. This obstructive spirit has now been superseded by a very general and anxious desire of Indian chiefs and influential men to see their children raised in the scale of civilization, and the same influences which formerly were so effective in driving educated Indians back into the savage habits of the multitude surrounding them are now employed in educating the education received by a comparatively few to the advantage of the many. The circumstances surrounding the educated Indian when now returning to his tribe are therefore radically changed. In the old time the educated Indian would have found his people thinking of nothing but their savage pursuits and pleasures, incapable of appreciating his superior knowledge and accomplishments, rather inclined to deride them as useless. Now he will find multitudes of parents anxious to have their children educated like him, and, if possible, to employ him for that purpose.

An Indian wagon or harness maker returning to a wild Indian tribe years ago would have found no wagons or harness upon which to practice his skill; but sent back there now, profitable use, that skill will be in general and general requisition. And so it is in many other things. I therefore feel warranted in saying that the results gained by this system of education will no longer be apt to pass away as before, but, if properly pursued, will be lasting and beneficial. It is, under such circumstances, scarcely necessary to characterize the charge recently made, that Indian children were taken to Hampton and Carlisle by force, against the will of their parents, as utterly groundless. On the contrary, the number of applications on the part of Indian parents to have their children admitted to these schools has been far in excess of our means to accommodate them.

The success of the schools at Hampton and Carlisle has attracted the sympathy of many benevolent men and women throughout the country, and I have to express my thanks to them for valuable donations with which the schools have been aided. But the continuance and development of these government institutions cannot and ought not to depend upon private munificence. So far the expenses have been defrayed from the civilization fund at the disposal of this department, but that fund has already been largely drawn upon in establishing and sustaining Indian education at these institutions, and cannot be depended upon to last much longer, especially if the system is extended as it should be. The continuance of this work will then depend upon specific appropriations by Congress, and I cannot too warmly recommend this subject to the favorable consideration of our legislators. As each school is capable of taking care of only a limited number of pupils, the number of such institutions should be increased. There are government buildings no longer used which might be profitably employed for that purpose, and they certainly can be used for no worthwhile object. It is in contemplation to establish another Indian school of this kind in some unoccupied public building in the neighborhood of Washington, where it would be easily accessible for the inspection of members of Congress, and I hope this plan may soon be carried out."

## SKETCHES OF MISSION LIFE

BY MRS. CLARISSA C. ARMSTRONG.

Many years ago, three lay, nestled down among the wild romantic hills of Western Massachusetts, a little township, broken with rocks and ravines, and intersected by roaring and uncarved for except where the turnpike cut a straight line through the woods by the side of a charming river. People went about mostly on horseback, or in one horse wagons. One Baptist deacon, who kept a tavern including a bag room," for the accommodation of the traveling public, had a large barn which was much indented and perhaps even, as he drove with his aristocratic wife up to the little church door on Sundays. The soil required much labor and strength to make it fertile. The corn was small, the wheat and corn grew well, there was not much sheep for them, aside from the woodlands and pasturage. There was abundance of wild and cultivated fruits, small animals and birds and a few deer. The brooks and ponds yielded a variety of fish.

The "city" was a small village on the turpentine road near the river, and scattered round among the hills, was a population of some five hundred people, who supported two small sawmills, a distillery, a few small shops, two flour distilleries, two blacksmith shops, two "taverns" and two stores. The one church of the town was owned by the Baptist denomination and was empty, with no galleries or bell, and the other was a small wooden building, so that the preacher stood perched above his hearers, and deepers could easily be detected for, in order to look at the minister, the heads must be held erect and the eyes turned upward. The distance was so great for many to come to this church, and as there were different denominations in the village, deacon's meetings were held in the various districts, either in a school house or private residence. It was not unusual for some missionary would be sent, or some young man who was reading theology. He would come on horseback the day previous, be kindly received in some family, and on the Sabbath morning he would be sent to the church. The event was communicated from one to another. Parents and children, and in their host attire, were seen wending their way to the place of worship, under the large chestnut, maple or oak trees. The church was a small building, with a clear spot of grass where those who were too early for church could rest; while, during the hours' intermission between the services, groups of both sexes were scattered round in the shade of the trees, or in the open space. The men did their own housework, and it was disgraceful to be lazy or untidy. Daughters were fostered by their mothers, and sons with their fathers. Industry was respectable, and people

The school houses where the children gathered during the week, and where meetings were often held on the Sabbath, were generally bare and unattractive. Long wooden boards fastened to the wall served as desks, and with the wooden benches for the scholars, and the teacher's table and chair, formed the entire furniture of the room. Here the children were taught reading, writing, arithmetic, sewing and spelling, while, on Sundays, the whole school was obliged to repeat the assembly's catechism, until it was thoroughly

Among the surroundings which I have — as briefly endeavored to sketch, there lived, near the place where I was born, a small farm, the property of my father and mother, of whose three children all born there, I was then the youngest. My grandfather on the father's side preached for many years in Southington, Conn., while on my mother's side, my grandparents were stonemasons and carpenters, and were in some degree of wealth. There were no other members of this, neither my father nor mother's regular attendants, and I know that my parents were among the excellent of the parish, as manifested by alms and deeds of kindness to the poor and to suffering. Until I was fifteen years of age I lived at home, learning to do all kinds of household work, and often assisting my father, who was crippled by rheumatism, in the care of the cows and sheep, and the lighter work of the farm. My experience for this, in my years of childhood, I had often deep reason to be thankful for.

advantages for schooling, were, however, very limited, and it was finally decided to send me into a family living near Wetlands Acequia, my where, by assisting in the care of the dairy, I could partly pay my board, and at the same time attend school. A painful ordeal of home-sickness was now endured, for internals contrasted in dress and bearing were now to my unsophisticated habits, and loving eccentricity and simplicity. I often shrank from contact with that which might perhaps have been advantageous to me. At the end of the term, I returned home, and with me came joy, unconscious of which I had entered only in the hope which should end only in entering the "getse-sar." Almost immediately, I began to teach school in my native town, for dear as home

was, I desired knowledge, and there was no way but to earn means to pay my way. For several years, I continued, to be scholar and teacher alternately, but, though my parents assisted me so far as they could, I was not long able to go on with my studies, except as I could do so in the intervals of teaching.

About this time, "distant schools" were much talked of, and, as I did not very much like to study that system, I ventured to go to New York, with a letter of introduction from Mrs. Bethune, by whom I was most kindly received. After a short residence in New York, I accepted of an offer made to teach in an infant school in a neighboring city, but before many months had passed in this pleasant occupation, another call came to me from a remote, almost unknown part of the globe. The subject of a missionary's life had often been brought before me, but I had always rejected the idea. I was now, however, it came so directly that I must consider it, and either accept or reject. My reasons against it were my own unworthiness, my unwillingness to leave my parents, and the short time given me in which to decide. But

high pressure of arguments was brought to bear against me. My persons in sorrow considered that I was being treated with unfairness, grave consent. From that time until their death, they were intelligent advocates of my position. Their instructions from their parents sent them seemed to be in accordance with the more than mere presence could have done. Divine help was implored and granted, and the thought that I was doing the right thing, for my parents, and sympathy and encouragement from the more intelligent people about me, I, too, was married to Mr. Richard Armstrong, now at Princeton Theological Seminary, where the blessing received from the good president, Rev. A. Alexander, and the cordial words of the faculty, were a great help. After brief visits among my husband's friends in Pennsylvania, we returned to New England, and, severing the last ties that bound us to the East, we sailed for New York, where we domiciled on the deck of a whale ship at New Bedford. It was a cold, bleak, stormy day, and we left the shores of our native land, as we supposed for ever. If we could have seen the next six months of suffering spread out in panoramic view before our eyes, we would have said, "Who sufficient for these things?"

The owners had determined that the ship should sail on a certain day, and, without regard to order, convenience or comfort of passengers, she was shoved off while everything was in a state of confusion. The captain, however, had been assured that she was a temperate vessel, but soon found to the contrary, and it was evident that both by officers and crew she was being used for the purpose of exporting. By the time we got into the Gulf Stream, our condition was pitiable in the extreme. Nobody seemed responsible, and the cabin attendants were so busy that the cabin attendants for single passengers had to be used as double beds, and the rest of the passengers were stowed away in temporary berths between the sides of the after cabin, a dark and narrow space, in which, in addition to the mattresses and kegs were piled up in utter confusion. One night, most of the provisions, except which had been provided for us by the kind-hearted captain, were lost. The hatch was not properly secured, had been, left on deck, and

swep off by a violent storm, the casks and boxes in the after cabin, tossing hither and thither, burst open, the water leaked into the hold, and the men, who were not prepared for the scene were confusion confounded. Most of us were prostrated by sea-sickness, but we made desperate efforts, and when the storm was over, emerged from the darkness and bad air below, to find the cabin and the hold filled with men in climbing about would put one foot into a keg of sugar and the other into a firkin of butter, such was the disorder of the deck. The men were so sick that they could not get the smell of their which wash was so bad that it produced nausea. Bilge water was intolerable and increased our miseries, and the filth was such that all food seemed loathsome. The oil on the bilging water was so thick that the butter which had been put up for that cabin was used as a substitute, until a fish was caught which supplied some oil. Much of the time the men were so sick that they could not get up, and the people led often to eat from one broken plate. The cabin boys who had been engaged especially to wait upon us, proved to be what most uneducated and untrained boys are, and were so filthy and so sick that they were dirty and disagreeable beyond description, refined only in insolence. In time, the upper and lower decks were reduced to something like a common street, and the men were sick to be helped on deck, though we were too sick and weak to sit up when there. Nothing but coils of rope and the deck for chairs, but this was preferable to the stine rooms. Two or three days of calm weather were like an oasis in the desert. Our trembling limbs were used, appetites improved a little, and and the men began to get up and about. The men tried to ingratiate and benefit the men, and

women made similar efforts when they could, but with little success. Thus weeks passed away—we observed our weekly prayer meetings and monthly services with the women would present the captain and some of the men would be present. A must be bed injured during the storm, and the captain one day announced that he should have to put in to Rio Jeneiro for repairs, which was welcome tidings. As we grew better, we took turns, with the captain's approbation, in trying to improve the table fare by preparing the food ourselves, but we could not effect much with the meagre provided.

At last, when for weeks the horizon line with raging billows or a calm sea, had been our only view, weesled one day into the beautiful harbor of the city of the future. The harbor was green grass, the fresh fruit, the sublime view on every side, and then the hospitality of kind Scotch merchant who took me, with one of my fellow passengers, to the city, to spend the day. I saw the ruins of the old city, the ruins of the voyage! Here, the roaring, restless ocean, with rude oaths, creaking ship, tarred ropes, and all the filth and discomfort of ship life, and the roaring of the sea, and the roaring of the wind, seemed united with every breath. It was indeed a paradise, but the trail of the serpent was there. On an open road, I saw a man and a woman, and a child, and a dog, chained together, while beside them were others with great bags of coffee on their heads, chanting a monotonous, mournful lay. From that lay, my sympathies went out to the poor, and I thought, if I could do but think of the poor, I should live to rear a son who should lead Freedom to victory in the great contest which, in future years, should come in my nation.

After a short stay in Rio, we returned on ship-board prepared for a continuance of our sufferings, but fortunately, as the kindness of friends had furnished supplies, we were, though for days after sailing the captain and crew were under the influence of liquor, we were, on the whole, treated with more consideration than we had experienced in the underhull. We were seventeen days in passing Cape Horn, and dark and dismal days were before us. Most of us kept our berths, as the weather was so bad, and the day was so gloomy. It was a great relief when we stopped for a few hours at Alexander Selkirk's island, which was then inhabited by a few benighted natives, who, however, did not obtain vegetable and fruits, and gazed eagerly from the deck, at the end of which we had wonderfully rich in childhood's days. We were, however, so much exhausted by the but the health of some of us had been impaired for life; one lady indeed, never recovered, and was obliged to return home after a few days. Mr. N. in regard to our suffering during this terrible voyage, and successive reinforcements to the mission were made more comfortable.

Honolulu was our next point, and at last our eyes were gladdened by the sight of Diamond Head, standing in silent, solitary defiance of the great waves at its feet. Like a sphynx it stood, watching the ships pass; vessels of war and of peace, canoes laden with unclad natives, ships bringing desolating, deadly diseases, the gospel laden with wealth, ships bringing the gospel of peace. There, Waikiki, with its green and brown hills, and the a thrill of joy went through my heart, as at the foot of the green and brown hills, we saw a little village of grass huts, with here and there a wooden house, and here and there a tree.

We found that we had arrived at the time of the Annual-Convention, when the missionaries meet to report success, talk over plans for future work, and exchange congratulations. Messrs. Bingham, Whitney, Richards, and several others, came on board to welcome us, and three of us who were able walked about a mile to this mission house, the residence of the secular staff, two "study" houses, a coal store, with small windows and prison-like exterior. Some of the party were too ill to walk, and were conveyed in a one horse wagon, drawn not by a horse but by several native men, each wearing a shirt and nothing more. The large room in the mission house seemed pleasant to us, and native of all ages

seemed pleasant to us, and native or oil seeds were  
flocked around to shake hands and say "Aloha"  
he" (lovn to you). Most of them brought some  
one offering, a few onions, taro, fish, cocon-  
nuts, sweet potatoes, chicken, a piece of  
bark cloth etc. They were pleased to have new  
week teachers, and were cheerful in action and  
expression. Mr. Bingham and family occupied  
the new house, the native people who had  
had bread with them, and the missionaries  
all had comfortable houses. The General  
Meeting was held in a well built adobe school  
house, the building of which was expediting  
by Mrs. Bingham, this work being done by  
natives.

On the Sabbath after our arrival, we went to the thatched church, where there was a congregation of some four thousand natives. The box like pulpit was perched up on one side, about the middle of the house. Dried grasses and rushes, spread on the ground end

covered in places with coarse mats, made the floor. There were a few rude benches, but most of the natives sat on the floor, chairs being used only by teachers and chiefs. Back of the pulpit was one small glass window, the rest were merely openings in the thatch, and the doors stood always wide open. Some of the natives of higher rank would sing a few tunes, though the voice as a whole were like the croaking of frogs; familiar "Green-ville" was the first that greeted our ears.

The church and all the house were made of grass tied to the timbers with cord made from the bark of a tree, or cocoanut fibre, nor were there any windows, but the light came from the mouth of doors. The natives dressed in every variety of the costume. Those of high rank tried to adopt the foreign style, but this was a disadvantage for many of them, as their long waists were found very uncomfortable in the American entirely unaccustomed to restrain. The women were dressed in the same manner as the men, by braiding the tresses of their hair, and by adorning the sugar cane, or a certain kind of grass, and sewing the braids into shape with a bark cord. The men were dressed in the same manner, but instead of braids, they were decorated with bits of cloth, flannel or bark, and were fastened to the body with cords, and were worn on bows. The sermon we over an hour long, and during its continuance, some of the natives were so overcome with grief, that they some walked out and in, some slept, and some listened to the preacher. After a bright-eyed, young man, who would crawl out from under its mother's skirt, and when he was asked why he did would run yelping from similar sight. All these things combined were so entirely new to the natives, that they knew nothing of what these people had been.

Kashumenu the Queen had been christianized, and being ill at this time, it was necessary that the new missionaries should be present to remain and labor. So, through narrow, unshaded lanes, we walked for half a mile to the large square house, and saw an air of sanctity and peace, and a style of architecture. It consisted of one great open room, with a celic curtain in the middle and a large bedstead at the head. The floor was of coral, the top one neatly woven of pine rushes, and the bed pattern. The pillows were stuffed full and hard, or often were smooth stones, and the bedstead was of coral, the sides of the cloth fastened together at the edges. A large-looking glass, table, chairs, etc., completed the furniture. The Queen sat in a large arm chair, and her attendants, all of whom were dressed in white, were placed around her. She was clothed much like the long fly of *one of our Kahila*, and frequently landed her a beautiful shell epitaph, always appropiating her own name, and then she would say, "I am the salvation of 'Aloha', and welcome to you."

[illegible]

the business was to assign new teachers to new stations, and my husband and I, with two other missionaries and their wives, were reserved for a mission to be established on the Mokuauia Islands. The first station was at Naha, and the first station was first sent to Naha to live with the chief, as they were known to be cannibals, and a report was brought back that the natives were anxious for light and knowledge, or merely wanted an opportunity to inquire about their own people, was uncertain. However, the mission could not be sent to Naha, so we directed ourselves to the study of the Hawaiian language, and to each other labors as offered. As upon this time, there had been no schoolhouse opened temporarily, I was house-

was glad to do this, for the question of what to do with the children presented many painful perplexities. Some of the older ones had already been sent to New England to be educated, but this was a bitter sacrifice, and faith alone sustained the parents. The poor children suffered intensely, not understanding the reasons for what seemed to them a cruel separation, and many of the parents felt that sub would have been preferable.

## MOLOK

An island some forty miles in length and seven in average width, had at that time a population of about 5000, to all of whom Mr. Hitchcock had access. Among the mountains and ravines was some wild, grand scenery, but the mission premises, given by a chief, lay on the low lands only a few rods from the sea, in full view and hearing of the foaming, dashing breakers, which surged up on the great crests of white foam.

The chief had caused to be erected a grand church as well as a house for the new teacher and Mr. Hitchcock was already vigorously at work. Children and adults were all brought in for instruction, and were about as orderly as a flock of sheep, and much less cleanly. They saw no necessity for order or neatness, and were like playful kittens, so that the greatest patience was needed to keep them from lying off to their sports. Somehow they good naturedly learned to read, and could see no harm in that, much preferring to ape their teacher in the water. A grass school house was built and brought into immediate use, and Mr. Hitchcock and I joining with Mr. and Mrs. Hitchcock in their work.

littleness in their first efforts in the line of house-keeping was to train a cock, as cooks were considered honorable employment and this was a good way to impart civilization. All the compensation required was to give, which "kums" or teachers were to give, which included a few books and food, which they learned slowly, required constant watching, and were especially skilled in brooding our dishes. When a cock became a cock, or thought that he was, he would no longer would do anything beyond, leaving us to our own attempt with another novice. We succeeded, I remember, in instructing a cock how to dress and prepare a chicken, were anticipating a New England dinner for dinner. Mrs. \_\_\_\_\_ flour, through the worms, which were numerous after a voyage round Cape Horn, when the dough was light, the pot-lid lifted to put it in. Behold the chicken, lying with its head, eyes, and legs, and its legs, all the same, all together with a strange inquiry were made. Yes, the cock had taken part in his own use, conceiving that part of a chicken was as good as another, and this was a convenient way to cook and he liked. The usual way to cook a dinner was to throw a stew, but necessity is a stern law and to thoroughly learned during that six month voyage around Cape Horn. The natives of cooking was to pull the feathers off a hen or strangle a pig, which is a barbarous method, but it was an oven, which consisted of heated stones buried in a hole in ground. Vegetables and fish, also wrapped in leaves, were added, a layer of hot stones put on top, the whole covered with mud, and the earth, and left to cook. The natives were all of the same prepared in this way, and our domestics were skilled in doing it.

## SUCCESS

\* Those natives were very repulsive in their personal habits; were immoral in the extreme and held such a distorted view of life that their ideas of religion were as crude as their ideas in other respects, but the grossness was filled on Sundays. Early in the morning, men, women and children could be seen at distance, trudging for miles to the place of worship, from all parts of the Island. They were bare, bodies nearly naked, hair, beards and little children clung to the backs of their heads, the single garment which some wore was often arranged and fastened in a grotesque and tasteless manner. The appearance of the congregation was so ludicrous, that it was almost familiar, we were often comically overpowered with laughter.

Progress was slow, but still there was progress, as was evidenced by the making of a law that each man should have but one wife, and that they should be joined together by the clergyman. The law was intended to save the wife and the putting away of all the others, and the ceremony which made this a legal marriage was generally performed in church, in order to give it dignity and importance. But the ceremony was a scarlet brocade of ancient date, which somehow or other had found its way to Mukoki, and its origin and meaning were unknown. It seemed to become a ceremony of the most grotesque character. A strip of hark about the loins of a man, with the red clink fastened at the neck and reaching down to the knees, made a grand suit, and a blanket of hide was equally fastened by the neck and reaching down to the ankles, while in either case, strings of dog's teeth around the ancles, bracelets of shells around their waists, and wreaths of shells or natural flowers around their necks, were considered as necessary to complete the man's clothing.

the beginning of a work which lasted for twenty four years, and proved a mighty power for good. In later years, their difficulties and perplexities were numerous, but they lived among an appreciative people, and lived long enough to see a great increase of civilization and religion. They had, in time, a comfortable stone dwelling house, school house and church, where most of the natives, both old and young, learned to read and write, and worship with their pastor and teacher. At the time of their death, many of the foreigner were attracted to this mission, and consequently the people were, in some respects, superior to those where the population was greater ones. The moral more contaminated

At the end of these three months, the depuration of missionaries which had been sent to ascertain if it were expedient to send any to Nuuhivi, had returned. One was against and two in favor, of the plan, and their report was received at the general convention of the mission, which met that year at Lahaina, where we huddled down somehow in the huts, until this and other matters were decided upon. The conclusion arrived at was that a mission should be sent, and Mr. Atkinson and I, with two other missionaries and their wives and two children, went to Honolulu to take passage from thence to the Marquesas in a small brig engaged for the purpose.

TO THE HAMPTON GRADUATES

[illegible]

to which I wish to call your especial attention in this letter. Teach your pupils by precept and example the *dignity of labor*. Tell them that those who, with little outlay of money, make bread and butter, and beef and mutton, and wine and oil, and wool and flax, and all the wise and good men here have made their hands of brains, or both.

One great error of the people of the United States is that they are too fond of both white and colored, has been the fact that labor is degrading; that an idle life is more noble than a life of toil, and that work and the color of the skin are of no account. This is a fatal mistake. It is the duty of the masters and the fathers to teach their children that the noblest freedom from care and labor is the highest freedom. It is not surprising that the people of the United States are so much more fond of the idle life than the people of the other nations, who once could call no time their own, and who were forced to work early and late in the day, and who were forced to work for the sole benefit of their masters, should be so much more fond of the idle life than the people of the other nations.

holidays more intensely than we, who love to work, and grieve when compelled by bodily infirmity to be unemployed. I asked a friend of mine, who spends her winters in the far south, what progress she observed from year to year in the condition of the colored people. Her answers were that they have more physical strength than formerly, but many of them, working on only three days in the week and spending the other days in idleness or frivolous amusement, do not lay up money, nor do they make much progress in the education of their children." However, the colored people of the next generation will undoubtedly be ambitious to rise higher in the scale of intelligence and wealth. They will see the advantages to be gained by industry; enjoying the fruit of their labor, they will be stimulated to acquire more and more knowledge and pleasures in work.

ate," they may even be made to feel that the influence is exerted, but the adults, with whom you mingle, may learn from you the value and dignity of labor. Some years ago, a colored freeman, a native of the United States, came to visit in relative in Virginia. On the morning after her arrival, one of the slaves knocked on her chamber door and asked permission to enter. Her mother-in-law, who was in the room, told her that she was being accustomed to make her toilet herself; whereupon, the slave, astonished at the displacement, went into the kitchen and informed the other domestics that she was to wash and dress herself. The feeling of indignity which she experienced was that labor is degrading is not confined to the people in the South, but is shared in countries where titles and social position are so important as in the prevailing for some time in the country, remarked to a young lady that he had met with very few gentlemen. She looked at him in surprise, and with a smile said, "I never heard of a gentleman being so ignorant." He replied, "gentlemen—class of people who have nothing to do." "Oh, yes," she answered, "we have plenty of people who go about doing nothing, but no gentlemen." The tramp.

ing to do, but we can't find it. There is no royal road to knowledge or wealth. Each man must be gained by persevering search.

Besides these acquisitions, there are other advantages to be obtained from labor in the formation of character, habits of industry, self-reliance, and independence; and from manual labor come physical development, health, and manual dexterity. "To accustom the young to be and to do, is of more importance than to induce them to learn and to know." Mr. Gladstone, - Queen Victoria, - the Prime Minister, - finds that measure in the American tree trunks.

The poet Longfellow, in his description of the Village Blacksmith, illustrates the effect of earnest, persevering labor upon the character.

" Each morning sees some task begun,  
Each evening sees it close;  
Something attempted, something done,  
Has earned a night's repose.  
Thus, at the flaming forge of life,  
Our fortunes must be wrought;  
Thus, on its sounding anvil shaped  
Each burning deed and thought."

The Apostle Paul wrote to the church at Thessalonica: "If any would not work, neither should he eat;" and the greatest of all teachers, our Lord Jesus Christ, set us the example of diligent labor, as he continually went about doing good, healing the sick, restoring the blind and hearing to the deaf, teaching his disciples as He walked by the wayside, administering to the wants of the souls as well as the bodies of men.

I am your sincere friend,

"JIM" AND "BILL."

The two well-known brothers, Bill and "Jim" so long connected with No. 2 Station, were last week separated, "Jim" being sold to a coal carrier, his age and infirmities rendering him no longer fit for work in the fire department. A day or two ago "Jim" and a load of coal, when "Bill" was last station companion, was brought out if the animals would remember each other. This they did indeed do. "Bill" rubbing up against the "lumber" "Jim" rubbing up against "Jim" and "Jim" caressing "Bill" merrily. The horses, finally, to the surprise of the delighted firemen, rushed together with passionate high cries, and then, with a stamp and a hector, every symptom of the time attachment. One of the firemen managed the engine-hell to ascertain if they would recognize it. The "sensitive animals" only looked at it but did not touch it. Then for the inside of the station and himself, as far as the engine, in a position to be led to the stable. He was with difficulty removed from the spot, and sent to the stable. "Jim" and his friend "Bill" who answered them with lamentations as they were pushed. "Jim" is even thoroughly infuriated with the enthusiasm department and the firemen. He is evidently doesn't believe in the engine in his old days.—*Montreal Witness*

**Temperance.**

## A DRUNKEN FARM.

The doorway fence had disappeared, burst up at the shilleuthens horn of drink. The house was unpainted and battered; broken panes of glass were stopped with rags or old hats; the chimney stood in a tottering ruin; the porch sagged under its own weight; the windows were boarded up on one side; the steps were nestlely, like those of an over-er's; everything was dilapidated, decaying, untidy, cheerless. A single look showed that the owner traded in spirit of thrift had been killed by the spirit of the still. Fresh paint, repairs, improvements, good cheer, and beauty for home—all had gone down the farm-drain to the outside world.

"The barnyard," he went on, "is a mess. The barnyards are wretched sties; the doors are off, the roofs leaky, the gates down, the carts crazy, the tools broken, the fodder scarce, the stock poor and half starved, the piglets, the chickens, and run—all had come from drink. The farm showed the trail of the serpent. The straggling and tumbled stone walls, the rocky fences, the ragged growths, the weeds, the neglected crops, the dingy orchard—all said to the passer-by, 'Whiskey did it.' Drink had given the planter of a mortgage instead of a costing of grain fertilizers, and both increased the cost of the crop as plainly as its owner did when he came home from town. One of the most impressive temperance lectures, for young farmers respect-

"DON'T GO, FATHER."

A gentleman, lecturing in the neighborhood of London, said:  
 "Everybody has influence, even that little child," pointing to a little girl in her father's arms.  
 "That's true," cried the man.

"That's true," cried the man.  
At the close, he said to the lecturer: "I beg your pardon, sir, but I could not help speaking. I was a drunkard; and as I did not like to go to the public-house alone, I used to carry the child. I approached this public-house one night, hearing a great noise inside; she said, 'Don't go, father.' 'Hold your tongue,' said I. 'Please, father, don't go,' said the tongue, I say. Presently I felt a big tear falling on my cheek. I could not go a step farther, sir. I turned round and went home, and I have never been in a public-house since—thank God for it! I am now a happy man, sir, and this little girl has done it all, and when you said that even she had influenced I could not help saying, 'That's true, sir.'"

## INTEMPERANCE

There is a sufficient quantity of fermented and distilled liquor used in the United States in one year, to fill a canal four feet deep, four feet wide, and one hundred and twenty miles in length. The liquor saloons and hotels of New York city, if placed in opposite rows, would make a street like Broadway, five miles in length. The places where the toxicating drinks are made and sold in the country, if placed in direct lines, would make a line one hundred miles in length. If the drunkards of America could be placed in procession, five abreast, they would make an army one hundred miles in length.

Young woman, never give your hand to a young man who drinks. I have seen experiments tried by young women who meant to reform a husband after marriage. Where a woman has succeeded, five hundred have perished in the ruinous risk. If a young man does not think enough of his loved one to give up the wine-cup before marriage, let him you will not allow such a rival as rum to risk your and his ruin.

Howard, the philanthropist, was standing one day near the door of a printing office when he heard some dreadful oaths and curses from a public-house opposite. Buttoning his pocket up before he went into the street, he said to the workmen near him, "I always say this when I hear men swear; as if I think any one who can take God's name in vain can also steal, or do anything else that is bad."

"What! Mr. M.," said a wedding-guest, a clergyman, "don't you drink wine at a wedding?" "No, sir," was the reply; "I take a glass of water." "But, sir," said officious guest, "you recollect the advice Paul to Timothy, to take a little wine for infirmity." "I have no infirmity," was the sententious reply.

## At Home.

### LOOK UP, NOT DOWN.

Life to some is full of sorrow—  
Half is reel, half they borrow;  
Full of rocks and full of ledges,  
Corners sharp and cutting ridges.  
Though the joy bells may be ringing,  
Not a song you'll hear them singing;  
Seeing never makes them wise,  
Looking out from downcast eyes.

All in vain the sun is shining,  
Waters sparkling, blossoms twining;  
They but see through these some sorrows  
Sad to days and wiser to-morrows;  
See the clouds that must pass over;  
See the weeds among the clover—  
Everything and anything  
But the gold the seashores bring.

Draining from the bitter fountain,  
Lo! your mole hill seems a mountain.  
Drops of dew and rains of rain  
Swell into the mighty main.  
All in vain the blessings shower,  
And the mercies fall with power,  
Gathering chaff, ye tread the wheat,  
Rich and royal, "neath your feet.

Let it not be so, my neighbor;  
Look up, as you love to labor.  
Not for one alone woe's vials;  
Every one has cares and trials.  
Joy and pain are linked together,  
Like the fair and cloudy weather.  
May we here, oh, let us pray,  
Faith and patience for to-day.

—The Advance.

### THE USES OF CHARCOAL.

Who knows the uses of charcoal? I have no doubt that many of you know that it is very handy to use in kindling a coal fire, but do you know its other uses? Are you aware that posities of any sort will effectively prevent the growth of proud flesh in a wound, allay the irritation and itching that often accompanies the healing, reduce inflammation and greatly assist in the healing?

Do you know that if pulverized and mixed with the white of an egg, or even mixed in water, and drunk, a little of it will quickly relieve sour stomach or dyspepsia, and usually check a light attack of diarrhoea? It will do all this for man or beast. Do you know that a lump of charcoal put in the pot when you are boiling cabbage, onions or strongly flavored meat, will prevent the scent of itself from penetrating the whole house? A lady of my acquaintance was lamenting that she could not indulge in her favorite vegetables as often as she would like because she did not like to have her whole house flavored with it for a week after. I told her of this, and now she feasts as often as she likes without incommencing the other inmates of the house.

Do you know that you may keep a fowl or a piece of fresh meat sweet almost as long as you please by putting a lump of charcoal inside it (wrap it up in cloth if you wish), and then wrapping it in cloth and putting it upon a pan of charcoal?

(N.B. I have not any charcoal to sell).—Exchange.

### HOW FISHERMEN COOK FISH.

A correspondent who visited the fisheries of the North, says, "It was nightfall. The men had just returned from setting their nets, and were busily preparing supper. In some of the cabins were ancient and rude fireplaces of stone, and from them the fire glowed warm and cheerful. Great pots of water were steaming, and generous slices of salt pork and the daintiest parts of the dairy white-fish were sputtering in the frying-pans. Two or three fires were burning on the beach, for some of the men have a notion that an open fire is better to cook by than is the stove, and then, too, it affords an opportunity to prepare the fish in the most popular manner among them; that is, baking it on a board. The fish are prepared and seasoned, pinned to a board by wooden pegs, and then baked and all are propped up close to the fire. The fish is very quickly baked brown, and by this method it retains all its flavor. Another popular but lazy method is to cover the fish with clay two inches thick, and throw it into the hottest of the fire. The clay hardens almost instantly, and the fish in its tough oven bakes through and through, retaining all its juices. The clay is then poked out of the fire, soaked with a dash of water, and sharp strokes with a stick separates it from the fish. The fish's skin peels off with the clay and the fish is ready. Plain bread and potatoes constitute the rest of the meal.

The Bible, diamond-like, cast its lustre in every direction. Torch like, the more it is shaken, the more it shines. Herb like, the more it is pressed, the sweeter its fragrance.

## Health and Humanity.

### TEETH BE PRESERVED?

BY H. VANDEBURG.

"Ask the Dentist if some way had not yet been found to prevent the almost universal decay of teeth, and he will at once answer, 'Yes, the true way is known at last, and you may preserve your teeth if you will.' You are encouraged with a hope; it is the best news you have heard in a long time; if too late for yourself, there is comfort in it for your children, and you eagerly ask, 'How?' 'Keep them clean,' is his simple reply, and your hope vanishes with it. You do not believe what the Dentist says; you have no faith in the 'keep clean' prescription. You would do anything to preserve your teeth. You know what suffering you have borne from decay; you know how irreparable is their loss; but every day from childhood you have brushed them and yet you have not preserved them. Your own experience, therefore, proves the falsity of the doctrine. Brushing doubtless does some good, you think, but you know that it does not prevent decay. What a comfort it would be if that simple rule was all that is necessary. Keep the teeth clean! Why any one can do that; if that is all, we should be fools indeed to lose them; and should well deserve to be punished, as we are, in their loss.

Thus, in your own mind, you have answered the Dentist; the discussion ends and you are none the wiser. Had he told you that it is possible to brush the teeth without cleaning them; nay, that it is impossible to clean them by brushing alone, you might have gained a new idea that would have been used to your advantage. The prescription is right, after all. If you will, if you can keep your teeth clean, they cannot decay.

How often is the question asked, Is this, or the other thing, injurious to the teeth, and how unsatisfactorily it is generally answered. Something sour—an acid, is necessary to the progress of decay. Acids alone are directly injurious. Strong vinegar, when used as a tooth powder, destroys a tooth immersed in it. Yet it is not to sour foods and drinks, as ordinarily used, that we must attribute much, or any perceptible injury to the teeth. The saliva, flowing abundantly when we eat, counteracts, almost instantly, their injurious tendencies. It is not what we eat or drink that injures the teeth; that is, it is not what simply passes through the mouth, but it is what remains in it, that does the harm, be it bread or meat, fruit or vegetable. Have you never picked a piece of food from between your teeth, and perceived a sour taste from it? Any food remaining a short time in the mouth becomes sour, and has the same effect upon the teeth it touches as that of vinegar alluded to. Always, decay is as corrosion from some substance on the outside of the tooth, eating into it; and the saliva is protective, and tends to counteract and remove what is injurious. These are positive and indisputable facts. There can be no mistake about it; the teeth are kept clean if they cannot decay. The fault is not in the theory, but in the imperfect manner in which it is practiced.

### DYING WITH HIS CHARGE.

A gentleman recently returned from Canada tells the following story: "A day or two ago the engineer of a train near Montreal saw a large dog on the track, barking furiously. The engineer whistled, but the dog paid no attention to the noise, and refused to stir. The dog was rarer over and killed. The engineer observed that the animal crouched close to the ground as he was struck by the cow-catcher. A minute later the fireman saw a bit of white muslin fluttering on the locomotive, and he stopped the engine. On going back to where the dog was killed it was discovered that not only the dog, but a little child had been killed. It was then seen that the dog had been standing guard over the child, and had barked to attract the attention of the engineer. The faithful animal had sacrificed his life rather than desert his charge. The child had wandered away from a neighboring house, followed by the dog, and it is supposed that the child lay down and went to sleep on the track.—Saratogian, Sept. 24, 1890.

The Universalist convention, recently in session in this city, adopted a resolution which was presented by Rev. H. S. Fiske of West Runney, recommending the Sunday school teachers to impress upon the minds of the children under their charge the importance of cultivating the spirit of kindness toward dumb animals. The resolution called forth several earnest speeches from Rev. Messrs. Fiske, Heyward, Maguire, Gorton, and Vincent. Mr. George, of Runney, also spoke briefly and effectively in favor of the resolution.—Fortmouth (N. H.) Chronicle.

## Teachers' Table.

### GARFIELD THE TEACHER.

REV. D. A. HINEMALE.

At Hiram Institute Mr. Garfield, now the President elect of the United States, taught Latin, Greek, the higher mathematics, philosophy, English literature, English analysis, rhetoric, criticism, and occasionally one of the natural sciences. Though especially enthusiastic in particular lines of study and teaching, it was hard to see that Mr. Garfield did not teach Caesar, Homer, geometry, English grammar, metaphysics and geology, equally well. On the whole he pursued least interest in the mathematical studies; but among the others it would be hard to name his favorites. In fact, of all the branches of knowledge taught in a college, there was no one that did not at some time engage his special attention and awaken his enthusiasm. It is not beneath the dignity of history to record that he always taught the class in English analysis, through which most of the better minds at that time passed; and that this study, often made dry and irksome, he clothed with light and filled with fire. Hundreds of eyes will kindle at the mention of 'Garfield's Analysis Class.' His weekly rhetorical class, with its essays, declamations, debates and criticisms, was a great theatre of interest and improvement.

The method of conducting a recitation was his own, combining the question that required a textbook answer, the topic to be handled, the call for the pupil's own opinion, and the teacher's discussion of matter in hand. As a drill-master, many teachers surpass him; but as a lecturer in the best sense, he stood with the first. His class-room glowed with life. Probably no pupil remembers having spent in it a dull hour. While placing its proper value upon learning and information, his great aim was to awaken the faculties of the student. There is a process known to the laboratory as energizing a magnet. By passing electrical currents around a bar of iron, the magnetism is increased. There is an analogous process known to the educator; the most important service that he can render the student is to energize him. Among the teachers whom I have known, Garfield stood alone as an energizer of young men and women. He revealed the world to the student, and the student to himself. He called out thought, set the faculties in full play, awakened courage, widened the field of mental vision, and poured in abundant measures of inspiration.

One of his most valuable offices was his morning lecture in the chapel to all the scholars. He ranged over the fields of Bible, history, morals, education, teaching, science, literature, practical affairs, history, and life questions. These lectures, many have seen, finished lightly but they abounded in fresh facts, striking illustrations, and suggestive thoughts, and were warm with the breath of his own life. Particular pains were taken to place before the students ideas of life and character nobly wrought, and instinct with courage, manliness and truth. Though bound with life and spirits himself, he was full of what Dr. Thomas Arnold called "moral thoughtfulness," and he strove to make his pupils temperate, morally serious and reverent to truth.

He was eminently successful as a school administrator. He was firm, but kind; exacting but sympathetic. He was fully alive to the sentiment of justice, and respected, even in the most unworthy, human nature and human rights. Then, as since, he was full of approval and generosity.

Naturally Garfield, the teacher, drew his pupils to himself with extraordinary power. Never have I seen such devotion to another teacher. An old Hiram student, now holding a responsible office in the public schools of Cleveland, speaking of the old times before Garfield went to college, says in a private letter: "Then began to grow up in me an admiration and love of Garfield that has never abated, and the like of which I have never known. A bow of recognition or a look from him was to me an inspiration."—Pennsylvania School Journal.

LEARN TO KNOW.—An excellent instance of the way in which the children in some Public Schools learn without learning, is related by Barnes' Educational Monthly. A teacher in one of our public schools had been accustomed to require her pupils to say, "The equator is an imaginary line passing around the earth," etc. It had never occurred to her that the boys and girls of her school had no idea what an imaginary line meant, until one day a visitor asked them how wide they thought the equator is. Some thought it was 5,000 miles wide, others 2,000, and others said they could jump over it. The visitor then asked how they thought the ships got over it. One pupil said he thought they got out and drew them over and another said he had read a canal had been dug through it. "What is the name of this canal?" was asked. "The Suez Canal!" was the answer.

## Agriculture.

YOUNG CHICKENS AND INSECTS.—The practice of excluding chickens from the garden, especially in mid-summer, is held both for the chickens and for the vegetables. The young chickens will not thrive in confinement as in freedom, and no growing plants can be in good measure protected from insects by the chickens. We have never succeeded better with young broods than by putting them with the mother, in the vegetable garden. The mother is kept confined in a coop, and the chickens have free access to her through the slats. She follows her instincts in scratching over the ground under the coop for worms and grubs, and after a few days the coop is pushed along to new soil. The chickens are regularly fed with scalded meal or boiled screenings; they supply themselves with animal food from the garden. The chickens are too small to do any harm to plants that are well started, and yet they pick up an immense number of insects. The more highly a garden is manured, the more rapidly do insects multiply, and the greater is the need of birds and fowls to keep them in check. The chickens can go beneath cucumbers, asparagus, beans, tomatoes, etc., and pick the eggs and worms from the inside of the leaves, where they are generally found. They eagerly chase every moth and bug that flies, and if it elicits within striking distance, it is sure to be devoured. When the chickens are large enough to do injury to the plants, they are easily removed to other quarters.—American Agriculturist for Dec. 1.

LITTLE THINGS OF GREAT MOMENT.—It is a small matter to take the horses across the field for their water; it seems to cost nothing yet if a farmer's time, or that of his hired men, is worth anything, it costs a great deal. The course of a year. It is a small matter to chop each day's wood upon the day it is used, and thus have it all fresh; but fifteen minutes in harvest time is worth more than in January or winter. There are vastly more economical methods of making fire-wood than with an axe. It is a very little matter to tighten a loose nut, but it sometimes costs life and limb not to do it. A pear tree here, and a peach tree there, cost so little that one is inclined to think they are of no account, but when the fruit is ripe they are appreciated. A single step from one room to another, a single step out of the house, a life time, is enough to make a woman's back ache. Look well to the details, that the little things are right, for it pays in the end.—American Agriculturist for Dec. 1.

DANGER IN THEIR "SILOS."—We are impressed with the importance of warning people who have put their corn-fodder in tanks, especially in deep ones, of the dangerous carbonic acid gas, the "choke damp" of mines and wells. A farmer near Sing Sing, used an old ice-house for pitting his corn-fodder; on Saturday night, when the corn-knocks were being put in, some seven or eight feet of fodder cut in half-inch bits, and well trodden down in the pit. On Monday morning it had settled considerably and one of the hands jumped in the morning about one to see if it had settled, evidently, when he felt dizzy and faint; the thought of "choke damp" flashed through his mind, and he called out to have a ladder lowered to him. This was done just in time, and he half crawled and was hauled out. His head was four or six feet above the worst of the "damp," for it is very heavy. Had he fallen he would have been drowned in the gas, as effectively as in water, without a struggle or a murmur. When going into a pit never fall to lower a ladder first, for half minute, and if it burns brightly the air of the pit is fit to breathe.—American Agriculturist for Dec. 1.

HOW TO TREAT MANURE.—"Agriculture," of Massasoit Co., Ill. writes: "I would like to understand more fully the action of water upon the manure and litter taken from the stable and cow-shed. Should it be exposed to the rain, freezing or thawing of winter, or sheltered until spring? Would it have time to rot after the freezing weather sets in, and be in time for use on the corn field?—It would be much better to have the manure piled up under a shed, than exposed to the weather. Manure, to keep well, must be either packed by tramping, to exclude the air, or kept so moist that fermentation will not become violent and burn (fire fang) the heap. If exposed to rain and water much of value leeches out, and is lost. If kept under cover, there should be a tank at the lowest point, covered with rails, or a grating where liquids can settle, and he pumped up over the heap again. Add fresh water, if necessary, to prevent moisture enough to prevent burning. Such manure is in good condition in spring. The corn crop does not require rotted manure.—American Agriculturist for Dec. 1.

# HAMPTON STUDENTS' GOWN.

## From the Senior Class.

### SCHOOL NEWS.

If there are any who have not visited our school within the last eight years, I am sure they would not recognize it now, for it is actually a little village, and kind friends are still assisting us to build more.

The Academic is being rebuilt; it is getting on splendidly, and will, no doubt, be finished about the 1st of January, 1881. We will all be glad when it is finished.

As the new Academic will not contain an office, as the old one did, the teachers and friends of the school raised money enough to build a nice and large brick office; it is not finished as yet, but will be no doubt about the same time that the Academic will.

School is more crowded than it has ever been. The buildings are filled with new faces. All of the boys' buildings are filled; which are two cottages, a large brick building, and two small tents. The girls' building is also crowded. There are three hundred and thirty boarding scholars, and twenty day scholars.

Our Senior class, this term, numbers forty-eight, which are ten more than there were last term; I don't know of one in the class, who does not intend to cultivate in the minds of their race, good common sense, with such as their school supplies us. Among our Senior duties, is learning to teach, under Miss Hyde. This is to train us to teach object lessons, so when we go out to teach it will not be so hard for us.

The New Academic Hall is being finished with great rapidity, it will be a very stately looking piece of architecture; it is larger than the old building, and has eight large chimneys for ventilators. We hope the class of '81 will soon be able to begin to recite within its massive walls.

The students of Hampton will regret to hear of the death of Mrs. Hamilton, the beloved wife of Mr. R. H. Hamilton. Mrs. Hamilton, was a graduate of the class of '79, (Miss Sarah Weaver) and was beloved by all who knew her; she had been married but six months. She died in the arms of Jesus, on Sunday morning, Dec. 11th, at 8 o'clock. Her only regret seemed to be to die without seeing her mother, who was telegraphed for, but did not come to see her pass away. She was buried Monday in the school cemetery; the funeral was largely attended by teachers and students, and also the people of Hampton. The funeral was conducted by Rev. Mr. Johns, of Hampton, and our school chaplain, Mr. Friswell.

The saw mill is doing a good work here for the poor students; about fifteen are working each day; it also makes lumber cheaper in this place. The mill will soon be S. M. & S.

### THE BEST TEACHER.

When we notice the subject of this composition it is quite obvious, that, like other things, teachers may also be divided into three classes, viz: good, better and best. Had I been requested to give my views of what may be termed a good teacher, I should have felt more able to perform the task. To my opinion, a true description of the best teacher can only be given by persons who are well educated, that have had years of experience as teachers, and that frequent high schools and other institutions of learning, and there observe the different modes of teaching. I can only give my opinion of what I think the qualifications of a good teacher consists. To be a good teacher, he or she should be fully competent to teach, to govern, and to win the love and respect of the pupils. The lessons of each class should be studied and clearly understood by the teacher, before going into the school room, so that if the scholars during the recitation should ask any questions concerning the lesson, the teacher would be able to answer readily and with accuracy. A teacher should never appear confused or puzzled in the presence of her pupils over any problem in arithmetic, or over any difficult branch she has to teach; for if a student once loses confidence in the ability of the teacher, it is undoubtedly a hindrance to the progress of the pupil. It is more desirable, and no doubt, it gives the teacher more satisfaction to have those recite that make the best recitations. My opinion is, that the dull scholars should be compelled by the teacher to recite often, and by so doing, many would overcome the timidity that they feel when called upon to recite. A teacher should study the dispositions of her pupils. If fifty children were sick with different diseases, and a physician

was called in, he would immediately inquire about the nature of their disease, and he would treat every case according to the melody. Just so it should be with a teacher; she should study the different diseases of her pupils intellectually and morally. The punishment that would cure some children of certain bad traits, would only make others worse. In such cases every teacher should discriminate for herself, how to govern. It is quite a task to teach children or adults that have been bred with uneducated people, for then the teacher has a double task to perform. So very many children are taught from infancy to speak bad English, and all bad habits formed in youth are difficult to overcome. Much valuable time is sometimes spent in teaching children the definition of words, and hard rules in arithmetic and other books; when practically, they do not know how to use them. The remedy should be carefully studied by all good teachers. I remember some time ago, when I went to a village school, and on entering, the teachers asked me if I understood grammar, I immediately replied that I did, and at that time, I thought that I knew ten times as much as I think I know. The teacher seeing that I had so much confidence, she asked me what was English grammar; I readily answered, that English grammar was the art of speaking and writing the English language correctly. I gave the words that I had learned from the book without knowing what they meant, for such mistakes as "you is, they is, I is, they reads" and many other mistakes, which I have not the time now space to mention here, were continually being made by me. A good teacher should lecture to her pupils and tell them about such mistakes as the above mentioned, and by attention, your children would derive more benefit from such lectures than they would from a text book.

### THE BEST TEACHER.

To make the best teacher, there are three things which may be regarded as necessary to success in this vocation.

1. A clear and thorough knowledge of the things or subjects to be taught. 2. Skill to give instruction to the capacities and circumstance of the pupils; and 3. Delight in and devotion to the employment.

No one can teach who does not possess it. Knowledge possessed by one who has not skill to communicate it, is like a "spring shut up, and a fountain sealed." Everywhere where knowledge and the power to transmit are found, there must be a desire to teach, or it will prove wearisome and half labor.

To be a good, successful teacher, piety should be regarded as a primary qualification. Every particle of influence which true piety casts into a school is inestimable. The teacher is responsible for the influence which he or she exerts over the children in school; which teacher forms character in children; which teacher perpetuates for good or bad in the future.

### SHOULD EVERY-ONE WORK?

Work in its truest sense is to labor physically, or mentally.

To work physically develops the human body, and to work mentally develops the human mind. The ancient nobles kept slaves to work for them, because they abhorred the idea of having the aristocratic work. Every body should work, because it is honorable, and we should never scorn anything that is honest in England and America for centuries, and now they are puzzled over the same question in every nation that exists in the bright sunshine of the nineteenth century. It was work that made England what she is to-day. No civilized person can enjoy this life without work.

If persons live in splendor and don't work, some one must have worked previously for their enjoyment. Christ himself worked, and we should never scorn what our Lord has done. I believe God has intended for every one to work, by some honest means. I am in this world. I have heard people complain of the hard times, and scarcity of work, when they could labor and earn money if they were honest in work. Massachusetts would not have flourished like the ancient Lydia in the time of Croesus.

You can read history and see for yourself how this great nation became so prosperous. We as Americans can boast of our industrial department, for this department has made us second to no nation.

### THE VIEW FROM MY WINDOW IN VIRGINIA HALL.

The view of the water, as far as I can see, from my window, is a grand and beautiful sight. Sometimes the water is clear and smooth as a mirror; then again, it is very rough, tossing the waves here and there till they appear like white caps upon the water. When we first look the water seems to be a very short distance across, but the farther you look the wider and longer it grows, until it forms a level sheet. It has formed many small cays and bays along the shores which are very pretty. Then you will see, here and there, trees growing along the banks, and it is very pleasant to sit underneath their boughs watching the water flowing peacefully on to the ocean. Then, if you look far away, you will see a very long row of trees, and the bank upon which they grow looks so very white that they seem like tall, black mountains rising above the water. There are many boats on the water, large and small. Some are moved by steam, and some by the wind and sails, and oars. It is very pleasant to go a rowing, then you can have a lovely view of the water. At night if you look out on the water, it is a beautiful sight to see so many boats, that have anchored within the harbor until the dawn. Then you will see men hoisting the sails preparing to leave and, if there is much breeze they move upon the water like birds on the wing.

The view from my window is beautiful; more so than I can express. The heat way to water, it is a beautiful sight to see so many boats, that have anchored within the harbor until the dawn. Then you will see men hoisting the sails preparing to leave and, if there is much breeze they move upon the water like birds on the wing.

If you walk out early in the morning, watch the dew drop upon the flowers and grass, with the sun shining upon them, making them appear like thousands of diamonds. We should be very thankful to the Lord for giving us the water, without it we would not have health and ships could not sail to bring us goods and fruits from foreign shores. I think water one of the best things God has given us. When I look towards the Fort and see those large steam-ships upon the water, with so many little sail boats about them I think it a lovely sight.

### From the Middle Class.

#### THANKSGIVING.

We have the first account of a Thanksgiving Day given in the Bible. The custom was first introduced into this country by the Pilgrims. They landed in 1620, and the next year they had a day of Thanksgiving, because the Lord had blessed them in their crops.

For a long time the day was observed by them to give thanks for different blessings; sometimes they had it to thank God for rain, sometimes for food, sometimes for good laws being passed.

There was no national Thanksgiving Day till President Washington appointed one to be held, after the adoption of the constitution. After this the day was not observed every year.

I think it our duty to return thanks to God for his blessings, and I hope that people will soon learn to thank him. It was very nicely observed here on November last. The first thing we had were services in the forenoon. Our minister read different Psalms suitable for the occasion; singing and prayers. He read letters to us from the President of the U. S., and from the Governor of Mass., which were very interesting indeed.

After services were over, we were then ready for turkey and plum pudding, which was served at a later hour than usual, but seemed to be enjoyed by every one when it was ready. After dinner the boys had a debate; I cannot say much about it, because I was not there. After tea the boys and girls were allowed to be together; they seemed to enjoy themselves, some playing games, some dancing, and some enjoying themselves other ways. In the height of their pleasure the bell rang, and all retired to their different apartments to dream of the pleasure of the past day.

### From the Preparatory Class.

MY VISIT TO SOUTH AMERICA.  
(An Imaginary Visit, described for an exercise in Geography.)

I enjoyed myself very much in South America. I did not stay at one place long enough to get tired of it; the girls city that we came to was Peru. I was glad that it was so much like New Orleans, only we did not see palm

trees there. We found in South America what I never heard of or saw before, the Island Marajo at the mouth of the Amazon river, and I never saw the beautiful lily called Victoria Regia, which grows in the marshes at the end of the Amazon river. In some parts of South America, they have what is called rainy and dry seasons. In the rainy season the river overflows its bank and the lanes or plains are covered; then the water goes back to its place, and we see tall, wild animals, pretty hogs, flowers and reptiles. As we go up the mountain it gets warmer, and it was quite pleasant in the valleys. I saw the wonderful milk tree; I do not think I will forget it very soon. I saw the vanilla bean growing, that is something else that I never saw before. I brought you some of them; the natives said that they would keep it I did not have much money so I could not buy much. I did not see anything that you would like to wear, but the Brazilian hogs; it happens to be dry and they had gone away or rather died, so I could not get many. I brought you a few, you can wear them around your neck for a necklace, on black or white. I brought you some pine apples, of course I had to get them green, so that they would not spoil before I got here, but the wild Indians and the Jaguar, and not much afraid of them. They hunt the wild horses and catch them with a lasso. The horses were brought there first by the white people from Europe, and they increased so that they drove all of the other animals away from the place. I also saw the Condor, the largest bird that flies. That is all that I can remember. I had a very pleasant time.

### From the Indians.

We have had some cold days here, bad very little snow.

Last Saturday Indians had a picnic out at Shellbanks. One Indian boy went in a hush, had his Indian clothes with him, he put them on and then he came like a wild Indian, and they just laughed at him; he ran back and put his citizen clothes on again.

Captain Romeyn has gone home to see his mother, but one colored boy acts like a captain while he is gone.

We have been trying hard to be good, also in our schools we try hard to learn, that some day we ourselves may be able to teach our own people and tell the white people the Indians can learn, and that we are the Indians that have learned the English language.

We have got a colored teacher on the farm, he teaches us how to plow, and many sorts of things which we never knew before. We are at school trying to learn more, our teachers are faithful and good; I hope that they will succeed in their work.

The Indian school at Hampton is getting a long very nicely, though they work part of the day, but I think it a good plan for them.

Mr. McDowell, who has now the charge of the Training ship is sharp with them; he is trying to learn them how to work the station, which they made, and some other things, that shows that they are learning. He also teaches us in Sunday school, before he commences to teach he goes around us and shakes hands with us, which makes me think that he is willing to teach us.

We feel proud of the high recommendation of these two schools, Carlisle and Hampton. We will not be ashamed if some white people should come to see us, because we have learned many things about the white people's way.

There's a paper printed at Carlisle Indian School, which is called "SCHOOL NEWS." It contains many little interesting things, but we have a column for the Indians. They sent us some copies for our reading room, about twelve or more; we are glad to get them.

How is it that some people say that Indians don't like to work; I like to know if they have been among them and have given them things to work with, such as plows and wagons; they do this because they think that they are coming up to be like them, and then they write things about them, saying "that they don't like to work but like to fight." They like to fight, but not with the white people. They know that the white race are trying to lift them up; they have been treated bad and have been driven away from their homes and tried to stand forth right; then they say they like to fight, but still they mind whatever the government tells them to do; they don't go and gather Indian warriors to have a war between the whites, but they wait for the government

to give them the implements to work with, for they can not till the soil with their finger nails. Especially my tribe, the Pawnees, they never had trouble with the whites as long as I can remember, and they are the Indians that helped the government in getting the Indians on their reservation and stopped their wars against government. The whites have nearly all the land now which belonged to the Indians, and have killed all the animals which they use to live upon, and left them in the darkness, while they return with gladness and then talk and shout them, and say that they did not want their children educated, and that they had to send the United States troops to school. The old people are ignorant, but they talk to their children about their savage state, and that they should try teaching their people up in civilization. I was talked in this when I was in one of these places. Some young men have made their own progress, which I have learned to-day, that things said to them by the government go right to the chief, and what the chiefs got to do, they don't have to work, they just keep their things while their men go around hunting things to work with, that he might do something for himself, finds an axe, goes right to work cutting rails or logs for houses; this way they have done a good work among themselves, and there's many now having houses and a few acres of land. Now see they can do things themselves. They have got good knowledge as the white and the colored people have. Colored people have been treated bad as well as the Indians, and it seems equal the way they were treated and the way the Indians are treated. And I think it is time that every tribe of Indians ought to have a new treaty with the government and make it as fair as they can for they have their own interpreters that they had when they made their old treaties, that they might have their rights as any other nation has, in the United States. And I hope when Gen. Garfield occupies the Presidency that some Indians will make new treaty with the government. J. R. M. (Alias) YOUNG EAGLE, Pawnee Indian.

#### HORSFORD'S BREAD PREPARATION

The acid of this superior Baking Powder is a simple acid phosphate, and contains nothing but what is found in food, as well as yeast, and other cereals, and it is therefore highly nutritious.

Outfit sent free to those who wish to engage in the most pleasant and profitable business known. Everything new. Capital not required. We will furnish you everything \$10 a day and upwards, ready made without staying away from home over night. No risk whatever. Many new women wanted at once. Many. Many are making fortunes at the business. Ladies make as much as men, and young boys and girls make great pay. No one who is willing to work fails to make more money every day than can be made in a week at any ordinary employment. Those who engage at once will find a short road to fortune. Address H. HALLEY & Co., Portland, Maine.

**HORSFORD'S ACID PHOSPHATE**  
Is Nervous Debility, Loss of Appetite, etc. I used Horsford's Acid Phosphate in nervous debility brought on by over-work in warm weather, with good results. Also in loss of appetite from want of tone of stomach and bowels.  
Tipton, Ind. G. McCOLLINS, M. D.

#### Band Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Homesteaded.

By T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the most of the band-shell crabs for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen crabs, each one filled with two pounds of crab meat. On every man will be found full directions how to prepare Crab Salad and Devilled Crabs, two dishes con-

suming which it is superfluous to say anything to those who have eaten them; but to those who have not, the pleasure yet in store, the recipes will be an interesting chapter from the time the crab is swimming in the water, on the coast of the Merrimack and Monitor fought, until its delicate flesh is harmoniously sealed, and ready for use. The only condiment used in its preparation is the native element, and it is absolutely certain that consumers will obtain far fresher meats in these crabs, than they could buy at the market, even if our sea-board is by the process employed, a very few minutes elapse from the time the crab is swimming in the water, on the coast of the Merrimack and Monitor fought, until its delicate flesh is harmoniously sealed, and ready for use. The only condiment used in its preparation is the native element, and it is absolutely certain that consumers will obtain far fresher meats in these crabs, than they could buy at the market, even if our sea-board is by the process employed, a very few minutes elapse from the time the crab is swimming in the water, on the coast of the Merrimack and Monitor fought, until its delicate flesh is harmoniously sealed, and ready for use. HAMPTON, VA., FEBRUARY, 1881.

NO. 2.

W. E. GLADSTONE.

ISSUED MONTHLY.

Mrs. M. F. ARMSTRONG,  
 Mn. W. N. ARMSTRONO,  
 Mn. T. T. BAYCE,  
 Mr. B. T. WASHINGTON,

*Regular Contributors.*

Specimen copies sent upon application.  
To secure safety, it is important that money  
should be sent by checks, Post office orders, or  
registered letters. Write plainly; give name  
in full, and name of Post-office, County, and  
State to which the papers are to be sent.  
For further information, address  
J. F. B. MARSHALL,  
Business Manager, Hampton, Va.

*The Southern Workman, devoted to*

HAMPTON'S need of a building for the accommodation of the twenty Indian girls now in attendance, and for thirty more to be received when room shall be provided, as well as for future requirements, has already been stated.

In April 1878, Hampton opened its doors to seventeen ex-warriors from St. Augustine because it was the only place where they could be taught agriculture and the trades. Our teachers soon saw the fine qualities of their Indian pupils, became eager to give them a fair chance, and urged the bringing of Indian girls to make their work complete. Mr. Schultz co-operated cordially and promptly and now the Indian department of 65 pupils, (soon to be increased to 85) seems to be a fixed feature of the school and is in cordial and excellent relation with its work for the Negro. Each race gives and receives wholesome influences.

While the great body of Indians may be educated in the West where they live, we believe that this effort for Indian work that at Carlisle has aided in making a sounder better public sentiment, with respect to that people; that it has been a object lesson in Indian civilization to be legislators and the public. When Congressmen and others see Indians huddled and studying, working and living like men, it makes an impression that piles of documents and the most eloquent pleadings cannot create.

Government is ready to fill the proposed building with Indian girl students whom, however, it only partially supports (barely paying cost of board and clothing, \$150.00 a year but nothing for the tuition or cost of education which is \$70. per annum). If we waited for government to do its whole duty, we might wait forever.

Plans have been carefully prepared for a girl's building, in the form of a Greek Cross, the longest arm being 100 x 40 feet, and the other 84 x 35. It is to be built of bricks, three stories in height, to contain room for seventy girls with teachers, also a study and sewing room, a large play room, washing and ironing room, hospital and kitchen for special diet pupils and for a cooking class. Its occupants will take their meals in Virginia Hall, with the rest of the students. It will cost not less than \$20,000. Our estimate has been \$15,000. The

The centre of the educational question for Indians was touched by Mr. Schurz when he said, "It is just as necessary to teach Indian children to live, as how to read and write." This building as a place to live and work in, is to be educational. The girls will have no luxuries but simple plain living.

SHALL IT BE DONE?

Ground should be broken early next April that the building may be ready (dry and wholesome for its inmates) by October next, when school shall reopen.

The pro rata cost of one room for two girls (40 rooms in all,) will in round numbers be \$300. The larger rooms above referred to will cost from \$500 to \$1000. This is stated to meet a frequently expressed desire of doing some definite thing

The bricks will be made on the school grounds, by the Farm Department; the lumber sawed out of logs rafted from North Carolina, and the sash doors and blinds will be made in the "Huntington Industrial Works," connected with the school. Each department is credited with a fair price for its products, which are charged in the estimate. The building will be economical.

The condition of women is the test of progress. The family is the unit of Christian civilization. What girls and mothers are, and mothers make the home. Shall we help the Indians to homes? Indian girls have been drudges, slaves. They are not so bright and responsive as the boys of that race. Is not an effort for them wise and timely?

Our experience with this people for nearly three years has been encouraging. Mentally they are quick; they learn our language readily. Teachers have often said "How could such people have been kept back so long." Morally they have given very little trouble. They are made with a sense of honor in them. Bodily they hold their own. The death-rate has been serious but not discouraging. The average health is now better than ever.

In field labor, at first unable to work without frequent rests, they became, in a couple of years, able to do continuous field labor. Mechanically they are superlatively good. They are intelligent, energetic, Indians, both girls and boys, work nicely but slowly. They cannot expect to compete successfully with those who have labored for generations. With a fair chance they can learn to take care of themselves. They are emphatically responsive to Christian teaching. No part of our work for them has been more encouraging than the religious. They are undemotional, but thoughtful, respectful of authority. Their own savage faith is not

Contributions for the building, to the amount of \$500.00 have been received. We are informed that the Ponca Committee of Boston, have collected about \$400.00 for this object.

The corner stone of this building should be laid next Anniversary day, Thursday, May 19th. 1881; we hope by the hand of President Garfield.

That occasion should mean hope for both our "despised races;" better chances for the Negro, as well as for the Indian, for the corner stone of the "Stone Industrial Building," for colored girls, (from Mrs. Stone's gift of \$20,000.) will, we trust be laid too.

Will the recent enthusiasm for Indian rights amount to twenty thousand dollars for their elevation?

Asking for anything in the line of human progress and of God's work is right. The proposed building is in this line.

SHALL IT BE DONE?

WE have received the Annual Report of Dr. Thomas Pollard, Commissioner of Agriculture, of Virginia; an interesting document of 166 pages. It is a full and most interesting discussion of the diversified crops of the State, is replete with information, at first hand from farmers and cannot but stimulate the agricultural interest of this State

The growth of a live agricultural and educational literature in this and other Southern states, is a sign of the times, and is an index of that better thinking of which political papers do not give the best indications, and is apparent to all who come personally in contact with the people.

There is not ground for a rose-colored view of the South, as a whole, for it is terribly backward,\* and the blight from Slavery and war is far from removed, but the outlook is good, the *direction* is right.

Mrs. Elizabeth L. Comstock, who has done so much for the Colored Refugee of Kansas, upon returning to Topeka, after a seven months absence, states that she left about 30,000 refugees, many of them struggling in poverty, and found that the number had increased to over 60,000; 10,000 of whom had scattered to other states.

All have been quiet and orderly, grateful for work, but thousands were still destitute. Large companies would come one time, to a place, as for instance: "15 came East last week in great destitution. Many barefoot except rags wrapped and tied around their feet. We saw many more arrivals in Colleyville, whose condition beggars description. There was not a whole garment among them. Some had their tattered pants, coats and shoes, tied on with string and strips of muslin. Great destitution in neighboring towns."

A large number have obtained home but need such needs as the common comforts.

When Sandwich Islands' planters will give free passages for such sufferers to their delightful land, offer good wages, and fair treatment, and equal rights to all, it is a pity that an exodus to Hawaii is not instituted. Women and children are the most welcome as men, to replace a decimated population.

In a letter from Paris to the N. Y. Evening Post its well known correspondent Edward King says:

The Senate is expected to accept the excellent bill in favor of compulsory education which the Chamber of Deputies has passed. There will be a sharp opposition in the Upper House, but the supporters of the bill are in the majority. This is justly considered the most important measure undertaken since the establishment of the Republic, and its immediate results will be far-reaching and salutary. Six hundred thousand children now deprived of school privileges will be brought under the birth of the instructor as soon as the bill becomes a law.

There are over six hundred thousand in the South to-day deprived of instruction by no fault of theirs, for whom our government has only to say, "I will be light," to assure their enlightenment.

ment. Congress is bound to preserve a republican form of government for the people of the different states. To assure not only the form, but the spirit of republicanism, it should after seventeen years of delay, at once provide for the most vital need of those whom it professes to cherish as its wards.

AN English woman living as a servant in New York, gives from her earnings seventy dollars a year for the help of two colored girls at Hampton. From her connection with a Sunday School in New York she heard of this work and gives this amount entirely of her own accord.

—According to the *Harvard Register* not more than one-third of those who have received aid from the "Loan Fund" for students needing help, have ever repaid the money thus borrowed. Each beneficiary signs a note payable on demand without interest. The trustees do not present these notes for payment, but the *Register* remarks that the obligation of students to pay them is none the less on that account.

Hampton students have paid as follows:

The graduates and ex-students of	1876,	36	per cent
" " " "	1877,	35	" "
" " " "	1878,	21	" "
" " " "	1879,	26	" "

They leave school more or less in debt, for we strain a point especially during the last year for the sake of seeing them through. They can teach for six months at \$25.00 or \$30.00 per month, out of which comes board and clothes &c. The rest is for their living. They are not the majority having none to help them. Times have been very bad. They pay up gradually. Those who left in 1878 will probably pay 50 to 60 per cent. and those who left in 1879, even less. I am expected to pay 70 or 75 per cent. I have not yet made up my mind in respect to an annual statement is sent to each one who can be reached. Some have been unable to pay in full or at all. Much more would be paid if I did it make a proper effort. Their ideas are not as a rule very clear as to paying, especially the older ones. I have been a little discouraged spirit in this respect. Payment on account are constantly dropping in.

A gentleman of Hartford Conn, informed us that during the past ten years he had advanced some three thousand dollars to young white men for their education, taking notes for about half the amount, having only an understanding about the rest, and on one occasion lent a hundred dollars to a Negro boy to go to Berea College, Ky. The only man who paid him back was the Negro. There is a temptation to the average man to neglect and

Delts are debts and should be paid if for the good of the debtor alone. It is part of his education. The money could be used to help some other needy man. There is by this an indirect injury on both sides. There are no doubt disgruntled men who don't say much but think a good deal over an unsatisfactory experience in lending money to students. Had their experience been otherwise the Colleges might have been profited through gifts inspired by a better appreciation of the results of education.

A delegation of Alabama, colored Republicans paid their respects to General Garfield, at the residence of William Edwards, in Cleveland, O., last evening where he was entertained at a dinner party. The General responded as follows:

[illegible]

General Garfield tells the Negro, "It is in your hands to take away that argument absolutely; not in a day, but to take it away from your children, so that by their intelligence, &c., &c." We do not know what the colored visitors replied. They might have begged the President-elect to use all his influence to put the power into their hands to take the argument away, for an impoverished South, and the overburdened charity of the North, could do little towards it. The Negro unaided, does not have it in his power to remove that argument. Government has a duty to do this matter, but so far from doing what the colored statesman would have Garfield do what he can through a liberal government policy to lessen the danger to the country from the ignorant voters of the South.

Nothing has tempted more seriously to retard the advancement of Virginia in a course of prosperity, than the disposition of our settler intelligent young men to migrate to other States. They are more precious to Virginia than silver and gold.

And this has been the process by which Virginia and the South has been depopulated. No foreign emigrants came to her shores, and her own heat blood ran away from slavery to the free West. Nor were these blighting effects of slavery proclaimed only by her Revolutionary Fathers. They were again proclaimed by the leading men in the Virginia Constitutional Convention of 1829; and among others, by Mr. Charles J. Falmek, of Martinsburg, who still survives.

Colonel A. K. McClure, Editor of the

did not go there. The civilization outfit was there they grew up was the very converse of the civilization then in the South. In the one sect labor was honorable; in the other it was dishonorable. To be a workman was to be a slave. All this has been changed. The pursuit of commerce and trade, which in the past carried a social stigma with it, is now the pathway to distinction. In fact, the South is endeavoring to convert itself as rapidly as possible into a nation of mercenary traders, close-fisted farmers and 'greasy mechanics.' The rattle and clatter of the factory are beginning to be heard

machines. We have already said, under the old system, manufactures could not flourish in the South, because of the character of our laboring population. Manufactures require educated and skilled labor, and the South is not yet possessing these indispensable qualities, could not be profitably employed, except in agriculture and the simpler processes of handicraft. The unmanageable and complicated machinery of manufactures is not introduced, and, consequently, the prejudice which existed in the Northern mind against "the peculiar institution" of the South, prevented the intelligent labor of the North from seeking employment in the South. The South is not yet educated labor—the labor which reaps the largest profit, by converting raw material, of little value, into costly finished goods. The cotton of the Southern States, for instance, was confined to States North of the Chesapeake. Meanwhile, in the production of cotton, wool, pig-iron, timber and other raw

Chief among the causes why Virginia lagged behind these and other States, was negro slavery. In the origin of this institution Virginia was no more at fault than the other colonies; and, indeed, her statesmen claimed

[illegible]

ON THE NEGRO AS A SOCIAL AND INDUSTRIAL FACT

Some of the negroes are leaving the South not because they are oppressed or outraged, but because they are anxious to better their condition. He is told that he can do better in the North, or East, or West than he can do here, and, being of a trusting, confiding nature, he is easily led and easily induced, he believes the representations that are made to him. But, except in some rare instances, the oppression of the black man in the South is not his fault. He is paid fair wages, and he has to work he cares to do. His work, however, is not his fault. He is not a success altogether in the field. He is not a success at least the present generation is not a success.

THE DEFENSE IMPROVED

in the factory. He has not the steady application that is needed around machinery. If a season passes, he rushes to the window to see if a stranger goes into a factory where colored men are employed, the chances are ten to one that every one of them will forget all about what he is doing and stare at him until he leaves the place. The next generation may be better in this respect, but I have no hope for the present one. Hence it is that in nearly all the Southern factories, the persons employed are white. It is a curious fact that the abolition of slavery has had as great a beneficial effect upon the "poor whites" as it has had upon the blacks. Their condition has improved wonderfully, and in a few years they promise to become what white men everywhere ought to be—enlightened, intelligent and self-respecting. There is, however, one great evil so far as the negro is concerned, and it seems almost impossible to find a way to remedy or remove it. The negro is mercilessly cheated by a class of people who, as a rule, have gone down there from the North—I mean the small traders who make advances in provisions, clothing, seed, liquors, tobacco, &c., while the crops are ripening. Some of these small traders are so rapacious and unprincipled that when the account comes to be squared the negro is without a dollar. He finds himself in debt to the value of his little crop. The condition of affairs is only too, of course, in the case of the extremely thriftless and improvident. But it is, none the less, a great evil that the more thoughtful and considerate planters and legislators are endeavoring to eradicate in some way. The question, however, is full of difficulty, and it is hard to find a remedy. If a law could be framed to retain or punish these extortioners it would be passed in a minute, but the trouble is to hit upon a measure that will be effective. But the South should not be held responsible for this. If the negro lived in the North, or East, or West and a similar industrial condition of things existed, he would be robbed of his lost red cent, as he is in many cases in the South, and not a word would be said about it.

## THE NEGRO IN POLITICS.

"What about the negro politically?"

"The negro, politically, is on the lookout for himself. In a national election he is a republican, but as soon as he gets a man and a bale of cotton, he wants to keep them, and he has seen from bitter experience that the way to lose them, to have them stolen from him, is to restore negro ascendancy in the management of Southern State politics. He does not want to be robbed, taxed out of existence, and robbery and pillage on the greatest scale ever witnessed is the record that black republicanism rule in the South has left behind it.

As a rule, the negro is free free to vote in the Southern States. Four black democrats sit in the State Legislature of South Carolina from the city of Charleston. Has New York or Pennsylvania ever done as much for their colored population? There are black policemen in New Orleans swinging their clubs around the heads of the ex-planters and slave owners of Louisiana more frequently than they (the ex-planters) would perhaps care to tell.

That there are some districts in the South where a different order of things prevails, I admit—as, for instance, in some parts of Mississippi—but, as a rule, the negro in the South is as free, and a good deal freer, as we saw in the late election, to vote pretty much as he pleases, as they are in Pennsylvania. And he votes for his own interests—first, hat, and all the time. Negro rule and white republican rule mean to him plunder, a war of races, unrest, strife and the suspension of nearly all industry. Those who have some little property or a few hundred dollars in bank do not want to have it stolen from them, and they vote for those who they know will protect it.

"What are the prospects of building up a republicanism party in the South? What would be the result if General Garfield were to attempt it?"

"The way to make the South republican is to do it without their knowing it. Let him give it decent, respectable officials—I do not care and the South does not care whether they be black or white, republicans or democrats—and he will have taken the first great step in this direction. All that they want in the South is honest, fair government. Ex-Senator Bruce, of Mississippi, for instance, is acceptable to all classes in that State. An appointment such as that of Bruce to some important federal position would satisfy all parties of every shade of opinion there. But if he takes the black and white adventurers down there and installs them in power, he will retard and delay republican growth and development in the South. The South wants her affairs, federal and State, to be honestly administered. If General Garfield will do all he can in this direction, he will inevitably win supporters for his administration there, and if ever he should get into a conflict with the extreme radical wing or any other wing of his own party, they will sustain and hold up his hands."

## THE BREAK UP OF PARTIES.

"How will the break up of parties in the

South affect the negro and the South itself?"

"In my opinion disastrously. I had this idea before I went South, and what I saw and heard there from men of all parties confirms me in this view. Even the colored men themselves deplore it. A colored committee that I visited in New Orleans expressed the opinion that it would be the greatest calamity that could befall the colored people in the South. See to what a pass it has brought Virginia to the verge of repudiation. If, developing white men—merchants, manufacturers, editors of newspapers, as well as politicians—we divide among ourselves and call in the negro, easily influenced by demagogues, as umpire, it will be the worst disaster that has ever befallen us, the war hardly excepted."

This break up of parties, now well underway, will so far as it goes, give to the negro the balance of power. He will use his power as any ignorant man will use it. He will get all he can for his vote. The black man's ignorance is as dangerous as that of any other man.

Those interested in the nation's credit should be equally interested in the enlightenment of the colored race.

Well disposed as the freedmen are, their position as arbiters of State and national questions is full of danger.

When some day, the price of U. S. bonds may fall because of short-sighted legislation, caused, in part at least, by ignorance for which the ex-slaves are not responsible, there will be a better appreciation of the need of their improvement.

Our *Carthago est delenda* is "THE NEGRO MUST BE EDUCATED."

## THE CLEMENT ATTACHMENT.

The following extract from a private letter from a gentleman in North Carolina will interest those who are watching the development of Southern Industries.

The Clement Attachment is a grand success, and I believe the day is not far distant when it will work a revolution in the manufacture of cotton yarns. When this time, the South will become prosperous. Our little mill here was started nearly two years ago, and was an experiment with us. We had to labor under many disadvantages. None of us knew anything about the business. We used unskilled labor, not one of our hands ever saw a cotton mill before. We have succeeded beyond our expectations. Having no experience in the business, our mill cost more than it ought to have cost. It cost as it now stands, \$15,000. We employ 16 hands, most of them girls. The capacity of our mill is 300 lbs. to 125 yards per day. Half of this we convert into ply twist. Our mill is now paying 35 per cent. on the investment. One Clement Attachment and all necessary spinning machinery for a mill with a capacity of 150 to 160 lbs. of 8 to 10s yarn per day would cost you about \$3000. It would require 8 H. P. to run it, and would give output of 8 operatives. The average yield of yarn by this process is 312 lbs. of yarn, which we sell to the paper mills. Now the Clement Attachment cannot be used where seed cotton cannot be had. It will not work ginned or baled cotton, but must have seed cotton as it comes from the field, and with four operations we convert it into yarn. The picking, motting, cleaning and carding, is all done with one operation. The attachment is thirty-six inches long, eighteen inches square, and sits on the back of the carding machine. In place of the leekers and feed rolls, and the seed cotton is fed direct to it by means of a feed board, and the fiber is gently removed from the seed without being cut or broken, and fresh with the oil, that nature furnishes it with from the seed, and cleaned and passed to the cord cylinder, and is carded, and is never allowed to fly or leave the machine until it passes off in a continuous roll or silver and falls into a revolving can.

Public schools in Tennessee, during 1880, numbered 5,522, against 3,942 in 1875. In 1880 the teachers employed numbered 5,954, against 4,210 in 1875. In Missouri last year 482,989 of the children attended school, leaving 240,495 who received no schooling.

A letter from San Carlos Agency, Arizona, dated Jan. 13th, signed by the Rev. Sheldon Jackson says,

"I hope to reach Hampton with twenty Indians the last of the first week in February."

Twelve of them are to replace those sent home from here for sickness. The

rest are over and above what can well be provided for, but will be received because of their need of education, the wrong done their people, and our faith in the readiness of their friends to sustain us.

If people shall show a tithe of the interest in helping Indians that they have done in hearing of their wrongs, the practical remedies and redress that are being provided will not lack the help they need.

Our Indian wars from 1865 to 1879 are estimated to have cost the government \$32,680,000. Five millions a year to kill Indians. But when it is represented that educating one of them costs considerably more than \$150.00 a year, (the amount now paid by government in the East to keep them under theoretical and practical instruction the entire twelve months,) and the Secretary of the Interior declares that the government ought not to tax private charity for such work, there is as yet nothing done about it. History is likely to show that Congress tried every possible expedient with the red and black wards of the nation before it made attempts to improve them by adequate educational measures.

## A FRIEND GONE.

In the recent sudden death of Mr. Alexander Hyde of Lee, Mass., who dropped dead in the street in Boston while attending the Legislature, of which he was a member, Hampton Institute has lost a valued friend and trustee, and the community in which he lived, one of its most active and honored citizens. A man of thorough uprightness of character and kindness of nature, of practical disposition and public spirit, he will be missed in many departments of life. From his beautiful farm in Berkshire County, he wrote for many years the agricultural editorials of the Springfield Republican and New York Times. For thirty years of his life he was a practical teacher. Both lines of thought and work were continued in his public life and recognized by the public. He was long identified with the management of the public schools in his town, which acknowledges his great indebtedness to him in the advancement of its educational interests. Shortly before his death he was offered the presidency of the Massachusetts Agricultural college, and in the Legislature of his state, was on the committees both of Agriculture and Education.

His warm interest in the causes of philanthropy, especially for the freedmen and the Indians, brought him into active sympathy with the work at Hampton and Carlisle. To the latter school he gave a daughter, of like mind with himself, as teacher. In the former he has been for many years a working trustee and friend. For the two summers that the Hampton Indian students have spent among the farmers in Berkshire, Mr. Hyde has kindly taken upon himself the general supervision of all; a supervision not merely business-like but fatherly. One who died at his house lies buried in his family burial place. Those who may spend next summer in Berkshire will sadly miss the kind friend who looked after their interests and gathered them all together every Sunday in his own delightful home, to teach them and cheer their stranger hearts.

For that home, where, after all, the cloud rests heaviest, Hampton has a tender, earnest sympathy.

DEATH.—At his home in Indian Town, Va. December 29, of consumption, Wm. R. Turner, a student of Hampton Institute, who would have graduated with the class of '80, if his health had not failed before the close of the year. He died in the faith of Christ and the hope of eternal life. His excellent character and gentle, lovable disposition made him many friends who will sincerely regret their loss, both for their own sakes and that of the field in which he hoped to labor.

MARRIED.—Jan. 11th in Bethesda chapel, by Rev. Richard Tolman, assisted by Rev. H. B. Frisell, Sarah A. Peterson to Charles H. Van Vliet, both graduates of Hampton Institute and residents of the place.

There have been already quite a number of marriages between Hampton graduates, and to all this month, Hampton sends a cordial "Bless you my children." But the present occasion seems especially near to us and calls for special rejoicings, as the first to occur upon our own grounds, and between young people who, ever since their graduation, have for years been in the employment of the Normal School, in places of responsibility which they have well filled. After the marriage ceremony in the little church, conspicuously shown upon by the chary winter sun, a pleasant reception was given by Mr. Howe, Normal School farm manager, and his wife, for his right-hand man and his bride, who received the congratulations of many friends, with some pretty and useful tokens of their esteem, and then, escorted by a merry party of former schoolmates, drove out under the moonlight to their new home, the school's Shellbark farm. On this fine farm, of 339 acres, the bridegroom will have the responsible position of superintendent, and the bride settle down in a pleasant home, not only to the care of ducks and chickens and all the duties of a farmer's wife, but to the charge of the night school for the farm students. May all joy and success go with them.

MARRIED.—Jan. 6th, in Washington, D. C. Mattie A. Parker, to Richard H. Pantlery, of Mill Creek, near Hampton.

The bridegroom is a graduate of Hampton Normal School of the class of '76, and is happy, not only in the acquisition of a wife, but in the possession of a pleasant and comfortable home for her, won all by his own industry and ability, since his graduation.

With hearty congratulations, Hampton wishes that prosperity may continue to attend them as it bids fair to, with so good a start on the right road in life.

Mr. Herbert A. Chenoweth, class of '79 (the only white young man who has graduated from the Hampton School), is now manager of the next to the largest poultry yard in America, where artificial hatching is carried on, and where the largest incubator is used; its capacity being 1000 eggs at a time.

After assisting for a year, he has been put in charge of this establishment, which is on a fine Pennsylvania farm, not very far from Philadelphia.

The proprietor of the place states that the experiment, so far, has satisfactorily proven. First, that eggs can be hatched in large quantities with less percentage of loss, artificially, than under the hen.

Second, that the young chicks can be brooded and cared for in large numbers, with fewer casualties in proportion than when *maternized* by the hen, and with absolutely no epidemic. Third, that upon reaching maturity they are as vigorous in all respects as those when raised by the natural method, with a tendency to improvement."

## THE OLD DOMINION STEAMSHIP COMPANY.

The Normal School has, from the first, received from this well managed and successful company attentions and favors which it is a privilege as well as a pleasure to acknowledge. The many courtesies which our officers and teachers have received both from Capt. Schermerhorn of the Accomack, and also from the officers of the New York steamers, are fully appreciated and gratefully remembered. The Company has our best wishes for its continued success. M.

A LIBERAL OFFER.—Having arranged clubbing terms with the *North American Review*, we are enabled to offer that foremost of American periodicals, together with the *Southern Workman* at the low price of \$1.50 per year. The *Review* is the organ of the best minds of America, nearly every writer of note in the country being a contributor to it. It discusses the subjects that are most prominent in the public thought at the time, and presents both sides of all important questions. It combines, to a considerable extent, the thoroughness of the *Cyclopædia* with the timeliness of the daily paper. It should be read by the professional man, the student, the merchant, the manufacturer, the farmer, in fact, by every one who wishes to form intelligent opinions on the events of the day.

STANDARD OF THE ENGLISH LANGUAGE.—Webster's Unabridged Dictionary is commended, the English World over, for its excellence. Wherever you find English speaking people there you find Webster. English has produced nothing equal to it, and in America it is the standard. The illustrations are a marvel for accuracy and number, and it is a treat just to be able to look through it. The edition has 1,023 pages, 3,000 engravings and four pages colored plates. Its able and comprehensive definitions are a library in themselves—a thesaurus of unbounded treasures. —Our Church Paper, New Market, Virginia.

## INCIDENTS OF INDIAN LIFE.

## AT HAMPTON.

Two years schooling makes the Indians so much like other people that it is hard to find anything interesting to write. Here the writer has been patiently waiting for the last three weeks for some genuine Indian incident to turn up, but in spite of all, the Indians seem to leave off their peculiarities and determined to give the anxious scribe nothing to write. They dress as fine as anyone else, if they can get the clothes, speak some of Webster's and Clay's English, eat like other people, and most of them study without compulsion.

## A CHRISTMAS DINNER.

It is the custom of the students here to form themselves into clubs for Christmas dinners. This Christmas, the Indian boys came to the conclusion that they had been behind in this matter long enough! Several weeks before Christmas, they began to talk about a Christmas dinner. When the time came, a meeting was held and each one agreed to furnish his proportion of the money required. Just how to begin and make proper arrangements for the party was quite embarrassing to them, and some assistance was required. The first perplexing question was whether or not they should invite the girls. Some readily saw the propriety of this, but others resisted it with all their might; they could not see why they should spend their money for food that the girls would eat.

After the matter had been discussed by them, it was decided by the teachers that the girls should pay their proportion of the money. The next question that troubled the brains of the gallant braves was how to arrange matters so that each boy could accompany his particular lady friend. It was a question of etiquette with them whether the boy should ask the girl or the girl the boy, for this privilege. To decide matters some-what, word came from the authorities at the girls' quarters, that the girls would not be permitted to sit at the boys' table unless by invitation from the boys. The boys now saw their position. How to comply with this condition did not reach their brains till late in the night before the party was to come off. They called a hasty meeting and each boy's name was set opposite the girl's he wished to accompany. In this way all the girls were chosen except those that were pronounced too small or too something else. The small proportion of girls to boys left a good many poor fellows to plod their way alone.

The next day, the boys chosen to attend the table were on hand and did their parts well. With some assistance their table was made to compare favorably with the more expensive ones. They took great pride in decorating and trimming their table. "Dakota Club" in large evergreen letters, made by two of the boys, marked it. Every thing being ready, the bell gave the signal for the different clubs to march into the dining room. Although some pins had been taken to couple the ladies and gentlemen so that they would march in ead ad together, success did not attend this part of the programme. For when they saw the good things on the table, there was a general haste to find seats, and in many instances, the gentlemen found himself seated at one end of the table and the ladies at the other, or her on one side and himself on the other. One or two gentlemen got seats for themselves and left their ladies running around the table in search of a vacant chair.

Notwithstanding these little mistakes, they did full justice to what was on the table when they got at it. It was a very pleasant occasion to them, and when next Christmas finds most of them in their western homes they will pleasantly turn their thoughts to their "Dakota Club" at Hampton.

B. T. W.

## ADMITTED TO THE CHURCH.

The communion service of January in the school chapel (Bethesda) was marked with special interest by the admission to the church of fourteen students, eight of whom were Indians; three girls and five boys: one from Indian Territory, the rest from Dakota. They have been members of the school between two and three years, most of them have long desired to profess their Christian faith and purpose. They have been carefully watched, and it is believed that they entered into the simple service with full comprehension of their action and in sincerity of heart. Three more, of whom the same hopes are entertained, were on a subsequent Sunday, baptized in St. John's Episcopal church in Hampton.

THE Chinese have a capital illustration of the power of perseverance. One of their countrymen, who had been making strenuous efforts to acquire literary education, discouraged by difficulties, at last gave up his book in despair. As he returned to manual employment, he saw a woman rubbing a browbar

on a stone. On inquiring the reason, she replied that she was in want of a needle, and thought she would rub down the browbar till she got it small enough. Her patience provoked him to make another trial, and he succeeded in obtaining the rank of one of the first three in the empire.

## THE STUDY OF THE POET LONGFELLOW

On the 27th day of this month, the earliest acknowledged and most widely known of our chief American poets, will see his seventy-fourth birthday. Like Mr. Gladstone, Mr. Longfellow is enjoying the fruits of his long labors without having ceased from them, in a green old age. May he long continue to.

He is the poet of the people; his pure and flowing verse does not have to be read twice to be understood and loved. Himself the finest of translators of foreign poetry, his own has been translated into different languages, and finds its way to all hearts. Cardinal Wiseman, of England, in a lecture on the "Home Education of the Poor," after remarking that England has no poet who is to its working classes what Goethe is to those of Germany, said: "There is one writer who approaches as near to any other to this standard, and he has already gained such a hold on our hearts that it is almost unnecessary for me to mention his name. Our hemisphere cannot claim the honor of having brought him forth, but he still belongs to us, for his works have become as household words, wherever the Eng-

Then the forms of the departed  
Water at the open door?  
The beloved, the true-hearted,  
Come to visit him once more."

With these does not the gentle spirit of  
Evangeline sometimes glide in with the long-  
ing in her eyes, and gypsy Frisco's dance in  
the flickering fire-light, and the old hearth  
ring with fine echoes of Minnehaha's musical  
laughter? Through the windows of this  
room.

"Like a fair lady at her casement, shines  
The evening star, the star of love and rest."

And there he sits writing and waiting in the  
twilight, when:

"Between the dark and the daylight  
When night is beginning to lower,  
Comes a pause in the day's occupation  
That is known as the children's hour."

We can almost hear in the chamber above  
him "the patter of little feet." We can al-  
most see the "three doors left unguarded,  
where they enter his "castle wall."

"Grave Alice and laughing Allegra  
And Edith with golden hair."

"They climb up into my turret  
O'er the arms and back of my chair:  
If I try to escape they surround me,  
They seem to be everywhere."

They almost devour me with kisses,  
Their arms about me entwine  
Till I think of the Bishop of Bingen  
In his Mouse Tower on the Rhine."

MR. LONGFELLOW'S STUDY.

lish language is spoken. And whether we are charmed by his imagery, or soothed by his melodious versification, or elevated by the high moral teachings of his pure muse, or follow with sympathetic hearts the wanderings of Evangeline, I am sure that all who hear my voice, will join with me in the tribute I desire to pay to the genius of Longfellow."

Mr. Scribner lends us a look into the poet's study in the old home in Cambridge,--once the abode of Washington--where he has lived so long and written most of his poems. If, as he sings:

"All homages wherein men have lived  
and died,  
Are haunted houses,"

How must this ancient home that will be doubly famed in history, be thronged with patriotic visions and poet dreams.

Here the Father of his country gravely pondered the gathering troubles of the colonies, whose feeble but brave banded army, he had come to organize.

"Up and down these echoing stairs,  
Heavy with the weight of cares,  
Sounded his majestic tread:

Yes, within this very room,  
Sat he in those hours of gloom,  
Weary both in heart and head."

And in this room now sits the gray haired poet beside his chimney's "Golden Milestone," listening to the solemn beat of the "Old Clock on the stairs."

"When the hours of day are numbered,  
And the voices of the Night  
Wake the better soul, that slumbered;

To a holy, calm delight,  
Ere the evening lamps are lighted,  
And like phantoms grim and tall,  
Shadows from the stifled fire-light  
Dance upon the parlor wall."

It is pleasant to have a look into the home and home life of this great poet who is so an with his home that he liko his own "Oliver Basselin" it will be said of him that

"--the poet's memory here  
Of the landscape makes a part:  
Like the river, swift and clear,  
Flows his song through many a heart."

## OUR LETTER FROM DAKOTA.

FOOT BENNETT, D. T., Nov. 17, 1880.

Editor of Workman:--Daniel Chantay Waccheyah, late of Hampton, is a leading spirit in a boarding school for Indian boys, which has been recently established at this Agency. A small two story frame building located between the agency store-house, accommodates twenty boys, averaging ten years of age. Thoroughly cleaned and dressed neatly, they present a very prepossessing appearance. A stranger could scarcely believe them to be the same boys, who were running about in breach cloth and blanket, but a short week ago.

They have been, so far, orderly and industrious, though several here required constant watching to keep them from running away. The Indians are thoroughly interested, and several have gone so far as to pursue their boys for leaving school, which is an unheard of proceeding, heretofore, and can be set down as convincing proof of their interest in the educational efforts being put forth in the behalf of their children.

And the voices of the Night  
Wake the better soul, that slumbered;  
To a holy, calm delight,  
Ere the evening lamps are lighted,  
And like phantoms grim and tall,  
Shadows from the stifled fire-light  
Dance upon the parlor wall."

sible. There are two hundred little fellows at this Agency, who ought to be in school, and the school should be an industrial one, well supplied with good teachers and the necessary paraphernalia. A bathing house and gymnasium are among the first requisites. The harvest workers should be placed in the field and the work pushed forward. The outlook is encouraging, and I believe that a goodly portion of the Indian race may be reclaimed.

If the Government could be induced to establish Normal, Agricultural and Industrial schools at the several Agencies along the Mission next summer, an opening would be made for the boys and girls, who return home from Hampton next year.

Our Indians are specially delighted with the issue of unity clothing this season, the miser suits and Kentucky jeans are exactly adapted to their wants.

Very respectfully, your oht. servant,  
GEORGE L. R. BROWN,  
Lieut. 11th Infantry.

## GOING TO KANSAS.

But few of the Hampton graduates have joined the exodus, and none from any necessity of hardships that we know of. The young man who writes as follows of his plane is going, as is best and safest for me to go, with a definite prospect before him and a desire to work where his work is needed.

VA., July 13, 1880.

Miss D.,

Dear Friend: Your kind letter of date May 28, was duly received. Though my illness was supposed fatal, by some, I am glad to say that I have improved wonderfully. I enjoy better health, more than I have for three years.

I learned that my school is going on yet, it will not close until some time in August. I received two months from a northern friend, I expected it when I left, but did not know that he would contribute after I left. It is probably so about me working too hard but you know I left Hampton, with the intention of hard work, I taught my school with all the power I had, and tried to get all the knowledge I could.

Besides this, I put myself in communication with as many who were interested in school affairs as possible, and by so doing I had my hands full all the time. Many times when the clock struck twelve and one, I could be found reading or writing. I sit up late now, but I get my sleep in the morning.

I am undecided about my winter's work. I am wanted at G., and I am wanted by a friend to go to Kansas, to teach among the refugees. I have refused an offer to teach 30 miles from home; but I am undecided after all. I have, on condition, agreed to go to K. It looks like a "wild goose chase," yet I have a desire to work where it is most needed. If I should not go to K, I will teach my school at G. Since leaving Hampton, I have become extremely fond of teaching.

I have some hope of going further with my own stock of knowledge. I want by and by to go to some school for two or three years more.

I hope to have the pleasure of hearing from you soon,

Yours truly, D.

# SKETCHES OF MISSION LIFE.

No. II.

This month Mrs. Armstrong's narrative, which is expected to continue through seven or eight numbers, gives way to the following letter from the Rev. Dwight Baldwin, a veteran Hawaiian missionary. Dr. Baldwin has been forty years stationed at the beautiful seaport town of Lahaina, on the front of which roll long lines of breakers, through which all traffic has to go. Many a capsized sea has been the consequence; and the Doctor learned to realize more than most men the advantages of swimming. To a native a ducking was only a slight inconvenience, but it was far otherwise to a white man, who had not only to meet the dangers of an unaccustomed element, but possibly the jaws of the dreaded ground shark, that lay on his back under the breakers, in the path of the boatmen, waiting for victims, rather avoiding the Kamales who would fight him under water, and preferring decidedly the favor of the foreigner.

## A PRAYER MEETING IN THE WATER, FORTY YEARS AGO.

Nothing strikes the visitor from a civilized land as he comes to the sandy shores of Hawaii, more than to see how much at home in the water are all classes of their population, from the highest to the lowest. Men, women, and children seem to enjoy their gambols in the sea, about as much as the sporting porpoises or dolphins. I have seen boys, in some of our river towns, in America, very fearless and expert in the water, as the warm season came round. But never till I came to this land, had I seen a troop of boys, one after another, in quick succession, leaping from a point of rock forty or fifty feet, first into the deep. Christian civilization has civilized the sexes, in these ocean sports, but the skill of Hawaiian women in the art of swimming is not, in general, inferior to that of the men. Indeed it is notorious, that the young women, somewhat fleshy, do not yield to the death chill of the water so soon as does the harder muscle of the men.

In one of our channels, 16 miles wide, a boat became disabled and sank in the middle of the channel, so hope left any one but in swimming. Of the sixteen souls in the boat, only half reached the shore. An old man, cared for all the way by a young woman, his daughter, had reached the land as he thought, but died while wading in shallow water to get on dry ground. His loving daughter had not only saved him from the deep, but had also taken good care of her careless clothing.

## THE LIL PATED BEOLA.

When I first landed at Honolulu with other missionaries in June 1831, a meeting of the Hawaiian Mission soon assigned to each of us his post of labor. The station assigned to me was Waimea, an inland place on the island of Hawaii, of about 2,000 feet elevation. It was a cold and stormy region. The severity of the climate, and the great exposure in traveling to minister to the needs of a few of four or five mission stations, was too much for my constitution, and brought on a fever and dangerous inflammation of the lungs. I was obliged to remove from this post to the milder air of Lahaina on the west end of Maui. I had, however, been at Waimea three years and a half, and in the first year of my residence there, had gathered a little church of eight members. Manne was decidedly the leading member of the little church, a man of medium size and then about thirty years of age; his wife, Kaulawinehine, might be five years younger; both of sound constitution.

The Koola was a small Hawaiian schooner of forty or fifty tons, and about fifty feet long. It belonged to Gov. Adams of Hawaii, and he had chartered it for one or two months, to a foreigner named Thompson, who seems to have been a driving, headstrong man, who had had the schooner already five times aground in going in and out of Honolulu harbor. This frequent grounding of the vessel had undoubtedly strained her, and prepared her for her unfortunate end.

On the ninth of May 1840, the schooner Koola arrived at Lahaina, where vessels bound for Hawaii generally touched. Our friends Manne and his wife had then been visiting friends in Lahaina for a week. They had called several times upon us; we were much interested in their appearance. Manne especially seemed eager to religious things, seemed of humble and tender hearted, which led me preparing him for a translation to a better world. On that day, Saturday, late in the afternoon, May 9th, 1840, they both embarked on board the Koola, bound to Kawaihee, Hawaii, on their way home. They soon found they were on board a leaky vessel, which they knew from the frequent rattling of the pumps.

In just one week from Manne and his wife's sailing on the Koola, almost the same hour of the day, Saturday May 16th, as I returned

from visiting in Lahaina, to my house, the first sounds I heard were, "Koola is wrecked; Manne is lost, his wife is now at the Governor's house half a mile distant." In my haste to know the whole, not knowing what she had gone through or endured, I sent a man to call her to come to me immediately. She was a beautiful woman, but when I met her, her face was so blistered and perished by the salt water and the sun, that I should not have known that I had ever seen her before, but her mind was fully awake to all that had passed. And I soon drew from her the following narrative.

## A THUNDERING STORY.

After going on board the schooner, Saturday May 9th, they learned so much of her leakings, that they wished ourselves back on land, but there was no retreating, we sailed slowly that night, and on the Sabbath found themselves in the midst of the channel between Maui and Hawaii. The trade winds were very strong; they rush through all the channels on the islands with peculiar force; the sea was rough, the waves were high. Of course the launches of the vessel were very heavy, so heavy the young men say, that some of the stone ballast rolled over to leeward.

They put it back again, but soon afterwards two barrels of molasses and a cask of water but poorly stacked up, rolled against the lee side of the vessel. This was the great and fatal accident to the vessel, and caused her to split open from the stern down to the foremast. She plunged at once, head first into the ocean, and as she went down, the stern was the last part which was in sight, and all the thirty-six souls on board were, in a moment, about in the raging waves, except two or three who were asleep in the hold, and had not time to get out.

From the deck of the vessel, before she sank, Hawaii was in sight, perhaps not more than five miles distant, and we judge that Kaulawinehine was full thirty miles away to the north-west. Now our friend Manne, who had attended morning prayers with the ship's company, and conducted Sabbath services in the forenoon, called them all around him to the water and gave them good counsel. He said to them, "Our vessel has left us, and there is no one that can help us but God only." He prayed with them and commended them to their heavenly Father. He then told them there was no hope of reaching any other land except Kahoohalawe, because a strong current was running from Hawaii towards that island. After he had given them all the advice he could, he then exhorted them every one to make what efforts he could, (native never swim against the current.)

Of the mass of this devoted company, we know nothing. The wife of the Capt. Thompson, a young Hawaiian, had got her husband, who could not swim, on one of the long sweeps of the vessel, and had started for Kahoohalawe. He died, child to death. Sabbath evening. She left him and soon landed with the long oar. Two young men belonging to the vessel, brothers perhaps, one with the water bucket, and his little brother on his back, without any thing to swim with, went on the same course. The little boy died that night. The two young men belonging to the vessel landed the same evening at Kahoohalawe. They belonged to Lahaina, and were acquainted with Kahoohalawe.

## A LONG SWIM FOR LIFE.

Let us now turn our attention to Manne and his wife. They had each a large "Hingham bucket." They threw away the clothes they contained, except a few which they tied around them, and then started on their watery journey. During the Sabbath, they had three young men near them, but all were missing before morning, perhaps by going in different directions. Mrs. Thompson and the two young men before mentioned were all that escaped alive, except the wife of Manne. Manne and his wife probably swam slower from having the buckets for buoy, and still these buckets were a help to keep them up; they were alone during most of their long swim, but seemed to have taken a good recreation.

They could see no land when they left the place of the wreck, the sea was rough, swam all the night and all next day. Monday afternoon, they were swimming bravely and had Kahoohalawe in full view.

## A DEVOTED WIFE.

It was not till the sun was getting low on Monday, that Manne grew weak and his limbs became. His wife's bucket came to pieces Monday morning, and she was left nothing. Now that Manne was weak and could not swim, they stopped. She looked him thoroughly (loani, is a Hawaiian practice of squeezing, rubbing, and pressing the body to restore circulation or relieve pain.) Manne was now relieved; they were now not much more than a mile from Kahoohalawe shore, and swam on, but Manne soon became weaker than before. He was now nearly dead, and his wife's next put her long hair into his hands; his hands slipped off separately, and when she could not rouse him even to such an effort, she told him he must pray. He could only utter a few

words of prayer. She then put his arms around her neck, held them with one hand, and started for the shore, which was now less than one quarter of a mile off, but she soon perceived that he was entirely dead, and she was obliged to leave him. She landed amongst the rocks and climbed upon the land, greatly exhausted of course, and her sight at first seemed to be gone, but by a little rest it returned, and she saw clearly. She was a native stranger there, and knew not where to go to find a little settlement on the island. What could the poor woman do, on a desolate island, 14 miles long and 6 broad. She would have perished, had there not been much rain, and she found water standing in the tops of some of the rocks, but she had more yet to endure. The sun went down as she came to land. On Tuesday, Wednesday and Thursday, she looked around in vain for inhabitants; had nothing to eat all that time. Friday morning, she discovered a patch of watermelons, and after eating one, she crawled under a hedge, so weak that she concluded she must die. Soon she heard a human voice, saying, "Somebody has been stealing watermelons." She had barely strength to utter "Owman-oo!" There were two fishermen who took her down to the settlement, and the next day, Saturday May 16th, she was taken in a canoe 25 miles to Lahaina, where I met her as before stated.

During all the time that Kaulawinehine was giving me the above narrative, a flood of tears was flowing over her face. I thought perhaps it was the effect of the salt water on her eyes, that made her weep so, and I asked her, "Why are you weeping so?" She replied, "Ever since I let my husband go, I have done nothing but weep." I was greatly struck at this last answer of hers; she was weeping for her husband. Had she not for the past week been in the very jaws of death herself, her whole life ebbing as it were to the last particle, and yet mourning so intensely for her husband, she seemed to forget herself, and there is no doubt that this love for husband nerved her up to all her efforts in the extreme peril of both their lives, to save him from a watery grave. She seemed to forget herself, Mr. Jarvis, in a Polynesian newspaper which had a mere sketch of the catastrophe, that it "contained a touching record of conjugal love," and that such faithfulness was something more than the mere instinct of savage life, it enabled its possessor if her skin was dark, and rendered her worthy of a page in the record of "noble deeds of women."

In reading the foregoing narrative, even if Hawaiians will find many things to wonder at. In the year, 50 or 57, the schooner Kaulawinehine went down. Not a soul survived to tell the story. Probably a greater number of Hawaiians would reach the shore when very distant, were it not for the hungry sharks, which abound in this part of the ocean.

We cannot be astonished that Mrs. Thompson and the two young Lahaina natives should have reached Kahoohalawe, thirty miles in six or eight hours, and the reason is not very plain to us, why Manne and his wife should have taken thirty hours to reach the same place, but I have noticed that those of a slender build shoot through the water like an arrow. The great wonder respecting these two is that, having been so long on the way, they should have lived to get there at all. What gives infinitely more interest to the story, than the long swim, is that a Hawaiian woman lately a heathen, after swimming thirty miles in one day and a quarter, with nothing to eat or drink, should follow up such persistent means to save her husband. Well may we say with Mr. Jarvis, such conjugal love and faithfulness have never been surpassed, even in a Christian land. My memory recalls many other escapes of native Hawaiians through their swimming powers, but none that seem more superhuman than the case of Manne and his wife.

I will give you hereafter, one or two more however that will excite not a little wonder, but not more wonder than the fact that so few Anglo-Saxons learn the art of swimming, and we sometimes wish that government would make a law requiring all to learn to swim. How else can an end be put to the burial of hundreds in the ocean, from a burning steamer, when the land is in sight, and not far distant.

## A FORTY MILE SWIM.

The first work of the early missionaries at these islands, was to preach the gospel and to establish schools in every district on the group. The Missionaries at Lahaina had the oversight of the islands, and in common with all the people to come together at the appointed place. He started in a canoe, with his wife, Kamaka, and two little boys. They met the wind; the sea was rough; the last-

ings of the canoe so far failed that the canoe filled with water. They were now about three miles from Lahaina shore and a strong current was moving them north towards Moku-kai. The Governor was obliged to jump overboard to lighten the canoe, while the woman and children remained in it, though full of water. The strength of the current made it hopeless to return to Maui, so he decided to push the water-logged canoe before him to Moku-kai on the north, full twenty miles from Lahaina. They had left Lahaina at nine in the morning. About four o'clock the evening, they could see by the lights of Moku-kai shore, that the land was not far off, and he said to his wife, that they would soon be all right. But soon, as always happens, the current turned the other way, and the lights on shore grew dim. His wife asked what hope there was left; the Governor replied there was only one hope left, that was Lani, far-away to the West, about the same distance as Lahaina, but they never could reach it with that heavy canoe. So they stopped and unlashed the urns and out-rigger of the canoe, and abandoned the canoe, while he bound together, with the coconut cord, the three pieces of light wood, he had left, and by this bundle got lashed together, Kamaka and the boys were supported, while her husband swam and pushed the whole before him. In the course of the night, the youngest boy began to fail, and soon it was perceived he was entirely dead. They must pray at a funeral, and so they stopped and he prayed, and then let the body go. Not long after, the child of the ocean had overcome the older boy, and he died the same as the younger. The same ceremony was performed, and then his body was abandoned to the deep. Now the two were left alone to take care of themselves as best they could. The labor still all devolved on the man, and he still seemed full of vigor for the work. It was broad daylight before they had reached the high and fearful surf of Lani, and it was quite a doubtful matter whether they would ever get through it, though Hawaiians will live in surf where a white man could not survive a minute. But his strength had not failed; they sailed on, he took it calmly and patiently, and soon found themselves inside of the surf, in comparative shallow water. But here they found a new difficulty. Both of them could swim but neither could use the limbs in wading, and they found the greatest difficulty in crawling along the bottom till they reached the shore, and placed themselves on the dry sand, beyond the reach of the tide. It was judged that they landed about nine in the morning, full twenty-four hours from the time they left Lahaina, and both fell into a profound sleep.

The day of examination came. Mr. Richards and the princes, on a high double canoe, such as only high chiefs possessed, went across the channel to Lani, but on arriving, were astonished that no notice had been given to the schools, nor any thing seen of the Governor and his family. Two runners were started immediately, one to the South to traverse the shore, the other to the North. The latter found the two sleepers on the sand, so overcome with sleep that it was no easy matter to bring them to consciousness. A little extra care and feeding, however, and all was right.

The Governor lived many years after, and appeared somewhat aged. His wife outlived him and never appeared the worse for such a dreadful trial. D. B.

## INCREASE OF RAILWAYS.

Although it is but little over half a century since the first railways worked by steam were opened (between Darlington and Stockton, in England, September 27, 1825, and between Manchester and Liverpool, September 15, 1825), there are lines of railways in the five divisions of the earth which cost, in round numbers, \$16,000,000,000, and which would, according to Baron de Kail, a statistician, reach eight times round the globe. Alluding to railway accidents, he says that in France, previous to the existence of railways, there was one passenger in every 333,000 killed and one out of every 30,000 wounded; whereas upon railways there between 1838 and 1875, there was but one in 5,778,800 killed, and one in 580,450 wounded. Railway travelling in England is found to be attended with greater risk than in any other country in Europe. The Baron observes that if a person were to live continually in a railway carriage, and spend all his time in railway travelling the chances in favor of his dying from a railway accident would not occur until he was 900 years old.

If life be a battle, how mad must he be who fails to arm himself for the contest! If life be a storm, how foolish must he who sleeps while his bark is driven among towering waters! If life be a pilgrimage, how unwise is he who strays from the right road, nor seeks to return till the twilight shadows gather around his pathway!

## SCHOLARSHIP LETTERS.

As is known perhaps to most of our regular readers, the students at Hampton are all required, once a year, to write a paper of acknowledgment, with some account of their life, or experience in school or in vacation, to be sent to those of the school's friends who give a seventy-dollar donation for the education of a pupil here. Such a donation is called a scholarship, and meets the estimated cost of a year's schooling for worthy students who pay their own way for the rest, (\$10 a month for board &c.), often entirely by their own labor in and out of school.

These letters are often of much interest, giving simple pictures of life, and the struggle for education which is itself an important part of the education. They show, as no outside description can show as well, to those who send the means of carrying on this work, what material it is used upon, and what good it is likely to do.

To extend the usefulness of these "scholarship letters," we are accustomed to publish a selected number every year, chosen for their special interest, being in other respects simply a fair sample of those written, and printed, as they are sent, without any correction in spelling or expression.

## FROM AN INDIAN IN THE JUNIOR CLASS.

The young man who writes this letter is of the Absentee-Shawnee tribe in Indian Territory, and, with the companion whose name he mentions, was elected among the chiefs of his tribe just before he came to Hampton. He had just had some instruction before coming, and entered the regular Preparatory class of the school, from which he was promoted the next year, to the Junior. He is doing well.

Hampton Va., Jan. 12th. 1891.

Dear Friend:

I would be glad if I could write just as much as white people do. And I can tell you about my life, but will write a few words. A little over two years ago I and Thomas Wikelett, before we started at the Shawnee, we did not expect to stay here more than two years, and also we don't know anything about it that there are colored people school here. When we first came here down there Fort Monroe about seven o'clock in morning 18th. Oct. 1879. And one of the colored boys took us from the Fort Monroe to here. At the time we saw the colored boys school, and also Indian boys and I went to school with the Indian class also one week and I then then other class with the colored boys. Now some of the Indian boys are learning fast in school. There are some boys are learning how to trade, some carpenters, some blacksmiths and some farmers, and wheelwrights. I think they have a good chance the Indians now. Gen. Armstrong told the Indian boys that there are many study hard, told them, so when they are all good over homes, they can teach their own people what we have been learned in Hampton, and every thing in the white mens ways and to make ourselves useful men. I think that the good way to send their children to school in Hampton. If the Indians did not send them here to school they could not do any better thing. But now some the boys are very smart. And a many of the Indians do wrong things because they don't know what is right, which ought to have not to do. If the Indians want to become a good and civilized men, they must do what is right. If they don't go to school they must try to do right, and must work hard that is away to do it, not only educated people are knows how to work. When I came from a great many of the Indians now on the road freighting for the Government, making plenty money for themselves, and getting rich and have a great interest in schools and educating their children, improving their country right along, also some of them have a large farms and some pastures, and their pit is inside cows and horses, and raised especially all the kind of in orchard fruits, which is they have a good time when they gettling riped fruits. And they are lived in houses slowly and every thing is like to be good like a white people, and we need what a white people use when they eat. Also cooking about. Whenever white man come in the Shawnee they like to stay there but the Agent don't let him stay there. Agent don't like the white man to stay around among Indians. But now I heard from home that there are white people try to get in Indian Territory but the United States soldiers three white people make them to keep out of the Territory. But I don't know whether it

is true or not. Well my studies are kind very slow and I have to study every night and every morning but I could not keep up without my doing best. We had a holiday on the Christmas day, and we had a good rest from study and all the boys are very glad to receive something on Thanksgiving. I thank you very much for what you have done for me.

Respectfully,

JOHN KINO.

## FROM A YOUNG MAN IN THE MIDDLE CLASS.

Hampton Va., Jan. 12, 1891.

Dear Friend:

I am again called on by the principal to write a scholarship letter, and I could do no duty that would afford me more pleasure than this. I have so often told the simple story of my life that I will confine myself in this letter to my labor and experience during the vacation. I spent my vacation at the Hampton Institute. Each of the students that remained at Hampton during vacation has work assigned him or her for which they receive wages according to the kind of work performed. My work was guard duty, the responsibility of guarding the school premises, both day and night, and to me at least, that was quite responsible duty, considering the disaster that occurred last long ago, the burning of Academic Hall. I receive \$10 ten dollars per month, which enables me in connection with what I had to continue in school this term. I tried to do my duty well and I think that I gained the approval of the ant and instructive, and because it was vacation I was not altogether lost to the strengthening influence of the institute. And I hope when my life shall here become a continual vacation, I will not be lost to the foregoing influence. After the burning of Academic Hall a plan was laid for rebuilding it on a more expensive scale, it was begun in May, and is now nearly completed and it is a fine building.

The Saw mill which we began last year is finished and furnishes work for twenty-five or thirty students who desire to work out an education. Another building intended for the principal's office is now being erected also, so you can see from this letter that vacation at Hampton was a very busy time. These buildings when completed will add to the beauty and comfort of this institute, and will give to the school ample room so that more students can be accommodated. I watched very carefully the occupations of the people during the summer and found a great difference between the occupation of the people here and at home. The main occupation here is trucking, raising and the oyster fishery. To see from twenty-five to forty-five canoes gliding in Hampton creek, some rowing, some sculling, some sailing on a calm and clear day. It is a sight that we see every evening during the summer.

The excellent situation of the school, the beautiful surroundings, and the very atmosphere that surround us seems to elevate the lessons of life. The people are industrious and eager for education down here. I am thankful to our Northern friends for all they have done for me and my race. I am striving hard to get an education. My opportunity for getting an education has been very discouraging, for my parents were slaves. Thankful for what you have done for me and my people.

R.

## FROM A YOUNG WOMAN IN THE SENIOR CLASS.

Hampton Va., Jan. 12, 1891.

Dear Friend:

I am now in the Senior Class, therefore this will be my last scholarship letter. And before I tell you about my last vacation, or my resolution as to what I shall do after leaving school, I will mention a particular incident of my life which I omitted in my previous letter. My position in life has been limited in every respect, my mother having been a slave, and I having no father. When my mother was freed she had two little children, a boy two, and a girl four years old, the support of us three being by the labor of her hands, and what made it harder for her was she was most of the time sick. During the time the small-pox was raging, my little brother took it, the law was that every one who came to the hospital, my mother knew this, but she tried every possible way to keep it from being known that she was sick, but in vain. A man would come along every day with a wagon to carry the people out in, but he did not carry my brother, the only reason though that he did not, was that she promised to carry him herself, she could not bear the idea of having him carried among strangers to die,

so she took him out of his bed, wrapped him up carefully, for it was in December, took him in her arms and ma by the hand and started for the hospital three miles distant, when we reached there I was so frightened at the dead bodies that were lying on the ground, that I pulled away from my mother and started back, I did not go very far before I was caught by one of the undertakers and carried back. It gave them a good deal of trouble to keep me quiet. My mother had not the spirit to say anything to me, for she thought that we all should be dead soon. We stayed there ten days, after which time the doctor said my brother was well enough to be taken home. After we had been home a week mother and I took a severe spell of the fever, but not any eruption, and were well in two weeks.

I went to school three months while in Norfolk, and did not go any more regularly till I was seventeen. I have always been anxious to have an education, but my chances have been so that I could not get it, at the same time I am thankful for what I have. I have been here, at Hampton two years, and have modified very much in many respects. My last vacation was spent in Glastonbury, Connecticut, in a Christian family whom I dearly love. My stay with them would have been longer had it not been connected with this school. My time is almost out at Hampton, and I am sorry in one sense, but glad in another, for my determination is to help my people who are shut up in darkness. And to you my dear friend, when God has filled with love, and given blessings, whereby you can help me, I do give thanks.

V.

## NEW POLITICS.

The census of 1880, and the general election of that year, viewed together, are interesting to any student of political history. They show conclusively, that the center of population, and hence the center of voting power, lies Northwest of the Ohio river, not South of it. The general election was a practical illustration of this, and proved that the idea of a Solid South any longer being a leading factor in national politics was a delusion and a snare. Many candid citizens see this, and appreciate the absurdity of trying to make a live fight over dead issues: to be sure there are some, to whom facts are as nothing compared with their convictions, and these will probably think it good strategy, to theoretically charge an army corps with a corporal's guard. There must be two parties in this nation; but the day of having Mason and Dixon's line to divide them, is past—only desperate political gamblers seek to play a partisan game, when the chances are three or four to one against them. History keeps repeating itself, and it is not unlikely that the next question on which the country will divide, will be the economic question, and the parties will be the same. Neither of the old parties are "Solid" on any of these questions, and no doubt we shall see many illustrations of the old proverb, "Politics makes strange bedfellows."

In the general "shaking up" of parties, the negroes, capacity for citizenship will be put to a severe test. Ever since emancipation, politics have been sectional, and it was easy to take a North or a South side view of them. Naturally, the negro vote gravitated toward the side that made him a citizen, and against the side that once sought to hold him as a chattel. On the new line to be drawn, there will be no such easy way of taking sides: to vote intelligently on economic questions, citizens must understand the questions themselves. White or black, native or foreign born—every citizen will have to decide for himself on which side he will vote, as to Tariff, Internal Improvements, Sabalities etc. These are abstract questions, and much more difficult to grasp, than to decide whether to vote with those who gave one citizenship, or those who held one, or would hold one, as a chattel.

Another point in the census is the steady diminishing ratio of the colored to the white population. Assuming that the natural increase of both races is the same, the whites are receiving an increment of hundreds of thousands by immigration, while the blacks thousands by practically none. If the present ratio of colored to white people in the United States be as 1 to 9, in 1890 it will be as 1 to 11. So long as America is likely to be, as it is, the whites and the blacks are the two main elements, and Great Britain has an Irish Question, and Germany the "Blood and Iron" rule of Bismarck, just so long will a steady stream of immigrants land on our shores. Westward the tide of emigrants, as of Empire, takes its way, and the inevitable effect is to move the center of population steadily toward the Rocky Mountains. The absurdity of a Solid South has been indicated, and the still greater absurdity of any section or part of the South trying to become a leading factor in National politics must be apparent. The solid negro vote is yearly of less general importance, and everybody will be better off, as the color line

in politics fades into a dim reminiscence. The only way in which a Solid South can hope to exert a potent voice in national politics is to feel it all solid through—that is, let her citizens feel they are fellow citizens, and that which benefits one, benefits all, and what injures one injures all. A plan of mutual forbearance, of giving and taking, established between the white and the colored citizens will develop harmony, that is in itself a power.

That at least a part of the present tide of European immigration be turned Southward in a consummation devoutly to be wished; but from a variety of reasons, there is no chance of its immediately assuming any large proportions. To the majority of emigrants, the crops of the South are entirely strange, and the wheat lands of the northwest are still to be had for a song. As the country hereinafore more densely settled, the tide of immigration must widen out, and the fertile lands of the South come into prominence. Still, as matters stand now, emigration on any extensive scale into the South is doubtful, and the relative political power of the colored and the white people will not materially change. What will be best for both, is to prepare themselves for intelligent action on the questions which are to arise, and I know no stronger motive to common action, than common interest. Leaders of the people will always be found among the most intelligent, and it is universally true, that an army of voters, if called on to vote to day on any economic questions, would probably act as mechanically and with as little knowledge of what they were doing, as the press that prints this paper has of its objects.

There are few axioms that underlie all economic questions, among which the following may be mentioned. Any policy that is contrary to any of these is in itself a dangerous policy.

*That this is a Government of the people, for the people, by the people, and not a government of the many by the few, nor of the few by the many. Every dollar the government has to spend for the people, comes from the people.*

*That in this nation of fifty millions, every citizen is entitled to the same protection (no more) as every other citizen.*

*That friction is a minus quantity in every sum of forces.*

*That those laws are best, which do the greatest good to the greatest number of people.*

In future articles I hope to discuss with all impartiality, some of the economic questions likely to arise, basing them on the above fundamental truths. The questions may not seem particularly juicy at present, but they will "ripen up," as we find forced upon us "New Politics."

T. T. B.

## FROM A RETURNED INDIAN STUDENT.

The following pleasant note is just received from Little Chief, one of the St. Augustine Indians, who, after two years at Hampton and one at Carlisle, returned to his home in Indian Territory, and has been doing very well indeed ever since, as assistant of the Agency physician, who speaks in the highest terms of his faithfulness, industry and intelligence. He has learned to make pills, dispense medicines, and under the doctor's direction, and supporting himself and keeping to the white man's road. He has a bright and pretty little sister in the school at Carlisle.

OFFICE OF AGENCY PHYSICIAN, CHRYSENE AND ARAPAHOE AGENCY.

DARLINGTON, I. T., JAN. 7, 1891.

GEN. ARMISTEAD:

Dear Friend:

It is a long time I have heard from you, and now I am going to send you a letter. I always think about your school at Hampton. And because very best your school, and now I am Doctor, I with him Dr. Hodge. I hope that you will write to me. Please tell all the my Teachers, give my love?

From your friend,

W. LITTLE CHIEF.

A rich but parsimonious old gentleman, on being taken to task for his uncharitableness, said: "True, I don't give much, but if you only know how it hurts me when I give anything, you wouldn't wonder."

## At Home.

## BEAUTIFUL HANDS.

BY ELLEN H. DATES.

Such beautiful, beautiful hands!  
They are neither soft nor small,  
And you, I know, would never think  
That they were fair at all.  
I've looked on hands of form and hue  
A sculptor's dream might be;  
Yet are these aged, wrinkled hands  
More beautiful to me.

Such beautiful, beautiful hands!  
When her heart was weary and sad,  
These patient hands kept toiling on,  
That the children might be glad.  
I often weep, when, looking back  
To childhood's distant day,  
I think how these hands rested not  
When mine were at their play.

Such beautiful beautiful hands!  
They are growing fessle now,  
And time and toil have left their mark  
On hand, and heart, and brow.  
Alas! alas! the nesting time—  
The sad, and day to me—  
When 'neath the daisies, out of sight,  
These hands must folded be.

Beyond, beyond these shadowy lands,  
Where all is bright and fair,  
I know full well these dear old hands  
Will palms of victory bear;  
Where crystal streams, through endless  
Flow over golden sands, [years,  
And where the old grow young again,  
I'll clasp my mother's hands.

## CHOICE AND ARRANGEMENT OF A HOME.

In choosing a house, the first object should be, a wholesome situation, good drainage, ventilation, and a dry cellar. The health of the family depends upon these.

Warmth and light are better than fine furniture, and good beds better than bedsteads. If there is plenty of money, one may have these good and comfortable things with all possible beautiful surroundings. If not, a woman with taste, industry and ingenuity, and with her heart in the matter, can make almost any place cheery. The more tasteful, the more beautiful your home can be made, the better always for those around you, and for the friends dear to them and you, not for show—not for display; this degrades the mind and the habits.

Men choose for their professions the law, medicine, architecture, engineering, and theology, and they give all their attention to the professions they have chosen, or cannot hope to succeed. A woman chooses for her profession the head of a household. Properly viewed, it is the highest and most elevating of all professions,—let her not enter upon it lightly. She has in her hands the happiness and welfare and direction of a few or many people, as it may be; but she cannot neglect her work. It is not to be neglected, and cannot be put into the hands of any other person. It is her bounden duty to see that her home is clean, airy, cheerful, happy, and all its various economies attended to. She can do no more neglect it with impunity than a doctor his patients, a lawyer his clients, a merchant his customers.

One of the most convenient articles to be used in a sick-room is a sand bag. Get some clean, dry sand, dry it thoroughly in a kettle on the stove, make a bag about eight inches square of flannel, fill it with the dry sand, sew the opening carefully together, and cover the bag with cotton or linen cloth. This will prevent the sand from sifting out and will also enable you to heat the bag quickly by placing it in the oven, or even on the top of the stove. After once using this, you will never again attempt to warm the feet or hands of a sick person with a bottle of hot water or a brick. The sand holds the heat a long time, and the bag can be tucked up to the back without hurting the invalid. It is a good plan to make two or three of the bags and keep them ready for use.

A dish which is sure to find favor with lovers of celery is made by taking the stalks of celery which are not thoroughly bleached, cutting them in pieces of about an inch long, and cooking as you would asparagus, the same length of time being required to boil it, season with milk, butter, pepper and salt.

## BABY'S SKIES.

Would you know the baby's skies?  
Baby's skies are mother's eyes.  
Mother's eyes and smile together  
Make the baby's pleasant weather.  
Mother keep your eyes from tears,  
Keep your heart from foolish fears,  
Keep your lips from dull complaining  
Lest the baby think it's raining.

## Health and Humanity.

## DECENCY TOWARDS HORSES.

A horse cannot be screamed at and cursed without becoming less valuable in every particular. To reach the highest degree of value the animal should be gentle and always reliable, but if it expects every moment that it is in the harness to be "jawed" at and struck it will be in a constant state of nervousness, and in its excitement is liable, through fear, to do something which is not expected, as to go along doing what you started it to do.

It is possible to train a horse to be governed by the word of mouth, almost as completely as it is to train a child, and in such training the horse reaches its highest value. When a horse is soothed by the gentle words of his driver—and we have seen him calmed down from great excitement by no other means—it may be fairly concluded that he is a valuable animal for all practical purposes, and it may be certainly concluded that the man who has such power over him is a humane man, and a sensible one.

But all this simply means that the man must secure the animal's confidence. Only in exceptional instances he is stubborn or vicious. If he understands his surroundings, and what is required of him, he gives no trouble. As almost every reader must know, if the animal when frightened can be brought up to the object he will become calm. The reason is that he understands that there is nothing to fear. So he must be taught to have confidence in the man who handles him, and then this powerful animal, which usually no man could handle if he were disposed to be vicious, will give no trouble.

The very best rule, therefore, which we would lay down for the management of the horse, is gentleness and good sense on the part of the driver. Be driven, make bad horses, usually.—Western Rural.

## BLANKET YOUR HORSES.

When left in the open wintry air, see that the inmates of the barn and shed and kennel are protected from the bitter cold. The creatures depend upon you, their owner, to guard them, even as you upon God. Be to them as you would have Him be to you.

## MISTAKEN KINDNESS TO HORSES.

Many drivers water their horses on the road as often as opportunity offers. The horse finally wants no more, but the driver wishes to make the water useful to the animal, and pours it on his legs. In order to cool his feet. But what is the result of such sudden cooling and wetting? The horse will be attacked with rheumatic pains and his thighs will very soon become stiff. In consequence whereof, instead of a refreshment, the animal has received a torture, all done with good intentions.

A good thing to give a horse after he has been driven, is a quart of oatmeal stirred into a pail of water. It refreshes and strengthens him, relieves his immediate thirst, and prepares his stomach for more solid food. It is the plate of soup before dinner, satisfying and appetizing together.

## BRIDLES AND BLINDERS.

"I have taken more than one hundred brides off horses to examine and have found them instruments of torture in six cases out of ten. By their blinders they cut off the sight where needed, and more attention should be called to that useless head-piece."

—Our Dumb Animals.

## TEMPERANCE.

AN OLD CURSE.  
Drunkenness and its attendant evils are by no means confined to our own day and age. Says Dr. Eadie: "Epheus was a commercial town and busy seaport, and its wealth led to excessive luxury, and Bcechus was the rival of Diana. The women of Epheus, as the priestesses of Bcechus, danced around Mark Antony's chariot on his entrance into the city. Drunkenness was indeed an epidemic. Alexander the Great, who offered a sacrifice to Bcechus, and not to Mars, offered a prize to him who could drink the most wine, and thirty of the rivals died in the act of competition. Plato boasts of the immense quantity of liquor which Socrates could swallow unharmed, and the philosopher Xenocrates got a golden crown from Dionysius for swallowing a gallon at a draught. Cato often lost his senses over his choice Falerni wine."

The superintendent of the Detroit and Bay City Railway has issued the following: "The lives and property entrusted to our care are of so great value that the use of intoxicating liquors cannot be allowed, and any one caught to use them will be discharged."

## Teachers' Table.

## PRIMARY SCHOOL QUESTIONS.

USED BY THE TEACHERS OF CAMBRIDGE, MASS.

Name the different things with which people write. What is your dress made of? Your shoes?

How does it look out-of-doors when the sun has set?

Have you been down the harbor? What did you see?

Name the country, state, county, and city in which you live.

What is it to be useful? Selfish? Benevolent? What does the expression, "lost herself-command," mean?

What is meant by a flock? A drove? A swarm?

What are the sports of the different seasons? Mention a polite act. Some rude acts. Some kind acts.

What plays do you like best? What books? Name the primary colors. Which is the prettiest?

How many panes of glass in that window? Mention some things you like to see or do.

Show me on your arm the length of a foot? How high is that door? How wide is the blackboard?

What is the length of this room? This width? The height?

How many little boys and girls in this school?

How many pupils in all the primary schools of the city or town?

"My eye aches." Why? Would this little marble ache if it were "hit"? Why not?

Why are we you so weary? Is there any difference between a house and a home? What?

Of the objects you have seen to-day, which are natural and which are artificial?

Tell the seasons of the year, and some pleasant things of each. Name the months of the year.

If every thing you can see were taken out of the school-room, of what would it still be full? Tell me in inches, as nearly as you can, the length and width of your desk.

If the sun does not shine in a room until afternoon, which way does the room face?

What do you learn at school besides Reading, Spelling, Number, Music, and Drawing?

What have you learned to-day? Mention the hooks you like to read, or have read to you.

Why should you not mark or cut the school-house or furniture?

How do you see the sun in the east in the morning, and in the west in the afternoon, and what does it appear to do?

Why is it well to have music a part of the programme each day? Calisthenics?

Why are the 23d of February, the 17th of June, and the 4th of July, holidays?

Give in other words the meaning of the word or phrase that I mention.

What do we call the young of the goat? Of the horse, of the cow? Of the cat?

What makes your father buy food and clothes and nice things for you?

If you were going to Boston, what conveyance would you take? To New York? To Europe?

What things do we see in the summer that we do not see in the winter?

What are the different kinds of articles used in making a house? From what are bricks made? How?

Sometimes a little boy is called Fred Jackson, Junior. Why is he called Junior?

I heard a little boy answering a gentleman, and he said, "Yes, sir." Why did he not say simply, Yes?

What work does the sun do? Is it larger or smaller than the earth?

Of what is bread made? Where do potatoes grow? Apples? Strawberries? Blueberries?

What is the difference between the furnace and register? What is a ventilator?

Describe the United States flag. Do other nations have flags? What flags have you seen?

Where does the moon get its light? Why do we not see the moon in the daytime?

Where did you get your book? Did the man of whom you bought it make it? Who did?

What is the name of the President of the United States? Of the Governor of Massachusetts?

For what do you come to your school? At what hour ought you to get here? Why should you never be tardy?

General plan of questions suggested by Reading Lesson.—First, attention is called to the picture; second, to the story or subject-matter of the piece; then questions like the following are asked: "Why was the little boy a philosopher? Who over saw any corn? What is meant by 'a golden sunset'?"

## Agriculture.

## ABOUT HORSES.

The stomach of a horse has a capacity of about sixteen quarts, while that of the ox has two hundred and fifty. In the intestines this proportion is reduced, the horse having a capacity of two hundred and ninety quarts, against one hundred of the ox. The ox, and nearly all other animals, have a gall-bladder for the retention of a part of the bile, secreted during digestion. The horse has none, and the bile flows directly into the intestines, as fast as secreted. This construction of the digestive apparatus indicates that the horse was formed to eat slowly, and digest continually bulky and innoxious food; when fed on hay, it passes very rapidly through the stomach into the intestines. The horse can eat but five pounds of hay in an hour, during mastication, with four times its weight of saliva. Now, the stomach, to digest it well, will contain but about ten quarts; and when the animal eats one-third of his daily ration, or seven pounds, in one and one-half hours, he has swallowed at least two stomachfuls of hay and saliva, one of these having passed to the intestines. Observation has shown that the food is passed to the intestines by the stomach in the order in which it is received. If we feed a horse with six quarts of hay, it will just fill his stomach; and if, as soon as he finishes this, we feed him the above ration of seven pounds of hay, he will eat sufficient in three quarters of an hour to have forced the oats entirely out of his stomach into the intestines. As it is the office of the stomach to digest the uterogeneous parts of the feed, and as a stomachful of oats contains five times as much of these as the same amount of hay, it is certain that either the stomach must secrete the gastric juice five times as fast, or it must retain this food five times as long. By feeding the oat first, it can only be retained long enough for the proper digestion of the hay; consequently it seems logical, when feeding a concentrated food like oats with a bulky substance like hay, to feed the latter first, giving the grain the whole time between the regurgitations to be digested. The digestion of the horse is governed by the same laws as that of a man; and as we know it is not best for a man to go at hard work the moment a hearty meal is eaten, so we should remember that a horse ought to have a little rest after his meal, while the stomach is most active in the processes of digestion.—Planter and Farmer.

## REGULARITY IN FEEDING STOCK.

While it is highly important that the farmer should provide good food for his horses and cattle, yet it is equally important that they should be fed regularly, at stated periods. Animals are good time-keepers; and if the hour passes at which they are commonly fed, they are apt to make their wants known; especially in the case of the cow. It is very bad practice to feed her often and irregularly, and some farmers have an idea, that almost every time the barn is entered, the cows should be given any or fodder. This is a mistake. The great object in view is to keep the cow quiet and contented, which can be readily accomplished by regular feeding, and supplying all the food they can eat. If fed in this manner in the morning, the cows will lie down and chew the cud, and are not disposed to be annoyed by the visits of any person. In the winter season, the second feeding should be about 2 o'clock in the afternoon, which will allow them to have from that time to milking, all they will eat, giving a feed of hay when the milking is finished. The first stomach of the cow should be empty, or almost so, before more food is eaten. A cow chewing the cud cannot be hungry. This regularity as regards feeding should likewise apply to watering and milking. This regular system of feeding applies fully as well to pigs and sheep, when the latter are in winter quarters. Animals can be as easily trained as children, and every farmer who hears this in mind will be amply rewarded by the fine appearance of his stock, and the affection which will be bestowed upon him by them.—Planter and Farmer.

Mansures.—By many the orchard is expected to yield two crops—one from the trees, and another more directly from the soil, as it may seem. It is useless to expect the best fruit from trees that are robbed of their nutriment by quick-growing crops. Ordinarily, when the trees come into bearing, they should have the land to themselves. If circumstances make it necessary to grow some crop between the trees, both the crop and the trees should be manured. Well rotted manure is best, and when spread let it cover the whole ground and not be heaped about the trunks of the trees where there are no small roots to make use of it. Winter is an excellent time to spread the manure, as it can be drawn upon sleds which more readily pass under and among low trees than a wagon. A dressing of lime will often be of great benefit to an orchard.

From the Senior Class.

In almost every turn in life we meet with discouragements. At times when we are gliding smoothly and think of no danger near, there are we to be tried.

Troubles come in various forms, and from various sources. There is no time when we can say that trouble cannot reach us.

Some say that they do not know what trouble is. Perhaps it is true; but that does not say that the plague will not come to them.

It is true that some can bear more than others, and it is a very good thing to be able to bear more.

to bear. We sometimes make our troubles seem to be more than they really are, which often has a very undesirable effect, and can only be avoided by pressing against them with our reason.

Our friends sometimes give us unpleasant feelings by speaking in an unusual tone, which is not at all a good thing to do, with or without a reason.

But before we become too much mortified, we must consider the matter and see who is in fault.

At the same time, I think it an unkind act for one who is not feeling pleasant to extend his cold feelings to others. VIRGINIA.

Let your occupation be what you are best suited for. Some people like to take for their occupation a kind of work which they like, but for which they are totally unfit. This however is a great fault among the people.

Every body has a kind of work which he can do better than he can some other. Some people have more than one trade. They think that by knowing how to do a little of everything, they can make a living more easily. This is a very true thought; though it would be much better to learn one trade thoroughly. Let every body take for himself a kind of work which he can master, and you will see that as time will go along better.

Some farmers can speak very well on politics, some can preach, and some build a tolerably good looking house; but this is not where we want most. I have known an instance where a good farmer was getting along well with his family, and making, you may say, an independent living on his farm, but, by chance he saw a political office vacant, and he gave up his prosperous farm,—the best and only trade he ever had—and went to fill the office for which he was wholly deficient.

It is always good to have a trade of some kind. No man has ever yet become rich without some trade, or profession, save he who inherits wealth. You can make yourself master of a good trade of some kind. Then do it.

Though you may not have any cause to go into a foreign country, as the "nail-maker" do, though you may be doing well at this time, though you may think that you can make the trade which you may now have, some body who is more studious than you, will take your place, and you will be cast out.

If you would make any progress in life, live upon your own income; if you wish to get the love of all, and live in a comfortable, peaceful home, get for yourself a kind of work which you know all about, then work hard and earnestly; and when your body shall have gone to mingle with the dust, you will leave behind you a good name and be remembered as an honest and useful man.

In answer to the above question, I must say yes. It is essential that all should work. One should hold back and depend on other persons' labor for help and support. The more people who are given up by nature, the more things will be given up by nature, and in many places things grow spontaneously, but, for all of that, there is need to work. If it is only to gather what grows naturally, it is not worth the trouble. This is why we use this beautiful world, and it was in his power then and now, to give us all that we might need, he didn't choose to, he gave us land and water, and he made it so that we could learn, that is labor of some kind needed. If you are a small child, when you grow larger and old, it is quite right that you should work, and make money, and have money, and have some amonia. You may be rich yet, there is considerable labor to be performed both mentally and physically, if you would retain your

I could not hear to have some one work

ma and I do nothing, if such a thing were possible. In order to sustain life, one must have food, for which some one must work. Now if we say we will not need to work, where are we to get food and raiment? steal other people's labor? no. I believe that there is need of work from the strongest to the very weakest. All persons that are able to labor, let the oldest and the youngest, and the man and the woman, and the child, all be made to labor. "The rule hides good for woman all so." If they can't bore corn, they can cook the bread produced therefrom. In still ages people have had to work, some at one time and some another. Then the reason why no work is because we all want to live as long as we can, and we know we cannot live without working.

We have examples of people who work very little each day and they are always half clothed, while the earnest laborer is well provided for and is looked after and respected by all that know him. The idler is apt to be suspicious and pointed out as a bad character. Nobody likes to make his acquaintance nor admit him into their house, and should he want to work at times, he will have a hard time getting employed. Now let every one who wishes to be a lady or gentleman, work for that not for anything else, for labor makes you what you are in life. A lazy person can never be a Christian.

SARAH.

After reading the history of the colored people, and finding out their condition, the question comes to me, what is our duty after this?—Houston?

leaving Hampton. This is an important question for each student to answer before leaving here. As the teachers are those of colored people in America, it is not to be expected that they have not been blessed with the opportunity of receiving any education, and are yet in darkness, it becomes us as loyal sons and daughters of our race, to go and teach those who are in darkness and have not had the opportunity to them. "In Africa to-day there are forty-five millions more or less, who are in a savage condition, worshipping idols and following their gods. They believe that there is a God, but how to worship him they know not, and it is because of this that they are in darkness and have been taken from them. We would be glad, in the same condition, if we had not been blessed with the opportunity of being brought

And, as Great Britain was once a savage country, yet, through the civilizing influence of missionaries from Rome, has become one of the greatest on the globe, so can Africa be brought out of her darkness, and in a few years come to have one of the most distinguished histories of any continent on the globe; but she can not reach that standard of civilization unless missionaries from here and other countries go to her, and stay there for her

And as some of our students are already in Africa, I hope that in a short time there will be Hampton students all over that dark continent, and then and not until then shall we feel that we have discharged our duty to our race.

Most of people speak of elevation as getting a high education, but I do not think it is alone.

We have noticed that our smartest men are not always the ones who have had the most education, but they are the men who can produce what they have learned, with the most accuracy. We will first examine the two classes of education, and then we can easily which is the better for a man who has school days are limited. I have heard of people starting in school and entering a low class, but, in the course of two or three years, they have gone through different

[illegible]

has been over. It is likely that if that man goes to school many years longer, he will finish in the way that he began, and such a man may be educated very high, but elevated to a small extent. When a man is at school he ought to make the best use of his time. It may not be agreeable for a teacher to see a scholar a little slow in taking in things, but if that man, when he once has learned a thing, can reproduce it almost as fast as a man who has done it, he will be a help to his fellow men good.

That is what I cry for teachers to teach the ignorant, and, in order that we should have a great influence and teach well, we should first learn well what we learn.

This vacation when I went home to rest from my long study in school all winter, there was a place in which I saw I would do good with the Lord's help if I would take the right steps to get it. So I went ahead to try to get a little private school to teach during the short time I would be with my people which was only three months and a half. After resting two weeks, I sent word to the people of my church that, if they would like, I would teach school during vacation. In the third week, on Tuesday, they met me for the purpose of organizing the school. Among the number of organizers were some that said "I am going to send my children to school in Louisiana, when she and my children were once in school, mates together."

Through all of these discouraging words, I had made up my mind that I would teach because there were some that were as willing to have their children come to school to me as I was to teach them.

On the twelfth of July, I commenced to teach. The first day, I had seventeen scholars. It was quite a small number out I opened my school with a bright heart, and, after I had taught school about three weeks, I found as many scholars as I could attend to. Then I went to work there among my poor ignorant people to do them all the good I could.

There was one family that would never send their children to school. They said they had always gotten along well enough in the world without an education, and their children could do as they had done.

I said to mother one day, that I seem to think so much of me, I believe I go over there and see if I cannot get them send their children to school. So I went, after talking with them a while, they consented that they would send two of their children to me, and I never saw children improve faster than those children did. I often wish that my teacher at Hampton could take a peep into my school-room, and see how much good a Junior could do.

HOME.

Every body is the best place in the world. When home life will turn their back upon us, our parents will take us in. Although there is a great many colored people in the country, and their parents give them, because they are very dissatisfied and reckless. So the children try to please their parents and do as they are told. But when they grow up, they find some there are a great many colored people who are buying land to make a home for themselves, when about nine years ago, they bought thirty acres of land, and now they own a tract. But now it is very common to find a people of color owning from one to one hundred and thirty acres of land. They are building houses, and they are building a great improvement—sometimes past they usually build log houses, but the only brick and frame houses then. So although the colored people are building respectable dwellings. And the people generally looking up and seem to be striving for better things. Numbers of Sawmills, School houses and Churches are being built, which employs a great many, and things generally seem to be on the

The late war left that part of the country in a very bad condition, most of the poor owned slaves and the best part of their property was in slaves and land. They would go heavily in debt depending on their slaves to sustain a security or offset for their debts. After the slaves were set free, they were left with a great many instances very poor. We saw that had the energy to go to work and land, others who had been accustomed to idleness, anything and everything they wanted,

were too indifferent and lazy to work their property, went to naught, their taxes overrating the principal, and their land was sold. The poorer class of people who had to be somewhat subject to the slave-holder are coming to be the richest men of the day. And the colored people, who have been kept under for so many years, are rising by degrees above their former condition and trying to make men and women of themselves, and are denouncing things they once loved and appreciated.

My home is pleasantly situated in the country southwest of Hampton, near the Staunton river. My people are farmers, therefore we live on a large farm, and raise large quantities of all kinds of produce. It is so pleasant when I leave here and get to the city, that I never want to go back, and to be obliged to leave. There is no end to the nice fruit of all descriptions. My people also raise a great many fowls, and have plenty of milk and butter. Therefore I think there is nothing pleasanter than my nice quiet country life. I have lived in the country most of my time, and have experienced the pleasures of all the enjoyments we have there, and I have never lived in the city enough to enjoy many of the pleasures that I have in the country. I should like the country better.

We have such nice fresh air in the country which I don't suppose we would have in the city. My home is near the Buffalo Springs, summer resort. It has three or four different kinds of water. There are a great many visitors there during the summer season, and everything about the place is quite pleasant.

When we first came here we did not know how to act civil. But now we can do better. I have learned many things at Hampton. I had been in school last term and worked part of the time I think we are doing better now.

Few of the Indians have entered in another class, which is higher than they were before. I am glad that we are at a good school where they all talk English, for I know we can talk better English now, but the colored students beat us in talking for we all know that they were raised in talking this language, but now we are learning this language and hope that we will soon know how to talk this language.

On Tuesday evenings we have prayer meetings with Rev. Frisell, I am glad that we have such good prayer meetings here which means we have strong hearts. Last Sunday the first Sunday of the year, some Indians and colored students join the Lords church, which means everybody who were in the church glad, glad to see them stand in there, and promise to see and love the Lord Jesus Christ.

We had a very nice time on Christmas. Christmas eve we all met in the Chapel gave us all handkerchiefs and some candy. The next day we had holiday and played through the day, in the night they had games and marching. They made a prize the teachers did, to see which two walk the best.

march all around in the Chapel and was  
 over, and then they called the names that  
 won. The first prize were Jos. Rivers, and  
 Lucie Peery second was O. Derritt, and Lucy  
 Eiden. These were the boys and girls  
 and the Indians that received prizes  
 are Alex. Peters, and Carrie Anderson,  
 was the third prize the fourth were Willie E  
 tier, and Sophia Little Bear. They did not  
 receive their prizes right then till about  
 a week which they received in the  
 gladness of the teachers put in  
 another prize and got some tumblers filled  
 with water and each boy had to take a  
 tumbler of water and hold it in the hand  
 marching around to see who would not  
 wet his water, when it was over they called  
 the names of the prize, there were three  
 who won the prizes.

On New Years evening the Middlers their meeting in the Chapel, which one of Indian boys made a speech in which he well.

JAMES R. MURPHY

## WHERE IS HOME?

A little boy about four or five years old was returning from school one day. He bounded into the house, exclaiming as he hung up his hat in the entry, "This is my home! this is my home!"

A lady was then on a visit to his mother, and was sitting in the parlor. She said to him, "Willie, the house next door is just the same as this; suppose you go in there and hang your hat up in the lobby, wouldn't that be your home as much as this house?"

"No ma'am," said Willie, very earnestly, "it would not."

"Why not?" asked the lady. "What makes this house your home more than that?" Willie had never thought of this before. But after a moment's pause he ran up to his mother, and throwing his little arms around her neck, he said, "Because my dear mother lives here."

It is the presence and company of those we love which makes our earthly home; and it is just so with our heavenly home—that home which our dear Savior has gone to prepare for the children of God.

A little Sunday school boy lay upon his dying bed. His teacher sat at the bedside holding the hand of his scholar. "I'm going home to heaven," said the little fellow.

"Why do you call heaven your home?" asked the teacher.

"Because Jesus is there."

"But suppose," said the teacher, "that Jesus should go out of heaven?"

"Then I would go out with Him," said the dying child.—*Young Leader*

INCORPORATED IN 1870.

S. C. ARMSTRONG, J. F. B. MARSHALL, President.

Devoted to the Education of Colored Teachers, for the Colored East, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Turns of admission: a knowledge of reading and writing, end of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 10 years of age.

The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

**FORM OF BEQUEST.**

I give and bequeath to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable

dec., etc.

**Hard Crabs**

FROM HAMPTON ROADS.

Carefully Picked, Packaged, and Hermetically Sealed.

**T. T. BRYCE,**

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a "Crabbing House" on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen crabs, each case filled with two pounds of crab meat. On every case will be found full directions how to prepare "Hard-shell Crabs" and "Soft-shell Crabs," and how to eat them, which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipe will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is beyond parallel, the most delicate and delicious of all sea-food, far exceeding in flavor and delicacy of taste, the lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain much fresher meats in these cases than if they bought crabs at the time of their season, and of the suburbs cities. By the process employed, a very few minutes elapse from the time the crabs are swimming in the water, on which the Meridians and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only consumption used in its preparation is a little salt, and anyone can prepare it as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be sliced, and served as a fancy delicacy. For parties, luncheons, excursions, etc., price parties, every individual can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs. In spite of the amount of labor and material needed, I have determined to offer them at the low rate of \$6.00 a case, net cash. \$1.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters to

NO. 3.

## INAUGURATION.

On the 4th, of this month, the twenty-seventh presidential inauguration in the United States will take place in our National Capitol, and our twentieth President take his seat in the chair of state with the solemn oath to "preserve, protect and defend the constitution of the United States." The daily papers will be filled with detailed accounts of the ceremonies and incidents of the day, and the enterprising weeklies with illustrations by "our own artists."

In anticipation of all this, it is interesting to recall some of the similar occasions in the past, each of which had its own special features and significance.

The approaching inauguration divides with the last one the interest of being the approximate Centennial Inauguration. It will be one hundred and two years on the 30th of April, since General Washington stood upon the balcony of the old Federal Hall in New York City, where the Custom House now is, at the head of Broadstreet, in Wall, and, before a multitude hushed to silence by deepest emotion, was made first President of the new nation that calls him Father.

No inauguration day can ever rival that one. It began fittingly with thanksgiving and prayer to Almighty God for the great deliverance and the great future. As the church bells rang, the clouds which had gathered darkly as they had over the nation's morning, rolled away, and the sun burst brightly forth in happy omen. The town (what there was of it at that early period) was thronged with people. No Fifth Avenue Hotel or Astor House had disturbed the green sods of the country, and the surplus of visitors had to put up tents on the "Commons." After service in various churches, a brilliant procession gathered before the Presidential mansion in Cherry St. to escort him to the Capitol; militia companies, the veterans of the just ended Revolution, horse, foot and grenadiers; the chief municipal officers, the congressional committee, foreign ministers, and multitudes of distinguished citizens.

No precedents existed for the inauguration of the President of a republic. The cumbersome details of monarchical ceremonies were out of place here, yet all their dignity and more was due. When years after, Marie Antoinette, wishing to send a friendly testimonial to the President, asked Lafayette whether she should address him as he did the sovereign of Europe, he replied: "No Madam, they are only Kings, while this is the President of a free nation."

At the door of the senate chamber, the vice president, John Adams, in eight years, met the Washington successor, met the President and led the way to the outer balcony, where presently the group was gathered before the eyes of the assembled thousands.

In front, the tall commanding figure of General Washington and Chancellor Livingston who was to administer the oath of office; the chancellor in his official robes of black, the General simply dressed, after the fashion of the time, in a full suit of dark brown American broadcloth, long white silk stockings, silver shoe buckles on his low shoes, steel-bitted dress sword, his hair powdered and gathered in a bag. Around and behind were gathered Revolutionary generals and men whose names still live in history: Knox and Hamilton, Sherman and St. Clair and others. Secretary Allison bore the Bible on a crimson cushion, on which, laying his hand to take the oath repeated with solemn deliberation to him by the chancellor, Washington bowed low and kissed the book, exclaiming with closed eyes, and voice choked with strong emotion, "I swear, so help me God."

Turning to the crowd, the chancellor cried "It is done. Long live George Washington, President of the United States!" The suppressed emotions of the multitude burst forth in buzzes, while "some waved their hats who, overcome by feeling, could not find voice to join the shouts"—and the little cannon mounted on "the battery" fired a salute to the thirteen guns for the new United States. "In the evening, the city was a blaze of illumination, and the new President himself went "down town" to see the spectacle, returning on foot about 10 p. m., the crowd being too dense for carriages to pass.

Very different from this brilliant scene was the quiet inauguration of Thomas Jefferson, framed in the Declaration of Independence, as third President, March 4th 1801, after an election won, not like Washington's, by the unanimous

sufrages of the electors, but after the unparalleled struggle which marked a division of political parties lasting to the present day. Refusing to have any escort sent for him, he hastened to Washington, to which city the capital had been removed, on the receipt of a message sent by mail. His friends flocked to the capital to attend him, but not by his desire. An English writer who witnessed his inauguration, thus describes his appearance on the occasion. "His dress was of plain cloth and he rode on horse back to the capital, without a single guard or servant in his train, dismounted without assistance, and hitched the bridle of his horse to the palisades." The inaugural ceremonies were simple as they could constitutionally be.

The modern inauguration day has settled down into something midway between the intense enthusiasm of the first and the democratic simplicity of the third; the American people being quite as fond of a fine show as their British cousins, and no longer afraid of its being mistaken for toryism. In general features one is much like another, and no better picture of a typical one could well be given than Mrs. Mary Clemmer's description of the second inauguration of President Grant.

"The avenue opens before you—a broad straight vista, gay garlands of flags of every nation and hue swung across from roof to roof. Above, glittering an absolutely cloudless sky, dazdly blue, and pitilessly cold. The air seems full of rushing feds. The impe comes down and seize an old man's hat, and fly off with a woman's veil, and blow a little boy into the cellar. The bigger air warriors sweep down banners, swoop off with awnings, concentrate their forces into whirling cyclones in the middle of the streets, and lying away at plate glass windows till they prance in their sockets. Before such trickery goes, through the biting air, comes the great procession. First a battalion of mounted police, then West Point, with its band and drum major; I believe it is the fashion to find fault with West Point; but I wouldn't give much for anybody who could see these boys and not admire them. They have their faults, (their caste and their army exclusiveness sometimes reach an absurd pitch) but look at them! What faces, what muscle, what manhood! Their movement is the perfect poetry of action; a hundred men stepping as one. The colored cadet is whiter than a dozen of his classmates, and has straight hair.

In the distance rises, wave on wave, a glittering sea of helmets; bayonets flash, bands play. After West Point comes Annapolis. Pretty middies, young and slender, in their suit of dark blue. The midshipmen are followed by the famous Marine Corps, then the old Guard of New York with Dodworth's band, the Washington Light Infantry, Corcoran Zouaves, Washington Grenadiers, the St. Louis National Guard, The Philadelphia City Troop, in navy blue jackets, tight knee breeches, high boots, bearskin helmets, silver mountings, the oldest regiment in the United States, two years older than the Government, organized in 1793, and having furnished men to every war of the country since. It has in its army a letter from General Washington of thanks for its services. But we shall not reach the Capitol till past noon, unless we leave the rest of this splendid procession, the "orchestra of soldiers and sailors," the burnished and flower wreathed engines, the brave firemen, black and white, the civic societies. The stragglers swarm the galleries till they over-flow.

The diplomatic corps enter the Chamber, led by Blaquiere Bey, a handsome man, in full Turkish court regalia—over fifty ministers, secretaries and attaches in full uniforms. Now the Supreme Court appear in their robes of office, kicking them up high behind as usual, and take their seats. Vice President elect Wilson, escorted by Senators, comes down the center aisle and takes his seat at the right hand of Vice President Colfax.

At three minutes before twelve, the President appears, leaning on the arm of Senators, takes the seat assigned him in front of the Senate's table. A deep hush falls on the throng. The Vice President begins his valedictory. Now comes the new Vice President's little speech. Then the swearing in of new Senators, the proclamation conveying an address of the Senate to begin this minute, when all start for the front door of the Capitol.

On the eastern portico, what do we see! Below, a vast mass of human beings, line of soldiers—cavalry, artillery, infantry; Before a little gentleman sits down in a big chair—Washington's inaugural chair he's told.

A big gentleman, the Chief Justice holds forth with solemnity a big Bible. The little gentleman kisses it—kisses these words "from the eleventh chapter of Isaiah:

"And the spirit of the Lord shall rest upon him, the spirit of wisdom and understanding, the spirit of counsel and might, the spirit of knowledge and of the fear of the Lord. And shall make him of quick understanding in the fear of the Lord, and he shall not judge after the sight of his eyes, neither reprove after the hearing of his ears."

Then he rises, and, with manuscript in hand, begins to baffle with the breeze, and read his inaugural which nobody hears. Behind him sit his wife and daughter, the ladies of the Cabinet, and the Diplomatic Corps. Now the carnival of salute; the Middlesex fire their howitzers, thirty seven guns; the artillery fire twenty one selfs. The firemen swing their hats and make their throats sore with shouting. Amid all, the multitude and the procession surge back towards the executive Mansion. Between the latter and Lafayette square, the military pagant culminates with the review. The President with lady friends enters the pavilion built for the purpose, and the troops march by, anvilting two solid squares. The entire body of soldiers march and mass as far as the eyes can reach through the glittering sunshine, one only sees gleaming helmets, flashing bayonets, glancing sabres, hands playing and cannon thundering. Amid all these, the four horses dashing before the Presidential barouche bear the President and his party to the Executive door which shuts them from our sight."

## THE COMING INAUGURATION.

The coming inauguration will doubtless be as brilliant as any of its predecessors. We learn from members of the committee in charge of the proceedings, that from fifteen to twenty thousand men under arms will be in line; twenty-two company organizations of infantry and cavalry, of the U. S. Army, Navy and Marines. Among them will be a division, six thousand strong, of the State National Guard of Pennsylvania. There will be two white companies from Norfolk, four colored and white from Richmond, four colored from Petersburg. The "crack battalion," from Charleston is expected, and a regiment of the California National Guard, who, if they decide to attend, will come all the way by a special train, and at an expense of something like a quarter of a million dollars. All schools with military organization to which an U. S. Army officer has been detailed, have been invited to take part in the procession. Hampton will probably be represented there, and we are glad to learn that one hundred Indian Cadets, from Carlisle, will take part commanded by Capt. Pratt. The following is the letter of invitation to Hampton Institute, which is a commandant of cadets, Capt. Henry Romeyn.

EXECUTIVE COMMITTEE ON INAUGURAL CEREMONIES, MARCH 4, 1881.

WASHINGTON, D. C. January, 29, 1881.

Sir: I am instructed to tender you, and through you, the President, Faculty and Cadets of your college, a cordial invitation to visit this city, on the 4th of March next, and take part in the parade incident to the inauguration of Genl. James A. Garfield as President of the United States.

Please signify your acceptance at the earliest possible date.

Very respectfully,  
Your obedient Servant,  
H. C. Corbin,  
Asst. Adj. Genl. U. S. A.,  
Corresponding Secretary.  
To Capt. Henry Romeyn, U. S. A.,

## OLD VIRGINIA HOUSES.

It was very natural that the colonists from the Old World to the New should have tried to make their new homes in the wilderness as much like those they had left behind them as possible. And so it was, the Dutch settlements were indeed a New Netherland, with their white stuccoed houses and steep roofs and streets narrow as if they thought they still had to weed the land from the sea; the Puritans founded a New England, according to their Puritanic but thoroughly English ideas of comfort and civilization. In Virginia as well, a New England was established, only after the fashion of the cavaliers instead of the roundheads. With good clay

under their feet and boundless supplies of timber around them, the colonists sent to England for ship loads of bricks and built their "Palaces" in the wilderness, and held their mimic court surrounded by wondering savages. Most of the ancient houses have passed away with the manners of the times they represented. A house a hundred years old is a rarity in this progressive land, where the new is constantly pushing out of its way the old. The few still standing should be cherished as historic relics of an interesting period of our national life.

An interesting series of articles has been published in Scribner's Monthly upon the subject, from one of which we are kindly furnished with the illustration on another page, and from another of which we quote the following pretty description of one of these old Virginia houses. "They possess that imposing look which these once grand mansions alone seem to retain. They are even now capable of outlasting houses of modern construction recently built beside them. Dormer-windows, with many little panes, look out from the moss-grown roofs above the heavy, black-stained eaves as they have done for years, and let in the only light upon legends, records, and family secrets possibly stored in many of the garrets they open into. Beneath these windows is the door with its massive carved frame and portal arch. The door jams and latches, of Ionic or Corinthian design, as well as the side-light, pillars, and divisions, are all pieces of art workmanship. Over the door the transom light is veiled, fan-like, with many radiating lines. The door itself is usually dark and cut into many panels, ornamented with knocker and knobs of polished brass. Contrasted with the light or white painted wood-work, and pale-green or blue plastering of the vestibule, the effect is altogether in keeping with the whole house, from the dormer-windows to the broad stone steps, with their gracefully wrought iron railings. Passing through such a door as this, into the old colonial houses, brings a thrill of genuine pleasure. Once inside the picturesque door-way, we find the hall-way equally interesting, contrasting, as it does other strangely, with those of today, where one or two chairs and a hat-rack are crowded to find place. Here the many antique chairs, tables, and couches, as well as an old corner clock, are reflected in the polished floor, as is also the curiously wrought swinging-lamp, suspended from the ornate middle arch of the hall-way. A feeling of airiness and largeness pervades the whole place. The old family paintings on the walls are in perfect harmony with the surroundings." Beneath the middle arch in this old house begins the broad stairway, so gradual of ascent, that it is a pleasure to loiter up beside the graceful balustrade and peer out the mysterious corners of the landing. The paneling beside the stairs is formed largely of old-fashioned corner-carved boards, that invite a mild and meditative curiosity.

Suggestive glimpses are caught from the broad hall through the open back door, of a garden. It was once laid out with care, and was, no doubt, the pride and pleasure of some nice gentleman in petting and three-cornered hat. But its owner is gone now, and the garden, through the many years of sun and rain since then, profligate alms by negligence of man and care of nature, has run wild in rank profusion, the slight attempt to restore order here and there evidently serving only to increase its charm. It is apparently meaningless shrubbery, its gnarled and fantastic branches, its flowers growing in a paternal embrace with plebeian weeds, roses and callow-grass, tulips and thistles, give a delightful air of freedom to the once trim parterre. Vines grow in regular irregularities, with their broad leaves rustling and jostling each other, at the base of an old sunny wall, which had faithfully marked off the many annual hours, but which now, from want of a style, forgets to keep track of time. It seems to know its utter uselessness as it leans upward, seeking for its final resting-place among the rank disorder at its base. Here an ally less neglected, bordered by lilacs and hollyhocks, contains a half-rotted grape-arbor, which runs almost the entire length of the garden, and ends in a summer-house, hidden in a mass of dewy, fragrant roses. As the result of negligence the garden has been turned to a wilderness of bloom: perfect pools of color are scattered among the fresh green of the leaves and the grass, and show bright beyond the dark stems of the bushes."

Entered as Second-class Matter in the Post Office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute, and printed on the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work, from all parts of the country, solicited, and will be done cheaply and well. Estimates will be sent on application.

To the nation, or to an individual, the close of the late war, what could have seemed a greater, better work than teaching the ex-slaves, just out of a regime of three hundred years in which it had been held as a crime to educate them; a work which swelled into new and tremendous importance when the slave became a voter, with all the possibilities involved in Negro majorities in some states, and in their holding the balance of power in others.

Physical relief required immediate attention, being first in the order of time, though not of importance, and was provided for by the Act establishing the Freedmen's Bureau, with thirteen million of dollars to expend for the benefit of Freedmen and Refugees. Of this amount three and a half millions, through the orders of Gen. O. O. Howard, Commissioner, were applied to education, and nearly a million of black children received a smattering of knowledge. The entire Negro population was interested in the subject, and sums of from ten to fifty thousand dollars were put into the foundations of Hampton, Atlanta, Fisk, Lincoln and many other now powerful institutions, then feeble and unknown, which northern men had planted. They have since been built up to noble proportions and wide-spread influence, by aid from the north. In some cases they have been helped liberally by state grants, regardless of the politics of their Yankee teachers.

This is all the general government has done to prepare its four million of "wards" for the freedom and power it gave them; for we do not include as preparation, the millions expended in maintaining an armed force at the south, to boot with bayonets the voting power of the Negro, which steadily weakened in spite of government, till the troops were withdrawn. It may be noted here that, from that time, from the apparent collapse of the Republican party and till now, the Negro vote has steadily increased as a power in the South, having created a Republican governor in Tennessee, and sent to the United States Senate two high minded liberal southerners, defeating so far the "Bourbonism" that is the bane of southern prosperity; besides securing the balance of power in Virginia, and, by a gain in southern elections, changing the House of Representatives from Democratic to Republican. The power created by giving the ballot cannot be crushed, as time

has shown. The latent forces of it is far greater than any external power. The logic of events is ten times stronger than the logic of rifles or artillery. How much good did coercive measures do? Politicians for nearly ten years tried reconstruction by force, and accomplished little. They expended many millions; where has it gone? What is there to show for it?

The three and a half million dollars from the Freedmen's Bureau, for education, are to-day a powerful, living force: that is reaching to the very roots of southern life and progress, and is a part of the mainspring that is moving the South along to a noble future. Only mental and moral forces can lift up.

The central fact in the life of the average politician is the next election; the course of reconstruction, since the adoption of the constitutional amendments, has largely turned on selfish and short sighted views. The politician is felt on the surface of society; the educator at the bottom of it. The northern school teacher, since 1862, has been a quiet influence; at first spurned, and, to some extent persecuted, later tolerated, and not in cordial relation with the best elements of the South, recognized as a benefactor, more hopeful and confident than any man or class of exotic origin, while the politicians of both sections are still distrustful, hostile and solid against each other. The "Fools Errand" is the gospel of the northern side: it is the best campaign document of the South.

The story of the northern teacher who has lived through dark and trying days in the past, if ever written, will show a bright and hopeful side as his later experience—which that celebrated book ignores or denies.

The lessons of experience, the teachings of good sense, the necessities of business, the bread and butter question, and, not least, free schools and universal suffrage, are the real reconstructive forces.

In spite of many things done in the south, that ought not to be done, and undone that ought to be done, a healthy progress has set in. This is as to legislative talk and political oratory, what the rising of the tide is to the noise of the waves on the shore. The one is gradual and strong, the other is violent and weak.

The best that Congress can now do is to pass the Burnside or other educational bill, that shall both complete and justify the gift of citizenship to the Negro, and help to raise the poor white man. It is remarkable that during the whole course of reconstruction not a notable speech or persistent effort has been made by a Southern Republican representative to promote the spread of knowledge. The best one was that of the United States Senator Joseph E. Brown, of Georgia Democrat, a few weeks ago.

It will hereafter be seen that the smart but, as a class selfish (not necessarily bad) men who have represented the Negro at Washington, have not cared for his real welfare as wisely and well as the few high and liberal minded southern men who have been there. It is this element yearly growing stronger, that is equally the hope of both races; such men are everywhere—the bother of politicians, but the real friends of the people.

In the Burnside Bill now before Congress, there is the blunder of giving one-third of the public land sales &c. to the Agricultural Colleges of the several States; the rest being devoted to teaching reading and writing to the illiterate masses. The colleges are, most of them, worthy, but their need has no comparison with that of the army of ignorant children in the land. They have been already well helped; those that are good for anything can do without more, those that have been failures don't deserve it. They may be meritorious, but there is no crying need, or danger, or injustice, in the name of which they can demand a third of all the national revenue available for education.

Ignorance in the South is a national danger; when it cannot control, it may get the balance of power. It is material for republicans, and threatens the public credit; it creates chances for demagogues, and is a standing menace to us. To remove it is an act of self-preservation.

Our important agricultural interests are flourishing, are not threatened, and the Colleges are not vital to them. The Hampton Institute is one of these and, as such receives from the state of Virginia ten thousand dollars a year for current expenses. The total annual cost is over forty thousand dollars, much of which is begged from house to house. Its most pressing need is an endowment fund, but it should not, as an Agricultural College, claim it from the money needed by the state and to the benighted and helpless beings thrown by the results of the war upon the country's charity. It may have, on other grounds, a peculiar claim.

We have been led to think that the nation's bounty to them, has been checked by the jealousy of the Agricultural Colleges or of their partisans in Congress, who have insisted on a division of the funds that a majority could not approve. If this is true it is the crowning outrage on the Negro, of reconstruction times. For all the good work that might have been done, northern Senators and Representatives are responsible more than those of the South.

Since 1862, northern friends have contributed over six million of dollars for the elevation of the freedmen. The "Solid South" is now devoting through taxation, over a million of dollars a year to Negro schools. This is far from adequate. Though the proposed government grant is relatively small, it is something, and may lead to more. There is enough sense of duty in northern individuals and southern legislatures in this matter to make itself felt. We have not yet found it in Congress.

The Republican party gave the Negro the form of citizenship; rights but not their substance—the fitness and power to use them; they will not get power till they get fitness. Gen. Garfield half apologized for bulldozing, when he quoted to his colored callers the other day, the argument of the south against them;—their unfitness for power—and told them to go and remove that argument. This address might have seemed to them ironical when they thought of the chances they had.

The south is gradually providing the substance of citizenship by its free school system, and in other ways, as shown by the taxable Negro property of Georgia of six million of dollars, and the fact that every Negro in five in South Carolina is a land holder. This is not the result of a wholesale outrage business.

We went into the war with "The Union without slaves if possible, but the Union with slavery if we must have it." Not until military necessity coincided with humanity; not till justice was compulsory was emancipation declared.

This is what surprises the Negro student, when he reads history.

Nearly two hundred thousand freedmen were enrolled as soldiers, and did not a little, directly or indirectly, to give victory to the North. They became the wards of the nation. The Freedmen's Bureau, for a few years, cared for them and was dropped. Hundreds of thousands were helpless; they expected 40 acres and a mule, only because they were told to expect it. Not an acre; not a mule. That was well. But hosts of aged, infirm and crippled, were turned out after a life-time of hard work, "like worn-out horses," as they say, to shift for themselves.

Our five million ex-slaves have not thrown upon the nation a single pauper to care for, but are bearing on their own burdened shoulders vast loads of infirmity and helplessness. A two mile walk from the grounds of Hampton Institute will show they began with nothing. "They will not work. They will die out," was prophesied of them.

When the Confederate ex-president admits that free labor is a success, we need not argue it. The four millions of 1870, are five millions in 1890. The colored men they raise create labor and wealth to maintain the nation's credit abroad.

They don't complain. But some of them are thinking.

Wise men will say by and by that the neglect by the Republican party of prompt

educational provisions for the ex-slaves, has been its great blunder.

After the Constitutional amendments were adopted and the states were admitted, reconstruction degenerated into a mere contest for the Negro vote. Statesmanship became partisanship.

## THE PEABODY FUND.

The Trustees of the this Fund, at their meeting in Washington on the 2nd of February, elected Rev. J. L. M. Curry, D. D., of Richmond, Va., successor to the late Dr. Barnas Sears, as Trustee of the Peabody Fund.

The income this year is \$90,000.00, to be expended with special reference to the training of teachers.

One hundred permanent scholarships are established at the Normal College (for whites) at Nashville Tenn. Which receive the principal benefit of this Fund.

We have known Dr. Curry for many years as a high and liberal minded Southern gentleman, appreciative of all good work, for either race, and a truly progressive man. The Trustees have made an admirable selection of an agent. We believe that the Peabody Fund has accomplished great results already, and is likely to do even greater good in the application to the improvement of teachers and teaching.

Make the teachers, and you will make the people.

Frequent gatherings of the teachers of the South at centers where they shall receive instruction, inspiration, and create an esprit de corps is of unspeakable importance.

We have been asked to receive at the Hampton Institute for a three weeks session in July next, the colored teachers of this State. The requisite provision for teachers and other expenses can be made only from the Peabody Fund. State legislators do not see the need of such work and will not appropriate for it.

Many colored institutions have been aided by the Peabody Fund, by way of personal aid to students, usually \$50.00 a piece, which helps them with their board bills. Current expenses are not provided for.

Hampton has this year \$500. for Virginia students, (boys and girls) and \$450 for South Carolina boys, selected by the Superintendent of schools of that State.

The cost of education, or scholarships of them all, (\$70 a piece), is provided by Northern friends.

We believe that the most enthusiastic and spirited educational work in the country is that for the Negro under Northern teachers.

Whatever may be said of race inferiority, it is true, that out of five millions of freedmen a small per cent. of talents makes a large aggregate. From this class chiefly, colored institutions are filled. Our training schools are dealing with the best brains and force of the race; with men and women conscious that they are to take a position which, in the North, is generally subordinated and destitute of eclat, but in the South, attracts the attention of both races. The Negro teacher is apt to be the most known colored man in his neighborhood, and therefore an oracle, and the whites are interested in whatever is an influence on the colored population about them. They seldom fail to commend a good teacher, who on his or her part finds the work both difficult and stimulating, but appreciated; difficult from poverty and vice, stimulating because of a general desire, that does not characterize all poor, to be improved.

The letters published from month to month in this paper, are faithful word-pictures of southern school work, by those who are doing the work. In future numbers, we shall take the liberty of publishing a number of letters written at our request by former graduates to those who paid their scholarships while here and sent via Hampton to their benefactors. They are getting away from a dreary past to a bright future. The movement rather than the result is the cheering thing.

In general it can be said that the competent Negro teacher is wanted, well treated and welcome everywhere.

### THAT INDIAN BUILDING.

In the face of some solemn warning, much adverse prophesying, and of almost universal doubt, the Hampton Institute undertook to teach Indians. The unquestioned success of long and worthy missionary effort for this race, especially west of the Mississippi river, had not made a serious impression upon the public mind. Our own ideas about it were vague; none of our many friends seemed assured in the matter. We went into it in faith.

Hampton and Carlisle schools cannot claim to have proved anything new, but they are helping to push public opinion on the Indian question to a point beyond doubt.

In simply demonstrating the capacity of the Indian, they follow afar off the veteran missionaries of the west. In putting before the people results worked out by their own peculiar methods, and securing general assent to their success, they have beyond the noble Christian pioneers of the plains. We have often felt when these eastern schools have been commended, that those good, patient, self-forgetful workers were in some degree robbed of the credit due them. We did not wonder at a seeming lack of cordial sympathy from some of them: others were, and all, we think, are now, appreciative in the highest degree.

The first building at all commensurate with the claims of the work for Indians, or adequate to express fittingly the awakening conscience and interest of the nation, is the one now projected for Indian girls at Hampton.

It is proposed to commence it early in the spring, to build it of brick, in the form of a Greek cross, one arm 100x40 and the other 84 x 35 feet, to contain rooms for 70 girls with their teachers, besides rooms for washing, ironing, a cooking class, hospital-room, bath-room, sewing-room, study-room and a large play-room.

The estimated cost is **TWENTY THOUSAND DOLLARS.** One thousand have been received. Only fifty dollars have been received in response to the statement in our last number.

Would it not be a mile stone of progress, a landmark of a new era, a symbol of the advent of peace and justice in our dealing with red men after a "Century of dishonor?"

It must be done by private citizens. Government will place the Indians at doors and pay \$150 a piece a year, two-thirds of the annual cost of educating them. For the balance, \$70, we appeal to the people. Individuals, Sunday-schools and ladies' benevolent societies must help to pay the nation's debt to Indians, if it is to be paid.

With the hearty and most helpful sympathy of the Executive Department of the government, there is, so far as we see, no hope from Congress for an effort like this. It assents, but does nothing, though urgently pressed by Secretary Schurz. The wide-spread agitation of the past year has added but \$10,000.00 to last year's appropriation for general Indian education; confessed, as education is, to be a leading point in our Indian policy. The \$100,000 asked for for this purpose, was cut down by Congress to \$85,000.

The people must lead our legislators in any effort for moral progress, for either the Indian or the Negro. Public sentiment, is the hope of the weak and the wronged in our country.

Shall this needed and noble gift to Indian education be deferred?

There is, here, excellent provision for over 50 Indian boys. There should be at least fifty girls instead of 29, as now. The sexes should have equal advantages. On them equally depends the future of their race.

We have faith that the people will respond to our appeal. We believe that the time is ripe for the effort. From "Boston philanthropy" and that of Massachusetts generally, more than from any other quarter, has come the means to build up, so far, Hampton's work for the Indian.

With the recent gratification of the Indian question, the kindling of enthusiasm for the race, the knowledge that the Indian question is only one of educational chances, result in the twenty thousand dollars for the benefit of Indian girls at Hampton, for generations to come?

The "State" of Feb. 2nd gives a comprehensive review of the recent Report of Hon. W. H. Ruffner, Superintendent of Public Instruction.

"Dr. W. H. Ruffner, Superintendent of Public Instruction, has finished his tenth annual report on the condition of the public schools, and will, at an early day, send it out. He says the year which closed July 31st was our best year in all respects. The number of schools was about doubled; the school attendance was more than double what it was last year, and about 15,000 larger than in any preceding year. An increased amount of State school money was turned over. And whilst, of course, there was a larger outlay for teachers and school-house expenses, there was almost no increase in the cost of administration, and there was a decided reduction in the cost of education per pupil. There was a slight falling off in the regularity of attendance, and a slight increase in the length of the school term. Over two hundred new school-houses were built during the year, and nearly \$100,000 added to the value of school property. There is reason to believe also that there was better teaching here than ever before, and certainly we never before had such exhibition of interest in teachers' institutes and other means of professional improvement. School officers generally performed their duties faithfully, and a cheerful, harmonious spirit prevailed universally.

The school population is put down at—white, 314,827; colored, 240,980. Total, 555,807. The number of white male teachers is 2,478; white females, 1,610—total white, 4,088; colored males 231; colored females, 254—total colored 485. Total, 4,573. The cost of the system for all purposes from all sources for the year, the total balance due for the year, is shown to be as follows: For current expenses, \$338,328.35; for permanent improvements, \$31,100.77; for taking census of school population, \$10,674.51; total cost for all purposes, \$340,103.63.

We hope to make further extract from Dr. Ruffner's report. He is the educational giant of this State if not of the South and has, we hope, a long career before him. The State system is, in some sense, his creation.

### SCHOOL DEBTS.

The comparison between "Harvard and Hampton" in our last issue in the matter of paying debts by students, is further illustrated by the two letters given below. The spirit shown by the writers as well as the letters themselves, would do credit to either institution.

The first letter is from one of the Hampton graduates of the last class, 1880, who is the first to pay in full his school debt.

The second letter is from a young man who left school apparently far gone in consumption. His debt of nearly \$50, was considered a total loss to the school, as it was not supposed he could recover. After he left, the first intelligence received from him was the letter given below, sending the amount of his school debt in full, which he had saved at much sacrifice and privation.

These are worthy examples for all of us to follow.

Nureysville Nansamond, Co. Va. Feb. 11, 1881.  
GEN. MANNING,

Dear Sir, I have present you the balance of my account, \$27.12 (this was his 2nd remittance) I would have paid it before this, but my first month's labor I had to use to fit myself up for the winter. It has been so cold, had I not I should not have been able to stand it. Allow me once more to thank you for what you did for me, for I consider that my qualification at Hampton was the making of me. The only pay that I can give is to do all I can in trying to elevate my race, for I am deeply interested in that matter. Please send me the Southern Workman, for I never get any thing here to read.

Very Respectfully,

H. C. Goodman.

Saltville Va. Aug. 13, 1880.  
Dear Sir, Marshall,

Enclosed you have a draft for principal due you. I have made an effort to secure this amount, and have ever felt, and do feel, ashamed that you have gone so long unpaid; but owing to the condition of my health, I have kept me busy to sustain myself, and accumulate over a small amount.

Dear Sir, I hope you will pardon my long letter but I will delay. And as I am feeling better, I will remit interest due. My health is delicate and often precarious, yet I work with all the energy I can command.

I would have gone to the Normal Institute at Lynchburg, but for my indebtedness to you, which I feel proud to be able to pay.

I can never forget the kindness received at the hands of the officers of the school. I pray for your success. I feel myself in every way

\* No interest has ever been required on school debts.

indebted to the Institute. I am teaching three miles from the village of Salt, have a very fair school, expect to continue here till cold weather. I hope for your acknowledgement of enclosed.

I am very respectfully,

J. M. Gunn.

The roughest winter we have had for years seems pretty well over. February has been full of delightful balmy days; breathing the fresh bracing sea air brought by west winds from the Atlantic has been a delight.

The steamers are now running regularly from Baltimore. Passengers who leave New York city at four o'clock p. m. (foot of Desbrosses St.) arrive at Fort Monroe the next morning at eight o'clock, taking a fine steamer at Baltimore at nine p. m. the previous night. The trip down Chesapeake Bay is usually as quiet as one on the Hudson River.

The Hygieia Hotel, H. Phocbus, proprietor, at Fort Monroe, is considered to be one of the best kept in the country.

Those who desire more modest prices can be well accommodated at Mrs. S. F. Eaton's boarding house, near the Hygieia.

The "Youth's Companion," an illustrated weekly paper published in Boston, Mass., is a practical, entertaining, bright paper, adapted especially to the young, but of interest to all, from the variety, excellence and comprehensiveness of its readings.

It deserves a large circulation everywhere, and we hope our Southern readers may be inclined to take it. The price is \$1.75 a year.

Those who are seeking new ways to make a livelihood or wish to know about the opportunities in the West for a young man, will do well to take this paper.

The native Chief Khame, at Shoshong, South Africa, is a very remarkable character, as reported in the *Chronicle of the London Missionary Society*. At his inauguration, some six years ago, he gave in his adhesion to Christianity, and to this he has constantly adhered. He has also taken a firm stand against the drinking habits chiefly of the white people of the English Colony, within which his province lies. Khame neither smokes nor drinks, chews nor snuffs, will have nothing to do with native charms, medicines, witchcraft, &c., and strictly observes the Christian law of one wife. Determined not to rule over a drunken townspeople, he declared against having any intoxicating liquors brought into his country or sold within its limits. Still the curse came. He tried fines and imprisonments, in vain. Jugs of liquor came in bags of corn, and scenes of drunkenness followed. He finally threatened banishment, and, though patient and forbearing, he was inflexible. He did banish, and send beyond his limits numerous white offenders, saying as he did so, "I am black, but I am chief of my own country, and I shall maintain my laws, which you insult and despise."

"Bricks without Straw" says: "More assent never accomplished anything." Congress assents to the needs of the Indians and there they stop. Not a syllable has been put into any appropriation bill in regard to the education of Indians in the East, most urgently asked of them by Secretary Schurz. An amendment to the allotment bill, proposed by Mr. Teller, provides for authorizing the Secretary to select and send to the Agricultural College at Fort Collins, Colo., fifty Indian youth. The bill can probably get no final vote in this Congress, and even if it passed, no money is appropriated to pay for the education of these youths. For general education the Indian Office at Washington asked for \$100,000.00. It is granted but \$85,000, only \$10,000 more than last year. Nevertheless, the public, including members of Congress, are getting interested in Indian civilization, and what is more, are getting to be almost intelligent on the subject, which is no small gain.

THERE is, among those friendly to Indians, a desire of sweeping changes; such as abolishing the Reservation and Tribal Relations which some of the best authorities comment on adversely.

Dr. James H. Rhoads of Germantown, Pa., is second to no man in this country as an authority on the Indian question. In response to a letter from us, he replies as follows:

GERMANTOWN, PENNSYLVANIA, 1st Mo. 26, 1881.

Dear Friend:

1st. We cannot give up the Reservation system.

2d. The Indians should all have the privilege of taking allotments of land as they wish to do so, where they are just settling down from wild ways. On the old Reserves, where they were more civilized, the lands should be allotted in severalty,—three-fourths conceding. The allotments should be inalienable for debt or otherwise, for not less than 30 years, and then only at the discretion of the president, by permission to each tribe, as circumstances dictate.

If passing, after five years, Indians should have right to sell to each other—legends trade.

3d. The surplus lands be sold, but be held to help pay farming Indians for the lands they must resign where they hold more than their share; and for school and other beneficial purposes; sold therefore at discretion of department, and with the concurrence of three-fourths of adult Indian Territory, surplus lands are wanted for grazing purposes.

4th. Only criminal laws and laws of marriage and inheritance should be extended over Indians generally. Other laws should be extended by future action of Congress.

5th. Citizenship should not be conferred by any sweeping law. It gives all the responsibilities of holding and defending property, while the better Indians even are as powerless as a child to defend themselves in our courts. As Indians show the ability to acquire and hold property, they should be admitted to citizenship. An enfranchised Indian must have his manly money, his lands, etc., all given up to him, and is totally discharged from all special protection or care from the general government. He must take care of himself, though as small as a boy of twelve.

6th. Open up chances for Indians to trade as much as consistent with safety from drink and vice. Let them have stocks of goods, and sell to each other, instead of conferring it to white licensed traders.

7th. The last is first; schools for all the children; and these industrial ones, teaching work, letters, practical Christianity. The Indian Territory should be held intact for Indians, at least for twenty-five years, and opened only with the concurrence of Indians. I do not agree with sentiments of President Hayes and Secretary Schurz that it can be held, as if the nation could be forced to do other than strict justice.

Very truly thy friend,

JAMES H. RHOADS.

CAPT. R. H. PRATT, in a recent private letter, referring to the late Memorial of the Presbyterian body to the President and Congress, in behalf of Indians, says:

All the religious and missionary folk are feeling pained in school matters, and there is decidedly a bright outlook for Indian work, if Congress will only act. The bestowing of citizenship (before the time) and lands in severalty, in the most injudicious order, I feel will not work wisely to the best good of the Indians. Lands in severalty and citizenship should go to the New York Indians, and those like them at first. Not to the poor Utah, who never had a child in school. It seems to me, not only cruel but cowardly to thus begin this work. The New York Indians are self-supporting, have good schools in the midst of civilization, and have had good contact for a century; they are the fellows to begin on.

With regard to Bihé, a South African inland Mission Station, to which a Hampton graduate, Samuel Miller, has just been assigned, the latest report says:

"The general observation may be made that the physical, mental, and social development of the varied tribes improves in the ratio of the altitude of the locality. The greater the altitude, the higher the perfect is the native, and the natives of the coast region are most racitic, the least intelligent, and the most unfortunate of all. In industrial arts, it is also remarkable that the tribes farthest in the interior, and therefore most remote from European contact, are the most ingenious. The coast native does not manufacture a knife for his own use, the inhabitant of the plateau does; the latter manufactures beads, and sells them to the degraded coast negroes." It will be remembered that the altitude of Bihé is given as about 5,000 feet above the sea.

## LIBERIA.

An urgent appeal for ten thousand dollars to maintain *All Saints Hall* in Liberia, is signed by Mayor Latrobe of Baltimore, and from other responsible gentlemen, ten thousand dollars have been secured; but a like sum is needed to maintain it.

Miss Margaretta Scott has been and is the inspiration of this worthy effort. She spent last July and August on the Liberian coast, to select a site for the school. A charmingly picturesque place has been chosen, and arrangements made for quarrying the stone, getting out the heavy timbers, and clearing out the heavy forty acres of the two hundred to be given by the Liberian Legislature. The expense of the preparatory work now being done in Africa, with the exception of \$200, is undertaken by people there. It is most noble; for, with one exception, they can only do this by making great personal sacrifices, and this also indicative of their great desire to secure the better education of the daughters of the land.

Liberia is a CIVILIZED NATION having its quota of educated men—gentlemen. The proposed school is for their daughters, and must aim to mould them into the earnest Christian woman, good wife, true mother, capable of influencing the home and social life of the nation. The surroundings must be elevating, inexpensive, but tasteful and attractive; a mould for the homes of the country.

Liberia is an important nucleus of African civilization. It is not a failure. No civilization in its earlier stages has made a more hopeful record.

Its claims should not go unheeded.

## GOVERNOR ST. JOHN ON THE EXODUS.

The Governor of Kansas, who certainly ought to know as much as any one of the subject, takes a very hopeful view of the exodus to his own state. In a speech he made in Topeka, he estimates that 60,000 colored people have come into Kansas since 1877, of whom perhaps 40,000 have remained there, while 20,000 have been forwarded to Colorado, Nebraska, Illinois, Wisconsin and Minnesota. About \$50,000 have been spent in their behalf, ninety per cent. of them needing help at the start. The need was, however, only temporary, he states, because they quickly became self-supporting. He speaks well of their moral character, saying that they are sober, well behaved and industrious, and that 80 per cent. of their votes this year were cast for prohibition (on which platform the Governor had just been re-elected). The flash of the recent victory may have given a somewhat rose tinge to the Governor's glasses. There was, no doubt, much suffering among the emigrants the first year, and Mrs. Elizabeth Comstock, whose faithful labors for them are well known to our readers, stated through the press that 20,000 of them must be supported by charity through this winter. Still there seems to be a probability that those who have begun to support themselves, will, for the most part, maintain their foothold, and perhaps many of the rest will eventually do the same. The Governor paid a very handsome tribute to the devotion of Mrs. Comstock and Mrs. Haviland, tann whom, he says, "God never made two nobler women." He will no doubt do all in his power to further their effort and help the emigrants to self-sustaining prosperity. He predicts that the exodus will continue till protection for property and political rights is assured the Negroes in the South, when they will for the most part prefer to stay there.

Their condition is constantly improving, and the best effect of the exodus has no doubt been its reflex action upon the general welfare of those who remain. Their next danger will be from bribery instead of bull dozing—a far worse danger, menacing not the body but the soul, the self respect and very life of the race. The danger of this danger the only exodus is in the nation, not only of the head, but of the whole character, in morality, industry and self-respect. This is the great need of the South.

## ARRIVAL OF NEW INDIAN STUDENTS.

Sixteen new Indian students, two girls and fourteen young men and boys, have arrived at Hampton from Arizona, collected under order of the Government, with others for Carlisle, by Rev. Sheldon Jackson, Superintendent of Presbyterian missions in that Territory, whose recent book on Alaska has introduced many to that wonderful addition to our dominions, and his assistant Mr. F. L. Conklin, who has had long acquaintance with the Indians of the West, in his experience as correspondent and artist of Frank Leslie's.

The new comers represent five different though more or less allied tribes. They are for the most part widely separated from the Dakotas in habits and modes of life, as they are by latitude, and it will be interesting to watch the hearing of all these differences upon their education at Hampton, while it is well to obtain this hold upon as many tribes as possible.

Three of the young men are of the Apaches, the most warlike of the southern tribes, in this respect most like the Sioux. The hostile Apaches, whose famous chief Victoria, was recently killed, consisting, however, but of a small band, met of the tribe being peacefully settled on their reservation. The success of this effort for the improvement of their children cannot but have a great effect in turning the tribe towards civilization.

Two of these from the Apache agency, though under twenty, have been employed by the Government as scouts, one of them having had two or three years' experience, and brought in several parties of hostile Apaches. Both of these talk some English. The third Apache, Stago, a little fellow of thirteen, is said by Mr. Conklin to be a particularly bright and observing boy. On the journey he often found him at his elbow trying to catch a private writing lesson, watching closely as he wrote a word, and then trying to imitate it with his own pencil.

From the Apache (San Carlos) agency come also four from the Mohave and Yuma tribes, which are altogether distinct from the Apaches in language, manners and customs, having come originally from the plains of the Gila and Colorado, in Western Arizona, while the Apaches lived in the mountains.

There is no school at this agency, and the little English any have has been picked up from their casual communication with white officers or agents. Farming on this reservation is entirely dependent on irrigation, and without competent instructors they have labored under great disadvantages, trying to dig ditches. Yet all or nearly all, including the Apaches, are reported by the United States officer acting as agent last year, as laboring to some extent, while many are industrious workers, quiet and orderly for an uncivilized people and very obedient to agency rules and instructions. They have about one hundred acres of land under cultivation, one thousand head of cattle, and two hundred head of sheep. About five thousand pounds of barley were grown last year, besides corn, which is their chief crop.

The remainder of the party are six Pimas and Papagos, affiliated tribes, living on reservations further west than the Apaches. You find them riding over a sea of desert land, their village appearing in the distance like a lot of mounds; a number of conical mounds, seven feet in height with a diameter of from ten to fifteen feet, built of mud plastered over a framework of branches, a hole on top for the smoke, another, built of the height of a man, for a door. The people who inhabit these primitive dwellings are contented in their dirt and degradation. Perhaps they are descendants of the Aztecs and Montezenas. They worship the sun, moon and stars, but they live in the ditch. They are open, frank, fair, generally honest, also naturally very moral while uncontaminated by white neighborhood. They do not practice polygamy, and are very jealous of their wives. As usual in other tribes, the position of woman is entirely subordinate. A wife is a slave, and can be sold or killed by the husband, with impunity. Living in permanent though wretched abodes, they are not a hunting

or fighting, but an agricultural people, with flocks and herds. Government furnishes them with farming tools and medicines, but for the rest they supply their own few wants, raising wheat and barley, and grinding their meal between stones, by hand. As for clothing, a very little goes a great way, and dirt fills up the deficiencies. Low as is their condition, there is something winning in the open, tractable disposition of the people, and those who see them nearest seem equally struck with the possibility of their improvement, and the impossibility of effecting it, except in one way.

The agent in charge of both the Pima and Papago reservations, Mr. A. R. Lulliam, closes his last year's report with a strong expression of this conviction. "Are you surprised then, most honorable Commissioner, that having daily intercourse with these people, we say emphatically that nothing short of educating the children apart from these scenes and influence can accomplish any speedy reformation in their condition of life? If Christian men and women would devote themselves to this work with the same zeal as to similar work in foreign lands, and with much less outlay of money, in connection with the efforts of government to civilize this people in time we have reason to believe a different life would be seen in these red men and women of the frontier."

With 22,000 children of school age, no school has ever been established among these people until a few months ago. Those sent to Hampton are the first they have ever sent away for education.

Five of the six Pimas are of the family of the head-chief. Among them is his son and heir, Antonio, a man about thirty years old, who some years ago represented his people in a treaty delegation to Washington. He will soon be in command of his tribe of over four thousand Pimas and Maricopas. Having already some knowledge of English, and being a man of unusual intelligence and character, he was, at his own earnest request, allowed to come to learn "to better speak English and to better farming." He has left behind him a wife and two children, and a farm of twenty acres in his father's care, and brings with him his own oldest boy, of nine years, a nephew and two cousins. He had hardly got here before he was asking, "When learn—when work—this to-day?"

Could the Christian men and women of this Christian land meet these earnest asking eyes without quick response for him and his people?

Bishop Whipple of Minnesota says: "The North American Indian is the noblest type of a heathen man on the face of the earth. He recognizes a Great Spirit; he believes in immortality; he has a quick intellect; he is a clear thinker; he is brave and fearless, and, until betrayed, he is true to his plighted faith; he has a passionate love for his children, and counts it joy to die for his people. Our most terrible wars have been with the noblest types of the Indian, and with men who had been the white man's friends." President Seelye, of Amherst College, says: "When the Indian, through wise and Christian treatment, becomes invested with all the rights and duties of citizenship, his special tribal relations will become extinct. This will not be easily or rapidly done; but all our policy should be shaped toward the gradual loosening of the tribal bond, and the gradual absorption of the Indian families among the masses of our people. This would involve the bringing to an end of the whole system of Indian reservations."

DIED—at Liberty Va., Feb. 1st, of typhoid fever, Lindsay Hayden, principal of the colored school in that place, and a graduate of Hampton Institute, of the class of '77, aged 39 years.

Mr. Hayden's is the fifth death among Hampton graduates which it has been our painful duty to record within a year. He has been, like two of the others, constantly engaged in teaching ever since his graduation. He was remarkably successful in his work and highly esteemed by all who knew him, both colored and white. He married, only four or five months before his

death, a classmate engaged in the same good work, and they were teaching together when he was so suddenly called from it to the higher activities of heaven. His sorrowing wife will have the heartiest sympathies of their many friends among the teachers and scholars of Hampton.

A young lady of an important Southern city was heard to express herself to a companion recently, as follows:

"I was in a store to day down on—street where some Hampton students were making purchases, and I was never more disgusted in my life. Why, they actually behaved like ladies and gentlemen, and not like colored folks at all. They were neatly dressed, spoke grammatically, and actually criticised the goods regarding quality, style and price, as intelligent and educated people do. It was absolutely intolerable: I turned away and left."

## THE YOUNG GIANT OF NATIONS.

The census is now complete as to the more enumeration, and it declares that the people of the United States, including the Territories and the District, number 50,152,866. The census of 1870 showed the number to be 38,923,210, and so the increase is seen to be the astonishing one of 11,229,656, or more than 28 per cent., an increase, be it remembered, which took place in a decade whose first third met such a crash in the financial world, and such a stagnation of industry as never before afflicted this or any other country; a crash and stagnation which stopped emigration, and had a large, though a hidden effect upon the native increase by birth, while it doubtless added, in some degree, to the death rate.

Of the English-speaking race, including all the colonies and dependencies of Great Britain, the United States now contains the larger part by several millions, and imagination almost loses itself when it contemplates the further increase in the next decade. Already first in population among civilized nations properly so-called, we may look to see our population amount in 1890 to not less than 60,000,000, which would make us equal the population of Russia, if we except the wholly barbarous tribes which are credited to her.

Bigness is by no means greatness, but in the decade just finished this country has shown something more than bigness. It has enormously increased its productive powers. It has seized many of the markets of the world. It has asserted its place among international powers. It has reduced its debt, and carried its credit to a point that attracts the attention of all countries. It has become a creditor instead of a debtor people, and it has paved the way to accomplishing, within a few years, one among the highest triumphs in civilization—viz: providing the financial centre and place of exchange for the world—the place held successively by Rome, Venice, Amsterdam, and London; the place, sure, if wise counsels guide us, to be occupied within ten years by New York.

With these material advances, other steps have been taken. Whilst the country has measurably returned to civil methods instead of the military, it has also made large progress in science and literature, and has shown sensible improvements in public morals and public opinion. The details given by the census will be looked for with great interest, but the outline we have given will not be changed, but established by them; and we may, without doubt, look upon the decade of 1870-'80 with satisfaction, not, indeed, unalloyed, but a satisfaction on the whole legitimate and proper, as well as patriotic.—*The State.*

We call attention to the advertisement (on last page of this issue) of the Job Printing Office, of the Hampton Institute. It solicits the opportunity of estimating for work, from all parts of the country. Prompt replies will be sent to all inquiries, and samples of work will be sent on application.—The office is as well equipped as any one of its size in the country, and is able to produce as good a class of work at lower rates than can be done in the larger cities. Send it a trial order.

## LETTERS FROM HAMPTON GRADUATES.

A GIRL LECTURER.—GAMBLING AWAY HIS LAST BEANS. "EDUCATION" OBJECTED TO. CHURCH ERECTION IN THE LITERAL. JUST STARTED FROM EGYPT'S LAND. A GRATEFUL GIRL WORKING FOR THE WORKMAN.

A GIRL LECTURER.

Hampton graduate teachers in general have been requested recently to send a report of their work since graduating to Hampton, both for the Workman, and to be sent to the friends whose contribution of scholarships assisted them through the school. The request has brought many interesting responses, among which is the following lively description of one colored neighborhood in Virginia. Such pictures give a clearer view of things than can always be obtained by even a visit.

—Co., Va., February 8, 1881.

Dear friend:

I have been teaching at this place now three months. I have been close in eight weeks. This is the first school which these people have had for four years. They of course appreciate this one and send their children very regularly. Not many of them can send their whole family of children, even if old enough, because they are not able to give them enough clothes and books as they need, but they send as many as they can. A great many of the children are four miles to school and none of them live any nearer than one and a half miles, so you may learn from this that they thoroughly appreciate school.

I only know of one family that has not seen the use of education, and they have children so wild in a manner that, when you go to the house and they see you coming, they will run and hide under the house or beds. I asked their mother one day did she not mean to send some of her children to school (for she has at least a dozen) and she replied: "No, dat's what turus all dese young niggers fow der heads dey don't have no more sense." The manner in which she expressed herself was quite amusing but then it made me feel as if to think that I had met with one Negro who did not want her children to be educated and civilized, although I knew that there are many more such.

I am sorry to say that there is little moral and card-playing for money or other property seems to be the chief idea of most of the men. I know a case where a man gave the last beans in his house playing, and they were all his family had to live on.

Very few of the people own land of much property of any kind. The women do little work, while the men (those that work) find employment with the white farmers. There is one colored farmer in the neighborhood who is as wealthy as the wealthiest white man around. My school is not far from the little village in which I was born. Dec. 29th, 1880, I visited it a few months ago for the first time since I left, when I was 3 years old. They have a railroad now and it is coming to be quite an important place as a tobacco depot.

I don't think they have school here next year, but if they do, I have promised to come and teach again for them if nothing happens. I suppose they would have had school more regularly if they could have gotten competent teachers, and this year I gave up a good school very near my home to come here and teach these people, for I knew I was more needed here than I was at home, and I feel that God has led me in the work, for I have a good school and my children are making great progress. Although I am a girl teacher, I frequently speak to the people about temperance, industry and a great many other things which may be beneficial to them. I always have a large audience on the evenings I teach, and I almost think that I can see when I am doing some good. The more I go about from time to time, visiting the people and seeing the great need of spiritual and moral character, the more I try to become more useful and fitted for my occupation, and continually thank you, my kind friend, for all your kindness and help given me at Hampton. I do will be left to the useful work of teaching and elevating their people.

I have taught in town and the country too, and find that there is quite a difference in the work. In the town you have but little more to do but give them instruction about their different lessons and of course a few other things, but when in the country you have to teach men, women and children about almost everything. All kinds of superstitious ideas to contend with; a great many things that you seldom hear of in town excepting from some

of the very old people, and they are generally laughed at and all manner of sport made of them. I must close my letter hoping that it may interest you.

Very truly,  
S. A. C.

The advantages of industrial training to the colored teacher and preacher in the South, who wants to help himself and his people, are made very apparent in the following letter. Many a Hampton graduate has been glad that he knew how to make his own school-furniture of benches and tables; some have built their own school houses. Here is a young man who has gone into church erection in a literal sense, and helpful spirit.

—Va., Dec. 1, 1880.

Dear General:

I thought I would write to you once more in this year and let you know where I am and what I am doing. I am teaching at the same place that I taught, last year. I did not commence to teach until the 6th of December, the trustees of the church were unwilling to have school in the church this term. Consequently they were consulting upon it until very late in the fall, and after all they agreed to allow the school in the church for \$3.50 per month, paid by the school board. I have been teaching just two weeks, and have forty-two pupils on roll, and these are not half that expect to come after Christmas. I have a good school this term, and all things look fair to continue so, and I pray it may.

I am still preaching at the same two churches in—Co., and—Co., Va. And I have charge of another in—Co., which I accepted the pastoral charge on the second Sunday in Nov. Either of the churches is more than twenty miles from where I am, and one of the is very hard for me to go to them once a month and get back to my school at nine o'clock Monday mornings. But you might ask why I teach because the salary they promise would not support me even if they paid it, and that they don't do. Two of them pay, or rather promise me, fifty dollars each, and the other thirty-five dollars. If it were all paid, it would only be \$105.00 per year. Therefore I teach school and make about \$30.00 teaching. That is, I get \$25.00 per month and pay \$5.00 board which leaves me \$17.00 per month which is \$205.00, and \$185.00 is \$270.00. If I get it.

But I cannot get it. Gen. I have worked very hard since I left Hampton. Last summer I bought for one of my Churches about 25,000 ft. of lumber and 7,000 shingles, and one of the does and myself put up a house 35 by 24, and 18 ft. pitch from floor, and it is now so that we can worship in it though we need about \$250.00 yet to complete it. I expect to do all the carpenter's work myself. I do not find any time to idle, and in fact do not go to places that I ought, such as the Teachers' Institute, Educational Society etc., being not only destitute of the time, but of the money to go. I do what I can for the people whether I am paid or not, I feel it my duty believing the Lord will provide for me; at the same time, I believe it my duty to look out for myself more than I do, but it is not my nature and I cannot do it.

I walked to one of my appointments last Saturday, 21 miles, and back to my school by 8 o'clock Monday morning, and have appointments to meet three Saturdays in each month. So I am some idea of my labor. I have wished to go to school before now, but had not the means to do so with, and hated to leave the people.

January 21st, 1881.

Dear General I wrote those two leaves in December with the intention of sending them to you, but Christmas came on and somehow my mind was diverted from it until now, and I think yet it may afford you some pleasure to read it, if it is not interesting it will let you know what I am doing. I have been teaching up to this date, six weeks, last month I had an average of 34-50 and 57 on roll. I am teaching the following series of books: Watson's readers and spellers, Davies' Arithmetic written, Mann's Geography—"The World we Live In," Read and Kilgore's Grammar, Part first; Blackman's Hymns; U. S. Composition, Spencerian Writing books; Callisthenes: Spelling matches, the word-method.

I think by the close of this term I shall have some pupils capable of entering Hampton with credit. I shall strive with them to go. We have had a very cold winter. The James river has been frozen over for more than two weeks, so that there has not been a packet up for about four weeks. But fortunately and joyfully to the people the train arrived here on Wednesday the 19th.

Respectfully yours,  
B.

## JUST STARTED FROM EGYPT LAND.

Lights and shadows are not as evenly mingled in the South as they are in the North, which has, in comparison, passed the formative period. This is the reason why it is so hard to get at a fair and true statement of the condition of things here. Reports vary widely, according to the differences existing in the same state perhaps,

or even county. The truth can only be arrived at by looking at all sides. The dark view given in the following letter has its own place and should remind those who are interested in the freedmen that there is still abundant need for their work.

Virginia, Jan. 23, 1881.

Gen. S. C. Armstrong, Sir:

Yours of the 13th inst. was handed me, and do what I can for the Workman: though the chances for getting subscribers in this neighborhood are few, very few, I don't think that there is a single person of color in the whole neighborhood who can read. None have shown themselves to me, no not one.

Though we, as a people, have crowded events of fifty years within sixteen, it does seem to me that I have fallen into a neighborhood that has just started from Egypt's Land. I shall do what I can for the Workman and the Institute, wherever I go.

Respectfully &c.,  
M.

## A GRATEFUL OILY.

The question is often asked. Is the colored race appreciative of the help given them? Gratitude is rightly regarded as a sign of mental and spiritual growth. Children have little of it at first. The ignorant do not have much—because they are ignorant. Like other children, the colored students do not always, or fully, appreciate their advantages while in school. When they go out to meet the trials of life and do their work, they begin to estimate as they never did before, the value of all that has been done and may be done for them. Gratitude grows with their growth. It is a pretty sure crop, and those who have sown its seeds can easily afford to wait.

—N. C. Jan. 19th, 1881

Mr. and Mrs. D.—

Dear Friends:

Pardon me for not writing any sooner, I would have written long ago, if I had known what you were doing. Receiving a Southern Workman, to-day I find you are again at dear old Hampton, I hope you had a pleasant trip to England, I am a student of you, and your name to me while at Hampton. I very well remember the time my uncle did not intend for me to return to Hampton, Mr. D. hearing of it came over me. If I were made glad that was one of the times. Mr. D. I am sure if you had not been so kind as to come after me, I would not have had the honor of being a Hampton graduate. I cannot find words to express my gratitude to you for your kindness towards me. Since leaving Hampton, I have tried to do all the good I could to devote my life to the cause of the colored people. The Fall of 1878, I taught school at Big Hill, a place near Salem Va., I liked it very much, got on nicely with the children and the parents, and was sorry when the time came for me to leave. That was my first experience in teaching after leaving school. The Fall of 77 I went to Thomas place, where I remain until now. I feel so fortunate as to receive aid from Mr. B. of Boston. Both children and parents took quite an interest in the school. Mr. B. supplied the children with clothing, books etc., I feel him as I do by you; I cannot find words to express my thankfulness to him for what he has done for me and the school. When you were in the school, I had been named a dull pupil to stand at the head of his class, instead of the foot. The Fall of 79 the Phila. Association sent me to this place, where I remain until now. I have quite an interesting school, not so many as I had last winter on account of bad weather. I have a very comfortable school-room, it is nicely furnished with maps. I also have a nice globe presented to me by Mr. B. My school children are blessed with all school necessities to encourage them to learn. I often tell them if they do not make use of their time now, they never will, I do think the colored people of the South have been abundantly blessed by the goodness of the Northern friends. I often tell the children they can only show their gratitude to the North, by doing all they can to elevate themselves to be true men and women. I always tell them to stick to the truth, always cultivate the habit of telling the truth in little things as well as in great ones. I have a very good Sunday school, not so many in number, but those that come are very interesting. I have a sister at Hampton, I hope she is doing all she can to master her studies, as Mr. B. has sent her to school here. I hope you will make yourselves known to Katie if you have not, she will be pleased to talk with you, knowing you are my friends. I have been teaching at Salisbury, I have not seen her since she graduated. Mr. Lindley the Sup't. says she is a very good teacher, and a great help to the school. Remember me kindly to the Misses M. and all of the old pupils I know. I learn that the school has improved so much, I guess it resembles a little town with so many buildings.

I never have the pleasure of meeting with many Hampton graduates, as I have not been in Virginia. H. H. is married, is now living in—, I think she married quite an industrious man, who was teaching when I heard from her last. I had a very good letter from Jennie, not long since, I am glad to know she is situated so nicely and living so happy. I saw Wm. Gates last Fall; he was well and was expecting to teach the Winston school. I often think of class 78, what a nice time, we had. Now we are scattered over the world; some in one place and some in another. Dear George and Walter have passed away, never to mingle their voices with ours again on earth. George was a dear girl, I loved her as a sister. Oh, may I live a faithful Christian, and some day or other meet them around our Father's throne in Heaven, where sickness, sorrow, pain and death, are left and feared no more. Please let me hear from you when convenient, I always feel encouraged when I get a letter from a friend.

Very Truly,  
M. G.

## WORKING FOR THE WORKMAN.

The Southern Workman is sent to graduates of Hampton at half price—fifty cents a year—and they are allowed to subscribe at the same rate for six months. In this way, many are able and glad to take it. Some become agents for it in their neighborhood, and thus do better work for it than in any other way. The pupils who desire to come to Hampton is mentioned in the following letter, will be received if able to work and study as students of the night class, in which some of the best students in the Normal School have made their way, working by day and studying at night, earning enough by their energetic labors to carry them all through the whole year in school—a vastly better sort of education than to be carried through school by some one else.

Graham's Ferry, Wythe Co., Va.,  
January 28, 1881.

GEN. S. C. ARMSTRONG,

Dear Sir:

I received your letter a few days ago, a copy of the Southern Workman, and was more than glad to read its pages. It contains some very interesting reading. In reading the letter of Mr. Mallette, S. B. Towne, it filled my heart with sadness.

As the Southern Workman was so very interesting, I concluded to send you a copy of some one else, as both their mothers are poor widows. So I will present their names to you, and if you can receive them on scholarship, letting them do all the work they can in Industrial Department, you will favor them, their widowed mothers, and an ignorant community.

I am doing all I can to get a sale for the Southern Workman in this county.

Let me hear by return mail.

Yours Respectfully,  
T. W. M.

## THE ACCOMPLISHMENT OF SPELLING.

—Md. December, 23d, 1880.

Dear Teacher:

As I have a few spare moments, I know nothing better that I can do to employ them than to write you a few lines about my little school.

On the fifth of October I began to teach. The first day I did not have any scholars at all, the second day I had five, which was much more encouraging.

The greater part of the people are very anxious to send their children to school, but about one-half of them are too poor to give their little ones sufficient clothes to keep them warm enough to come in the cold weather.

The larger children have to be at service or stay at home to help their parents gather their crops.

A few old land of their own; some are trying to buy little houses. The white people are in general very kind.

Minio Washington is about three miles from me teaching, she is doing well. We often see each other and have a fine time and a good talk about good old Hampton. I am going to see her this afternoon, and to-morrow we are going home together.

The school is situated in the western part of the county, about eighteen miles from Baltimore and twenty-five from my home.

I received a letter and a Southern Workman from Salem last week, and I cannot tell you how glad I was to hear from the school.

I was glad to hear that the new building would soon be finished.

Miss L. is trying to be a good scholar, or a better one than I am. When you get this letter I hope you will say I have improved.

Miss C. told me it was a disgrace to be a poor speller. If so, I do not want to be. I am not only trying to improve in spelling but in all of my studies, as I want to go to school one more year if I can.

Please remember me to Miss H., Miss M., and all the rest of the teachers that know me. I wish you a happy New Year.

Good bye, remember me to one of your scholars.

H.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

## CLOTHES.

The Indians that have been here between two and three years, are now beginning to learn the value and use of clothes. They say that it is a little more trouble to get a suit of clothes than a blanket, which they could make answer for hat, coat, vest and pants. The girls who are accustomed to keep both body and head bared beneath heavy shawls on all occasions and in all places, are beginning to leave them off more frequently. A few mornings ago, a girl came in the class with her shawl all drawn up round her head. One or two of the girls began at once to motion and pull it her. She soon dropped it from her head. One of the girls seeing that I had been noticing what was going on, said, "Indian girls at Mr. H's school wear shawls on their heads, but Hampton girls do not do it." Suspecting that they had been recently lectured on the subject, I replied, "I am glad they know better." Several times in the same class a girl would unconsciously gather her shawl about her head, but a mere nod or look from the others was enough to make it drop. I think a reform in this matter has begun.

One accustomed to deal with the Indians would be surprised at the large amount of clothes required for them the first one or two years after taking off the blanket. To say that the boys are hard on clothes is to put it too mildly. The first two years they found many strange uses for their bed clothing. Blankets would be cut up and decorated for fancy pants, sheets would be turned into strings to serve their many purposes, and even now if a boy is in a need of them, he will not hesitate to use his coat linings. Whatever is new must be worn in preference to any thing else. If a boy has a new summer suit, it is hard to make him understand why he should not wear it in February. They think they ought to be permitted to wear a new pair of cotton overalls to the exclusion of the woolen pants, for a few days, till the novelty of them is gone.

The following is about the average of the principal garments needed for a boy for the first two years: 8 outside coats, 9 pairs pants, 2 overcoats, 10 pairs shoes, 11 outside shirts, 14 pairs socks, 3 neckties, 6 pairs undershirts, 8 hats or caps.

## WITH DINNER OF THE BOYS.

The quietness of the girls' sewing school was somewhat disturbed a few days ago by the appearance of little Kawhat at the door. When asked what he wanted, the reply was, "I want soap." As much as the girls laughed, they could not shame him out of his object. The teacher gave a needle and thread and a garment to him. He sat down and worked on it the remainder of the afternoon. When he was done, the girls themselves could not pronounce it well done.

While discussing the Atlantic and Pacific oceans in the geography class, they were told that the Atlantic was noisy and stormy, while the Pacific was calm and smooth. As soon as the explanation was satisfactory, the boys began: "Girls Atlantic Ocean, boys Pacific Ocean." The girls attempted in vain to turn the joke.

Shashaney left an order at the tailor's shop a few days ago, for some standing collars to be made with his shirt. When they were finished, he came to me very discontented, and the collar limber and wrinkled, just as they came from the tailor, and said "I want standing collars, these collars no good, they no stand." When told that they would be washed and starched, he replied "they clean now." After some more explanation, he reluctantly agreed to send them into the wash.

## WHAT THEY ARE LEARNING.

## A FARMER.

Geo. Bashott tells what he learns on the farm. "I am here two years now; since I came here I always work on the farm. I want to learn more about planting. I want learn plant corn, potatoes and everything. Next summer I think I want more about plating, that is the reason I want more on farm. I will tell you something that I learn since I come. When I first come here I do not know anything about the work, but now I learn this first, how to drive horses with wagons, and how to brush the horses off, and how to feed the cows, and how to clean out the stable, how to feed the cows, and how to brush the cows off, and how to clean the cow stable, and how to milk. I learn this in barn, but besides this I learn to make hay, and how to load hay, and how to mow hay with hand, and to take care of the cows and the sheep."

## A SUE MAKER.

Whet Samael Brown knows about shoemaking. "I have been working in shoe making now five months and I want to learn the trade so when I go home I can teach others, and I can make my living like that way. There are no shoemakers out where I live. I have learned

to patch and stitch shoes already, and I can make a good looking shoe if I take time to do so. I hope by the time I get ready to go home I shall be able to do anything in the line of shoemaking. So I have not much to say this time, but I will next time, that is all."

## A BLACKSMITH.

Alexander Peters tells how he is mastering his trade. "I am going to tell you what I have learned at Hampton School. Why I have been here how to be blacksmith, and now I can do most every thing in my trade. Certainly I can mend those springs on the carriage's body, or I can shoe horses, and I mend chains, also I can iron it the end. And those things which I have not quite learned yet I will try to complete before I go home, and I will do the best I can in my work. I know it is only way to do to make a useful man, so I can help my people when I get home."

## A WHEELWRIGHT.

Abnks writes about making carts and wagons. "When I came to Hampton I thought I would like make carts and wagons. So I work in work shop and make carts. I make some carts and some wagons. I like Mr. Williams very much, he show me how to work, and tell me how to make carts and wagons. I think when I go home I will make carts for

OLD VIRGINIA HOUSES.

my people, and many other things. I think I will go with this man. Work in the shop; I mean in my home, one may work in the shop making carts. I am getting all right in my work. This is all I have to say."

## WASHING DISHES.

Jaila St. Cyr tells how she makes clean dishes and sets a nice table. "All of us, Colored and Indian girls, wash the dishes every time, after every meal and I wash dishes with two Colored girls. We have a table which some of Middle class boys and girls eat at, and so we always try to make every thing look nice, and when we all get through washing dishes we report our tables to Miss D., and when she says it is all right, then we empty our dish pans and put all our cups and saucers away. One Indian girl has the care to put all the cups in order, and another girl has the care to keep the saucers, plates, and glass dishes, and soup dishes, in order, and two Colored girls give the dish towels out. And sometimes just the Indian girls wash dishes so the Colored girls can have prayer meetings, and when they come down Miss D.—says all the girls that are glad say I, all of them about I at once, and always want to do any work well, whatever it may be, and all of us enjoy ourselves washing dishes, and it is easy to see all of the girls washing dishes, and one girl cleans the sink where we all pour our water, and two or three girls wash dishes in a room which we call the dish room, and I think I have told you enough about washing dishes."

## A PRINTER.

J. A. Marrie writes what he knows about printing, and then to prove it, sets up the type for it himself. "Since October I went in the printing office, as I was working on the farm last term. I thought that I would try and learn the printer's trade, as I saw that one of the Ewings boys at Carlisle was learning the trade. I thought that I would learn it so that both of us would have the same trade, so we may be able to

start the same trade on in the Territory. And I went in the printing office with a Shawnee boy. The first thing we were to learn was looking over the cases and learn where each of the alphabets belong to. I learn that; and got so I could distribute some type that had been set. I work two days every week. And now I can set types for the Southern Workman. I like this trade very well, but then I will not say that I will start this trade out in the Territory; I don't know whether circumstances will permit or not, for my trade needs education, and I expect to be a teacher among them. I like this trade very well, and wish to learn as much as I can while here."

## DRILLING.

Sergeant Frank Yellow Bird describes a dress parade. "I want to tell you about the school Battalion. First thing the bugle blows, then we fall in. The battalion is made of four companies, A, B, C and D. Each company is formed, then we march up in front of Virginia Hall where the battalion is formed. Then the Adjutant and Captain give command. The first thing is, Adjutant says to all the companies, right dress, and after then says to all the companies, guides post, and after these says, first Sergeants to the front and center march. First Sergeants report, Sergeants to your posts,

geography; but now I am in B. Section, Junior Class; these are the books I study; a cow, fourth reader, grammar, arithmetic, spelling, writing, geography, then go to study hour in the morning and evening. That is all I got to say now."

## AN ENGINEER.

Thomas Smith has only been a short time with the engineer, but he says that Thomas can already be entrusted with many important duties. "This is what Thomas says, 'I am going to write this letter and tell what I learning in Engine-room now. These things that I had learned in there, and I only been in there five months now, so I don't learn much yet, and I can running the engine, and I can pump water from the well to the tank, and I can pump water into the boiler when no water in boiler, and clean engine sometimes too, and I can grease the engine, and I learn to make fire. I learn how to cut the pipes. I can run the engine and stop it again, and I like to work in there very much, and learn something. And also I like to be a good engineer, and go back to my own home. That is all I have to say.'"

## A TINKER.

We have two Indian boys who are going ahead making nearly all the tin-ware needed for the school, and Winnebago in one of them. "When I first came here I don't know anything about how to work and how to talk English, but now I learn good deal something about tin-ware. So make me happy all the time, and when I go back home I will try to teach my people."

Every afternoon I go to work in the shop, and when Mr. McDowell got something to work he come to me ask me, he say 'Winnebago do this' then I say yes, and I will. Then he show me picture, then I try one of them. When I try first time, little good, and next time I make all right."

I tell you this thing I made: pans, jars, oil cans, molasses cans, pitchers, bread pans, cake pans, dish pans, stew pans, sauce pans, dust pans, wash basins, coffee boiler, tin caps, dippers, iron brake pans. Those things I made myself. When some things I can't make then man show me once, then I make myself. So when I go home to Dakota I shall teach my friends. That is all I have to say, because I don't know how to write English."

## SEWING.

Little Carrie Anderson tells us about sewing. "I always go to the sewing school, and other girls too. And the girls sew the clothes for themselves. I like to sew, but then sometimes I don't feel like to sew very much, but I have to though. Annie, Mary, Sophia Little Bear make the doll's clothes, and they don't have to sew their own clothes, but the other girls sew their own clothes. Sometimes ago we make some bags for the boys to put their clothes in, and Mrs. Seymour said we made them nice. Miss E. said if I made one of the girls sew very fine and look so good then she will pick out some of every kind and keep it, and see what the Indian girls can do."

## A NEAT HOUSE KEEPER.

Edward Ashley tells how he keeps the neat room in the building. "I have been here about two years, now. I always wish to do well, but I don't want what is wrong, because when I go to Dakota Territory I wish to teach my relatives, and also something else about dirty and not cleanly. This time I want always cleanly everything. But I don't want dirty. And then all the time I take care of my room; every morning I make cleanly my room. This is my trade in the morning. Then I go to school, and in the afternoon I work on farm. But always before breakfast, first I work in my room. I sweep floor, and then I make clean table, and chair, and looking glass, window, or anything in my room. I wish everything very clean in my room. I know how to keep room clean now, because I am learning every morning. I have two trades always, one early morning, one afternoon, it is these, keeping room and work on farm. I like both very much. All the time every Saturday I wash my floor, and door, and window, and chair, and table, because I don't want look ugly my room. I study hard, too."

## A COOK.

Josephine is a faithful worker and does a good part of the cooking for the Indians, who have special diet when sick. "I thought I would write to you a few lines to let you know about Indian boys and girls who are sick. I cook for them, every morning, beef, oat meal, coffee, tea, eggs, light bread. I think this is a very large breakfast. Some of the Indian boys come over to breakfast, and sick boys I send their breakfast over to them. I cook for them until 9 o'clock, then I go to school. Sometimes 10 o'clock I go to school. I not cook for supper and dinner. I was very glad to cook for the sick boys and girls who are sick. One morning I was setting the table, and I forgot my meat, so it burned up. I was very sorry, indeed; I cook some more meat. I like to cook, but sometimes very hard work."

(Continued on page 32.)

# A COLORED GIRL'S EXPERIENCE SINCE THE SLAVERY.

BY ORRA LANGEHORNE.

About the time the Normal School for colored teachers opened here last summer, I met on the street one evening, a plain-looking dark-skinned girl whose face seemed very familiar to me, and after a moment's reflection, I decided that it must be Julia Jenkins, the daughter of a formerly colored shoemaker whose family had come to the village where I then lived, after the close of the war. I looked at me in surprise, and then exclaimed, "Why this is Miss Orra." After hearing that she was one of the teachers attending the Normal school, and inquiring for friends in my valley home, we parted, Julia promising to come to see me during her stay in the city. I saw her several times afterwards in the Normal Institute, and noticed her studious and attentive demeanor, and one Sunday afternoon she came to see me and we had a long talk, partly of mutual friends and acquaintances, and partly about herself, and her life since I had seen her last.

I had heard that Julia's mother had been the cook at the Log Cabin which was such an attraction at the Centennial Exposition, under the name of the "New England Kitchen" a hundred years ago, and had greatly wondered how she came to be there. When I asked Julia about it, she said she must tell me the whole family history to make me understand her mother's appearing in such an unexpected place. It seems that at the Emancipation, her father Jerry Jenkins, left his master's farm, and with his wife and children, moved into our village to seek their fortune among the townships. Uncle Jerry was a shoemaker and general jobber, and his career, active wife could turn her hand to various trades, such as washing, cooking, etc. The old people worked hard and sent their children to school to "Miss Libby" and "Miss Phebe," the nice Yankee school ma'ams, who taught the first Negro school in our town. The family were possessed with the desire to have a house of their own, and it was not long before Uncle Jerry had bought a lot and put a small log hut on it, which all the family worked hard to pay for, and of late years they have made considerable additions to it; so that it is now a very comfortable home.

The two girls, Julia and Mary, learned fast at school, and Mary showed so much musical talent that Miss Libby said it would be a shame for such a voice to be kept in a kitchen, and she interested northern friends in her promising pupil, to such a degree that some Boston ladies undertook to educate her as a musician. The teachers took Mary and two or three more of their pupils to the North, and as the climate proved too severe for her, she was sent for a term or two to Hampton, and then returned to Boston. She had learned very well and her voice was developing beautifully, when unfortunately a severe cold fastened on her lungs, and after struggling vainly against it for awhile, the young singer gave up her hopes of distinction, and quietly returned to her old home, where she died.

When Mary went North to study music, Julia, by Miss Libby's assistance, secured a place as cook in the New Jersey family, and since that time she had made many trips across Mason and Dixon's line, having lived at service in several different states, and at intervals going back to the log cabin in the Shenandoah valley, purchased by the united efforts of the family, in case of sickness or special emergency staying at home for a while, and then returning to the North for service, as she could make better wages than in Virginia.

During the Centennial summer, she persuaded her mother to join her in Philadelphia, and they were both engaged in a restaurant on the Exposition grounds, to wash dishes and assist in cooking. In this establishment there were several colored servants who had always lived North, and Julia dated upon the difference between them and Southern servants, drawing the inference largely in favor of her own class. The Philadelphia colored domestics were, as she asserted, bold, fierce and rough in their manners, using bad language, getting as much as possible from the employer, and doing as little as possible in return, and never on any account submitting "to be put upon," which she evidently considered a special merit in the southern Exhibition.

The keeper of the restaurant soon discovered the value of his Virginia domestics, paid them good wages and treated them very kindly when he was not drunk. However, and "out up awful," raging and swearing at any one who ventured in any way to oppose him. The northern servants neglected their share of the work and imposed on Mrs. Jenkins and her daughter, who found themselves extremely uncomfortable, and at length Julia left the place and entreated her mother to do likewise. This old dame, who was banking more money than ever before in her life, was disposed to bear

her disagreeable situation until a better one could be secured, and worked on with that patience which has sustained the faithful Negro under centuries of bondage, and through the years of freedom which have often brought him greater hardships than he knew in slavery. After leaving her drunken employer, Julia was walking about the Exposition grounds disconsolately, when an acquaintance told her that help was wanted at the New England Kitchen. Miss Jenkins had a very poor opinion of restaurants and their keepers just then, and somewhat indifferently walked into the Log Cabin merely to see how things looked, and great was her delight to find in the lady presiding at the tables, the kind "Miss Libby," who had been her first northern friend. The pleasure in the meeting was mutual, and in a few hours Julia and her mother were both installed in the kitchen, with good wages promised them, and both kept their places with much satisfaction until the season closed.

When preparations were making for the Paris Exposition, the enterprising Miss Libby proposed to lug her Log Cabin across the Atlantic, and wrote to engage Mrs. Jenkins' assistance in representing our national dishes in France. Just at this time her daughter Mary's health was declining, and the food mother would not leave her.

Julia gave an interesting account of the Log Cabin eating house, with particular decisions as to the preparation of the famous baked beans of New England, a dish with which I am not acquainted, as it is little used here, and she had to learn how to make it. I doubt that this, like other "Yankee ideas" is destined to become popular in the South.

As her sister's health grew worse this summer, Julia declined several good situations offered her in the North and returned to Virginia with her mother, to assist in taking care of the invalid. She was so fortunate in the autumn to obtain the position of cook in a colored school within a few miles of her home, as that she could readily be summoned in case of her sister's growing woe.

She told with simple pathos the circumstances of her sister's illness and peaceful death, which occurred as is often the case with consumptives "when the leaves begin to fall," and said that since that time she had felt unwilling to leave her parents, and was growing old, and she had continued to teach the little country school near them. She had studied to improve herself by all the means within her reach, and was happy to embrace the excellent opportunities afforded by the Lynchburg Normal Institute. She regretted to hear her speak with admiration, unmixt with envy, of the Hampton graduates, whom she considered very fortunate in their character education and training. She regretted that it had never been in her power to go to Hampton herself, as she had heard so much of the school from her sister, and other students, and was particularly impressed with the kindly interest which she said she had noticed always followed the pupils into their other lives, from the teachers and patrons of the school, which she knew to be of great advantage, especially to the girls, in their great distinctions in which many of them were placed. I knew of many good works originating from Hampton, but Julia spoke of one method of kindness far-reaching in its influence, but which I had not heard before.

It was in regard to the boxes of clothing sent to the Hampton graduates to distribute among the colored people. "I know of whole families who could hardly get through the winter, but for the good warm clothes that arrived in those boxes," said Julia, who had evidently to a high appreciation of this thoughtful kindness shown to her race. It is impossible to tell how much good is done by such benefactions in the extreme poverty, so common among the colored people, and nothing better suited to their needs could be given than these supplies of ready-made garments.

The experience of this young girl is a very simple story of humble life; my heroine is a very unpretentious colored woman, who has struggled hard to reach her present position, and assisted so little in the meantime in the support of her family, all of them obscure people, whose chances in life have been only those of the poorest and most ignorant of our country.

The circumstance of a young girl, going from the place of a servant to that of a teacher in our public schools, has no parallel, as I am aware, among the white people of the state, but such cases are not uncommon among the Negroes.

Although born slaves, and living among the lowly of our land, struggling with the hardships of poverty, social ostracism, and all the difficulties besetting their race in our generation, such colored girls are often full of noble aspirations, and if now found in low estate, are "bound to climb up higher." Many of them are, year by year, not only improving their own condition, but setting excellent examples and exerting a most wholesome influence among their people. The fact that from slaves and prisoners they have become educated citizens, not seldom property holders, is an ever present source of

congratulation to them.

There is still a long stretch of road before such people in the pathway of progress, but they keep plugging, faithfully, and they have no time in their years of freedom, they will reach the goal at last, and their more highly favored companions in the way should ever extend them a helping hand in time of need, and heartily wish them God speed.

## SUBSIDIES.

Whether our Government should or should not grant subsidies, is one of the questions soon to become prominent in partisan discussions.

Practically, a subsidy is a relatively large sum paid by the government to an individual or corporation, for a relatively small service; especially, when without such government aid, the individual or corporation could not survive.

If, for example, a company were organized, to sell for three cents, loaves of bread that cost four cents to make, and the government should pay it three cents on every loaf sold, then that company would be in receipt of a subsidy of three cents per loaf. Painfully plain as this illustration may be, it presents, in a nutshell form, all the points involved in the subsidy theory.

In behalf of subsidies, it will be urged that some people will get five cent loaves for three cents, hence they will be benefited by the subsidy. Let us look a little deeper. From whom would the government get the three cents a loaf paid as subsidy to the company? Clearly from only one source, from the taxing of all the people of the United States. The government has no other source of income.

The working of a subsidy then is to fleece the money to fat the few. The imaginary company, though apparently selling five cent loaves for three cents, is really getting six cents—three from the buyer of the loaf, and three from "Uncle Sam"—as the government gets its three cents from bread buyers all over the country, it is manifest that bread buyers are paying six cents for what they might have got for five. Some few bread buyers may be benefited, but many are injured, and the theory of this Republic is to have, and carry out, a policy, that will do the most good to the greatest number of people.

Out of subsidies grow monopolies. Who would try to run a bakery on his own account, when a neighbor had three cents a loaf as a subsidy? Is it not clear, that the effect would be to close all bakeries but the subsidized one? This would leave but one seller for many buyers—and the result would be, higher prices than three cents "all in spite of my Lord Subsidy."

Whatever it pays to do, somebody will find ready to do. Demand brings about supply, and supply brings about demand. If there be no apples in Hampton, and five hundred people want apples, and are willing to give valuable things for apples, the merchants would not telegraph to Washington for a subsidy to those markets, whence the best apples could be got, at the lowest prices and in the shortest time. If more than enough apples to supply five hundred buyers were to arrive in a day, paid for by a subsidy, the prices would be more than five hundred buyers would be willing to pay. No subsidy will prevent the decline of a glutted market.

If there be anything that asking a subsidy means, it is, that it is right and proper for people to ask the government to do for them, what they deem neither wise nor prudent to do for themselves. To carry out the theory of subsidies to extremes, it should be held, that it is right and proper for the government to continually indulge in losing speculations, that some citizens may benefit thereby. If, for instance, the government should agree to buy all the wheat raised in Iowa, for three dollars, when in open market it is worth but one dollar per bushel, then the wheat growers of Iowa would have a subsidy. But who would have to pay the amount of this subsidy, save the people of the other thirty-seven states?

A very plausible argument is offered by subsidy hunters, that usually takes this form—"They say (and with truth,) that the carrying of the mails by the United States in sparsely settled districts is an expensive business, that is, that the cost of carriage, delivery, etc., far exceeds the amount received; so that it is practically taxing the people of one section for the benefit of the people of another, to continue the mail service in such sections. Hence it is argued, as nobody opposes the mail service of the United States, whereby one section is taxed for another, nobody should object to taxation to provide means for other's subsidies. This speciousness of this argument lies in the fact, that in the matter of mail carriage, the government gets the fat with the lean. The profits of the Post Office in certain thickly settled sections goes to make up the loss suffered in other sections. As a matter of fact, one about balances the other. Now, when the government grants a subsidy, it gets all the lean, and unt the veri-

est scrap of fat. In the matter of mail carriage in the United States, the profit and loss both belong to the government. When a subsidy is granted, the certainty of loss falls on the government, and the certainty of profit on those subsidized. Otherwise, why should they ask for a subsidy?

It is further argued that by means of subsidies, certain lines of industry may be opened that would otherwise remain closed. No doubt possibilities could be raised in Greenland, if the government would grant a subsidy to produce soil, fuel, greenhouses, light, skilled labor, etc.; still other industries would have to be sorely mangled in this conveying of the tropics to the pole. You cannot make a hill without cutting down some other hill, or making a hollow at least, equal in depth to the height of your hill. Beyond this it seems to me that subsidies do not always develop new lines of industry. If my neighbors are all taxed to give me a fat income without material exertion on my part, either as money-lender, capitalist, or laborer, the sum of industry in the community is lessened by just the amount of exertion I should have had to put forth, if my neighbor had not been taxed to pay my living.

Another plea of subsidy hunters takes this form: "If a subsidy be granted for a little while," the proposed industry will be strong enough to live by itself. This statement is as hollow as a drum—hardly an industry brought on by government pay ever gets strong enough to live on the course financial force of unaided mortals. If any such exist, it is a miracle; and working miracles is not one of the objects for which the government was formed.

Subsidies and corruption, if they do not go hand in hand, are generally cheek by jowl. For anyone to defend, as a government policy, a line of action that tends to corruption, is for somebody to bear a bad case.

The cardinal error of those who honestly believe in subsidies as good policy, lies in their failing to appreciate that what we call the government is to itself nothing. To be sure it has been beautifully said, that our government is of the people, for the people, and by the people; but a plainer statement is that the people are the government. The Treasury of the United States is not a great deal more like a hopper, from which nothing can come out unless something has been put in. We would "write down as an ass" a mill owner, who should drive his horse full speed, and expect cloth, if he fed no yarn. Yet subsidy hunters always assume that the Treasury can give without taking.

The derivation of the word subsidy is enough to condemn it in Eastern ears. It is third or last line of battle; the final thing to be called on, when all else has failed. Philology and public policy seem strangely in accord on this word.

T. T. B.

Col. Dickinson, speaking of our trade with Japan, says: "I think I can safely say that I was not in a single town of 500 inhabitants in Japan, where I did not see a store with a small stock of American goods. We can sell them everything. There are forty-five millions of people who want everything that we can send them, and they are taking them just as fast as we can send them. All over Japan I found American sewing machines. Twenty years ago European boots and shoes were unknown there; now there are 20,000 who cannot get along without them. So with the grain; they need all we can send them." There is said to be an immense market for canned goods, a description of merchandise in which we can fairly claim we are unparalleled. There seems to be no doubt that large exports of our cotton goods, flour, fruit, and general merchandise might be made in exchange for tea, rice and silk, but here again the growing greatness of our home market, more powerful than foreign competition, interferes with the extension of our foreign commerce.

## INDIAN PICTURES FOR SALE.

Photographic or heliotype pictures, cabinet size, showing the appearance of the Sioux Indian children on their arrival at Hampton, November, 1878, and as they appeared after fifteen months of schooling, sent by mail, for fifty cents a pair. From three to eight Indians in each group.

There is also a large photograph 9 x 11 inches, giving an excellent picture of the sixteen Apaches, Pima and Papago youth, with chief Antoinette, as they appeared on arrival at Hampton, February 15, 1881.

Please write by mail, one dollar. Apply to

 Business Agent,  
 Hampton, Va.

## At Home.

### COLORED WORKING MEN'S HOMES IN VIRGINIA.

TWO MINDS, WHICH IS YOURS?  
ONE KIND.

A correspondent of the *N. Y. Tribune* gives a picturesque, but very fair description of one class of cabin homes in Virginia. It will be easily recognized by many of our readers, from their own observation.

"It is necessary to observe that Northern and Southern standards of comfortable and prosperous living are widely different. Many things which the poorest Northern laborer requires in his home would be useless, and only be in the way, in a Virginia negro cabin.

I have been in many of these during the past week. They are almost entirely destitute of furniture. There are commonly, but not always, a rude bedstead and two or three stools, often only one stool. There is usually a table, but it is not used as a table. It is a receptacle and place of exhibition for the ornaments and finery of the household, very much as the bureau or chest of drawers is employed in the homes of the poorer class in the North. The family does not assemble around the table at meals in the negro laborer's cabin here, because there are no meals; at any rate, there is no regular habit of all the members of the household eating at the same time. Those who are going away from the house to work eat first in the morning, usually standing up by the dresser, a sort of rustic cupboard of two or three shelves at one side of the first place. There are generally a few knives and forks, and a spoon or two in the house, but the food is, for the most part, served by setting the pot, or pan, or skillet in which it was cooked, upon the dresser; and from this vessel the food is taken with the fingers. I can assure the readers of the *THE WORKMAN* that these vessels are not to be despised. Fish, eels, oysters, clams, and indeed all kinds of shell-fish, are abundant and cheap in all this tidewater region. They are eaten while perfectly fresh, and, cooked as they are, over an open fire, they have a delicious flavor which is not obtained by the more refined methods of cookery in the use of the North. The sweet potatoes are better than we ever see in New England. As to neatness and cleanliness in connection with the cooking and the food, one must not be too particular; and, indeed, in such circumstances, one does not think so much about these refinements as he would at home; just as one is not always critical in such matters when out fishing or hunting.

"But when do the other members of the family eat, after the laborer has gone away to their work for the day?" Well, they are all hungry in the morning, and they crowd around "the dresser," or come up to it by turns, and carry off pieces of food in their hands, or in a large oyster or clam shell. If the weather is pleasant, the children like to go out of doors to eat. Then, through the day, as they again wish for food, each goes to the pot, at the side of the fireplace or on the dresser, and helps himself. If an unclean appetite of carrying off more than he can eat, he gets a cuff on the side of the head, with this reproof, "You're too greedy," or "Don't be hoglike, now," but there is usually an ample supply for all.

The bedstead is for the oldest and the youngest members of the family. Four or five persons can sleep on it in cold weather. In one corner of the room is a pile of old cast-off clothing or, sometimes, some straw with a piece of drilling or a fragment of an old sail spread over it. This is the bed for those who cannot find room on the bedstead. The inmates of the cabins do not commonly wear "night-clothes." They only partially disrobe at night, leaving off some of their outer clothing, especially in cold weather, and sleeping in the same undergarments worn during the day. In summer they commonly wear the same clothes night and day through the week. When Sunday comes they put on clean clothes and go to church."

#### ANOTHER KIND.

A tiny little frame house, a story and half high, stands gable to the street, on the edge of the village of Hampton. The door was standing invitingly open, and a glimpse of the neat interior, and an aromatic whiff of boiling coffee, tempted us to drop in, in passing, and pay an unexpected call on the thrifty owner, with whose steaming washbowl, and gleaming solar, comfortably starched cuffs and snowy ruffles had long been intimately acquainted.

The sun was setting, and Susan, (perhaps that is not the real name) her heavy work over, met us, smiling in her tired face, and asked us into the next little hall and then into the next little sitting room at the side. A bright clean window gives free access to the level sun beams, and still kept up a sultry glow, and with the cool fire in a tiny grate backing abruptly, with out jamb or mantel, out of the opposite side of the room into the round plas-

tered chimney which is a common exterior ornament to Virginia houses of this size. Between them, grate and window did their best very successfully, in guiding the modest accessories to indoor comfort; the clean rag carpet covering the floor, the wooden chair set primly around, the intensely colored prints on the walls, the side table with its photograph album, and lead of painted mugs and match boxes, shells and other representations of its owner's esthetic sense.

"Wouldn't you like to look over my house?" asked Susan, with modest pride, after we had admired what we saw below. Of course we would, and did. The family bed-room above stood the unpurged for inspection with credit. No staidness or disorder offended any sense. An open fire-place end window provided for ventilation. The large bed was made up with neat white sheets and pillows, and bright patch work quilt. A smaller one was as neatly prepared for the two little tots of girls who clambered up stairs after us, comfortably dressed, their shining faces as clean as could be expected after a day's play. They were only three and five years old, but Susan is looking ahead for them. "Next year, we mean to raise the kitchen wing. It wouldn't be nice for the children not to have a room to themselves." And now a look into the bit of a kitchen, in which everything was put up as snugly as if a washer-woman's week's work had not just been done in it. Susan's assistant, an elderly woman, was just winding the last clothes out of the rinsing tub. The table stood cleanly scoured, ready for the evening meal, for which the coffee pot beginning to steam on the kitchen stove gave pleasant promise. The cupboard still hid the dishes from our view, but we knew they were in there, and would appear in order on the table in due time, at a regular meal.

Susan is no graduate of Hampton or any other school, but a middle aged woman who remembers slavery, and has had no education since the war. Her husband works at oystering when he gets chances, but the last winter's season has been a bad one and he has not averaged one dollar a week. Susan herself works early and late, if not at one thing at another, and has mainly supported the whole family. As much as she has done, surely other with her spirit, if with no more advantage, can do.

They own their house and lot, trusted for the lumber by the kindness of a resident of the town, they have paid it all up by instalments. They might indeed Susan says have built the house three times over, long ago, if they had been always saving. But for some time they put it rent, and spent all they could have laid up in "good things to eat." Fortunately Susan accepted a good chance to go to service in New York State, and after three years in a Northern home returned with the fixed determination to have one of her own however humble.

These are types of two kinds of homes both of which exist in Virginia. Which is most like yours?

## Health and Humanity.

### THE TEMPERANCE QUESTION AND FINANCES.

So MANY almost incredible things have been published in reference to the "drink question," that many shake their heads and reply, "It cannot be true." Nevertheless, facts are stubborn things, and even if the half that is told to boot, it should arouse every Christian and patriot to active determination to save the nation from the oppression of the ruinous traffic. Dr. Story, of Chicago, estimates that 4,000 persons are made insane every year by this traffic, and die as an average of three years and are buried from some insane asylum, costing to the nation at the rate of \$1,000 each. This would be four millions for the three years. He also estimates that some eight thousand, who at the end of that period, are cured, at the same rate, cost eight millions, making in all, for the fruits of the traffic in this one direction, a cost of some twelve millions of dollars, or four millions per annum. And this amount is to be paid by the property-holders of the country. Is it not time, even on the low plane of the financial argument, to do something to put a stop to the oppressive traffic?

On a farm near Leipzig a cat was observed to have a particular regard for a chicken; she almost constantly attended it, and protected it from every danger. But what is still more remarkable is that this attachment on the part of the cat continued after the chicken grew up. When the poultry were called to receive their food, Grimalkin was sure to make her appearance, and would not allow any of the other poultry to peck until her favorite had first eaten her fill; after which she let them satisfy themselves.—*Anecdotes in Natural History.*

## Teacher's Table.

### THE TWO GLASSES.

A TEMPERANCE PIECE FOR RECITATION.

There were two glasses filled to the brim,  
On a rich man's table rim to rim.  
One was ruddy and red as blood,  
And one was clear as the crystal brood.

Said the glass of wine to the paler brother:  
"I let us tell the tales of the past to each other;  
I can tell of a banquet and revel and mirth,  
And the proudest and grandest souls on earth  
Fell under my touch as though struck by blight."

Then I was king, for I ruled in might;  
From the heads of kings I have torn the crown,  
From the highest fame I have hurled men down.

I have blasted many an honored name;  
I have taken virtue and given shame;  
I have tempted the mouth with a sip, a taste,  
That has made his future a barren waste.  
Far greater than a king am I,  
Or than any army beneath the sky.

"I have made the arm of the driver fail,  
And sent the train from the iron rail;  
I have made good ships go down at sea,  
And the shrieks of the lost were sweet to me;  
For they said, 'Behold how great you be!  
Fame, strength, wealth, genius before you fall,  
And your might and power are over all!'  
Ho! ho! pale brother, laugh the wine,  
"Can you boast of deeds as great as mine?"

Said the glass of water, "I cannot boast  
Of king dethroned, or murdered host;  
But I can tell of a heart that's true and glad;  
And the shrieks of the lost were sweet to me;  
Of thirst I've quenched and souls I've saved;  
Of hands I have cooled and souls I have saved;  
I have leaped through the valleys, dashed  
Down the mountains, and the sunbeams  
Sprung again upward in life giving fountains.  
Slept in the sunshine and dropped from the sky,  
And everywhere gladdened the landscape  
And eye.

I have eased the hot forehead of fever and pain;  
I have made the parched meadows grow fertile  
With grain;

I can tell of the powerful wheel of the mill,  
The ground out the flour and turned to my will;

I can tell of manhood debased by you,  
I close, I help, I strengthen and aid;  
I gladden the heart of man and maid;  
I set the chained wine-captive free.  
And all ere better for knowing me."

These are the tales they told each other,  
The glass of wine and its paler brother,  
As they set together filled to the brim,  
On the rich man's table, rim to rim.

One of the most hopeful signs of the times, touching the educational problem, is the echo of the Southern press to the plea of ex-Governor Brown, of Georgia, in the Senate, for universal education. The *Southeastern Christian Advocate* has, in a recent number, a long article on this subject, and the *Richmond Waig* devoted a half column of editorial in arguing the necessity of educating both the white and black children, as a means of securing the greatest advantage to the South. It closes with these forcible sentences: "The North, by her common-school system, has prospered in every department, with less netural advantage than the South. Germany, by her compulsory education, has become one of the first nations of the world. Let the South foster her public schools, encourage universal education, and she will reap her reward in prosperity."

### EDUCATION VS. CRIME.

We have direct statistical proof of the fact that school education is a very important factor in the repression of crime. The Bavarian Government tested this question in 1870, by a careful census. Let me present some figures which show the result of this investigation. The first figures show how many school houses among 1,000 buildings; the second how many criminals among 100,000 inhabitants. You will notice that the numbers stand in an inverse ratio to each other; i. e., the more school houses, the less crimes.

Provinces.	No. School-houses per 1,000 buildings.	No. of Criminals per 100,000 people.
Lower Bavaria	4 1/2	670
Upper Bavaria	5 1/2	667
Upper Franconia	7	444
The Palatinete	11	425
Lower Franconia	10	384

## Agriculture.

There are certain fixed facts in regard to farm work that are not affected by latitude. Whether the farmer's work begins in February or in May, the successful man is the one who is in the best of his work, and pushing his farm work. The one who is just a little behind in his work is always a "ne'er do well," and always ready to show that "farming don't pay." The "plow of the sea" has a proverb: "a stern chase is a long chase"; this sailor's saying holds equally good with the plow of the land, and whoever makes a late beginning, will be engaged in a "stern chase" to catch up with his work, all the season through. There are certain kinds of work that can only be properly done at just the right time. Plowing, for example, may be done a few days too soon, and to the great injury of the soil. We are enjoined to not only "Learn to labor," but it is added, with equal force, "and to wait." But one is not obliged therefore to wait in idleness for the land to be ready for the plow.

All live stock should be kept clean. They should not be exposed to the severe weather of winter; not only because it is cruel, but because it does not pay. It costs money for an animal to keep itself warm, for it must be done at the expense of the food it gets, or the flesh that it has already gained. An animal that has many respects an animal, and its food is the fuel. Any shelter given to farm stock saves in food, just as covering to a boiler saves fuel. Another kind of exposure is especially injurious, that of horses that have had active exercise by driving. If a horse is brought in wet with sweat, he should be first rubbed down and then blanketed, if the weather is cold; otherwise he will be chilled, and very likely take cold. An abundant supply of water is important in the proper keeping of farm stock at this season. The troughs should be kept clear of ice, so that the water may not be chilled by it. If the water comes from a well it should be drawn only as needed, in order that it may not be cooled below the natural temperature. To raise 10 gallons of water from the freezing point to a temperature as it comes from a spring or well (50 to 55 deg.), will, when taken into the stomach of the animals, use up the effect of a large amount of food that ought to be expended more profitably. Besides the animal chilled, and perhaps injured, vital force is wasted, and nothing is gained.

Pigs need well ventilated clean pens, as these are essential to good health. They require a variety of food; all corn, or all wheat, or any one food continuously, gives an unwholesome sameness to their rations. Broods sows should be provided with plenty of bedding of clean straw, especially when the young pigs are expected. Some hens that have been laying will brood this month. They should have a warm, sunny place. These chicks will make early market birds. Warm feed is important for poultry in winter, and it can be furnished at very little trouble. The droppings should be kept dry that they may be in good order for use upon the land in the spring.

—*American Agriculturist.*

MANURE, the key to successful farming over a large part of the country, demands attention. Perhaps in no one item of farm practice has there been a greater change than in that of the management of manure. Formerly it was thought that manure should only be brought to the field just as it is to be used. Now it is taken out when carting or sledding is good, and the hands and teams are not pressed with other work. By hauling it in winter, and placing it in heaps near to where it will be needed in spring, it gets the benefit of an extra turning, and, if desirable, these heaps may be again turned before they are spread. Of course, some forthright must be taken to put the manure in the most convenient place for the labor of distributing it. Whatever else is done with manure, let it be kept in compact heaps; to scatter over the whole barn-yard that which should only cover an acre of a few square yards, is wicked waste. After the winter rains have washed out the soluble matter from the scattered manure (often it runs to the nearest creek), the remains is of little value. It would be far better were the manure upon the field where its washings would be utilized. One fact has been often repeated in these columns, but our correspondence shows that it is not every where understood, which is—the quality of the manure depends upon the quality of food. The animal adds nothing to what is fed to it; it takes out something, but leaves the waste, which it does not want, but the soil does, in an available form. The old adage "out of nothing nothing comes," is commended to those who think they can make a large quantity of rich manure out of a little poor food.

—*American Agriculturist.*

I think that the poor, and should do so for their different some people, others, they should, it is very, I say, should, it is not work as have a few. How they did, stand still and we see that it is most essential impossible for labor carried. Another exercise for I think, the bo see that poor much as healthy. Wor like the ent part in the. # HAMPTON STUDENTS' OWN.

## From the Senior Class.

### WORK FOR ALL.

I think that every-one, as rich as well as the poor, and the high as well as the low, should do some kind of work, according to their different abilities. Of course there are some people who cannot do so much work as others, and therefore it is not expected that they should, but everybody can do something even if it is ever so little, unless it is one who is very sick and entirely unable to do anything. I say, as I have said before, that the rich should work as well as the poor, but of course it is not necessary to them individually to work as hard with their hands, because they have everything that they want.

How could nations and races progress if they did not work? Why, everything would stand still and be in an uncivilized state; so we see that work is one of those things that is most essential for life. It would be utterly impossible for people to live if there were no labor carried on.

Another consideration is that work is good exercise for both the mind and body, and I think, the body especially, because you will see that people who work enough, and not too much are a great deal stronger, and more healthy than those who do not.

Work is good to develop the muscles and limbs. Different kinds of work make different parts of the body stronger, as will be seen in the cases of blacksmiths and other laborers. You will see that the blacksmith uses his arms a great deal, he is very strong in them, and his muscles are large; while on the other hand, a person who walks a great deal, is strong in his legs, and the secretary are apt to be weak, sickly and of no manner of account to themselves or any-one else.

How did some of our most prominent men of the United States obtain their popularity? Why it all resulted from work, and hard work at that. Take, for example, the case of General James A. Garfield, who is to be our next President, and see how by hard work he has gained the prominent position which he will hold for the next four years, I hope.

General Garfield did some of the hardest work that ever was done, and was not ashamed of it. Abraham Lincoln was also a hard-working man, and obtained a prominent position in the world. Therefore I say that it is no disgrace to any-one to work, but an honor.

There is a discussion up now, I think, about raising a pension to support the Ex-President of the United States, but I do not agree with those who advocate such a plan. It makes no difference how high a position anyone holds or has held, he ought not to think himself above working, and he is not too good to work.

If a man after being in a good situation, has not saved enough money to support himself after he has been thrown out, let him work, up matter what kind it is, if it is his constitution will allow him to do so.

One of the reasons why so many of us like this school is because we are taught here to work in almost every way necessary for life, and I think that work is the greater part of our education. JULIA.

### THE EXODUS.

Let the Negro go to the West. I think it will be better for him in time to come, as it is now there are too many in the South to prosper. You will find that there are two or three colored men to one white, and still they are increasing every day. Now which do you think would be the better plan; for them to remain in the South, or to go to Kansas? Can they gain anything while there are so many in each other's way? It is natural for some to be indolent, while others with all their effort and courage, can hardly make out to live.

Look at the condition of the Negro in the South. He is leaving the country and crowding the cities. And when you ask his reason, he says, "If I stay out there, I'll starve, so before starting out there I thought I would come in town." I have heard these expressions used every day. Just as soon as he arrives, he is willing to work for twenty-five cents per day and board, or fifty cents boarding himself. Can a man with a family afford this, having to pay from five to six dollars per month for rent? There are his provisions, his clothing and fuel to come from? He is left to the mercy of those passing by. The reason I say that the Negro should go to Kansas is that it could teach him to be dependent upon himself. He has stayed in the South so long that many believe that he cannot get along anywhere else. But they are far mistaken.

Give the Negro a fair chance and a free ballot, and he will show himself a man. Let

me ask a simple question. Why are so many foreigners coming over here? It is because they are treated at home just as the Negro is in the South. They are satisfied to know that just as soon as they land on the coast of America, they will receive protection under the wings of the American Eagle. The Negro is slave to hard work; therefore the only thing I see for him to do when he reaches the West is to lay his shoulder to the wheel and work; forgetting the past and thinking of nothing but the present and future. If he will only do this it will make a great page in the history of the Anglo-African race.

R. J.

### WOULD BE COLONISTS.

The following letters were received at a school exercise. They are supposed to be written in application for membership in a new colony to be founded somewhere in the West.

#### APPLICATION TO THE NEW COLONY.

Mr. Geo. W. K.

Sir: I have heard of your Colony, and after seeking and reading the history of it, would like very much to become a citizen.

My experience as a citizen has been very great. I suppose that in order to have you grant my request, it is necessary for me to give you a history of my life.

I was born in England in 1820. When twenty-four years old, I came over to America; I was in 1844. I went to a trial judge's office in Charleston, S. C., and declared that I wanted to become a citizen of the United States, and that I would abide by the laws; five years after, which was in 1849, I got what is called by the Americans, a naturalization paper. I was then declared to be a citizen of the United States of America.

I lived in Charleston, S. C. for thirty seven years, which brings me to the present time. I was known as an honorable citizen of the United States, and also of England. I never was before a state court or United States court in my life for a crime of any kind; and if you will trace carefully the history of my life as recorded here, you will see that I am a man sixty-one years of age.

While an inhabitant of England I was one of those unfortunate individuals who could not get a wife, but in a short time after I came over to America, I married on American lady from a very wealthy family of Browns. My profession is that of a lawyer and I was also known as a famous statesman of both England and America.

I aspired once to be a national senator but they claimed that I was under age. This was in 1848. I was then twenty-nine years of age. Sir, I hope that you will search this record carefully, and I trust that you will grant my request.

Very respectfully, J. L. M.

Hampton, Va., Jan. 23, 1881.

Sir: I would like very much to join your new colony to Kansas. I am a seamstress and hope to render my service faithfully.

I have three brothers and two sisters who would like to join also. My sisters are bright, well-awake girls, and you could never afford to lose such help as they would give in forming a new colony. The older one is a weaver; and her occupation is useful among colonists. The younger can cook, wash, iron, make butter and do almost anything useful.

My brothers are good, upright boys, and are very fond of good society; one is a carpenter, one a lawyer and one a printer.

I am certain you need all the carpenters you can get, for there will be houses to build and a great many things that can only be done by carpenters.

You will also need a printer, as the public must know what we are doing and how we are progressing.

I hope we will not be so unfortunate as to need a lawyer to settle our quarrels, but only to record deeds and marriages and sales.

I am very anxious to hear from you and learn when you expect to start.

Very respectfully, CHARLOTTE F.

Hampton, Va., Jan. 27, 1881.

Messrs. Williams, Johnson & Co.

Sir: There is a company of fifty persons of different trades and professions, who would like to settle and obtain land in the Colony which you are about to establish. We have considered the conditions by which we could obtain land and membership, and have

concluded that it is just the place that would suit us. We find in the city in which we reside, that there is too much competition, and I think that it would be a good idea if we could go to some other part of the country and establish a Colony or obtain membership in one about to be established. We have among us, Mechanics, Doctors, Preachers, Lawyers etc., all of whom are first-class workmen, but on account of so much competition among the great numbers of equally skilled workmen, they have not been able to obtain work enough to procure for themselves a fair living.

Though it is said, we ought not to praise ourselves but leave it to others, I will take upon myself to say, that I think you could not find more peaceful, temperate and religious members. We have not a great deal of money to lay out in the cultivation of the ground, but each has a fair sum to expend in doing his part towards making a prosperous Colony. We will not urge ourselves upon you, but ask that you will consider what we have said and give us an answer at the earliest date. Remembering that when we help ourselves, God will also help and be with us at all times, we are, gentlemen,

Respectfully,

J. Wilmore & Co.

Per S. E. C.

## From the Middle Class.

### THE COLORED PEOPLE OF THE SOUTH.

In the South the colored people are making a very rapid progress towards getting themselves comfortable homes. Most of them in Virginia, have their horses and carts, which they use in different ways to make a living. They rent plantations from the white people, and after making their crops, they pay the fourth of it for rent. And by so doing a great many of them have made very good progress.

What I mean is that they have made money enough to get stock, land, property, etc.

At the close of the war, the colored man did not have anything towards a support for himself. A great many were hired for five dollars per month, and some really thought that they were not free, so kept on working as usual. But I can say that up to this period the colored man has improved his chance for civilization almost all over this country. The colored people have their churches and Sabbath schools organized in almost all parts of Virginia, and they are doing good work, which was never expected by a great many. But through all that the colored people have been blessed, and by the help of their friends, they are standing where they can make for themselves a good and strong character.

A. B.

### HAS A STATE A RIGHT TO SECEDE?

It is far to say that the following paper was written within forty minutes, as a class exercise, on the subject of Secession, in the History class. The expression of opinion was unreserved, and three or four took the opportunity to say what they thought.

The colonies of America being made up of men who were persecuted in the countries from which they came, and being at the same time so far removed from the Old World and their parent countries, were found naturally free and independent governments. These colonies, for the sake of mutual protection, attempted several times to make a union: first, against the Indians; and secondly, against British oppression. During their revolt against England, and while struggling for national independence, they were brought together by Congress, which had no other than delegate powers; and the sovereignty was retained by the separate states. The articles of Confederation, which were meant to make a complete and perfect union though not entirely ratified by all the states till the war was almost ended, were found insufficient to carry the government on, and make the union a success. Congress had no real power to enforce the laws; it could only recommend to the various states the levying of taxes; and when this was done many of them were dilatory, others refused. Among the exclusive rights or privileges which congress had the authority to send or receive an ambassador, to take care of the public domains, to declare war, or make treaties. This it pretended to do; but it was found that many of the treaties were not kept by some of the states. Such a thing may be defined as being not a government, for it could not be recognized or respected by foreign nations. This would soon bring things to chaos. At such a state of things, thinking men grew restless. Washington, in a conference with some statesmen at Mt. Vernon, recommended a convention which met at Annapolis, Md. As a minority of the states was present, they adjourned to meet in May, 1787, after discussing some questions about Tariff. Accordingly in May

of 1787, delegates from all the states, except Rhode Island, were present. The object of this convention was to make a stronger union which could not be broken or annulled by an individual or any part of the United States. This Doctrine is very beautifully implied in the preamble of the constitution. If this convention did not accomplish this, it did not accomplish its aim and its object. By this I imply that no state has a right to secede from the Union, or a right to annul an act duly passed by Congress of the United States. To say otherwise, is to imply that this is not a national government; and it would not be respected by the nations of the earth. A. W.

### THE PLYMOUTH ROCK.

Before I begin to tell anything about the Plymouth Rock, I will first ask what does the Plymouth Rock mean, and why it came to be called by this name? There were a great many people in England several years ago, who were not allowed to worship God in the way they wanted, so they made up their minds that they would go where they could worship him as they wished. They took a frail vessel, called the May-Flower, and after a weary journey of about three months, they anchored in the Cape Cod Bay. When they reached this land everything looked cold and barren, but like soldiers, they never once felt sorry for their having come to this country. When the weather was warm enough, a little girl stepped ashore, upon a very large rock. They named their new settlement Plymouth, and because this large rock was the first thing that the feet of any of their crew stepped upon it was called the Plymouth Rock.

Second, I will ask whether the landing of these people has done anything for us or not, and what have we to do with them? There are a good many people who know about the Pilgrims, and yet do not think much about them, but I think that this is a great question to reflect upon. The first lesson which it teaches is this, that we should stand up for God, although we may have a hard time in so doing.

The second lesson which it teaches is, that when we are wrong to the Lord we should be willing to do anything to please him. These people are sometimes called the Pilgrim Fathers, because, like the Patriarch Abraham, they left "their kindred and their father's house," and went out as strangers and pilgrims to seek a country wherein they might worship God in the way they believed to be right. MARTHA.

## From the Indians.

Indian boys have been cleaning around the new building of Academic Hall. Bears Heart went to Carlisle on Friday. Samuel Townsend the editor of the "Sennet News," says that ten Creek children arrived at Carlisle, and are now in school, and some of them had to go to a College near Carlisle. Also he said that they are trying hard to learn. At Hampton we are looking for some Indians from Arizona. One of the Indian boys at Hampton wrote a letter to his brother to send him a pair of moccasins which he received a letter, and will be as follows:

Fort Berthold, D. T. Dec. 29, 1880.

My Brother,

I got your letter, and I am glad you got those things I sent to you long ago. I haven't got any buckskin yet as it is hard work to hunt to get them at present. It is now very cold and there is a very great deal of snow in drifts. I want you to tell me all about what you are doing at Hampton. What do you work at every day? all your relations here are well and happy to think that the summer will soon be here again. Don't forget to send no letters, as we want to hear all about you. By and by I shall go hunting for deer and we will try to make you some moccasins and gloves. But my brother you have been with the white people a long time, and I think you ought to wear shoes, and not use moccasins anymore. I am glad to get your nice letters, and to see that you are so skilled in writing. If you speak as well I am glad. I myself am poor, I cannot understand English, and can put English clothes but I can't understand their words.

Your Brother

"Take or 'Strike the Lodge.' This shows that Indians want to learn how to talk English words. This man who wrote to his brother, is said to be one of the bravest man among the Red Indians, and is willing to hold on to the white man's road and quit the old ways. I hope when we get back to them we will be able to teach our old people as well as the young to know how to read in English. J. R. M.

# Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. X.

HAMPTON, VA., APRIL 1881.

NO. 4.

## ***SPRING.***

Spring, the sweet Spring, is the year's pleasant  
King;  
Then blooms each thing, then maids dance in  
a ring;  
Cold doth not sting, the pretty birds do sing,  
Cuckoo, jug, jug, pu we, to witta woo.

The fields breathe sweet, the daisies kiss our  
feet,  
Young lovers meet, old wives a sunning sit,  
In every street these tunes our ears do greet,  
Cuckoo, jug, jug, pu we, to witta woo.  
Spring, the sweet Spring.

## A POOR WHITE MAN'S EXPERIENCE SINCE THE WAR.

BY ORRA LAKSHONKE.

I heard a gentleman say at my husband's little store, not long since, that a well-to-do white farmer had asked him to count some money for him, as he could not read or write. The incident seemed so curious that I afterward asked for an explanation, and our kind neighbor gave me the following story, which I hope the readers of the WORKMAN will find as interesting as I did.

James Johnson was the overseer on a plantation in Campbell county, when the civil war began. In early life he had been extremely poor, and had no chance at all for education, but was possessed of good common sense, a great deal of energy, and a strong desire to better his condition. He soon adopted the business of "oversawing," as munging the estates of the land-holders was called, and had no difficulty in gaining the confidence of his employers, as he understood raising tobacco, which was the principal crop of the country. He was very thrifty in his habits, and married a sensible, industrious woman of the same town of mind. At the time the war broke-out, he had saved several thousand dollars, and indulged golden dreams of becoming the possessor of a plantation and slaves of his own. With part of his money he had bought Negroes, as that seemed to him the best investment he could make, until he was able to purchase the land he had set his heart on. The war upset all his calculations, and being very ignorant, he did not at all understand the true meaning of the great struggle in which the country was involved. He had no fancy for soldiering, and for a time contented to struggle for the fortune that had seemed almost within his grasp. For some years he obtained exemption from service, on the plea of being overseer of a plantation working more than twenty slaves, but, as the demand for men grew more pressing, he was forced to join a regiment, and near the close of the war, found himself in Lee's retreating army, many of the slaves he had been accustomed to managing being also transferred from the fields of peaceful labor to the trenches, and throwing up fortifications against the army which was fighting for their emancipation.

The ex-overseer was very unhappy in his new position. The prospects of the cause in which he had so reluctantly engaged had become extremely discouraging. He could see clearly enough now that the day of freedom for the Negroes was at hand, and the money he had saved had in an evil hour been invested in Confederate bonds which were already valueless. He felt great anxiety about his family, for whom he had rented a house on a little piece of poor land, as the best he could do for them, when called to join the army, and he sadly realized that the labor of the best years of his life had been wasted, and if he survived the hardships and dangers of war, he would have to begin his career again, as much a pauper as in his friendless childhood. He had a great dread of being captured, being convinced that after the active life he had always led, the confinement of prison life would kill him. As Lee's army grew daily less able to withstand the advancing enemy, the final collapse was plainly but a question of time. The soldiers were harassed with forced marches on scant rations, discipline was almost forgotten, and the men were left to do almost as they chose. There was no hope for improvement in the condition of affairs, and Johnson, with several comrades, who were equally afraid of falling into the hands of the enemy, determined to make the best of their way home. They had not gone many miles in the effort to carry out this design, when at a point on James River some miles below Lynchburg, they suddenly found themselves surrounded by Federal soldiers. Johnson, who chanced to be without his coat at the moment, made a dash for the river, losing his hat as he did so. He was fired at several times, but succeeded in making his escape by hiding among the rocky bluffs on old Powhatan, until the soldiers, chasing his own party were out of sight. When he felt sure that the coast was clear, he emerged from his hiding-place, and being now within a few hours' walk of the little farm where he had left his family, he hastily continued his course in that direction. About midnight, he presented himself haggard and coatless before his anxious and astonished wife, weary and worn with his adventures, but happy to have escaped with his life. After a day or two spent in much needed rest, our friend Johnson set himself to survey the situation and take stock of his possessions. He soon began to realize that his situation was not as almost nominal rest. Beyond this, little comfort about the house accumulated by his carefulness; the house was a tolerably good one, and they could keep the place at an almost nominal rent. Beyond this, things looked very dark, they had no money, the supply of provisions on hand was very small, the difficulties of living for the last

year had been so great that the stock they had owned had been sold to buy bread; they had not a horse, cow, or pig, had little clothing and no farm implements. The slaves they had purchased were of course free, and a valuable Negro woman belonging to them, had died a few days before, leaving two little helpless children on their hands, and she had two children of their own, this gave them four mouths to feed, without adding any hands to work. All Johnson's clothes, except those he was wearing, had been lost, and he was left with a few shabby remnants of the blue-coated gentry, and the chief hope of the family consisted in two or three hens, which Mrs. Johnson had contrived to keep. The prospect was not cheerful, but Johnson and his wife had not yet reached middle-age, both were healthy and energetic, and without wasting time in useless lamentations, they at once set to work, with such materials as they could command. A saddle and some old harness were exchanged with a neighbor who was in somewhat better plight than themselves, for a plow without a point, and the same neighbor kindly agreed to lend them a horse, when he could spare it.

By the time these arrangements were concluded, Mrs. Johnson's hens had contributed a dozen eggs to the family stores, and a soldier, without a coat, and in a borrowed hat, set out to walk twelve or fifteen miles to the city to buy a plow-point. Having succeeded in so doing, he began at once to plow his land for a crop. He and his wife carefully calculated what they could plant in the garden, and anxiously watched the growing vegetables, being forced to live on the same rations, until they were fit to eat. In referring to this trying period, Mr. Johnson says he really cannot tell how they lived through those days of hardship. The old adage that Providence helps those who help themselves proved true, however, and when winter came their condition was so changed for the better that they had no reason to fear its rigor. The seasons had been remarkably favorable, and all their labor prospered abundantly. The garden, planted with seed saved by the careful housewife the year before, furnished them excellent vegetables in rotation, and they had good store laid up for the winter months. The corn crop had turned out much better than they expected from the character of the land, and the tobacco crop, planted and tended by Johnson alone, was so fine that it gave him good credit among his neighbors, and eventually sold for a thousand dollars.

The children, happily unconscious of the cares and anxieties of the heads of the family, had been well cared for and were growing fast. In the course of time, a rich old planter near them, whose servants had all left him, was paralyzed, and hearing that the old gentleman wanted what Virginia people call, "a likely" young African to wait upon him, Mr. Johnson took the little black boy to the sick gentleman, and feeling sure from his knowledge of the family, that the child would be well treated, he had the little fellow bound to them. This proved an excellent arrangement for the boy and the invalid, and the young Negro, now grown to manhood, still remains in what he has found a happy home. The Johnsons kept the little girl, and she is still with them, a fine girl, honest, useful and industrious, perfectly contented in her situation. When she was about ten years old, she was decoyed away from her home by some worthless white people, who deceived the child, with a story of her brother's being ill, and having sent for her. They carried her off to their cabin, "the pine barrens," some miles distant, and several months passed before Mr. Johnson could discover what had become of her. At length, after much searching, he obtained a clue to her hiding-place, and went at once to the settlement of the half-savage inhabitants of the barrens. The people in the cabin, where he went to look for the missing child, swore they had never seen her, but Johnson heard some one walking restlessly in the loft overhead, and managed in spite of the opposition manifested, to reach the foot of a ladder, which led to the room above, and on looking up, met the eager gaze of the lost child, who was peering anxiously down, trying to catch a glimpse of her friend, and afraid to speak to him. Mr. Johnson called the child to his side and telling the discomfited occupants of the hut to interfere with him at their peril, he took the delighted little girl up on his horse and returned home unmolested.

Two or three years after the close of the war, Johnson found himself going back to his old dreams of owning land, and it was not long before he purchased an excellent creek bottom farm, to which he has from time to time made additions, until he now owns a large hundred-acre land. He has also a considerable amount of money chiefly invested in mortgages on real estate. Not long since the gentleman from whom he bought some of his land and who told me this story, went to Mr. Johnson's home to receive his last payment. He was somewhat surprised to see Mr. Johnson take from a bureau a unlocked drawer, which contained money papers and

much loose money. They had previously had little personal intercourse, and the visitor who was a resident of the city, had had some unpleasant experience with dishonest servants, remarked to his host that it might be unsafe to leave money about in that way, and to do so was inviting a great temptation to the Negro girl, he had noticed about the house. Mr. Johnson smiled and said that girl was a member of his family, had been born in his house, and was quite as honest and reliable as any one else in the family. In settling for his land, Mr. Johnson desired to use as part payment some bank certificates of considerable amount, and when told that his endorsement was necessary to make them available, he seemed somewhat confused and said regretfully that he could not write his name, but was always obliged to affix his mark to papers requiring his signature. He then requested his visitor to count the money lying in rolls in the drawer, which amounted to some hundreds of dollars. He also asked that if his friend had time he would read over to him some papers he had which proved to be mortgages of considerable value, and said that as he could not read himself, it was a great help to him to hear his papers read to him once in a while. In the conversation that ensued, finding that his visitor showed a kindly interest in his affairs, he told the story of his struggles with fortune, as I have related it. No part of his experience seemed to interest his friend, but the circumstances surrounding his early life, which had caused his growing up in such dense ignorance, and he is a warm friend of the public school system, the influence of which is becoming to be felt in his district. He is determined that his children shall not suffer for want of education, as he has done, and has given his two sons all the advantages in his power. Finding the elderly boy inclined to "take learning," he sent him some years since to board in a private family in the city, that he might attend the High School. The young man applied himself with considerable diligence, and is now able to assist his father in attending to their large and valuable property, as he has not only been trained to labor, but can "read rime and rite readin'."

## TO THE HAMPTON GRADUATES.

My Dear Friends:

When we purpose building a road' one of the first things we do is to level the hills, fill up the valleys, and remove all obstacles. As a race, you have a laudable ambition to make a road that will lead to honor and independence; but many of you are not taking the proper method. It is generally acknowledged that ignorance, idleness, extravagance, and want of forethought, wherever they exist, are obstacles in your path; but there is another obstacle that, perhaps, is not sufficiently recognized. It is the lack of sympathy with each other. You do not work together; you allow jealousy to control your actions; you do not rejoice with those who rejoice, and it is this sympathy to which I wish to call your attention. In using the word "you," I do not at all mean the Graduates of the Hampton N. and A. S. You have so thoroughly enjoyed and profited by the warm sympathy of your teachers and class-mates, that you feel like one body, animated by one soul, and bound to each other by the strongest ties of friendship, to be perpetuated through all the changes of this life, and to be perfected, as we and you trust, in the Heavenly home above. You have learned to enjoy the pleasure of sympathy; you appreciate the words of the poet:

"A solitary blessing few can find,  
Our joys with those we love are intertwined;  
And his whose helpful tenderness removes  
The obstructing thorn that wounds the breast,  
Smooths not another's rugged path alone,  
But scatters roses to adorn his own."

But I write to you on this subject because you will exert an influence wherever your lot may be cast. You will find, in no many instances that the colored people do not rejoice in the prosperity of their fellows as they ought to do. When one of them acquires property or honor, he becomes a mark for abuse, and others would gladly, if they could, pull him down from the eminence he has reached. I trust that there are many exceptions to this statement, but I have heard it so often from reliable sources in different parts of our country, that I fear it is too true. It is well known that the obstacle to the progress of the race would be removed, if it were a negro overseer or slave driver that more oppressive and cruel than a white man that position. If all colored men would be content to be another in business, join hands with their fellow-men, and lend a helping hand to the unfortunate, the great obstacle to the progress of the race would be removed. It is contemptible to try to rise by the fall of another, and rising by such means must be the work of a short continuance. It is an old, but true saying, that "Every tin must stand on its own bottom." Merit will finally be acknowledged, and receive its reward.

"Worth makes the man, the want of it, the fallow."  
"Can place or lessen us or aggrandise!"

Pygmies are pygmies still, though perched on Alps.  
And pyramids are pyramids in vale.  
Each man makes his own stature, but himself."

Industry, economy, and good conduct, lead to the same results in your race as in others. The *Augusta (Ga.) Chronicle*, says: Many of the colored people in Georgia, are now comfortable, and some are growing rich, while all who are sober and industrious make a decent living. "A jury composed exclusively of black men would be in New York." These assertions may not hold good in all parts of these States, but there is sufficient evidence to prove that the road to success is open to colored people, if they will follow it. I hope, as you advance in education, there will be among you physicians, lawyers, (a few of them,) and ministers, as well as farmers, merchants, and skilled mechanics, worthy of confidence, who will receive full encouragement. You all know how the Irish and Germans who emigrate to this country, work into each other's heads, and though they come to our shores with very few dollars in their pockets, they are soon able by their industry, not only to support themselves, but to send generous aid to those whom they have left in their native land.

In a certain sense the whole world is our country, for we are the children of a common Father, and every man to whom we have the opportunity of rendering a needed service, is our neighbor; but we are commanded by the highest authority to provide especially for our own household, and I do heartily desire that the elevation of the colored people may be secured, not only by a strong pull and a long pull, but by a pull all together, that will lift them out of the mire of ignorance, poverty, and despondency.

"The wise and active conquer difficulties  
By daring to attempt them: sloth and folly  
Shiver and shrink at sight of toil and danger,  
And make the impossibility their fear."

I am your sincere friend.

M. A. L.

## CORRESPONDENCE.

Please testimony to the work of the *Southern Workman*, and evidence of its appreciation in various quarters comes to us in the following letters from which we take the liberty of publishing extracts.

New Orleans, La. Feb. 23, 1881.

EDITOR SOUTHERN WORKMAN:

I desire, in the name of the American Seamen's Friend Society, whose Chaplain I have been at this place for the past 13 years, and in that of the throng of sea and land-men, who from morning to evening have filled my Free Sailor's Reading Room, and emphatically in my own name, to send you very hearty thanks for your sending to me for the Reading Room your excellent and highly-appreciated monthly "The Southern Workman," as a donation to the Seamen's Society and cause here. Those good words have been carefully preserved and filed and much read, and after a period sent to sea, and have done much good. But we have missed the *Workman* for several months past, and all unite in earnestly soliciting a renewal, trusting that the bread-corns thus cast upon the waters, some of which in our distributions on departing ships, goes to the ends of the earth, may be found again by you after a few days, with an undiminished increase.

Hoping again to greet the welcome month, and wish you every blessing,  
I remain very respectfully yours,

L. H. FRASE,

Seaman's Chaplain.

New Orleans, La.

Nov. 1880.

EDITOR "SOUTHERN WORKMAN."

Dear Sir,

I have taken the *Southern Workman* for a number of years, have found it a readable, instructive paper, improving from year to year. But the last year has been very marked in its able articles in regard to the lifting of the two races for whom you especially labor. I take some ten or twelve weekly and monthly publications, and may declare that find in none of them matter more important for lovers of God and man to ponder than I find in some of your last numbers. The paper ought to have a more extensive circulation.

I encased each for \$4.00 to pay for the paper to my own and the enclosed addresses.

Yours truly,

T. H. C.

# Southern Workman.

ISSUED MONTHLY.

S. C. ARMSTRONG, Editor.  
H. W. LUDLOW, Editor.Mrs. M. F. ARMSTRONG, Regular Contributor.  
Mr. W. N. ARMSTRONG, Contributor.  
Mr. T. T. BAYNE, Contributor.  
Mr. R. T. WASHINGTON, Contributor.

TERMS: ONE DOLLAR a year. IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by check; Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-4 column.	2 75	7 50	13 50	23 00
1	5 00	13 50	23 00	40 00
1	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

For further information, address J. F. H. MARSHALL, Business Manager, Hampton, Va.

Entered as Second-Class Matter in the Post Office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute, and printed on the School Press by colored youth trained in the office. Subscriptions are a help to the school. It is sent on trial for four months for twenty-five cents. Job work, from all parts of the country, is solicited, and will be done cheaply and well. Estimates will be sent on application.

## INDIAN GIRLS.

When, about three years ago, we suggested to Secretary Schurz that Indian girls should be sent to the Hampton Institute, in view of the fact that we were educating seventeen Indian boys, the then Commissioner of Indian Affairs, Mr. Hayt, on being summoned, declared that it would be of no use; that the experience of his department had been that the education of red skinned girls had been a failure. In face of this opinion of the Commissioner, Mr. Schurz decided that the Indian girls should be given another trial. Nine were soon brought from Dakota to Hampton. There are now here twenty-two young Indian women, from twelve to eighteen years of age. Of their capacity and progress, some account is given by one of their teachers, in another column.

We have fifty-nine young men. Girls should have an equal chance with boys. The Hampton plan is to educate fifty of each. No more boys will be received; a few are likely to be sent home.

The Crow Creek agency alone is ready to fill up our quota of girls. Another agency would send forty girls. The pressure is great, and the need is real and deep.

With this number of the "Southern Workman," is issued, (so far as the supply will go), a SUPPLEMENT, showing the ground plan and perspective view of a proposed building for Indian girls at Hampton, to cost

## Twenty Thousand Dollars.

The plan explains itself.

Contributions of any amount, large or

small, are earnestly solicited from the friends of Indian education.

Those desiring full accounts of our work for this race, will find an excellent one in "Harper's Monthly Magazine" for April, 1881, and on application, will receive a small pamphlet by the Principal of this Institute, giving details.

On the evening of March 15th, a public meeting was held in New York City, presided over by Rev. Roswell D. Hitchcock, D. D., at which Ex-Secretary Carl Schurz, made an earnest plea for Indian education, endorsing the work at Hampton and Carlisle, and declaring that the lifting up of Indian women is imperative to the progress of their race.

In the course of his remarks, Mr. Schurz said:

"We want particularly to enable General Armstrong to erect a building for the education of Indian girls. Indian women have always been only beasts of burden. No human society can be good where woman is not recognized as an equal. Woman makes the atmosphere and meat make the attraction of the human home. If we want the Indians to respect their women, we must teach the women to respect themselves. I commend this object mainly to your consideration."

Gen'l Nelson A. Miles, Capt. R. H. Pratt, Bishop Haro, of Dakota, Rev. Henry Potter, D. D., Rector of Grace Church, and the Principal of the Hampton Institute, made brief addresses. At the close of the meeting, Hon. William E. Dodge, (referring to the plans for the proposed building for Indian girls at Hampton, which were drawn on a large scale, and placed on the platform) said that a lady in the meeting desired to pay the cost of one room for two girls, which is

## Three Hundred Dollars,

adding that he wished to do so himself, and suggesting that, after the meeting, others come forward and do likewise. Fifteen rooms were soon provided for, thus securing four thousand five hundred dollars (\$4,500) towards the cost of the building. Two sisters agreed to defray the cost of the Hospital department, which is two thousand dollars.

About one-third of the needed fund has thus been secured. Earnest efforts are being made to secure the remainder, by way of subscriptions, for the entire cost of Play-room, \$1,200; Wash-room and Laundry, \$2,000; and Study-room, \$1,000; as well as for the rest of the sleeping rooms for girls and teachers. Providing a room at a cost of three hundred dollars, supplies accommodations for two Indian girls, so long as the public or government will send and support them.

Many would gladly help, but cannot give the large sum above suggested. The smallest contribution will be gratefully received. The thought and sympathy that inspires the gift of a dollar, may be as true, and as valuable to the cause, as that which inspires five hundred times that amount. Public sentiment and widespread sympathy are at the bottom of all sound work of this kind. The more help

era towards this building, the better; those who give for it, will care for and watch it. If twenty thousand dollars are given, there will be, besides, created by way of indirect result, a public sentiment worth twice the amount to the cause.

Contributions may be sent by check, to

S. C. ARMSTRONG,

HAMPTON, VA.

President Garfield, in his inaugural message, said:

"The full elevation of the Negro race from slavery to the full rights of citizenship is the most important political change we have known since the adoption of the Constitution of 1787. It has freed us from the perpetual danger of war and dissolution. It has added immensely to the moral and industrial forces of our people. It has liberated the master as well as the slave from a relation which wrangled and enfeebled both. It has surrendered to their own good-will the march of more than 5,000,000 of people, and has opened to each one of them a career of freedom and usefulness. It has given new inspiration to the power of self-help in both races, by making more honorable to the one, and more necessary to the other.

Those who resisted the change should remember that under our institutions there was no middle ground for the Negro race between slavery and equal citizenship. There can be no permanent, disfranchised peasantry in the United States.

The emancipated race has already made remarkable progress. With unflinching devotion to the Union, with a patience and gentleness not born of fear, they have followed the light as God gave them to see the light. They rapidly lay the material foundation of self-support, widening their circle of intelligence, and beginning to enjoy the blessings that gather around the homes of the industrious poor."

It should be said with the utmost emphasis that this question of the suffrage will never give repose or safety to the States or to the Nation until each, within its own jurisdiction, makes and keeps the ballot free and pure by the strong sanctions of the law.

But the danger which arises from ignorance in the voter, cannot be denied. It covers a field far wider than that of Negro suffrage and the present condition of the race.

It is a danger that lurks and hides in the shadows and fountains of power in every State. We have no standard by which to measure the disaster that may be brought upon us by ignorance and vice in the citizens, when joined to corruption and fraud in the suffrage.

The voters of the Union, who make and unmake constitutions, and upon whose will hang the destinies of our Government, can transmit their supreme authority to no successor save the coming generation of voters, who are the sole heirs of sovereign power. If that generation comes to its inheritance blind of by ignorance and corrupted by vice, the fall of the Republic will be certain and remediless. The census has already sounded the alarm in the appalling figures which mark how dangerously high the tide of illiteracy has risen among our voters and their children.

To the South this question is of supreme importance; but the responsibility for the extension of suffrage did not rest upon the South alone. The Nation itself is responsible for the extension of the suffrage, and is under special obligations to aid in removing the illiteracy which it has added to the voting population.

For the North and South alike there is but one remedy. All the constitutional power of the Nation and of the States, and all the volunteer forces of the people should be summoned to meet this danger by the savory influence of universal education. It is the high privilege and sacred duty of those now living to educate their successors, and fit them, by intelligence and virtue, for the inheritance which awaits them. In this beneficent work, section and race should be forgotten and partisanship should be unknown. Let our people find a new meaning in the divine oracles which declare that "a little child shall lead them," for our very little children will soon control the destinies of the Republic.

A more wise and noble utterance has never been heard from the Chief Magistrate of the land. The danger he mentions has been recognized by others, but never pointed out with such force, and the remedy and the duty so clearly stated.

Two points are:

1. The ballot must be free and pure.
2. Ignorant voters are a danger; in the South, especially. This danger is a matter of supreme importance.

The power of the Nation, of the States, and all the volunteer forces of the people are summoned to meet this danger by the saving influence of universal education.

A relative importance is given to the danger from ignorance and corruption and the need of intelligence and virtue, that no other public man of the day has pointed out.

For once true manhood is recognized as the paramount fact in our civilization, and the terrible lack of it indicated as a chief concern of government and people.

What next? Will a Republican Congress neglect as it has since 1865 to look to the foundations of the nation, turn a deaf ear to the cry of its "wards" for light, that they may read and learn their duty as men and citizens?

If President Garfield is right, national legislation for the past sixteen years, so far as Negro progress is concerned, has better expressed the ideas of men who made it a penitentiary offense to teach slaves, than of men who owed their own success in life in great measure to free schools. Making voters out of slaves and not fitting them to vote, shows scant wisdom and weak patriotism.

"The volunteer forces of the people," meaning Northern teachers and contributions (amounting to over six millions of dollars since emancipation,) have proved their loyalty to the principles of sound government and to the duties involved in the results of the war.

The million of dollars annually expended by the "Solid South" for Negro education, and the constantly improving sentiment in that direction, shows some appreciation of the danger from and the duty to ignorant voters.

Aside from the three and a half million dollars devoted from the funds of the Freedmen's Bureau to schools for the ex-slaves, the Nation has as yet done nothing. Does Congress, as a body, care for the real welfare of the black man?

Will the trumpet note in President Garfield's inaugural address have any effect?

"If the coming generation of voters comes to its inheritance blinded by ignorance and corrupted by vice, the fall of the Republic will be certain. The census has already sounded the alarm in appalling figures."

Will these ringing words pass over our legislators like a flourish of rhetoric? We are sure that the "volunteer forces" will be stimulated to greater effort.

The people are, generally, sympathetic about the black man, but there are in most of our cities and towns, a few people who care for him, their continued and unnumbered efforts have produced great results.

The Negro cause is not popular. Few will go out to hear an appeal for his elevation. For his physical relief there is more general sympathy.

But throughout the country, in New England especially, there are enough men and women who realize that the South was not alone responsible for slavery, and that the entire nation is responsible for the extension and the results of it, to create a steady interest and a flow of contributions and personal effort to the South, year after year. What money and work has been more fruitful of good, and served a higher and more patriotic purpose than this? It has helped "widen their circle of intelligence." It has done much to create that "light" which they "followed as God gave them to see the light."

Good men and women did not staidly wait for a Divine interposition. They went down South and taught Negro children, leaving hardships and contempt. That's the way God's light reached the Negro in the earlier and more troubled days, and unless President Garfield's stirring words shall lead to some public measure, it will be the only way, save from the considerable and increasing efforts for his elevation by his former master, who fought to keep him a slave.

The Inaugural is headed in some papers as "a stalwart document from President Garfield."

Speaking of bull dozing or intimidation

tion of ignorant voters in defense of honest local government, it says:

Bad local government is certainly a great evil which ought to be prevented; but to violate the freedom and sanctity of the suffrage is more than an evil; it is a crime, which, if persisted in, will destroy the Government itself. Snicide is not a remedy. If in other lands it be high treason to compass the death of the king, it shall be counted no less a crime here to strangle our sovereign power and stifle its voice.

The evil or crime must be remedied. The enfranchised Negro must vote.

But when that evil is past, an even greater one looms up.

In New York, Philadelphia, and other cities, the masses are free to vote; but does that settle the question of the public welfare? When every black man votes as he chooses, will everything be lovely at the South?

Suppose suffrage to be absolutely unrestricted there. What then? The Stalwarts will be satisfied; they may be sure of power for many years. Do they care for anything else?

We regard the unrestricted use of the ballot at the South as an absolute but terrible necessity. There is no other way out of the difficulty. But we would recognize and urge measures for industrial improvement, for universal education, quite as strongly as we would the free ballot. That, however, is not "Stalwart" doctrine. Ten thousand of them will rally to hear of and denounce outrages, where they will come to listen to the Negro's appeal for light; especially if there is a collection to be taken up.

Practically, northern pressure on the South is for a free Negro vote, for party purposes. The pressure is felt, and southern men are seeing the folly of intimidation. Outrages are scarce. A solid South makes a solid North, which don't pay. It hurts the South most, because she must grow malady from Northern emigration and capital, which avoids regions where dissension is not free, where political questions become social questions. Men go South, but their families often become home-sick from lack of congenial surroundings.

No southern State will let the Negro rule, even if he has votes enough to get in power.

Say to them, "The ballot should be free." They will reply "Yes. But we will not have Negro rule." They regard such rule as a danger, which they are bound to avoid. They will educate the blacks and let them prosper, as they are doing in many states, but they must not rule.

This is, we believe, the situation at present.

The President's inaugural demands a full free vote at the South. That would unquestionably give the control of three of these states to the blacks. "Will they get it? We think not. What is to be done? We answer: Raise up the Negro by the only known means of elevating men, by a wise and supreme educational effort. "All the constitutional power of the nation, of the States, and all the volunteer forces of the people, being summoned to meet this national danger by the saving force of universal education."

Do this, and the Negro question will work itself out; power will come with the capacity to use it. The Negro will "march on" to the attainment of his entire political inheritance, and "Freedom will yield its fallow of blessings" to that race and the country. With the lifting up of the ex-slaves, there will not and cannot be "the smallest obstacle in the pathway of any virtuous citizen."

In the pathway of the low and ignorant there will be obstacles, and President Garfield knows it.

The election of Ex-Governor Browne of Georgia, to the United States Senate, is a sign of the times. We extract from a lengthy interview recently published in the New York Herald.

By way of preliminary the reporter says: "In his own history Senator Browne, illustrates the extent of the reform he has effected. Ten or twelve years ago, on account of his position on the reconstruction measures, he was threatened with assassination when he

was announced to speak to an audience of Georgians. He was completely ostracized and subjected to the wildest abuse of men who are now his close allies. Without noting one jot or tittle of the views he then held, he is elected, after the fiercest campaign known to the State, by about a two-thirds vote of the Georgia Legislature, and against the unrelenting abuse and opposition of the Bourbons. To have predicted five years ago that he could have accomplished this, would have been tantamount to insanity. The importance of his campaign is increased by the fact that he represents not only a determined constituency in Georgia, but the liberal and progressive element that is to be found in every Southern State, and is rapidly becoming a commanding element. There is not a State in which his election has not been hailed by press and people as the first substantial victory achieved by the new South over the old South—the first breaking of the purely sectional passions and resentments that have represented the best sentiment of the South for so long; the first turning from the past, with its terrible memories, to a hopeful and glorious future.

It must not be supposed that Governor Browne and his followers are less Southern in sentiment or democratic in principle, than their opponents. On the contrary, they respect every tradition of the South, and defend every principle of democracy—no party split can be looked for from them. They merely insist that prejudice shall not stand in the way of development—that political agitation shall not impede political progress, while the laws shall be faithfully executed and every right of the citizen respected."

Senator Brown stated the following in replies to questions:

"The first thing that the people of the South should do is to convince the people of the North that they have accepted in perfect good faith the reconstruction measures and the amendments to the constitution, and will stand by them and carry them out in all that they legitimately imply. We can never hope to win a national victory until this is done. It was fear on the part of the capitalists and the substantial men of the North of the South's sincerity, and apprehensions created by a few Southern Bourbons, that defeated us in the last election, and will defeat us until it is entirely removed. We have nothing to lose by being frank and straightforward, and everything to lose by agitation, prejudice and passion. The course of her representatives should be to argue manly and without interpretation, to discourage all sectional feeling, to live on good terms with the representatives of all sections, and move in solid phalanx with them in any movement that promises to aid our common country in working out its great destiny."

The great laboring classes of the South are tired of sectional strife. They want peace; they want a faithful execution of the laws; they want a full restoration of property; they want the Union of our fathers, upon the constitution as it is. With this restoration and the vast resources of the South properly understood and appreciated by the men of means, the substantial business men of the North and West, many of whom would then come South, there is no limit to the future prosperity and wealth of the South.

Under the old era, I am satisfied that a State had a right to secede. Under the new era and the constitutional amendments a State has no such right. The old South, under the old era, maintained and practiced slavery. The new South, under the new era, has consented to abolition of slavery, and that our former slaves are now citizens with every legal right of citizenship. This change has swept away slave labor and has elevated and dignified free labor. It is now our duty to see that labor has its just reward, and that citizenship is protected in every legal right."

**NEGRO EDUCATION.**

"You have interested yourself considerably in pressing an educational bill?"

"Yes, and I think that of the very first importance to our people. We have accepted the enfranchisement of the negro in perfect good faith, and are determined to protect him in every right. The platform on which I was elected was a free vote and a fair count. But we want these people educated so that they can vote intelligently and honestly, and prevent them from being defrauded. Georgia is doing her duty in this matter to the extent of her ability, but we cannot do all that is needed. New England has a heavy responsibility at this point. She brought the slaves from Africa and sold them to us. She and her allies freed them after we had bought them. She enfranchised them after they were freed. She will fall in the discharge of a solemn duty if she does not help to educate them. Knowledge will protect them as neither armies nor laws, nor anything else, ever can, and I will be so glad that I am very happy to see the interest manifested by the Northern Senators in this subject. In the last debate in the Senate they showed a most liberal and just spirit."

## THE NEGRO SOUTH AND NORTH.

In a recent number, we quoted from Col. McClure of the "Philadelphia Times," who has been publishing recent personal experiences in the South.

He states that the whites will dominate without regard to the occasional numerical preponderance of the blacks. Negro majorities at the South are thus to be set aside by intimidation or by false counting. This seems a settled fact. But he gives another picture.

"THE WHITE AND THE BLACK MERCHANTS

are on an equal footing. I saw a score of colored policemen on the streets of New Orleans, saving under a democratic mayor, but it would cost Mayor Stakley his last hope of election if he were to put the sable policemen on Chestnut street. I saw black men sitting on the Democratic side of Southern Legislatures, but a Republican district in Philadelphia or Pennsylvania has ventured to nominate one of the seventy-five hundred colored voters of the city, or one of the three that number in the State, for any legislative position, either State or municipal. I saw the colored man mingle with Democratic organizations in the South, but not one could sit in the councils of the League or the Union Club, or march in mixed ranks with the Invincibles or Young Republicans in Philadelphia. I saw him have free access to every channel of mechanical industry in the South, but he is relentlessly excluded from the organized mechanical pursuits of Republican Philadelphia. He is admitted into the printing offices of the Times or the Press or the North American, but he vacates every white man's ease, where most of them vote the Republican ticket, to help the black man; and the colored laborer of the South, as a class, is to-day better paid, more steadily employed and more uniformly free from want, than the farm labor of the North or of any country of the world. Indeed, so great is the demand for labor in the now rapidly progressing South, that all colored laborers are employed from January to January; their wives and children double or quadruple their incomes in the cotton picking season, that lasts three months in the year, and there is now a yearly winter influx of white labor from the North to aid in the sugar and rice harvests. This is the

**PEACE TO THE BLACK AND WHITE MAN**

that has followed the now accepted domination of the whites in the South, and the black man does not wish it changed for a renewal of a struggle to which he is utterly unequal. I see the same colored leader (ex-Senator Revels), who was excluded from the forum of the Academy of Music when a Republican United States Senator, solely because of his race, now at the head of a colored college that is sustained entirely by the Democratic State government of Mississippi, and he holds his high commission from the State authority, while Republican Pennsylvania has no such temple of learning for the black man. Although forbidden to speak in the Philadelphia Academy, he can speak to intelligent and appreciative audiences and receive the approbation of the Kampfer and the Yazoo tragedians. In all the reign of passion that has followed the war of races in the South I can find no limitation of the execution of a Curtis from a public hall by the Republican Mayor of Philadelphia."

**"ALASKA**

and Missions on the North Pacific Coast" by the Rev. Sheldon Jackson, D. D. is an interesting and encouraging account of efforts for the elevation of the Indians of Alaska.

The Rev. John G. Brady, a pioneer missionary there, is quoted as follows, under date of May, 1878:

"I came here expecting to find about the lowest grade of people on the globe. In all my journey from New York to Sitka, I received but very few words of encouragement from those who knew my mission. I now know that the people of our country are ignorant in regard to the people and resources of this grand system of archipelagoes. There are several miners here in Sitka who have been among the Indians since 1849, and are thoroughly informed in regard to customs, habits, mental powers, etc., of the various tribes in the gold regions. These men say that the Alaska Indians are in all respects superior to those on the plains. They build good, permanent houses. They store up supplies of food, when fish, berries, and the like are in season. They will do hard work, and are always anxious to be employed. An officer of a steamboat which plies on the Sitka coast told me that whenever he hired an Indian to chop so many cords of wood, and to have it at a certain place, he was sure to find the contract strictly fulfilled. The casual miners in British Columbia employ them constantly in packing, chopping, and in doing all kinds of hard work. They are self-supporting."

## SLAVERY IN CUBA.

We reprint from the "Anti Slavery Reporter" of London, a letter from the late British Consul General in Cuba, which cannot but interest American readers.

London, 3rd December, 1880.

DEAR MR. STUBBS:—I am glad to inform you that the reports I have just received from Cuba are most encouraging, both as regards the emancipation of the slaves, and the productions of the island.

It is reported to me that the freedom of the slave population is progressing rapidly, as the slave owners are now fully convinced that the law enacted by the Spanish Cortes will be faithfully carried out.

The value of negro slaves has declined so materially that a great many of the negroes have been able to purchase their freedom, their owners, in many instances, accepting almost a nominal sum.

In several cases, the slaves have been granted their freedom unconditionally, whilst others have been allowed to shift for themselves upon a monthly payment of four dollars to their owner, for a limited period.

The law regarding children is being punctiliously observed, the children being declared free.

By a Government decree, owners are obliged to pay their slaves their monthly wages within fifteen days of the expiry of the month, failing which, the slaves are declared free. Many have already received their freedom in this manner, and it is thought that if the emancipation of the negroes continues in the same ratio as it has done since the Emancipation Act became law, a very short time will suffice to complete the total manumission of the slave population in the island. There has already been a decrease of over one-third of that population since 1878.

The insurrection is now completely over, but it has left a heavy debt behind it, and there is a considerable single planter who is solvent. There is little doubt that the proprietorship of the sugar and other plantations must eventually change hands, and that their working will require the strictest care and economy. The same system which obtains in other places is being successfully employed in Cuba; I mean the job system. The Chinese, who are now properly protected under their own Consular supervision, have been, for some time past, engaged in introducing this species of labor. They are now freely permitted to work together in gangs, and it has been found that a Chinese contractor, with his sixty men, will take off a crop as efficiently and with far more economy than a planter with his 300 slaves could do under the old wasteful system.

The antipathy which formerly existed between the negroes and the Chinese has, in a great measure, abated; in fact they now amalgamate freely, so that there need be no apprehensions regarding the production or prosperity of the island, inasmuch as the free Negro will work with Chinaman, and the superior intellect of the latter must always place him above the former.

The cultivation of Cuba will largely develop itself under the new system, as it has done in 680,000 tons of sugar, is ample proof of the capabilities of the soil, in spite of the rapid transitions which have fallen so heavily upon the agricultural resources of the island.

Much no doubt will depend upon tariff and other economic reforms, to which the Spanish Government can no longer remain blind. Cheap food, which is one of the primary necessities in Cuba, should be secured by doing away with the four and other monopolies, and as the United States consumes 80 per cent. of that island's produce, giving a large trade in return, the negotiation of a special Treaty of Commerce between the two countries is of the most urgent necessity and paramount importance.

The present Governor-General of Cuba, General Blanco, who is most popular, has done much in hushing about the pacification of Cuba, and causing the Emancipation Act to be observed, thereby seconding the liberal and enlightened views of his predecessor, General Martinez Campos.

You will, I am sure, be much pleased to learn these tidings from Cuba.

Yours most truly,  
JOHN V. CRAWFORD.

Mr. William M. Dart, a graduate of Atlanta University, Georgia, now teaching in Columbia, South Carolina, is an able, "level-headed" colored man, from whose "Reflections for the Colored People," a lengthy article in the Daily Register of that city, we quote.

"Unfortunately, however, for the country and for the colored people, was the belief that they were the wards of the nation. This was of a tendency to destroy some of the many independent tendencies that each one should have. But the time has come when the delusion should be shaken off, when the virtue of inherent obligations and qualifications, colored people everywhere should first deserve all those rights and

privileges that appertain to true American citizenship, then, in the name of the constitution, demand them before the bar of public opinion, remembering that the people who wish to perpetrate themselves and to be respected must labor, must acquire wealth, must educate themselves and their children, and must practice morality. Without these, there can be no true citizenship in the highest and best acceptance of the term, the sophistry of the political demagogue and time server to the contrary notwithstanding. Why not recognize the substantial worth of the individual citizen? Let the letter of the law be what it may, and disregard the fact as we will, there never has been, is not to day, and never will be, a real *universally acknowledged* citizen of intelligence and property, although the want of these is excused by a popular government like ours, because of the circumstances which make such a thing possible. But will it ever be thus? Should it ever be thus? To both interrogatories the negative is being frankly admitted by some of the best friends of the race.

It is fearful that the race is contending amidst fearful odds. But who knows but from these very odds a stronger race is to grow? But the Negro has sought to be poverty to pit against wealth, ignorance against training of centuries, and humble efforts against traditional prejudices years old.

We need more education and less whiskey, more morals and less politics, (we do not mean no politics, but deep politics), more pure Christianity and less bigotry in religion, more mental culture, and less pauperism of our bodies and appetites.

We should attend lectures, concerts, dime readings, and all entertainments that tend to elevate, and if you are too poor to attend a daily newspaper, subscribe for a weekly issue. It is a new struggle with the "current events" that are transpiring daily. A reading people is a thinking people. A thinking people is a progressive people. A progressive people can never be wiped from the face of God's green earth. Our homes should be made pleasant, thus being an attraction to keep our young women from being their faces as common as carriages on our public streets, and thus saving our young men from narrows, from gambling dens, and from brothels.

Whence must come amelioration? Not from politics; not from the strong arm of the national government. She is too weak. She is stronger to defend her individual citizens on the high seas against a foreign foe, than she is able to protect her subjects within her borders. The fact, not yet controverted, remains, in accordance with a growing public opinion and the "best self government idea," that the individual States exercise, and will continue to exercise, reserved powers over their citizens within their borders, and never attempt to exercise without the consent of the States, unless she invites revolution.

The duty of colored people is clear. They must work, work, work—in the morning and at night, in the day and (if necessary) through the night. They are working for posterity. The object is worthy any sacrifice. THE COLORED PEOPLE MUST EDUCATE ALL THEIR CHILDREN AT ALL HAZARDS.

#### HISTORY OF VIRGINIA.

Captain John Hambleton Chamberlayne, the able editor of the Richmond "State," delivered, by invitation, before the Hampton Normal School, last month, a series of instructive and interesting lectures upon their history of Virginia. We regret that we have not space for an abstract of the course, which was fully reported in the Norfolk papers, at the time. Laying aside his manuscript which had been prepared with great elaboration and research for the Southern Historical Society, Capt. Chamberlayne held his hearers' attention with graphic description of old Virginia times, and later history such as no one else in the country is so well prepared to give. He divided the history of the state into six periods; Colonial, Revolutionary, Constitutional, Period of Decay, of Secession, and the Present. The decay of the State he attributed to slavery, which he declared a national curse denounced and struggled against by Virginia herself, until overcome by "King Cotton," and selfish interest which blinded the eyes of many in the North as well as the South, to its huge evils. A beautiful eulogy of Washington occupied much of his last lecture, and he closed with an earnest call to the young colored men in the school before him to come forward to their duties as citizens, not as politicians, but as voters, upholding righteousness and the honest payment of debts, whether personal or of the State.

#### ARE THERE TWO HALVES IN A WHOLE?

Assuming, for argument's sake, that there are, can we expect to elevate a whole race without elevating both halves of it? That has been, to be sure, the plan of work in the past. Ex-Commissioner Hayt is not by any means the only one who has thought it worth while to expend thousands upon the education of aboriginal young men, while not admitting the possibility of improving their aboriginal sisters. This, however, is not Hampton's idea, and we believe we are right in thinking that it is no longer the idea of the whole awake, working class of thinkers, those on whom the work of humanity and the world's progress depends. If the women of a race are beyond hope, the race is doomed. If they are left out of any plan for its improvement, that plan will fail. If there is any slighting of the work, it must not fall here, for this is the most vital point of all. There are two halves to a whole. It will seem strange some day to all, that mathematical science could have advanced to the calculation of eclipses while sociological and philanthropic thought was lazy on this somewhat elementary principle.

But can Indian girls be elevated? That is the whole question.

The two ladies, half-centuries experience of Hampton and Carlisle, answers it with an emphatic Yes! And it is therefore that, in all faith and earnestness, we appeal to those who do not believe in half-way measures, to round and complete our work by the noblest building for Indian girls at Hampton, without which we cannot receive the fifty girls who are waiting to come, towards whose support here the Secretary of the Interior has pledged the same assistance from Government as is given for the boys.

We think you are well to be in doubt as to the possibilities for Indian women, after such testimony as the following from a teacher of Indian girls at Hampton:

#### THE INDIAN GIRLS AND THEIR NEW BUILDING.

Nothing makes the work for Indians seem more hopeless and discouraging than the want of respect in an Indian girl for herself. There is a conscious strength among the boys, which inspires respect; there is a proud self-distinction and shamefacedness among the girls, that responds to no appeal, and seems to give a stumbling-block to character.

The sweet traditions of a woman's influence which sanctify the life of a New England girl, and often change a round of tiresome and vexatious tasks into a joyful ministry of love, find no resting place in an Indian girl's heart. The thought of a life of dishonour and infamy which God meant for her, falls as an inspiration, and begets the bitter response, "Indians don't talk so. Hampton boys don't think like that. Why don't you tell them about it?" Poor child! To be believed by her own people, and those she loves the best, has yet far down the Indian girls' road.

Yet daily she grows towards a purity and sweetness and dignity of character, that shall meet her and give her a glad reward.

The new building has begun to do its work before the first brick is laid, by the assurance it brings to the Indian girls that somebody believes in them.

What the Indian girls have received for themselves, they have been most anxious to give to their poor little sisters, who have come to Hampton from hunter tribe, separated by miles of prairie and mountain walls from the home of the Dakotas.

We thought that, when they saw the little

girls with their unkempt hair, and strange wild ways, speaking an unknown language, the missionary zeal would disappear. We were mistaken. It was touching to see the watchful care the self-appointed guardians showed for their charges. They taught them more quickly than they had been able to learn themselves, how to make their beds and get in ready for sleep between the sheets, how to keep their hair smooth and collars straight, and to use their knives and forks at the table. One of the new girls who was very homesick, could not contain herself in Virginia Hall, and at frequent intervals called upon her brothers and cousins in the Indian boys' cottages. She was watched and followed, entreated to come back, or reported instantly with fearful eyes when she made her escape. "Bird-Tail," walked to a sudden consciousness of her own improvement, by the department of the new girls, drive her home one day with a stick, and the boys were found on one occasion meeting their sisters, gently advanced with a knotted towel and a shiver of oyster shells. Though she was by no means allowed to carry

her point, she was comforted and diverted when she came back to her room, by every means which the gentleness and ingenuity of the Indian girls could devise. By mild and severe measures combined, the lesson was learned at last, and the little girl is quite contented now in her new home.

Like other missionary enterprises, undertaken by other girls is happier spheres, the work was easier while it was novel. When it settled down to a daily irritation and annoyance, patience began to fail.

After a few weeks, the matron complained that Carrie and Annie's room, which had been her pride, was in a constant state of disorder. When the matron came to account for it: "It was all Francesca's fault. She puts the bread down in the middle of the table, and she goes to my drawer and nuzzles my things all up, and three girls are too many any way, and it isn't owing to me." "Shall I take Francesca away?" "Yes," with some hesitation. "I guess you better. Where are you going to put her?" Full-rod to tell their story before we decided, and their eyes brightened when they found it was the old legend of St. Christopher. They never tire of hearing how the strong giant sought a way to serve Christ, and refusing to weaken his strength by fasting and prayer, the monks' tale him, found none, till at last, wiser than the rest, sent him to the edge of a rushing torrent to carry pilgrims across the stream; how patiently he kept at his post, not knowing whether he was in Christ's service or not, till one black night, when the torrent was a rushing river and the storm was high, a little child called to him to carry him across to the other shore, and the giant's face was hid in weight upon his shoulders, and stepping into the stream found it grow heavier upon him till he staggered beneath the load, and trembling laid down his burden on the other side, and a saint was the Christ-child he had carried over the waters. There was no need to point the story for the Indian children. Long before it was finished, one little head was bowed in the teacher's lap, and the other's face was hid in her shoulder. Well she knew that often their weary heads must bow, if they would indeed carry back the Christ-child to the dark country from which they came.

Long after the story was done, little Annie looked up through her long dark lashes, to see, smiling, "I guess you better not take Francesca away, I think we'll keep her a little longer," and added, pained and genuine struggling in her voice, "Were we like that when we came away?"

Last Saturday morning when we opened the door for inspection, we found Carrie on her knees scrubbing the floor, and Annie at the window, ready to change places when her time came; while little Francesca had been given the easier task of folding her clothes neatly in the new cover. In the evening, the matron, opening the door before lights were out, found Annie kneeling by her bed, with Francesca beside her, while she framed for her the simple petitions of her last prayer. No angel of heaven, with avenging sword, came to balance the debt of a century's wrong and dishonor, but a little child calls to us in the dark and the storm and asks to be carried to a shore of safety and peace.

Steady, that while the child cries, our thought should be grasped by the memory of a piece of printed cover three centuries old. It is not the church fathers just waking to ponder the self-consciousness of man and saint, who know not what they worship—not even the mother's face, with its wonder of love and purity, and sympathy, and pain, which fascinates us; but the boy she holds, upon whose baby brow, and in whose child-like eyes, there lie the majesty, the struggle, the agony, the love, of the suffering and conquering Savior of the world.

We hear the call of the Christ-child, who trusted himself to a woman's weak arms, and in the supreme hour of his humiliation and exaltation commended the mother who bore him to the protecting strength of manhood. Who shall dare, man or woman, to turn away from the child's cry, though we know the burden will grow heavy as we hear it, and we may faint beneath the load?

#### MEETING OF THE ALUMNI.

Pursuant to the adjournment of the last meeting of the "Alumni Association, of Hampton Institute," the next meeting will be held at the Institute, Friday, May 20th, 1881, the day following the Anniversary.

It is earnestly desired that every graduate will feel the necessity of being present, and doing his part towards making the meeting interesting, profitable, and an honor to our beloved Alma Mater.

The resident graduates have constituted themselves a general committee of arrangements, and we can see, especially in the case of those for those who attend, Boarding and lodging by the School need not be expected, but ample accommodations, outside, at low rates, will be made for those who notify the Corresponding Secretary, R. H. HAYES, by the 5th of May, of their intention to be present.

#### A LETTER FROM EX-PRESIDENT HAYES.

An expression of grateful acknowledgment from Hampton Institute, to ex-President Hayes, for the sympathy he has so actively manifested through all his administration, in the causes for which it exists, and itself is representing them, seemed but natural and fitting, on his retirement from the Presidential office. A letter of such acknowledgment, signed by the Principal, officers and teachers of the Normal School, and sent to Mr. Hayes, has received a response characteristic and cordial, which the school is honored to place among its archives. We feel that the gratification of reading it belongs to all the friends of Hampton, and therefore publish it, with the letter that called it forth.

The story of Bethesda chapel, alluded to in the letter, is an interesting bit of unwritten history, which we will give our readers in our next number.

Hampton, Va., March 7th, '81.  
To the Honorable Rutherford B. Hayes, U. S. D., ex-President of the United States of America.

Sir: As officers and teachers of the Hampton Normal and Agricultural Institute, for Negroes and Indians, at Hampton, Virginia, we beg to express to you our appreciation of the noble work you have done for the whole country and for humanity, in having thrown the weight of your influence in your high official position as President of these United States, in behalf of the weak and long oppressed races which the providence of God has made the Nation's wards, and in having so wisely furthered the process of reconstruction.

We would very gratefully acknowledge the constant kindness from yourself and Mrs. Hayes, which, through the whole four years of your administration, has been one of the schools' greatest encouragements in its own work in behalf of these interests.

We recognize it as the expression of your estimate of their importance, and your confidence in the school, as representing them, and we hope, that in fulfilling its trust, it may ever continue to deserve your confidence, and that of the public, so largely due to yours.

We would especially thank you for your last official act in behalf of the school, in interposing to save for its use the chapel in the National Cemetery within our grounds, endeared to us by so many associations of peace and war.

We know that the good wishes of those who are the medium, are a small part only of those which attend you as you leave the position you have so nobly filled. The dangers that threatened the country when you took the oath of office, have disappeared as morning mists. National prosperity has taken the place of national despondency, peace the place of passion. To your firm hand on the helm of state, much, if not all, of this is due.

Congratulating you upon the results of your administration, and praying that a happy consummation of them, with all the blessings of God, may follow you in laying down the duties of your office, for the honorable repose which they merit.

We have the honor to be &c.

Fremont, Ohio, March 10, 1881.

MR. DEAR GENERAL:—

I cannot too strongly express the gratification which Mrs. Hayes and myself feel in receiving the congratulations and generous approval of yourself and the officers, teachers, and all other friends who united in the letter to us dated March 7th, in behalf of Hampton Institute. The work the Institute is successfully doing is so worthy and admirable, that we deem it an especial honor to have its commendation. We shall never cease to be deeply interested in its success, and in the personal welfare of all connected with it. We beg you to receive our warmest thanks, and to be assured that you have our sincere wishes and prayers.

With all respect and regard,

R. B. HAYES.

General S. C. Armstrong, and the Gentlemen and Ladies of the Institute.

#### CO-OPERATION.

Prof. James Storum, of the Academic Department of Weyland Seminary, lectured, by invitation, before the Hampton Normal School, March 25th. His subject was the interesting one of co-operation, especially of co-operative business enterprises as furnishing to the colored race—in the way of occupation and means of acquiring property and standing—that opportunity which is essential to all success. The lecture was interesting and practical, and was eloquently delivered. It is too late for a more extended account of it in our present number, but we will give, at least, an abstract of it in the next.

## WHO SHALL GO TO AFRICA?

Our missionary teacher at the Mendi Mission sends us the results of his own observation and thought on this question. They are worth the consideration of those who have a desire to emigrate for Africa's interests as well as their own.

Mendi Mission, Sherbro, West Coast Africa.  
Jan. 13, 1881.

GEN. S. C. ARMSTRONG,

Dear Sir:

Some months ago there was a question published in the American Missionary asking "Who shall go to Africa?" If the writer of that question will allow me to turn his question around, I will try to answer it. Since I am in Africa to answer this question, the writer will please be kind enough to let me put it in this way. Who shall come to Africa? (As missionaries.)

Let me first say, that Africa and her wants are unknown to some of our good people in America. They seem to think that any thing will do for Africa. They think that it is dark, and therefore can not see what is sent to her, whether it is good or bad. Now, my good sir, whenever you go to light a room, don't you put the best light in the darkest part of the room? So also we should do for poor dark Africa. Africa wants to be redeemed from the darkness which covers her to day, and to remove this darkness it will take a powerful light. So let me give you my opinion once more, on the question. "Who shall come to Africa to redeem her?"

1st. Men who can stand the climate. These must be men who are used in body before leaving America. They must be men with unimpaired blood, and of the pure negro race. The sons of Africa are better suited to the climate than any one else. They are coming home when they come to Africa. Some people may say, if this statement be true, why have so many of the colored missionaries from the Mendi mission had to leave the field on account of ill health? So let me give you my opinion once more, on the question. "Who shall come to Africa to redeem her?"

2nd. Men who can stand the climate. These must be men who are used in body before leaving America. They must be men with unimpaired blood, and of the pure negro race. The sons of Africa are better suited to the climate than any one else. They are coming home when they come to Africa. Some people may say, if this statement be true, why have so many of the colored missionaries from the Mendi mission had to leave the field on account of ill health? So let me give you my opinion once more, on the question. "Who shall come to Africa to redeem her?"

3rd. Men who are useful. A man to go to teach must never show to his pupils that he thinks himself above them; only in this, that his improvement has been above theirs.

Some men come to Africa, and keep themselves aloof from the very people to whom

they have been sent, and how can they do any good? If a man is to get up on hisstige, and call to the stones, which he is to build the house with, to come up to him, his work will be done. But truly this is the way in which some of our school men who work more than they do men. Men who will try to please God first, and man second. Men who do not work for a good name from men, but who will try to do their duty to God, first, and man second. When this is done the mission field will be successful, and not neitl then. Let such men as I have named come and take in these poor native men, and teach them how to work, and train some for missionary work, and what has been prophesied about Africa's rising will look hopeful. I hope that all who come to Africa may be such. These are the men to redeem Africa.

I had hoped a letter from you by this mail, but did not get any. I hope you will send for the boys in time enough for them to start in March next. I want to send some things by them which I cannot send by mail.

Hoping that you will let me hear from you soon,

I am yours truly, A. E. W.

P. S. Both the boys are with me now.

## FROM A MEMBER OF ONE OF THE "LIBERAL PROFESSIONS."

Rev. Edward Everett Hale, in his noble lecture on the so-called "Liberal professions," puts forcibly the idea that they are liberal, not only in the fulness of learning and culture acquired by the individual, but in the generous freedom with which their results are given out to the world. The central idea of the profession of the ministry, of medicine, of teaching, of literature, of science—even of law—is the good of humanity. Whoever in these callings puts his own gain before the interests of those he deals with, is making of his profession a trade.

This, apropos to the following letter from a young member of the liberal profession of teaching, who will not give up his high calling because he finds a fourth grade salary attached to a first grade certificate. But is it fair?

Mt. Feb. 4, 1881.

My Dear Friend,

I again attempt to write you an account of my work, and how I am succeeding. It was thought one time this winter that the schools would not be run longer than Jan. 31st, which would have given a five months term. But in this District, April 15th—and teachers' salaries for this term will be reduced ten per cent. Mine which was \$60.00 per quarter (the salary paid all colored teachers) will be \$54.00, board \$10.00 per month. A neighboring school has closed on that account, but it may be opened again and run out its full time, as the people may make up the balance to make the teacher's pay the same that it was. The present Board of School Commissioners are not giving the Colored schools the same chances as the white schools, for they do not pay the white, that is, by the grade of their certificates. The certificates are graded, 1st or Principal, 2nd or Assistant, and 3rd or Primary, and the pay is respectively \$110.00, \$80.00 and \$75.00, but Colored teachers, regardless of certificate of examination, receive only \$60.00 per quarter. Colored school-houses are not kept in as good repair and furniture is not so good as the white schools. Their desks for this is that the Colored people do not pay taxes enough to justify them in doing any better, which is true as far as it goes. The Colored people here are able, many of them by working, for the corporation, etc. and I don't think it fair to put them back in this way.

It looks to me like a step towards effectually crippling the colored schools by making the teachers who are small that they will not accept it. But some of us will be found in the work, if we work for nothing and board around with the people. On account of heavy snows and cold weather my school has decreased, and my average is still about fifty, and I have reasons to feel encouraged at the progress made. I receive the newspapers regularly, read them carefully myself, and then send them out among the people. I have had interesting letters from several of our graduates, Logan, Cunnahy, Miss Harris and Mr. and Mrs. Dyson. I hope you are very well and that I hear from you soon.

Yours Truly, W.

## LETTERS TO FORMER HELPERS. HER LOO SCHOOL HOUSE.

—Va. Jan. 24th 1881.

Miss L.

Dear Friend:—Though a stranger to you, yet after reading your kind letter in S. W. to the graduates of Hampton (I being counted in the number) I thought I would give you a brief account of my work in Nelson Co. I often think of you and the good talk you used to give to the class of '76, (of which I was a member.) I have found it all true and a help to me through my work. After a short vacation, I left my home in N. J. and sought a field in the South, to labor with the view of trying to elevate my race. Let it be ever so little, I thought, if there was any good I could do for my people, I wanted it done there. I found rather a neglected spot. Though Hampton Institute has sent her hundreds out, yet none had reached this place. After going through the required examination with success, I entered my little school house, which presented such a miserable looking picture, had I been easy discouraged, I would have given up at once. A little log cabin, with not a desk, black board, chair or table, could be seen; only a few benches without backs were all that met my eye. I went to work and soon had necessary things. I had the school-house whitewashed, and framed pictures from papers hanging them upon the walls, and soon had a pleasant looking room. I started with nine pupils, the class numbered 55. I have gained the love of every child and parent, and it is a pleasure to me to meet their faces. I taught them punctuality by always being at my post in due time. On Friday I give them talks on neatness, politeness, whiskey drinking, and such topics as I think will have effect. I find it hard to put down whiskey. The old people fault me in it, also teach it to the children. Though I have put down a great deal of it among my pupils, I want to organize a Temperance Society, even as soon as I can get some nice pledge and papers to put before them. I have a nice Sunday School, but am suffering for want of Sunday School papers and something to explain the Bible. I have nothing at all of the kind. My friend S. Lucas is teaching about five miles from me.

Obligingly, M.

## STRUGGLES FOR EDUCATION.

—Va., February 7, 1881.

DEAR FRIEND:

I am requested to write you an account of my early life,—also how I came to be a Hampton student, and what advantage has the education been to me that I received there, &c. I was born a slave in King and Queen Co., Va., October 7, 1853. My father and mother were both slaves, my mother died before I was three years old, my father is still living in the same county. After the death of my mother I saw many dark days, often suffering from hunger, and being poorly clad. I was separated by my master from my father at seven years old, and carried quite a distance away. I saw my father once, and once more, but he died, and I never saw him again. My master said that it was time that I should begin to learn how to work, so I had to go. I lived with him till the close of the war; I most of the time for nine years on the farm; going to school during the winter from 1871 to 1874. During the year 1871 I accidentally saw a circular of the Hampton Normal School, and that gave me the desire to go there that time I began to cherish a desire to go there as a student, but there were some difficulties in the way. It was very hard for my father to live and save money enough to start me at Hampton. Well, during the summer of 1874 I made up my mind to go to Hampton the next fall. So after ploughing the crop over, I began to haul wood to the river (that being a branch of industry in that section) to get money to start me at Hampton Institute. I worked faithfully with a strong hope that I should reap the fruit of my labor at school. But a few days after I began to haul, and was doing quite well, my cart broke down, and it took all that I had earned to repair it. After that I began again and was very successful. I left home September 20th, with \$40.00, and arrived at Hampton with \$25.00, and was successful enough to enter the junior class. I was promoted at the end of each term, till I graduated. I was there three years. I left school in June 1877. I cannot estimate the value of my education to me. I think that I just did secure the golden opportunity. I have had three hundred children under my care since I have been teaching in a large school. There are several Baptist churches in this vicinity, and better instructors are sadly needed in them. A good temperance lecturer is very much needed too. There are a great many colored people buying themselves homes. The two races are on friendly terms.

Yours gratefully, S.

## A HARD WINTER IN THE MOUNTAINS.

—Virginia, January 22, 1881.

Mr. B.

DEAR FRIEND:

I received yours of the 17th a few minutes ago; I am very glad to have it. I received the charts, books, maps, globe, black-board, slates etc. the first of January. I was glad to get them, they were just the things I needed for my school-room; the children also were glad to get new books and slates. I find the globe very useful—I have a very nice school of twenty-five; I cannot tell how I enjoy teaching them. I think a private school is much nicer than a public school.

We have had a very deep snow,—so deep as to prevent traveling. I live seven miles from the station, and no wagon has been able to go from here there, on account of the drift. There is no work going on on the farm; every laborer seems to be out of work, which makes it very hard for some. There are several families on the mountain that were so near starvation, that they made a rail on a gentleman's core-field one night a part of them were caught, tried and let loose, as they had no more that they could eat.

My husband has been out of work ever since Christmas; every thing looks gloomy, and times are hard. The baby is in good health; she is four months old, weighs 17 lbs, sits alone, and tries to crawl; has been prattling for some time.

I receive the Southern Workman and other papers you send. I am requested by the trustees to return to the school again.

Many thanks the children and I send for your kindness to us.

I am yours gratefully, C. P.

## FIVE MILES TO SCHOOL.

—Va., Feb. 1, 1881.

GENL. S. C. ARMSTRONG,

Dear Sir:

Your December letter came safely, and found us well. Since my return the weather has been extremely cold, and very wet; but regardless of this my numbers have steadily increased. My present enrollment is 153; average daily attendance about 105; So you see I have something to do these very cold days. On account of the distance which some of my pupils live from the school, (five miles) they did not respond very freely, but through the kindness of my Boston friend, we had quite a nice New Year's tree.

The "Educational Journal" for January '81, was a welcome visitor, for which I thank you, as the sender is unknown. Your offer of me in securing subscribers for the Southern Workman is received. In reply I will say that I have been unable to do any thing yet, but some persons have promised to give us their names for the paper. I will send them in as they pay the money. Our people here do not read as much as they should.

I shall be very glad to hear from you again soon. With kind wishes,

Your former pupil,

E. M. C.

## KIND COUNSEL APPRECIATED.

The young woman who writes as follows, is one of many who doubt not, who are grateful for the kind and wise counsel of our correspondent, M. A. L.

—N. C.,—1881.

DEAR GENERAL:

Accept my sincere thanks for the papers. I know you must have sent them. Be assured they were gladly received, and thoroughly perused. I feel very grateful to be the recipient of such an interesting paper. I received a letter from you desiring me to be an agent for the "Southern Workman." I will do all I can, but do not think I can accomplish much in this portion of the country, there being but few in number, and not many able to read; if they could, it would enlighten them, and cause them to be more punctual about sending their children to school. I have a very good school this winter. No so many on roll as last winter, on account of the severity of the weather. Mr. Boston, has been very kind to me since I have been in the work. He was so kind as to give me a summer school at this place last summer, besides supplying the children with cloth, ink, books etc. The children, parents and teachers, can never forget him for his benevolence to us. I am sure he is a friend indeed, because he has been a friend in need. I often tell the children the only way they can show their gratitude to the north, is by trying to elevate themselves to be true men and women.

I am much encouraged by the lines written in the "Workman," "To Hampton Graduates." I think all Hampton graduates ought to be encouraged, and feel as if they have quite a compelling confidence in them.

It was a pleasure to me to meet with a Hampton graduate, there being such a few in North Carolina.

Let me hear from you when convenient.

Very truly, M.

# SKETCHES OF MISSION LIFE. No. IV.

BY MISS C. C. ARMSTRONG.  
EXPERIENCE IN MICRONESIA.

The first thing for us to do, as it seemed, was to set an example of separate family life, and thus begin the alphabet of civilization. We had been provided with cotton cloth, hats, chets, hammers, nails, etc., to use among the natives, and with these we proposed to pay for the attempts at work of our savage pupils. The old chief Hape, gave us a piece of land, and ordered his men to build houses for the new teachers, but we soon found that the only way to accomplish anything was for the missionary man to go into the woods with the natives, and themselves cut timbers and local tools, leaving always the Hawaiian men to protect the women and children. In this way the language was learned and to some extent the confidence of the people gained, while our attempts to teach them never ceased. There is no doubt that the novelty of all this diverted, for a time, their untutored minds from evil, and was a safeguard to us, but by the time the frames for the houses were ready, and it became necessary to obtain some covering for the roof, the novelty had worn off, and our employees would do nothing without pay, and their demands were often for large sums of the value of their services. Our supplies would soon have been exhausted at this rate, but, luckily, I one day hit upon the idea of entering to their taste for sweet things. Some very thick molasses was among our stores, and I offered it in tin cups of water sweetened with this, for a certain quantity of breadfruit leaves. A bribe that quickly sprang up, and by varying our bribe we were able to obtain fish-hooks and pins, both of which were greatly in demand, we kept up a lively business. We had no place to keep our leaves except in a pile near our door, and the mischievous creatures would steal them and send them to us two or three times over, so that the progress of our work was somewhat slow. At last, however, after innumerable obstacles and perplexities, we began receiving the offerings. The leaves were large, and a pointed stick or pole some six feet in length was thrust through the mid rib of each. They were then pressed together, tapping like shingles, and each pole with its leaves was tied on and above another until the ridge pole was reached. There were at that time living upon the island, two or three white men, who had run away from whole ships, and the natives, for the pleasures which they could there enjoy, had degraded themselves to the level of the savages. Two of them, Angel, (name fallen) and Collins, had a me knowledge of carpentry, and we employed them to put in the doors and windows we had brought with us. A half ash, with six panes of glass, put in as high up as possible, was considered the safest arrangement for the windows, and these we had only in the sleeping apartments. The floors were nearly dry, coarse grass, spread on the ground, with some of the matting in which our furniture had been packed. At least the passages were carpeted, to the great wonder and astonishment of the cannibals, and we left our diggy, dark and wretched prisons, to enter what seemed to us spacious houses. No palaces could have been more appointed than these were these clean, airy rooms, divided by partitions, and of comfortable size.

## INSTRUCTION.

I soon succeeded in coaxing a few women in, to learn the alphabet, and at the same time began to teach them how to bread coconuts of the leaves of the screw-pine. Good, faithful Hawaiian John took hold with them, and when we had enough matting to cover the first bed room and then the dining room, it was considered a very triumph of success, and was really a great comfort. Our little cook-house, covered with coconut leaves, with stones piled up for a fire-place, stood at a short distance from the main house, and the whole was surrounded by a fence of sticks some five or six feet high.

By this time, curiosity had somewhat subsided, and the natives had concluded that we were somehow different from the foreigners they had previously known. While we were getting settled, they had been diverted by the new and strange doings, and seemed a trifle tamed. The women at first objected to stepping over the door sill, because it had been carried on the shoulders of men, and was therefore "taboo" (sacred or forbidden). I passed and repassed it in their presence, saying, "See me; it does not make me die to pass over it, neither will it make me sick; that I was not harmed, and after much hesitation, ventured to touch it with fear and trembling.

One woman, Titibani, who came for several weeks in succession and was progressing well in the little Hawaiian primer for juveniles, was taken ill, and declared that the sickness was caused by her attempts to learn. She was from a neighboring tribe who were frequently at war with the people among whom we had settled, and she was more docile and

inclined to be influenced, but she soon disappeared, much to our regret. Other women came, but were fickle and not willing to learn, and the same was true of the men.

Amidst these surroundings, my second child, a boy, was born, and as I learned, my own life nearly ended. I felt that I stood almost within the gate of the Eternal City, but the thought "thou shalt care for my little ones" held me back, and gave me a new grasp on life. Considering what the circumstances preceding my boy's birth had been, it was a matter of surprise and gratitude to me that he should be so plump, healthy, perfectly formed child. The natives were delighted when they learned that a white child had been born among them, and though anxious to see it, were surprisingly prudent when told that they must wait because the mother was very ill, and showed some feeling by trying to pass the house quietly. At last a day was set for them to see the baby, and they came, clad in their best attire, and expressing great delight in the arrival of a child. They said they did not care what his name was, they should call him Hape, and so they continued to call him, seemingly truly fond of him.

## DISHONESTY.

was so common among them that the most constant watchfulness would not protect our property, and soon began to realize how completely we were in the power of these savages. Our Hape grew worse and could not go to the mission houses, but often sent for Dr. Armstrong. He was very avaricious, constantly wanted things from us which he could not be spared, and could in no way be of use to him. He became angry because his diseased body was not cured, and declared that he would not believe in the white man's God if he was not so well.

The general impression was, that powder, muskets and tobacco were in the barrels which contained food, and when assured that we had none, they struck them down. "You lie, you say you came here to do us good, and if so, why did you not bring us these good things?" They resorted to every possible device in order to get out of our possessions from us. Hani was frequently thrust through the leafy sides of the frail covering of the houses, or a hook tied to the end of a lamboon would be thrust in between the lamboon windows, in order to knock out some garment hanging near. One day a volume of our Scott's Bible was stolen, to be used, we supposed, for cartridges to the few muskets owned in the Bay. On another occasion I found that our door key was gone, and as there was no other to fit the lock, the loss was serious. A very bad native, who had professed great friendship, had been seen to pass by and was at once suspected. Dr. Armstrong sent for him and said, "You are my friend and I desire you to help me, for I am in trouble. The key of my door is gone, and without it I cannot protect my wife and child, or my property. If you will help me find it, I will reward you with a file." With pompous airs and voiceless language, the man replied, "Yes I am your friend. So and so is a great thief. I think he has your key." With great apparent anxiety and interest he threatened what he would do with the thief when caught, and stared off on a run, not to appear again till toward evening, when he came in, covered with perspiration, holding up the key and declaring with what difficulty he had chased the thief and obtained it. He evidently expected extra pay for his trouble and had, of course, stolen the key himself for the reward.

This man, Papaitani, was most savage in his appearance, some six feet tall, erect, and with a fine athletic form. He was much tattooed on all parts of his body, and his face was completely covered, which made his white teeth and the whites of his eyes show to great advantage. He was terrible to see and talk with, but after a time I thought how much I should like to make a picture of him to send home, for my friends to see what sort of neighbors we had. I therefore hired him to give me a sitting, at such times as my husband was in the house, and sketched him with a spear in his hand, standing as he was about to thrust it into a victim. He was requested to don his full war costume, and his appearance as he thus stood before me, was revolting beyond expression.

## A WILD GUARDIAN.

A few weeks later, Dr. Armstrong found it necessary to explore another Bay, in order to ascertain the number and condition of the people, with reference to mission work. With some native ornaments, and the white man Angel, he set off in a canoe, on his voyage of discovery, but before leaving he consulted this same Papaitani regarding leaving his wife and the children. He told the old savage that he would give him a file, hatchet, etc., if he would take care of our house and its inmates. Papaitani promptly accepted of the proposal, and on the first evening came into the house and was quite talkative and friendly. My heart throbbed with fear, but I had to conceal it as best I could, and at length I mustered courage to say that my baby was put to sleep, and that little Hape would wake

if there was so much talking in the house. Upon this he went, and I looked the door behind him, feeling that it was a frail protection against savage passions. My confidence and simplicity was in an overwhelming measure, my two little ones slept peacefully, good Hawaii, an Ahu was in the house, and by and by my heart grew calm, and I, too, slept. My condition while under this wild guardianship was no enviable one, but it was well to have rested this man, for he was capable of much evil, and the promise of the reward no doubt exercised a strong restraining influence over him. When Mr. Armstrong returned from his expedition, which had a result except to establish the fact that the natives were everywhere savage and degraded, Papaitani promptly appeared to receive his reward, which he went off well satisfied, while I, in the language of Daniel could say, "My God hath sent his angels, and hath shot the lions' mouths, that they have not hurt us."

## THE HAMPTON INSTITUTE CADETS AT THE INAUGURATION.

EXTRACTS FROM REPORT OF COMMANDANT.

The following extracts from the report of Capt. Romeyn, Commandant of the Hampton Cadets, on their return from Washington, may interest some of their friends who read in the New York or Washington papers, notices of their presence in the inauguration procession. "An official invitation was received from Col. H. C. Corbin, U. S. A., Secretary of Executive committee on Inaugural ceremonies, in January, at 2:40 P. M. Mar. 2, the battalion, (four companies, aggregating 101 men, with addition of band, 13 pieces,) left the grounds of the institution, and at 1:13 P. M. embarked on steamer "Moskey," at Fort Monroe. The battalion was in the city complete; with Adjutant, Sergeant Major, Quartermaster, and Quartermaster's Commissary's Sergeants. Rations enough for three meals were taken, and at the proper time for supper, companies fell into line at the sound of the bugle, and rations, including hot coffee, were served out to each man. Guards were placed on duty over the stores, baggage, and also in the "stereos," where the men slept, to prevent plundering by outside parties, and to arouse the battalion in case of accident.

The passage up the Bay was very rough, and many of the students were sick, and an accident at Point Lookout delayed the boat over an hour; making the time of arrival at Washington very late, (8:40 A. M.) The Inaugural Committee had an Agent at the wharf to meet the battalion and conduct it, if necessary, to its rendezvous in the city, and thence to its place in the column, and to attend generally to its wants during the day in the city. The morning was very cold and stormy; and to save time, and to protect the students from the weather, street cars were procured, and the march was made by the Avenue from that point to 21st St. N. W. where an arrangement had been made for meals, the men marched.

The battalion had been assigned a place in the 21st Division of the Infantry, and marched directly in front of the Washington Light Infantry, one of the finest organizations in the column, and at 10:13 was in place, and ready for the march. It marched down Pennsylvania Avenue in the column of companies, headed by the band, and during the inaugural ceremonies, had a position nearly in front of the south wing of the Capitol; but too far from the grand stand to hear anything of the address. After the ceremonies, it moved up the Avenue with the procession, passing the reviewing stand in front of the Executive Mansion, at 3 P. M. The anticipated arrival of the command had been noticed at length in some of the morning papers of the city, and during the march it attracted much attention, and drew forth its full share of cheers and applause.

After dinner the students had permission to stroll about the city till 6 P. M., and then fell into line to march down to the vicinity of the Treasury, to view the fireworks, and at 9 P. M. most of them marched out to Howard University, where arrangements had been made to allow them to occupy the chapel for the night. (It is to be regretted that it was not known that Senator Bruce of Miss. lived on a short distance from the rendezvous of the battalion, in time to give him at least a morning salute, but as it was only heard of at 3 P. M. there was no time for it. A card was sent to him, stating the reason for not calling.) Most of Sunday was spent in looking about the city, and at 4 P. M., the battalion took up its line of march for the steamer "Leary," leaving the wharf at 5:30 P. M., and reaching home at 9:30 A. M. of the 11th inst.

The behavior of the students during the trip was excellent—creditable to them, and to the institution. They will probably be better able to appreciate the benefit of organization and discipline than ever before, and their contact with so many orderly bodies of men, of both races, cannot but give them a better idea of well disciplined organizations, and imbue them with more respect for law and order."

For the creditable appearance of the Hampton battalion, which won it commendation in Washington and the daily press, great credit is due to the faithfulness and efficiency of Captain Romeyn. The possibility of their going was uncertain up to the last hour, owing to repeated disappointments in the efforts to arrange for reduced rates of passage. The cadets who went bore a share of their expenses according to their ability; and the extra cost of the trip was made up by subscription from the officers and teachers, who agreed in the strong conviction of the great value to the young cadets of both races, in this identification with their country on its representative day.

## NOTICES OF THE PRESS.

"One of the organizations that will attract especial attention in today's pageant is the battalion of cadets from Hampton Institute, Virginia, who were invited to accompany the steamer Leary. It was expected that the Indian cadets from Carlisle, Pa., would also be present, but owing to the expense of transportation and general bother of having them to Washington, the project was abandoned."

The Hampton Institute Cadets were organized in 1878, but the personnel is changed yearly, owing to the changes among the students. The battalion will be commanded by Lieutenant Henry Romeyn, 5th Infantry, brevet Captain United States Army, assistant instructor at the institution. The companies will be commanded by cadet officers. The battalion will appear uniformed in blouse and pants of cadet gray, caps with black bands; the captains and lieutenants wearing chevrons above the elbow, as at West Point; the non-commissioned officers wearing chevrons on the forearm, according to rank. The organization will bring between eighty and one hundred men, with a band of thirteen, composed of musicians from the students. The battalion will display the "Stars and Stripes" and the colors of the institution, the latter a plain blue flag, with a white monogram of the institution in the center. Markers will carry "guidons," school colors. Arms not being available, the battalion will appear without them. The school is composed of colored and Indian students. Both races are represented in the officers, and the United States colors are carried by a Cheyenne Indian, formerly a warrior, and for three years a prisoner of war at Ft. Marion, Fla. In the ranks are colored men who served as soldiers during the war of the rebellion, Indians who have served as Government scouts with our troops on the frontier, and others who have been in arms against us with Sitting Bull. The school gathers its students from twenty-eight States and six Territories, the West Indies, Liberia, and South Africa. President-elect Garfield was a member of its first board of trustees, and wrote its first annual report, and still has a warm interest in its welfare. —Daily National Republican, Mar. 4.

The Hampton Institute Cadets, Dr. Capt. Henry Romeyn, U. S. A. four companies, 101 men, with colors and 13 pieces, made a handsome appearance in the first division of the procession yesterday. In the battalion were 27 Indian students, representing 9 different tribes. In the battalion were also represented 20 states, and 6 territories, also the West Indies. —Washington Daily Star, Mar. 5.

Following the Midshipmen were the Hampton Cadets, a band of colored and Indian boys; under command of Capt. Henry Romeyn, U. S. A. 100th number. —Army and Navy Register, Washington.

The "New York Tribune" gave similar notice.

The students of Hampton had again had the pleasure of some glimpses of astronomy and geology through the inspiring lectures of Rev. S. R. Culthrop of Syracuse, and a look at the planets through the fine telescope, which, by the kindness of two members of his church, has been, for the last two years, lent and sent free of expense to Hampton, for the use of the school.

Hampton Institute and the Butler School acknowledge with many thanks, the gift of a complete set of "Kitchen-Garden" apparatus for a class of twelve, from friends in New York, through Miss Grace Dodge.

## ROSELAND FOR SALE.

Roseland, the former residence of the late Hon. Joseph Sagar, is offered for sale. The property is beautifully situated, fronting on the bay, near the National Soldiers' Home, and is a most eligible site for a hotel or boarding house.

## SCHOOLSHIP LETTERS.

To help those who help themselves is the preference of human nature, as well as of Heaven. To give seventy dollars for a year's training of a young man or woman who is paying a hundred by personal exertion to support himself at school, and who will put that training of heart and hand to immediate use for the good of his race, is thought by many to be one of the very best ways in which seventy dollars can be spent. If it were not so, Hampton Institute or any like it, could not exist another day; and that part of God's work is represented would have to wait till human thought grows nearer Heaven's.

The struggle which some of these young people have gone through in their efforts for an education, and the signs of their progress since leaving school, are interestingly shown in the simple letters of acknowledgment they write to the friends who have thus helped them, with whose permission, we give some of these to our readers.

## FROM A CHILD IN THE JUNIOR CLASS.

Dear Friend:

I will try to write you the history of my life. I was born in County, N. C., June 23th 1861. I have had a very rough time through life, and I am still having it yet. First I will tell you of my parents—they were both slaves. When the first master they did not live where I was born; they lived in Virginia. Father and mother both were born in Virginia and when they married they belonged to different masters. Mother's master got in the notion to sell out and go to another county to live—saw mother and father had to be parted, or one of them sold. Mother's master was very mean; he said he would part them before he would sell mother; but when he got ready to move, by the help of the Lord, father's master concluded to sell him, that he might be with his wife. Then they moved to North Carolina, where I was born, and lived there about fifteen years before the surrender.

Master died in time of the war, about three years before the surrender, and after his death, all of us children had to be divided out among other cruel white people. While this was going on my young master sent my oldest brother to the breast works, where he stayed five or six months without a rag of clothing except those he had on, helping the rebels to build an entrenchment to keep the Yankees back from the country. Every citizen of the county had to send a slave, and so it fell to my brother's lot to go, who was very glib on to my poor mother, for she did not ever expect to see him again. He was the oldest child of sixteen; there was one girl older than him. My mother is mother of seventeen children, and I am the youngest girl of seven, but there are two boys younger than I am. There are only nine living now.

My oldest sister married before the surrender, and three of my brothers since they all have quite large families, and you know my parents are getting along in years very fast.

When the surrender was, my father had twelve in family. The first year after the surrender he worked with his master to get a start, so that he could go to himself the next year. At the end of the year he went to master for a settlement, and he told him unless he stayed and worked as he had done before the surrender, he would not pay him anything. Father told him he would not stay, for he wanted to go to himself to try and make something for his family; so after he had said that he would not stay, he gave him three barrels of corn and one mule of meat for the years work of himself and three grown boys; father took it and left, and that was all he had but what he worked for. So he moved about three miles the next year, and hired for part of the crop, him and three boys. That year we did not have very much success. The season was dry, but the next we moved again a few miles further, now aiming to make a large crop, hired every one out—that was large enough to do anything. So this year we had a splendid, good success—made bread enough to eat us the next year, by hiring out two of the girls to buy other things which we were compelled to live. So after that year we got as we could live at home. The next year he bought him a little tract of land from a very fine man who gave him good time to pay for it, he finished paying it now, and is living on it, doing very well.

I left home Sept. 23, on my way to school. I have never been to school much before I came here; not more than five or six months, and that was not all together; sometimes I would go two or three weeks, and then I would miss a month or more. My chance has been very hard indeed. It was on the account of my mother, she was always sick, and I being the youngest girl, I had to stay at home and wait on her during her sick-

ness. I have sat up with her many a time all night long, when father would be gone, and the younger children would be asleep. But believe God helped me. I had such a poor chance at home that he opened the way for me to come here. My parents concluded to send me here to school, I was very willing to come because my sister had been here and come back so well. She seemed to enjoy herself so much with an education, that she put me in the notion to try to get on. She is the only colored person at my home that has any kind of an education. So, when I came here I entered the Junior class. When I first heard of the school I never did think that I would be able to reach it, but after going to school to my sister a few weeks I soon learned enough to know the good there was in education. When she used to try to teach me, I thought it was nothing but foolishness to have me going to school, whipping my life out of me for a little education; for I thought there was a good in it; but before I was 10 years old I began to see where it would help me in the future, and then I went to work. The first thing I did was to come here, I had brought me from four to six dollars every year until it got up to fifteen dollars, and I saved it just as much as I could until I got a right smart to get on, so I kept on in this way saving all I could get for eight years; and the year before I came here I worked hard during the summer helping my father attend his crops. I have been working out in the field every summer since I have been here. I commenced to work at ten years old up to sixteen, and I expect to do it next summer if I go home, and my father needs me.

Last winter I got a little school which paid me very well for my trouble. They had no teacher and I knew enough to teach the children, so the people employed me—gave me fifteen dollars a month, which paid me very well, though I had my board to pay. That was, which was five dollars per month, and I had for pay for the house I taught in, which was two dollars per month, and so you know I did not clear much. I taught five months and a half which was eight two and a half dollars, but when I was done paying all my costs I only had seventy-five dollars to get ready for Normal school, all my clothing to buy, and my way to pay out of that. When I arrived here I only had twenty-two dollars to pay my way through. I have to pay ten dollars per month and I am allowed to work out five or six months each year. I think if I keep my health I will be able to work my way through, and I am happy to tell you this is the best school I ever saw for the colored race. I never saw white people take so much interest and pains with colored—believe God will reward them for their trouble, for he knows we poor colored people are not able to pay them for their trouble with us, if it had not been for our good northern friends we never could have been educated.

As my homy if a white man sees a negro reading a newspaper he will hardly speak to him; he says that the negro thinks himself as good as a white man, there are a very few that do with this sense.

When I get through here I will be able to help myself and my race also, for they need all the help they can get. "It is almost as bad as Africa there, where the negro is made to hold the hoe in earnest. I have taken my hoe many a day, and from sun-up to sunset without a thing to eat but my bread, and some mornings I would have coffee with no sugar. I never will forget our good northern friends and teachers, I love all my teachers, and try all I can to please them.

May the Lord bless this Institution, and all that tend a helping hand towards it. For here is the place for help, it is needed.

With many thanks,

Very Respectfully, R.

## FROM AN INDIAN IN THE MIDDLE CLASS.

Dear friend:

I have been requested to write a sketch about my life and how I spent my vacation last summer, which I will try to do. I am an Indian boy belonging to the Menominee tribe of Indians. My home is in the northern part of the State of Wisconsin, and where the rest of my tribe live. A mission had been formed here long ago, in which these Indians were brought up in Christianity. And now about half of them belong to the church in which my parents are members. My father used to tell me that he had went to school when he was a boy and had not learned as much as he ought to have learned; although he had learned to read and write very well; and he had been clerking in a store for three or four years even since he left school. And he used to say that although he had only learned a little of the "Education," it had done much good for him. "But what a great benefit it would have been to him, and how happy he would have been to teach his fellow Indians, if he had continued his course a little longer while he was at school as he has to have

gained more education. Thus my father had fairly seen the importance of education, and since then his earnest desire has been to have me educated.

The place where I was born was a new settlement, and there was no school there, for there were not many settlers there. And many years the place had grown to be a large place, and contained a great many settlers; they planned for an erection of a school house for the education of their children, which, by the aid of the U. S. Indian Agent was soon completed; and by this time I had grown to be quite a large boy. As soon as the school house was finished the school-teacher came and began his duty. He was a half-breed—he is half English and half Indian; and could speak both languages as well as the other. And he was a very good teacher for he used to make his pupils read their lessons in English first, and then he would explain in the Indian language, and in about twelve months his pupils got so that they can read their lesson in both languages.

In the way of teaching I made a rapid progress in my studies. And after some years schooling, I had made quite an advance, and wished to go in a higher school, where Indians were sent and their tuition paid by the people of the North. So I and my father immediately told the U. S. Indian Agent to inquire if one or two boys from that Agency could be accepted in the Hampton School, and in about a week he received an answer saying we could come in the school in one week from that time.

October 3, 1870, I and another boy started for Hampton. When we arrived at Hampton, R. H. Pratt, he had been to Dakota Territory after some Indian children and was on his way back to Carlisle, Penn., where the new training school had just been established, and we went with him to his place all around and stayed there for three weeks. But I was loathsome in staying there; although the place all around was very beautiful.

The town is a valley, called the Cumberland Valley; as high ranges of mountains on the north and south sides, make it look a beautiful scenery. I think it was because the school was just commencing and didn't do very much in the way of teaching. As I had I went for Hampton and arrived Oct. 28, '70. On the following day I was examined and passed the examination for the Junior Class, and while I was in that class I did all I could to learn my lessons well every day; and at the end of the term I was promoted to the Middle Class, in which I am in this term.

At the close of the term just mentioned I began to work on the farm all summer during vacation. At first it was hard work for me; but after awhile I got along all right with the summer.

There is a big farm in the country about four miles from Hampton that belongs to the School and the Indian boys go there to work. The boys were divided into three squads, and they used to send one squad to the farm for two weeks; then the other, and so on one after the other. The place is called Shell Banks and is a beautiful place. Our tents were right on the banks of a creek, and in the evening after work we used to play and sing just as much as we want to, and before the sun sets we would play ball until it is dark, and if it happens to be a moonlight night, there would be seen some boys running races and others swinging; and many other pleasures were enjoyed by these happy evenings. But how glad we were still when the time came for lessons for another year's work.

How happy I am to know the greatest blessings the good people of the North are bestowing upon the Indians in giving them education, and showing them the way of civil life, and in bringing them out from dark heathenism to the light of the gospel. I cannot express the feeling of gratitude I feel toward you, and for the others, for the kindness you are so kindly doing us. What can I do to reward you for your kindness, but to sincerely thank you.

Respectfully Yours,

EMIL ANTONIO BROWN, M.D.

## FROM A YOUNG MAN IN THE SENIOR CLASS.

Dear friend:

Having successfully gotten through my second year, I enter upon my third and last in this school, with much pleasure; and I write not only to acknowledge your kindness in assisting me, and my people, but to express part of the gratitude of which my heart is full.

There are many things for which my soul is drawn out to thank God, and chiefly among these are Christ, liberty and education. I am so much indebted to you, and to all who are interested in know some of my future intentions. As the days come, and go, and the time for leaving school nears, I must confess that I feel more and more the pressing desire of my people; therefore, I conclude without any further preparation, to lend my own helping hand, and propose to teach school, and take a decided stand for temper-

ance, under Christ's banner—being thus guided I feel sure of success.

I take great pleasure in writing you a short account of the work I have been able to do in the little town of Hampton during my stay here. I was advised to come to this school by a young man in 1878, whose advice in the same year, I accepted; cheerfully, all of which time I have been interested in Sunday School and temperance work. I have by this time, since organized, what seems to be a growing Sunday school, of which I am the superintendent. I have also organized a young ladies' sewing circle, and through the kindness of several good ladies who prefer not to have her name mentioned, I have received a number of pieces of clothing from the North which I have had made over, and distributed among the poor little children down here; in connection with my Sunday School I have a children's temperance aid society, including old and young. I began this work by getting them together Sunday afternoon, and talking to them on temperance and habits, and the Lord blessed the work, and now the pastor of the little Church gives me one or two Sunday evenings in each month to devote to this kind of work, and much it is said in being done in the way of temperance, and I am very respectfully yours, and would be glad to hear from you.

## OUR LETTER FROM DAKOTA.

Nothing is visible except snow; beautiful indeed, yet warlike to the eye. Hills, valleys and plains covered deep with snow, and from the east has come a heavy fog to tunnel or plow through the snow drifts for several weeks past and our news from the outer world is meager indeed. "The old wind" that blows no one says good, as the old sayings, and it is true in this case, for the severe weather has brought large game in near to the Mission, and the Indians are having grand sport and remunerative employment. About a week ago, a large party left this Agency for a buffalo hunt, under the charge of Sergeant Devitt, of the Detachment of Indian Scouts, and accompanied by the Rev. R. R. Riggs, the able, practical and industrious Missionary, located at Twenty Bottom on the Missouri River, about twenty five miles below this Agency. Mr. Riggs has been established here for a number of years and has effected a most marked and encouraging improvement in the tone, moral and general condition of the Indians with whom he has been laboring. Wild and savage; living in huts and canvas tipis, dressing in blankets and skins and following their barbarous rites, when Mr. Riggs came among them a few years ago, their little settlement now appears like a thrifty settlement of whites. They have their separate houses, barns, fields and domestic stock, wear citizen's clothing, attend service regularly in their pretty little church under the bluff near Mr. Riggs' house, send their children to school, have titles to their homes under the homestead laws, and dress themselves in as orderly and satisfactory a manner as could be expected. Mr. Riggs would tell you that he looks upon his work as only begun; but to an outsider he seems to have done wonders. He not only owes much of his success to the early training and advice given him by his worthy parents, Mr. Riggs works on his little farm, cares for his stock, and in his every day work appears like the average sober, intelligent and industrious young farmer, and his example has a tremendous effect upon the Indians under his charge. His self-denial in taking a long and tedious trip over the frozen and snow covered prairie with the Indians during the severe weather, shows that his heart is in his work, and that he feels the importance of getting at the true character of the individuals whom he wishes to help, and this he could accomplish in no better way than in entering into their every day life, seeing as they see and feeling as they feel, every want, ambition and pleasure.

There is hope for the devotion and redemption of the Indians, when good, intelligent and industrious white men, like Mr. Riggs, are willing to get down near enough to the Indians to extend to them a helping hand, by the aid of which they may be able to clamber up the ascent. The hunting party was very successful, obtaining about 225 buffaloes, 250 deer, one hundred porcupine and a number of wolves, foxes, badgers, beaver and smaller game. Mr. Riggs killed several buffaloes and no doubt gained in various ways more influence among the people, and affection of the Indians during the six weeks trip. He has during two years of occasional visiting, and I fear that the unfavorable season may prove very discouraging to the Indians, who are now just beginning to rally under the influence of raising themselves. With kind remembrance and good wishes, I am, very respectfully, Yours, Geo. D. R. Brown, M.D. and his family.

# HAMPTON STUDENTS' GOWN.

from the Senior Class.

## LECTURES TO OUR PEOPLE.

### PRESERVATION OF HEALTH.

(Supposed to be addressed to a school of children about ten or twelve years of age.)

Dear little friends,—

It affords me much pleasure to meet you here this bright April morning, and to see you all looking so well and happy. Your teacher asked me to say a few words to you to-day, and I think nothing would be more appropriate than a little talk on health. Now most of us seldom realize what a great blessing it is to have good health, until it is impaired; I think now is the time, while we are blessed with health, to take care of it, before it is too late. Some people seldom think of their health until they get sick or something, and then they begin to strive to recover it, but in some cases it is too late. So I warn you all now, while you are young, and healthy, to realize what a great blessing it is to have good health, and try to preserve it. There are a great many things to be done for the preservation of health, and the one that strikes me most forcibly is cleanliness. Every body should preserve this rule especially. Let me tell you how to do it. First, it is no excuse for his not being clean. We should be every morning if possible, and in case we cannot, we should at least twice a week. The under clothes must be changed at least once a week, and at night when we go to bed we should take off every thing that we wear in the day, so that all the impurities that have collected in them can pass off. Another thing necessary is, that every apartment which we occupy should be provided with some means of ventilation, so that the impure air can pass out and fresh be admitted. If we were to stay in a room awhile with all the doors and windows closed, the air that we breathed would become so impure that we would all soon die, so you see how essential pure air is for good health. Let us pass on to a little farther, to the food, for instance, and see if there is any thing to do with the preservation of our health. This food should be plain and substantial, and such as will digest well, and should be taken at regular hours. If we should eat our breakfast at eight o'clock and then eat again about nine or ten, we would be doing something contrary to the laws of health. After we have eaten once, the stomach has to go through that wonderful process of digesting the food, so as to prepare it for blood, to make up our bodies, and if we should eat again about an hour afterwards, the stomach would have to begin to go through all of its work again, and at that rate we would be injuring ourselves all the time, without being aware of it. We should all devote about an hour or two to exercise. There are many ways of exercising the body, and I should say that work is about as good an exercise as any one can have. I want you all to understand that exercise does not consist in playing all the time, but sometimes in work. Exercise will strengthen our bodies and make us strong and healthy. I hope you all will observe the few rules that I have given you, and profit by them. There are a great many more that I could tell, but I haven't time, and I guess there are as many as you can remember until you are older.

JULIA.

### LECTURE ON EDUCATION.

The longer people live, the more they find out the need of education. In this 19th century, people have found out the need of education more than they ever did before in one century, and they are yet finding it out. A man that was once looked upon as a great man, because he was a great fighter, or a very strong man, is not looked upon in these days as such; because intellect has the day, and not physical strength.

I once read that education made a man see better, hear better, and smell better, and I believe it. For education cultivates every faculty in us. Take a man that does not cultivate his sense of hearing, and you will find out that he will not be able to hear as well as one that has cultivated it. Why is it that an Indian can hear and smell so well? It is because he has educated his sense of hearing and smelling, which enables him to hear a sound twenty yards farther than you or I can. Education does not simply depend on what you get out of books, but on what you yourself get by your own intellect. Newton, the great discoverer of gravitation, did not get his discovery out of books, but simply by seeing things falling to the ground, and knowing that there was something that caused them to fall, so he went to work to find out what it was, and by so doing he discovered that great law known as gravitation.

Watt, the discoverer of the power of steam, did not read in any book to find out how to discover it, but by his own intellect made one of the most important discoveries in the world. So you see that every thing people learn does not come out of books. Education is a thing which you cannot get in a year, and there is a big mistake in people, especially the colored people. When they have sent their children to school one or two years, they think their children must answer any question which they ask them, and if they are not able to answer them, they say their children are not learning anything, and it is because they have not experienced that task of getting an education. Ask an educated man that got his education by going to school, if he learned all he knows in two or three years, and he will tell you when he had gone to school four or five years, he had just gotten to a place where he could see what he did not know. Therefore, friends, you must not get discouraged in sending your children to school; you must remember that they are working after something which has never been accomplished in a short time; and when they do accomplish it, they have something which money cannot buy from them, neither can it be stolen from them, but will remain with them until death. Therefore I advise you, if it is the only thing you can do for your children, give them an education, and it will be the best thing you can do for them.

### PUNCTUALITY.

Friends: If there is one habit that we, as a race, need to cultivate more than another, I think it is that of being punctual.

Even if we are not placed in a position where hundreds of lives depend upon promptness, to cultivate the habit will only fit us for that position, should any of us be called to it. Most people do not wish to deal with persons who are always behind hand, for they cannot be depended upon; but if we are prompt in our duties, people cannot help respecting us, and we will often be found in places of trust.

A man who is always behindhand is all the time getting into trouble; he loses his place because, when the stated time comes for him to make his appearance, he does not appear, so another comes in and takes his place.

If we get into this habit of being punctual, I am sure we shall never regret it.

ANNA.

### IMPROVEMENT.

Ladies and Gentlemen—It is with pleasure that I stand here to address you after an absence of two years. Since my return to Hampton, Virginia, I have not been idle. I have visited your cotton and corn fields, and I have been glad to see the crops growing so abundantly. You have been ploughing, you have been using your hoes, you have been trying to cultivate your lands, and I fully believe that your efforts will be crowned with success.

My belief is based upon the present appearance of your farms. I have visited your houses and gardens, and you need not be ashamed of them. Your gardens are teeming with vegetables—fresh and green. They are, in quantities that are too large for your use. But you need not waste them; there is a use for every thing, and when you have learned to apply small things properly, you will have learned a good lesson. I have visited your barn yards and pastures, I have seen your cattle, I have noted the condition of your oxen and horses, and I give me pleasure to report that they are in wondrous condition. So far so good, but there is room for a general improvement. Our lands are not sufficient to warrant unlimited success. Our fields are not large enough. If we have fifty acres under cultivation this year, we ought to have more, and must cultivate at least five more acres next year. I would be glad to talk to you hours on the importance of buying land, but time will not permit. We need better houses. We must either make those that we have larger or build new ones, and I advise you to build new houses complete if you possibly can. Some among you rent houses, some rent oxen. I want to know this, but it must be so now. How long fellow citizens will this state of things continue? The rent of a horse for a year will buy an ox, and the rent of a horse for three years will buy a horse. Now gentlemen, which is the better thing to do, to rent stock from other people and pay large rent, or to buy your own stock and save the rent that you would have paid out if you had rented? Build school houses and pay your ministers with it? We must improve. Our schools must be larger. Our preachers must preach improvement to us on Sunday, and we must improve. In conclusion let me say that you have been a subject of thought for me during my absence, and now I wish you and it is among my best wishes that you should prosper and be a power in the land.

## From the Middle Class.

### SHALL WE ENCOURAGE MODERATE DRINKING OR TOTAL ABSTINENCE?

It has been truly said, that a constant dropping of water will wear away marble in time, and it may as truly be said that the habit of indulging in moderate drinking may lead to a drunkard's end.

There is no reason why a man should drink even moderately. It is not necessary for health, wealth, reputation, or character; which are the chief necessities of life; and if moderate drinking will in the least endanger one of these necessities, it is much better I say to do away with it completely.

We in the first place find it conflicting with wealth. It brings the rich man to poverty, and clothes him with rags and disgrace. It takes the beauty of health from the cheek of the youth, and leaves there the shameful trace of the wine-cup. Next we find it conflicting with the character of a man. It takes from a man the highest character of man, and leaves with him the lowest character of the beast.

It gradually brings a man who is a gentleman, to be a drunkard, a liar, a thief, and a murderer; one of the most miserable men on earth.

It brings men out of the highest society to the jail, the penitentiary, and even to the gallows. Then why should we encourage moderate drinking, the first step that leads to this miserable end?

No man has ever become a drunkard, who did not first drink moderately. The Book of Proverbs says: "Woe unto him that giveth his neighbor drink."

Most people do not wish to deal with persons who are always behind hand, for they cannot be depended upon; but if we are prompt in our duties, people cannot help respecting us, and we will often be found in places of trust. A man who is always behindhand is all the time getting into trouble; he loses his place because, when the stated time comes for him to make his appearance, he does not appear, so another comes in and takes his place. If we get into this habit of being punctual, I am sure we shall never regret it.

ANNA.

Then I say, total abstinence has never caused the tender mother to be a widow, to wring her hands and cry with a broken heart for the want of food for her children.

Total abstinence has never clothed the orphan with rags, and sent him as a beggar through the street. It has never been the means of leading men to the jail, or any low, degrading place, but it is the only way of raising men who have sunk low in the scale of human degradation, to a higher state of life. It is the help that enables us to redeem the fallen, and save others from ever falling into the hands of the great demon, intemperance.

We plainly see that intemperance, the result of moderate drinking, is ruining our people.

There are said to be in our land, six hundred thousand souls that yearly perish from intemperance, and I will say again, if there were no moderate drinking, these might have been saved. This warns us in the voice of scripture: "Look not upon the wine, when it is red, when it moveth itself aright, for at last it biteth like a serpent, and stingeth like an adder."

### IMPROVEMENT OF TIME.

Does every one improve his or her time? In the question so often asked of us.

There are many ways in which we can improve our time. The spare time we have between school hours and meals, can be occupied by doing some kind of fancy-work, or in reading a good book.

One might say I do not think reading an improvement of time;—but the more books we read, does it not help us to reason out things more correctly? In our afternoons, can we not find something to do instead of standing idling away our time talking about things which do not interest us? We should soon find out, if we took care of the minutes, that the hours will take care of themselves. I do not think that it would be impolite while we are visiting our girls in their rooms, to take our sewing with us.

There is nothing on earth that we need to consider more, than how to improve our time, and nothing will help us more to be

what we wish, than to learn how to occupy every spare minute. If we were to stop for a minute, and think how much we could gain if we would only employ our spare minutes, we would be surprised to see how we have gained by improving our time. NANNIE.

## From the Indians.

Hampton, Va., Feb. 1881.

My Dear friends:

I want to write to you this morning—I want to tell you about this summer. Some of the Indian boys and I went to Massachusetts to vacation, and I was stayed in Berkshire county in Mass. Then we went to Boston, and we saw lots of things in the morning; then we went to across Rhode Island, and went to Norwich, Connecticut.

When I came to Hampton, Virginia, about two years ago, when I came to Hampton, Virginia, I don't know nothing; but I know something now in English; so I write to you this Scholarship letter. And I like work on the farm best. I am worked on Tuesday morning, and Saturday morning, and when I am going back to Dakota Territory, I want work on the farm all the time; because that is the best way to make some more money; then I am rich I think. So I want to write I can at Hampton Normal School, Hampton, Virginia. And all scholars get up very early in the morning and drill, and go to breakfast in Virginia Hall.

Now I am going to tell you about my own home in Chayenne River Agency, Dakota Territory. I was one of the first scholars at Hampton, Va., but I don't know how to talk English. I am trying very hard to write to you this English letter. Oh I forget I thought I am going to tell you about my own home. When I am at home I was riding on horse-back all the time, because I have many horses, and I don't know how to work on the farm; but now about two years ago, I learn how to work. And I am use to hunting birds when I was at home; but now I don't like kill birds any more, because I am just like white man; because I wear white men's clothes.

Now I am going to tell you how the Indian boys work at it. Some of the boys work in the blacksmith shop, and some in carpenter shop; and some in shoe maker, and some of them fixed widows. And we have never meeting every Friday night, and we like to eat the corn bread, and we have some teachers—but they are very nice teachers. And all the Indian boys wear like soldiers. They have drills every morning at school; and we have a Captain; his name is Capt. Henry Brown. And this is my last year; so I want learn all I can. That is all I can said to you. Good bye. Your friend, HARRY BROWN.

Hampton, Va., Feb. 1881.

My Dear friend,

I will write to you this morning; I want to say something about Hampton and Dakota Territory too, but I don't know how to write English but this to-day I try writing in English, This Hampton we been Indian boys and girls, we learn speak English and write and read.

We want that way, I reason we cana here in Hampton, because we don't know anything about God, and this Indian boys and girls, we don't know anything about, first we came here, but we learn little now, and trying be good girl at Hampton, and there are been Massachusetts, we have very nice time in Massachusetts. We have picnic in Mass. I saw great thing in Boston and New York—two how beautiful things! This Indian boys and girls we have prayer meeting every Friday night and Sunday night. Prayer meeting too this man prayer meeting with him—his name, Mr. Grevitt, his minister's man, his prayer meeting with him all the times. I want to say something again about Hampton. All time I wash dishes in dining room, and all time I wash my things, and the times I go to school every day, and we have very good times here at Hampton. Indian boys and girls, and colored boys, all the times. Good times and some times we go picnic in Shell-banks, and there are I been. In Massachusetts all summer—I work hour last summer. Oh I trying be good, every night I prayer good. I don't know write in English; but this to-day, I try;—I write a letter for white people; I wish I knew how to write people doing work, and when I go back, then I teaches some English, and work too, and when I go back to Dakota, then I teaches some for Indian, then I think, we will think some Jesus, and love him, and I think we will try please him. I think I don't know how to write in English, but I trying for you all the white people,—that is all, I can say. Good bye. From your friend, ZZWAM.

## A HUMBLE BURIAL.

There appeared recently in the Paris "Figaro," this touching anecdote, in which a child and a dog are joined together in a picture of melancholy interest.

"Yesterday, about four o'clock, a humble funeral procession left Acadia Court; it was the funeral of a poor woman. There came, following her to the grave, a child only, of about twelve years, and a dog; no others attended the burial. Mr. D., one of the chief land owners of St. Ouen, and manager of one of the large restaurants of that commune, saw the procession. He went to the boy, and taking his hand, walked with him to the Baignolles Cemetery. There he bought a funeral wreath, and when the coffin was lowered, he ordered a cross to mark the spot where the deceased lay. The dog had followed in spite of the employees, and had entered the cemetery, and it was only after repeated appeals from the child that it withdrew, howling, from the edge of the grave.

"Mr. D. learnt, on leaving the cemetery, that the funeral was that of the child's mother, the widow of a workman. She had died of consumption, contracted during those nights which she had spent in labor, in order to support her son. The child having no relation, Mr. D. announced that he would adopt him; he also took away with him the dog, for, but for him, his attention would not have been drawn to the poor woman's funeral."

## STAR CANE MILL.

Double the Capacity—Cheapest Mill Made—Warranted in Every Respect.

Manufactured by  
**J. A. FIELD, SON & CO.,**  
Eighth and Howard Sts.,  
ST. LOUIS, MO.

## BIG GIANT FEED MILLS.

HAS CAST STEEL GRINDERS.

SIFTS THE MEAL.

The only Mill that will Corn with Husk on without extra expense. The only Mill grinding Corn and Cob successfully that will grind shelled corn fine enough for family use.

## INDIAN PICTURES For Sale!

Photographic or heliotype pictures, cabinet size, showing the appearance of the Sioux Indian children on their arrival at Hampton, November, 1878, and as they appeared after fifteen months of schooling, sent by mail, for fifty cents a pair. From three to eight Indians in each group.

There is also a large photograph 9 x 11 inches, giving an excellent picture of the sixteen Apaches, Pima and Papago youth, with chief Antonito, as they appeared on arrival at Hampton, February 15, 1881.

Price sent by mail, one dollar.

## Hampton Normal and Agricultural Institute

AT  
**HAMPTON, VIRGINIA.**

INCORPORATED IN 1870.

S. C. ARMSTRONG, J. F. B. MARSHALL, Principals; Treasurer.

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The Institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited. Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the Institution is a permanent fund.

## FORM OF REQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable etc., etc.

For further information address,

NO. 5.

THE TIGER.

## THE TIGER.

BY WILLIAM BLAKE.

Tiger! Tiger! burning bright;  
In the forests of the night,  
What immortal hand or eye  
Could frame thy fearful symmetry?  
In what distant deeps or skies  
Burned the ardor of thine eyes?  
On what wings dare he aspire?  
What the hand dare seize the fire?  
And what shoulder, and what art,  
Could twist the sinews of thine heart?  
And when thy heart began to beat,  
What dread hand forged thy dread feet?  
What the hammer? what the chain?  
In what furnace was thy brain?  
What the anvil? what dread grasp  
Dare its deadly terrors clasp?  
When the stars threw down their spears,  
And watered heaven with their tears,  
Did he smile his work to see?  
Did He who made the lamb make thee?  
Tiger! Tiger! burning bright,  
In the forests of the night;  
What immortal hand or eye  
Dare frame thy fearful symmetry?

## TRAITS OF THE TIGER.

The tiger is as high on the limbs as the lion; but it is more slender, active, and stealthy, resembling, in figure and movements, the domestic cat, which serves as the type of the entire genus. Its coat is very handsome, being of a yellowish fawn color above and a pure white beneath; everywhere irregularly striped by brown transverse bands. Its tail, which is very long, is ringed with black, and contributes not a little to its beauty. It has also white around the eyes, on the jaws, and on the back of each ear. It is peculiar to Asia, inhabiting Java, Sumatra, a great part of Hindoostan, and China.  
The tiger makes its lair in jungles or densely wooded districts bordering on the water-courses. Like the lion, it has a den, to which it retires for rest. Thence it steals forth, secretes itself in a wood on the borders of a frequented path, and there, concealed from every eye, awaits its victim. The moment it sees the object of its desire, its eyes flash, and its whole bearing manifests a savage joy. It allows the unsuspecting prey to draw near, and when it is sufficiently close, springs upon it with tremendous velocity. If it winds prey at a distance, it glides through the high grass with

the undulating movements of the serpent, almost impossible to be detected by human eye.

The tiger has for a long time borne a reputation for cruelty, as little deserved as that for generosity which has been given the lion. The old naturalists pretended that the tiger gloried in shedding blood, and that it never saw a living creature without desiring to destroy it. Nothing can be more untrue. The tiger does not kill for the pleasure of killing; it kills only to appease its hunger.

Tiger-hunting holds a high place among the amusements of the Indians nabobs and the English officers stationed in Hindoostan. This sport is principally followed on elephants placed in line, and on which the hunters ride. When all is ready, at a preconcerted signal they enter the jungles, beat them in every direction, and compel the tiger to show itself. Fire-arms then do their work. It often happens that the ferocious beast springs on the flank of an elephant and tries to seize one of the riders.

Whatever may be said to the contrary, the tiger is capable of being trained and rendered perfectly docile; it is even susceptible of a certain degree of attachment. One that lived in a menagerie in Paris had been brought

from India in a ship on which it has been allowed to wander about at large. The confidence it inspired was such that the cabin-boys lay between its legs, and slept with their heads on its flanks.

A tigress which had been brought to England, and which had not shown any signs of a bad disposition on board ship, became morose when shut up in the menagerie. Some time after, however, a sailor, one of its late traveling companions, came to visit the menagerie, and solicited permission to enter the den where this tigress was confined. The latter at once recognized him, and testified the greatest pleasure. All the day after its friend had departed it lay prostrate with grief.

It is said that Nero had a tigress, named Phoebe, which he often kept near him in his apartments, and which he more than once made the instrument of his brutal, vindictive feelings. At the termination of an orgy, nothing gratified him so much as to point out to this animal some illustrious patrician that had come under his displeasure, and quickly a bleeding victim rolled at the feet of the monster with a human face. Here the veritable tiger was Nero.

Readings in Nature's Book.

## BETHESDA CHAPEL.

In the midst of the Hampton Normal School grounds, entirely surrounded by them, is one of the largest of the National Soldiers' Cemeteries established by the United States at the close of the civil war. About six thousand Union soldiers sleep peacefully here under the gleaming rows of low head-stones marked with only the initials of a name, and the number of a regiment and company, or the more pathetic inscription "Unknown." In the center of the neatly kept enclosure, a solid granite obelisk points heavenward, its pedestal inscribed with sentiments inspired when the nation's gratitude was fresh. A broad stone wall shuts in the sleepers, thick completely hidden on the inside by a itself green hedge, where birds build their nests and now and then a brown rabbit peers out. Blue violets and periwinkles star the grass, and mocking birds and meadow larks and orioles and red birds find sanctuary here, and fill the May mornings with harmony. Here, on "Decoration Day," the "Union people" of Hampton and Norfolk, chiefly, of course, of the colored race—come with wreaths and flowers and speeches for the heroes' honor; the old soldiers from the Chesapeake Asylum for Volunteer Veterans, pay their respect to their comrades' memory; and later in the day, as the sun is setting, the students of the Normal School, with their teachers, go quietly to add a fresh leaf to the withering tribute, and recall, with prayer and thanksgiving, all the significance to them of those thronging graves, to which no pillar of stone can be a fitting monument as the busy walls of the freedmen's school, outside their gate, close at hand.

It is well that these children of the freedmen should remember, reverently and more than once a year, the great price of their freedom. In the cemetery, near the entrance, stands a simple chapel of wood, built, as was the monument, by private benevolence. Erected for the benefit of the soldiers in the neighboring camps, it would long ago have fallen into ruin and disappeared, but that ever since the establishment of the Hampton Institute it has been, by consent of the Government, occupied by the Normal School church, consisting of the students and teachers, and some colored people and Northern white families from the neighborhood. The school repairs it in repair. Every Sunday is sure of a full congregation, no fear of preaching to empty pews here, and hundreds who have visited Hampton and Old Point must have seen and admired the morning service; the grand swell of congregational singing such as they cannot hear at the North; the opened windows, vine laced, letting in the air of spring, with a glimpse of green grass and waving boughs, and the Sabbath rest surrounding the Sabbath worship; the mocking birds' choral service outside. Many must have felt and many have expressed, a sense of the peculiar beauty and appropriateness of the provision which thus keeps alive the more tender and sacred memories of the war, and connects them with one of its most living and hopeful results.

But official routine does not always find place for sentiment however fitting; and technical objection to the idea of divided jurisdiction, though not thought of in the early days of national enthusiasm, when the chapel was given freely to its present use, has twice since then occasioned an order for its removal. On the reception of the second one, dated Feb. 7, 1881, the Principal of the Normal School went himself to Washington, to lay before President Hayes the reasons against the enforcement of such an order, taking with him, in evidence, the following letter from General Marshall, treasurer of the Normal School, giving the history of the previous order, and its rescinding.

Hampton, Va., Feb. 14th, 1881.  
Gen. S. C. Armstrong, Principal.

Dear Gen.: On the day on which the letter of Capt. A. P. Rockwell, A. Q. M. U. S. Army, dated Feb. 28th 1870, (copy enclosed) requesting the removal of Bethesda Chapel from the Nat. Cemetery, was laid before the Society, the Secretary of War and Gen. Sherman visited the School. I pointed out the Chapel to them, informed them of the request for its removal, of its great use to the school, and of our inability to rebuild it on our own grounds in case we were compelled to take it down, and asked permission to repair it and to use it as heretofore where it stood, so long as the ground was not needed for interment.

Both the Secretary and the General of the army, after examination of its location, expressed the opinion that the Chapel was of no detriment to the Cemetery, but an appropriate ornament to it, and the Secretary of War said he would not rescind the order for its removal, but would also have it repaired for our use, on his return to Washington, he found that there was any fund which he could use for the purpose, he requested me to write to him and make application, both for permission to use the chapel on its present site, and for aid in making the needed repairs.

This was done, and, in reply, the letter of

dated April 4th, 1876 (of which I append copy) was received, according to our proposition to repair the chapel (at our own expense) on condition that the grounds immediately about it should be kept in good order by us.

On receiving this permission, the School raised, by contributions and entertainments given by teachers and others interested, over seven hundred dollars, which was expended in putting the chapel in thorough repair, and it has been since kept in good condition. I have heard of no complaint of the violation of the conditions imposed by the Secretary of War, or of the misuse in any way of the privilege granted.

Yours respectfully,

J. F. B. MARSHALL,

Treas. and Asst. Prin.

THE PRESIDENT'S ORDER.

It is pleasant to add that this plain statement of the case to the President was successful; and one of the last of his official acts, for which as for many other manifestations of kindness, the school will be always grateful, was to order the revocation of the decree against the chapel; official information of which was received with a copy of the following letter.

War Department,  
Quartermaster General's Office,  
Washington, D. C. Feb. 24th, 1881.  
Major Jas. Gillies,  
Quartermaster U. S. Army,  
Fort Monroe Va.

Major:

In accordance with the orders of the President of the United States, the Secretary of War has revoked the order for the removal of the Chapel from the Hampton National Cemetery. You will inform the proper authorities of the Hampton Normal School accordingly.

Very Respectfully,

Your Obedt. Servant,

(signed) M. C. Mans.

Quartermaster General,

Bvt. Major General U. S. A.

SERVICES OF THE CHAPEL.

As we promised our readers last month, we complete this record with an interesting sketch of Bethesda chapel, prepared by Rev. James Marshall of New York, who, as U. S. Army chaplain then stationed at this post, was familiar with the history of the chapel from its beginning, and instrumental in its erection.

New York, Feb. 25th, 1881.

GEN. S. C. ARMSTRONG,  
Dear Sir:—A call from the Rev. Mr. Frissell a few days since, revived an old story about the National Cemetery at Fort Monroe, its Monument, and the wooden Chapel within its walls. I have not time to pen all the facts belonging thereto, yet will send some of the connected facts as I promised, and hope they may be of service in the re-errection of the Church where it stands; and also as a contribution to the knowledge of the origin of the Cemetery, Monument, and Church. In 1864 "the Monument Board" was formed with Dr. Eli McClellan as President, Chaplain E. P. Roe, Treasurer, and Chaplain James Marshall, Secretary. At this time all the bodies were consolidated into one, and Dr. McClellan as Surgeon in charge. The Chesapeake General Hospital, now the Soldiers' Home, was made the Officers' Division, at which I was retained as Chaplain, and when I was in that capacity, it was twice since then occasioned an order for its removal. On the reception of the second one, dated Feb. 7, 1881, the Principal of the Normal School went himself to Washington, to lay before President Hayes the reasons against the enforcement of such an order, taking with him, in evidence, the following letter from General Marshall, treasurer of the Normal School, giving the history of the previous order, and its rescinding.

tions to the Monument Fund.

The Chapel was built for the benefit of the soldiers through the efforts of Chaplain Roe, who was stationed at Hampton Hospital. Mr. Roe left the service before the Chapel was finished. The close of the Chesapeake Hospital, the Camp Distribution, the Muster Out Camp, and the Military Prison (all within the grounds of the Chesapeake) about July 1865, I was transferred to Hampton Hospital. My first effort was to finish the Chapel and render access to it possible by filling up the ground with oyster shells and earth; as the ground was so low that the Chapel was usually surrounded with water.

In the fall of 1865, the Chapel building was transferred by the war department to the Presbyterian Committee of Home Missions of New York, provided said Committee would finish it and use it for religious services. I acted without expense to the Church Committee while U. S. A. Chaplain, and in addition to my Chaplaincy work, organized and carried on church and Sabbath school at the Chapel for the benefit of the white people of the surrounding region; as the colored people had schools and churches and teachers in abundance, under the auspices of the American Missionary Association. The Chapel was in the open field; and when the Hospital wards would be removed by the Government, the Chapel would present an isolated appearance, with no right of way to it, and liable to fall into the hands of the original owner of the land; or to be destroyed in case of removal, for it stands on piers, and removal would be its destruction in any case. In looking over the Cemetery, we had three things in view: First, the right of way to the Chapel; Second, its perpetuity for religious work; and Third, the saving of expense to the Government by retaining as this Chapel the new Cemetery, the largest of the old ones, which was the Hampton Hospital Cemetery, lying between the Chapel and the Creek.

The officers of the Government fully understood the facts at the time, and accordingly, Gen. Blunt did everything possible to locate the Cemetery, remove the bodies, surround the grounds with a suitable picket fence, and save the Chapel for future use of the Government or some religious body working in the interest of the Government's work. The Government had done nothing at the time of all our preparatory work, (at Fort Monroe) but to see that the thousands of Soldiers' graves from obliteration. But after the location of the Cemetery, and after all the essential preliminary steps had been taken, the final work of bringing the Cemetery into its position as a "National Cemetery of the first Class" was under the direction of the General Superintendent of National Cemeteries. I was mustered out of the Government's service in April 1866, but I remained in the interest of the religious work of the Presbyterian Committee until July following, and was, at the same time, actively at work with the erection of the Monument which now stands in the midst of over six thousand of our Nation's heroic dead. But my health failed, and I was obliged to leave before the money was all raised or the amount received. Col. Curry, of the Army, received the contributions then poured in, in large and small amounts, even as low as ten, twenty-five, fifty, cents, from poor widows whose husbands and sons were buried in this Cemetery. A son of my own was buried there, and I might have been the first to be placed under the monument. My four years work at that point, for the living and the dead soldiers, had apparently ruined my health. But failure in our Monument work would have been dishonor to our dead heroes, and disgrace to all concerned. When I found that I must leave, I went to Washington and had an interview with Miss D. L. Dix, so long and so widely known for her efforts in behalf of the insane in both England and America, and for her connection with the Sanitary Commission during the war. She knew our work well at the Fort; and I asked her to assume the responsibility of raising more funds and securing the erection of the Monument. She at once accepted the duty and entered cheerfully upon the work; thus adding another chapter to the long life of her philanthropy. Miss Dix immediately visited Philadelphia, New York and Boston, for the purpose of raising funds. She succeeded. She then contracted for the Monument, and when completed the Government transported it from the East to its present position. In the year 1867 the Monument was erected, and the grounds set apart as a permanent National Cemetery, with appropriate ceremonies. As I was absent from the country, I can give no particulars of this part of the work. Neither do I remember the exact cost or dimensions of the Monument. While in Heidelberg, Germany, in March 1868, I received a photograph of the Monument erected, and the grounds, from Miss Dix. Many persons were interested in its erection, and all the officers then at the Fort gave their cordial support to the enterprise; but to no one more than to Miss D. L. Dix, in the honor of her completion. It will stand as a testimony to her energy, as well as an honor to the soldiers of the first and second wars of the dead heroes, whose service for the Na-

tion it commemorates. The history of the Chapel is inseparable from the history of the whole work there under the control of the Government. Its removal would not only be its destruction, but would blot out one of the chapters of the whole history of the work for the moral welfare of the soldiers, and unnecessarily embarrass your present good work among the living words of the Government.

Most truly yours,

JAMES MARSHALL.

## ON THE STICKEN RIVER, ALASKA.

(See illustration on page 51.)

Comparatively few people even yet know much about the real value and wonders of that vast addition to our dominion, Alaska. The bigness of Uncle Sam's farm becomes apparent when he can pay millions on millions to add to it such a three hundred million acre lot, and then laugh at the purchase as a folly; or almost ignore its existence.

Whoever has read, however, Dr. Sheldon Jackson's little book on Alaska, in connection with the missions established there, will not let say further opportunity for information slip; and will not fail to be interested in the graphic description here, by Wm. E. Bell, of the Sticken river and its wonderful glaciers. For the extract and its illustration on page 53, we are indebted to "Scribner's Magazine."

A detention of a month at Fort Wrangel, Alaska, waiting the steamer to take us back to Portland, Oregon, gave me the opportunity of making a trip up the Sticken River, which empties into the Pacific a few miles north of the fort, and of seeing its glaciers, the principal of which, the "Great Glacier," being, it is said, one of the largest in the world. Embarking with a pleasant party from the post, one beautiful July morning, one of the boats carrying our baggage, supplies to the headwaters of the river; with a supply of water-pots and gum-boots for the glacier, with sketching materials, fishing-tackle, shot-guns and traps, besides canvas, and a few men, we were, in a few minutes, steaming away toward our destination.

Rounding a point half a mile from the wharf, the mouth of the Sticken came in view; and then, as we were about to enter, and then the character of the scenery began to change from that of the coast. We had left behind us mountains, high and wooded, but here they became higher and more rugged, and were occasionally capped with snow. New heights presented themselves every moment until the sun set, and it became too dark to see anything.

The first streak of daylight saw us on deck. Opposite to us was the monster glacier, white and cold in the uncertain morning light, but which, as the sun broke upon it, sparkled and glistened like miles of heaped-up jewels. From where we lay we could look out over the surface of the sea as it came out of the mountains, dipping with a gentle slope toward the river; immediately in front of us, was the glacier's foot, about two miles wide, through which I issued before spreading out into its fan-like shape which terminated in a perpendicular face next to the river, of from six to seven hundred feet high, and above several miles wide. As the pressure was removed, at the mouth of the gorge, great cracks and chasms showed themselves until, as the edge of the face was approached, the whole ice plain was seen to be a network of cracks which appeared to run, with broken joints, to the very bottom of the glacier. As we looked into these fissures in the clear ice, from about one mile and a half distant, the prismatic colors were superb. The surface of the ice had the appearance of being covered with snow, but the face of the precipice is all clear ice.

Thus we stood on, always through the same sublime scenery, until we arrived, at ten o'clock, at the bend just below the "Big Canyon." It was still light, but some difficult passages lay just ahead of us; and as full daylight, and plenty of it, is necessary in order to make the run, we went to the bank and in a few minutes were securely tied up under the lee of a point which jutted out into the river just above us. Below, and midway in the river, there is a long, low sand island, and on the point of it, next to us, was encamped a party of Indians with an enormous "birch-bark" canoe of solid cedar; it was beautiful model, as are all of the canoes of these Indians. This being an extraordinarily large one had attracted my attention as I left Fort Wrangel, two days before we did, with a small American flag flying from a short staff stuck in a hole made for it in the solid wood of the high stern. The Indians were cooking their supper on the sand, their canoe being pulled well up out of the water; they had evidently arrived but a short time before us. Night soon shut down, and after supper and diversion of cards and music, we were quite ready to turn in; the fresh air and the excitement of sight-seeing had worn us all out, and we needed no opiate to send us off peacefully to the Land of Nod.

Business Manager, Hampton, Va.  
Entered as Second-class Matter in the Post Office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute, and printed on the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work, from all parts of the country, is solicited, and will be done cheaply and well. Estimates will be sent on application.

## THE EXPERIENCE OF A NEGRO TEACHER.

—Va. April 9th, 1881.

Dear Sir: I know that you will be always busy; but I hope that you will find spare moments to read what I am about to write. You remember when I was at Hampton in November, 1879, on route for this place, I did not want to come; but you induced me to come to this country, and I truly think that God must have impressed it upon you to do so; for, I do not know where I could have gone that my work would have been so prosperous. I came and put my hands to the plow; and have not looked back; but am almost to stand still now, for the want of funds to help me move the work on.

When I came to about 18 months ago, I found an anxious people for education, and no house fit to teach in. However, I opened school in an old log-cabin, with 25 pupils. In a few weeks I had four times that number. I taught seven months, which was the term of public schools. The anxiety of the people seemed to increase each day. So I had an exhibition or concert at the Church, by which I raised \$30.00 to continue the school six weeks longer. During this time three of the patrons, with myself, went to the members of the school board and asked them for a house or money to build one. They responded by giving \$275.00 and contracted with me to build a house 18 by 24 saying that was the best they could do then. They also gave us privilege to make any addition to the house that we could. Well, I knew that a house that size would not accommodate 125 children and two teachers. So I said to the people, that if they would help me out, I would have a two story house built, that would meet our needs. They rejoiced at this idea, and came to my call like men. Some giving two and three days work, some giving and some even bringing corn and potatoes to the store to help pay for nails, etc. And in less than three months we had a two story house 30 by 26 completed, furnished with two seated desks and good blackboards. The house cost about \$450.00 as it is \$275.00 from the county, and about \$200 given by the people and myself in labor. For I put my hands to the tools and labored daily until the work was done.

and the only compensation I received was to see the earnestness of the people and to know that they appreciated my work; \$18 I received from you and the other officers and teachers at Hampton Normal Institute; the rest I received in donations from three kind benevolent friends of the North, who gave respectively \$30, \$10, \$5. Well, the house being completed I opened school and the children came in so thick and fast, that I could not hold the term alone. So I applied to the board for an assistant, but the treasury being short they could not give me but \$10 per month. Well we were determined to have one; so I turned to the patrons again and said to them, that ten dollars would not pay a teacher; but if they would agree to help make up ten more I would get a good teacher; but having been exhausted of means in building the house, their response was not so strong, but they said "go ahead, let us try it, we will do the best we can." In a few days Miss Lucy Isbell arrived, and took part with me. She has proved her love for the work, and her great desire for the improvement of our people, by her faithfulness to her post, regardless of the pay. We graded the school at once, and have had a very successful term so far. She has taught four months, and we have raised \$28 by festivals, collections, &c. She is to teach two months longer, and we should raise \$32 more, but I fear that we shall fall short. These people have been faithful in helping themselves, and truly deserve to be helped. We have 129 pupils on roll. Many of them unable to get the books needed. My most advanced class of six pupils needs to take two new studies, and to be advanced in another. But for want of money to get books are kept back. I have prayed for some treasure to come to me that I might buy books for them, knowing that they deserve it; but my prayers have not yet been answered. I have thirty girls from 12 to 18 years of age in my department. So we have opened an Industrial school for them every Friday afternoon. Miss Isbell having had some experience in the Industrial room at Hampton N. S. finds it very serviceable. She has charge of this instruction. The girls seem to enjoy it very much. Oh it is just grand to see them so busy cutting and making little dresses. The patrons seem to appreciate it very much indeed. I lecture to the people, old and young every other Sunday afternoon, on Truthfulness, Honesty, Industry, and Moral Science, mixed with "Outline of man." They enjoy it greatly. I always listened to your lectures with so much interest and earnestness when I was at Hampton that I imagine I imbibed a great deal of your ambition in lecturing. I found the Sabbath School very poorly conducted, but a more earnest school and one more desirous to improve I never saw. I took hold with them, introduced the International lesson; and soon raised it to a fine, large prosperous school.

I feel that the Lord is blessing my work. I know that he has been with me. For I have not gone over the above mentioned ground without opposition. There was a strong outdone opposing faction. But that served as an encouragement to me. For I knew that there were no good works without opposition. We have nearly exhausted all means we know of for raising money at the present, though we are much in need of \$75 or \$50, to successfully carry out the work already begun. Whose heart will God turn towards us? Who will accept the heavenly crown offered for aid in this particular?

There are several promising girls and boys here that I would like to send to Hampton; but their parents are not able to send them. But I hope that they will be admitted to work out their education, like the two I sent there last year. Since I first went to Hampton school, I have taught four different schools, and have had 449 different pupils under my charge; but I feel more encouraged and hopeful of these people and children than any. These people are poor, but they are very religious, and their moral character is good, considering every thing.

Now I must close. Please excuse me for taking so much of your valuable time in this conversation.

Your old pupil in earnest, and your true friend,  
W. B. Weaver.  
Cappahosic, Gloucester Co. Va.  
Genl. S. C. Armstrong.

The above is from a North Carolina boy, who after three years study at the Hampton Institute, has taught four years with success and with great credit to himself. His experience is not an unusual one among our graduates though unusually well told; his statements are reliable, and he deserves help.

Selecting and fitting such youth to be educators of their people is the mission of the Hampton and other Institutions, and it deserves far more encouragement than it has received.

## FROM AN EX-CONFEDERATE OFFICER.

State of South Carolina, office of State Superintendent of education.  
Columbia S. C. April 9, 1881.

Dear Sir:— I have not, I assure you, lost interest in your great work, or forgotten the charming visit that I paid you in 1877. I often wish that I had the opportunity to renew the very pleasant association which I shall always have with Hampton Institute. If you will glance over my report you will see that we did some good work last year in the way of a four weeks Normal Institute for white teachers. The success of the Institute was chiefly due to the ability of the Principal, Prof. Soliman, whose report, contained in mine is well worth reading. I am anxious to secure him again this year, and I have strong hopes that I will do so. One of the good effects of the Institute was to arouse our legislators to the importance of this work. They have given me \$1500, all that I asked for, to defray the expenses of the Institute work this year, and Dr. Curry will give me \$1000 for the same purpose. I am very anxious to secure another success, because I believe that these Institutes will ultimately lead up to the establishment of Normal schools, and that in the meantime they will exert a most beneficial effect upon our teachers. As I have said I am encouraged to hope that Prof. Soliman will again take charge of the Institute, but I want his match, if I can find him, to conduct an Institute for our colored teachers. You know exactly what kind of a man I want, and I need not therefore attempt to describe him. A live, earnest, practical teacher, could do good service among our colored people. I would like to have a session of about four weeks in July or August. To a good man I will be able to pay a very fair salary for the session's work.

There is in this city, a young colored man, W. M. Dart, with whom, if I mistake not, you have had some correspondence, and who in some respects is well fitted for the work. He is an excellent teacher and disciplinarian, and while he stands high in this community he is not perhaps sufficiently well known in the State to attract teachers to the Institute. A man of some repute, especially from another State would draw many teachers who otherwise would not attend. And now to the point of this letter, can you help me to find the man that I am looking for? Besides paying, as well as the means of my command will allow, I will endeavor to make his stay in South Carolina pleasant, and I know that he will find no small part of his reward in the consciousness, after he finishes his work, of having done valuable service to the cause of education.

Please remember me kindly to Gen. and Mrs. Marshall, and believe me, I am, Yours very truly,

H. S. THOMPSON.

Gen. S. C. Armstrong.  
Hampton Va.

The above is published as an illustration of the spirit uniformly shown in correspondence with Southern school officers. We trust Capt. Thompson will excuse us for publishing his letter. A Massachusetts yankee well up in the theory and practice of teaching, is wanted to help the march of ideas in South Carolina but in what way can we better do just

tice to the fine spirit in which this cause of the negro is taken up by an important class of Southern men.

## PAID FOR.

The sum of twenty thousand dollars for an Indian Girls' Building at the Hampton Institute and three thousand for heating apparatus and furniture, has recently been provided by friends, chiefly in New York City, and in Boston.

From the efforts to get this amount there has also resulted an intelligent interest in the welfare of the Indian race and a faith and confidence in it that are quite as valuable to the cause as the money raised.

Without a proper public sentiment the Indians will never get knowledge or justice. A good Indian policy is just as dependent on public opinion as a good financial policy. Better ideas about Indians are spreading but it will be hard to exterminate the extermination policy which is hugged to many a civilian as well as military bosom. Its advocates may, however, as a wholesome stimulant, do more good than harm.

## A WORKSHOP.

to cost about six thousand four hundred dollars, is an immediate need for the twenty-one Indian boys who are learning the carpenter, tinner, blacksmith, shoemaking and painters trades in a damp and crowded basement room. Indians are remarkably apt at the trades and deserve a first rate chance to acquire. On their habits of practical industry will in great measure, depend their stability at home. Regular industrial habits, next to christian character, are the support of sound morals.

Ten hours work every day is a wonderful saving force.

Our Indian boys have good rooms, our girls are soon to be provided with ample sleeping and work rooms. A large and valuable farm was given last year by a Boston lady for this practical agricultural instruction. A work shop that will cost complete six thousand four hundred dollars is necessary to give them a fair chance to learn the following trades:

Wheelwrighting Shoemaking  
Carpentering Harness making.  
Blacksmithing Tinning  
Painting

A thousand dollars for each department of the shop. Who will provide for a trade?

## THE GOOD OF A PRESIDENTIAL CAMPAIGN.

The following is from the *Christian Advocate*: "But there is a good side even to a political campaign, which must not be overlooked. It is an educating process to the masses. There are a great many men everywhere who scarcely ever touch a book or paper, who know very little beyond their neighborhood precincts—men who lead a plodding sort of life. Now these Presidential contests, which come around once every four years, set these people to reading and thinking. They become aroused by hearing political speeches and read up their party literature. Then the whole country wakes up. There is an interchange of thought and opinion; new views widen out beyond the narrow home circle; they rise above the dreamy monotony of every-day life. Great names pass in review before the mind; statesmen of national fame find their way into even obscure corners of the earth, where they may be seen and heard by the untraveled class. Great events in the political history of our country, such as the repeal of the Fugitive Slave Law, Jackson's Nullification Proclamation, etc.—events that have been the pivots on which the wheel of State has turned—become matters of daily discussion in shop and store and railroad car. History is read, comparisons are made between national policies, political economy is studied and the theory and policy of government is better understood by the average man. An exciting Presidential election, with all its excitement, is better than the monotonous dead level of some old European monarch, where the King rules, and the people have little to do but attend to the domestic affairs of life, tamely submitting to the imposed fate, whatever they may be."

### ANNIVERSARY OF THE HAMPTON INSTITUTE.

Anniversary day will be Thursday, May 19th, 1881.

All contributors to the Institute have a standing invitation to attend.

The exercises are expected to be as usual with the addition of laying the corner stones of two buildings; one for Indian and one for Negro girls.

Those from a distance are advised to secure rooms beforehand, at the Hygeia Hotel, Fort Monroe, which is two and a half miles distant from the school.

Guests are requested to preserve the "cards of admission to Virginia Hall" enclosed in their invitations. Admission by tickets is necessary to prevent confusion and possible danger.

### TEACHERS' INSTITUTE.

The Hon. W. H. Rufner, Supt. Public Instruction of Virginia, has placed in my hands a sum of money from the Peabody Fund, to be expended in securing instructors and appliances for a colored teachers' institute at the Hampton Institute, from June 27th, to July 15th, inclusive.

This is for the special benefit of Virginia teachers. Others may apply.

The services of Prof. Warren, Principal of the State Normal School of New Hampshire and of Miss Reed, his assistant, have been engaged.

Board and room (not washing) can be had for two dollars and a half per week. Those who desire to attend should apply to the undersigned.

Improvement in the profession of teaching means better success, better pay, and better chances for the best positions.

Attending such an Institute is a wise use of time and money.

A model school will be in operation in order to illustrate methods of teaching.

There will be an exhibition of the "Kitchen Garden" or school to illustrate and teach in a remarkably instructive and interesting way the various duties of house-keeping.

S. C. Armstrong,

Principal.

Hampton, Va., April 20th, 1881.

### EDUCATION IN WESTERN VA.

From the report of the Hon. W. K. Peadleton, Superintendent of State Schools, it appears that, while there has been in the last ten years an increase in the number of school-children of only 29 per cent., as ascertained by actual enumeration, there has been in the same period an increase in the number of teachers employed of 72 per cent.; in the number of months taught, an increase of 87 per cent.; in the number attending school, an increase of 64 per cent., and in the general average attendance, an increase of 66 per cent. That is, there has been an increase in provision for instruction, and in the number of youth actually receiving instruction, about three times as great as the increase in the number of school youth entitled to the privilege of free schools.

### EDUCATION IN SOUTH CAROLINA.

From the last report of Capt. H. S. Thompson, Superintendent, we learn that the estimated cost of public schools for the current year is \$351,415.50. Of the teachers 2048 are white, and 1123 are colored. White children in attendance 61, 219. Colored children 73,853. Total 134, 072. Average yearly session 3½ months.

Large space is devoted to an account of efforts to raise the standard of teaching in the State.

In his conclusion, Capt. Thompson says: "The great social and political changes through which the people of this State have passed in the last fifteen years

make it necessary that we should have an efficient system of public schools.

Universal education alone can avert the evils which universal suffrage threatens. We can best guard and protect our civilization by providing liberally for the diffusion of knowledge."

There is some wholesome work being done in the "Solid South."

### THE "KITCHEN GARDEN" AT HAMPTON.

Those who are interested in benevolent work in New York understand by the name "Kitchen Garden" not a forcing bed for early vegetables but a novel and pleasant kind of school of housework for little girls.

The method was the happy thought of Miss Emily Huntington, in charge of the Wilson Industrial school in that city, and has been successfully adopted in many others. With little tables furnished completely with toy dishes, and table linen; little bolsters, with all the appropriate bedding; little wash-tubs and clothes lines and clothes; little brooms and brushes; little baking pans with moulding clay to shape into remarkable turkeys and ducks and legs of mutton, or loaves of bread and biscuit like little housekeepers, while delighting their little hearts with the toys they love best, are systematically taught a good way to do all the grown up work they imitate: they learn how to put a room in order for night or morning; to sweep, dust, and make a fire; to set a table and wait on it; to wash and fold and iron clothes; to wait on the door; to be careful, neat and quick. Besides their practice with the toys, they are put through a catechism of house-keeping rules and principles, and a number of graceful little plays and enlivening exercises which are made to further illustrate and enforce them. There is an advanced course with full sized dishes, and larger furniture. A young girl who has gone through this pleasant and practical training, will feel at home when she has a house of her own to take care of, and can safely be trusted with mother's.

With the kind help of some New York friends in providing apparatus—acknowledgment of which was made in our last number—the kitchen garden class has been started by Hampton Institute, at the Butler school on its grounds, whereas most of our readers know some two hundred and fifty little colored children of the neighborhood are taught by Hampton graduates, and the Senior class of the Normal School is trained in practice teaching. The interest felt in the Kitchen Garden there has been increased by a pleasant visit from Miss Huntington, with Miss Grace Dodge who is Secretary of the Ladies Kitchen Garden Association of New York. Miss Huntington very kindly gave some gratuitous lessons to the Senior class and teachers. It is hoped to make the new method not only a permanent and valuable feature of the Butler School, on a larger scale than at present, but to bring it so far within the reach of graduate teachers that it will be helpful in their work among their people.

### A VISIT FROM BISHOP PAYNE.

The Hampton Normal School has had the great pleasure recently of a visit from the venerable Bishop Payne, Senior Bishop of the African Methodist Episcopal Church. He addressed the school, reviewing in a very touching and graphic way the events of a life which includes the most interesting and dramatic periods of his people's history, something of the old times and something of the new, with the stormy days that divide them. While born a freeman, by the laws of South Carolina at the time, in virtue of his partly Indian descent, and allowed by the same laws to go to a little school taught by a colored man, and then to start one himself, he was nevertheless obliged to go North because his pupils were found to know too much, and his school was broken up. He reached New York in 1835, and found friends in Mr. Garrison and the other early abolitionists. In the thirty years to a day from his landing in New York, he arrived again in Charleston and visited a school for freedmen. He wished

he could put before his young hearers the full meaning of that change as it appeared to him, and their parents. He called on them to consider that they might better appreciate the wonder and the greatness of their privileges. He urged them to remember that liberty is not license; to cultivate a spirit of respect and obedience to authority, of docility and teachableness. He was glad they were learning to use both their hands and their minds—he would have sold himself for ten years to have gained such advantages when he was their age.

He was glad to see the school is working for his red brethren. Indeed, as he quietly said, he is descended himself from three brothers—Shem, Ham, and Japheth—so that he feels a sympathy and interest in all humanity.

Bishop Payne's visit has done good to all who saw and heard him, and we hope that it may be only one of many.

Miss Inlie Brown, a former student of Wilberforce College, Xenia, Ohio, of which Bishop Payne was formerly President, accompanied the Bishop to Hampton, and gave one of her eloquent readings in the Chapel of Virginia Hall. She has considerable talent and succeeded in greatly pleasing her audience.

The addresses of the following named graduates of the Hampton Institute are unknown and are inquired for. Any who know of their whereabouts will please report.

CHAMPAIGN WARREN. THOMAS SMITH.  
WILLIAM HENRY. THOMAS JENKINS.  
JOSEPH B. BROWN. ALFRED MOORE.  
GEORGE W. COLE. ANDREW J. MINNIS.  
WM. A. TINSLE. (under graduate)

### FROM "DOWN THE MISSISSIPPI."

BY REV. A. D. MAYO, OF BOSTON.

Happily, the ere of "stirring up" is subsiding to the good time fast coming when the people of all sections appear only too anxious to get into a mutual good understanding. Set it down as Gospel that about all the hounding between North and South is now done from the safe distance of a country editor's stool, or at the reporters' gallery of the national debating society at Washington. The Northern traveler southward, on the lookout for facts, is surprised at the singular fascination that the best people of North and South have for each other. A Yankee parson, whom you knew twenty-five years ago as the most fiery of platform agitators, is tilted in his chair alongside a Mississippi planter who sent his last boy to the war, in a long day's talk, that slides easily into something like an old friendship. Even the said, home-staying plantation madam, with jolly countenance framed in flowing curls, is open to the approach of the stranger, and, after an hour's talk, to you as confidentially as your elder sister. The natural kindness of these far-down-south people is one of the most beautiful things in America. The most unapproachable folk in all lands are the horderers, and, once through the brusque fringe of the southern shore of the Ohio, you move into the tropics through mellowing streets of humanity. Easily provoked by a controversial habit, all these people, gentle and simple, are more open to approach, more ready to talk out of the heart, than any among whom our lot has been cast. The young people, especially school-children and students, are wonderfully open to enthusiasm or a hearty appeal for good things.

The Hebrew brother is in the ascendant here, makes the moody, lends to the planters, trades with the negro, and sends his hand some wife and daughter about the country in the palace car in more than the splendor of the old Southern days.

This plantation-life is, just now, as notable as the restless tides that whirl outside the levees. The planters that come on board complain of the unreliable character of their laborers. Poor Sambo is the scape-goat for the sin and shiftlessness of the country. He won't work steadily, will get drunk, drive the mules to death, go away on holidays, spend all his money, knock off from work when he is crossed, and is always going to Kansas. Down in the barber's shop, or on the upper deck, the colored brother gives his side of the story. He has no chance, don't get well paid at best, sometimes only in tickets, good at the planters' store; is cheated at the jaw-shop, and pushed about generally; mocked with a poor apology for a school, and worried about his voting. We are afraid there is too much truth in both the stories. In short, the crochety and impracticable way of doing business that still lingers from *ante bellum* days is the curse of the planter; and ignorance, like a great stone at the bottom of

a wall, is the oas curse of the negro. Until the average colored man knows more of everything necessary to an American citizen, he will remain poor, will be the drudge in country and city, plundered by every swindler, in an eternal "wangle with his own neighbor, and, worst of all, made periodically an infatigable bruta by the horrible paganism that goes by the name of religion in too many of his churches. The greatest enemy of the negro to-day is the wretched creature who, under the name of revival preacher, fills his credulous soul with fear, humors his savage superstitions, turns his home into a brothel, and makes him a beast when the "power is on him." Nothing can be said in favor of that intolerable nuisance, the average negro preacher in the far-down South. The great schools of the Evangelical Missionary Societies are conferring an untold blessing on the freedman by sending him an improved teacher and minister, for which they deserve the gratitude of the country.—*The Christian Register.*

### THE EGYPTIAN SLAVE TRADE

On the 4th, of August, 1877, a convention was signed by the representatives of Great Britain and Egypt, by which the latter country undertook the following engagements:—

"Public trading in slaves, whether negroes or Abyssinians, suppressed immediately. Their importation or exportation, whether by land or by sea, forbidden. Coarctated traders to be held guilty of the crime of robbery with murder."

This was a great stride in advance of anything yet done in the Ottoman Empire.

Colonel Gordon in Central Africa, strengthened by the power of the Convention, got some of the best years of his life to the establishment of order and law in the districts which for many years had been the source of the yearly supply of human flesh. One great net of traders on the Bahr Gabelle, who were numerous enough to muster an armed force which intimidated the whole surrounding country, he utterly rooted out after two years' fighting. But Colonel Gordon's work is part of the world's history, and it does not now require recapitulation. There is no doubt he did much to stop the slave supply; still, when he left Egypt, he confessed that the snake was only scotched, not killed. Another English officer was stationed at Massowah with the duty of surveillance of the Red Sea coast. His exertions, however, were not as successful as those of his colleague, and the caravan that escaped the latter's vigilance, seemed to have always found the means of getting away to sea.

Finally, there was the Slave Trade Bureau at Cairo, with its various branches in the interior. The public were ignorant about the working of the office until about a year ago, when the news was suddenly communicated from Siont that a large caravan of slaves had arrived, although a branch of the Slave Trade Bureau existed at that town.

The laws are obviously stringent enough to put an end to the slave trade if they only could be enforced. What remains undone is due, not at all to the want of zeal of the Cabinet at Cairo, but to the inertness of inferior officials, and the weakness of Egyptian rule in the vast regions of Equatorial Africa.

There is no doubt an intimation on the part of all enlightened Egyptians to carry out the convention. Riaz Pasha acknowledges frankly the necessity of its performance. The Khedive himself is sincerely desirous to get rid of slavery as only a plague to his country. With only his simple household of which the Princess is the only head, his Highness has no need of that singular organization of wives and odious and emuuchs which compose the harem of the wealthy polygamists of Mohammedanism and makes the slave system a necessity in the Ottoman Empire. He has himself declared that slavery only makes the country degenerate. But he is in advance of general public opinion. There is no widespread interest in the reform on the contrary, there is a steady passive opposition, and, if common report speaks true, the trade is even fostered in distant districts by the collusion or wilful blindness of the authorities. It cannot, therefore, be expected that either 1884 or 1889 will see an end of slavery if Egypt is left to do the work alone. It can only be done in one way. England must lend a hand in the

The colored children had, but little chance for schooling before this time, not more than half of them were in school the previous year. Since that time Hampton graduates and under-graduates have taught them very successfully. Their schools have been well attended. Years before the people have been satisfied to have their children go to school only a few months in the year, and stay as much of the world out in servitude the remainder of the time. Quite a number of the colored people have homes of their own, bought by them since the close of the war. Their farms are small, owning on an average from two to forty acres of land. Others are on the lands of their former masters. There are five churches in the county, and five colored have churches in the county, and two of them have intelligent pastors.

TRE BUTLER.

After I came to school in Mathwa County one year I came to Hampton, I was employed by Gen. Armstrong as an assistant teacher at the Butler school, where he had been principal. The school was in the school and landstead, is located on the Normal School grounds, in fact is the property of the Normal School. The school now numbers 287 pupils and has 10 teachers. I am now principal of the teachers from the Normal School is the principal, who has the present Senior Class his Normal training at this school. The education benefit me, not only in being able to teach but the satisfaction I get in teaching. I feel that I am doing a good work and do my best not grow weary. I like the work very much and it gives me a pleasure. I have every reason to feel encouraged in my work, and mean to do my part of it. I am very grateful to you for your kindness and interest in me. I will write myself word of what you have done for me.

I am, yours very truly, W.

---

HAMPTON PIONEERS.

Hampton graduate teachers are pretty well scattered over Virginia, and the bordering counties of other states, and making their way now and then into new fields. One of these pioneers, a young woman, writes as follows:

Fair View School, Feb. 7th, 1881.

[illegible]

I have started *what I call*, a reading circle. I conduct it nearly the same as a Sabbath School. I would have started a Sabbath School at once but the people had one and had closed it because they thought it only suited to have it in warm weather, so to keep down all confusion I would commence what was equivalent to it, and call it by some other name.

The colored people are all Methodists, there are no Baptists here. The majority of the people live in rented houses, in some places it seems difficult for them to get land, for the farms are large and the owners are unwilling to cut them up. The people are very poor, they seem to be industrious but are poor man-

The poor whites are very prejudiced to the

Very truly yours,

Would many white teachers have the grit to persevere in their work, which this young colored man has shown? This quality of patient endurance is an important element in the future prospects of the race.

— Va. Feb 9th 1891

When I finished my school term in Co., Va., I married a schoolmate of mine who was teaching in that City. After we were married I returned to my home. The Fall of '78 I was engaged to take the school at \_\_\_\_\_ again, which I have taught ever since. When I shall have finished this term, which will be in about six weeks, it will make the \_\_\_\_\_ year that I have taught here. I have taught every Fall and Winter since I left Hampton, and the summer I do hotel work. I have never made any money teaching school year. When at \_\_\_\_\_ I was paid \$10.00 per month, and I would teach school, and I am thankful that I am only getting \$20. per month, and board myself; one winter I only got \$14. per month and board myself. I have almost decided not to teach school any more, as I think I can never get our pay, sometimes it is three or four months before we can get any pay.

I have always felt interested in this race, and feel that it is my duty to do all I can for, and to do it as well as I can. I have no objection to my being called a missionary, but I think it is certainly discouraging to have to work for so small a salary and then you can not get there when it is due. It has been my luck ever since I have been teaching to have my salary in arrears, and I have been kept at it all the time since I left Hampton. I have been teaching I have paid special attention to the way in which our people conduct religious meetings. I find they have very peculiar ideas about religion, they seem to think that true religion is to be seen in the way making all the noise they can. Their standard of morality is very low indeed, they seem to look upon this as no sin whatever; drinking and lying is hardly considered a sin by them. I have been told that in some places you must be turned out of church at once.

The colored people in this neighborhood are progressing very slowly; there isn't hut on a colored man here that owns any land, and that is the saddest thing I ever saw. I have seen a colored man here that has a house, but he has but six acres and a house. The farmers here will not pay over seven or eight dollars per month, and the colored people are obliged to work for that; then they are paid but a few cents. I have seen a colored man here, way they do not mink enough to feed and clothe themselves and family. They talk about buying property, but that is nill. Every colored man here that owe the white man, is, I think, in a bad way. I have seen a colored man, Henrietta C. Evans, are all teaching in Rockbridge Co., Va. I have a very large school this winter. I have forty-five pupils on roll, and they are learning very fast. I have told you what I have seen and done, and I have told you what I have heard and done. I hope that you are satisfied that the help that you gave me has been appreciated, and that I have worked in the way that you have desired. I have come to report to you what you have done for me. I hope to hear from you when convenient.

I am yours respectfully,

We have had one student at Hampton, a preacher, who was sent to school by his church. The young man who writes the following was helped here by his Sunday-school. Both minister and people show great good sense in the arrangement which might not be a bad example for some richer flocks—a year at Heidelberg, or a summer at Chatauga as a variation instead of a tour to Europe.

—Va., February 16th, 1881.  
DEAR SIR: I have written to you before something about my life; but that you may compare the present with the past I will give you the outline again. I was born in—Va., 1858. My parents were slaves. My father

went away before the war, on the underground railroad, and left my mother with three children. In 1867, my mother came to Manassas Va., and stayed three months. When Jackson came in we all had to leave for a while. My mother and I got lost from my mother and wandered seven days in the road with no one to care for me but the Lord. In seven days I got to Alexandria and I found my mother, who then had two children to care for. My mother then learned to work and helped my mother, and from then until I went to Hampton my chances were small. When I became 18 years of age I was married to a white girl named Mary and Alexandria, and I told the school that I wanted to go to school, and they gave me \$7.50. With this I started for Hampton. My fare was \$3. When I got there I found that the \$2.50 only. While there I worked one year and one night school, and the next year entered the Middle class, then the Senior, then came here. As a teacher I like very much to try to do the best I can. I have learned. Some in this County were opposed to me because I was a stranger; this I soon overcame, and my greatest trouble now is how I shall teach, so as to do the most good in a short time. I am a Christian, and I believe in the white religion in this section is what they call "Ironsides." Yet many do 'know what this means. It is this; they believe that God loves the white people best and some to be saved, and those who are not white are damned, and those who are not white do not matter not what they do. Intemperance is a curse to the people in this section, white and colored. They believe in conjuration. They believe in witchcraft. Some of the farmers have been "tricked," and think the only hope for this place is to teach the children better things, which I try to do. The people generally are very indurrious; most of them are very ignorant, and do not know more than long unless they lat whitney moon. The whites and colored are friendly, but I must say the colored for excel the poor white. Most every one poor white rent, and have to work every day for their living.

A just estimate of privileges is a matter of time. It is pleasant to see this estimate growing with the growth of the graduate after leaving school, and many such acknowledgements creditable to the student as well as gratifying to his friend are received as the following from a young man who has now been absent five years.

Atlantic City N. J. 2, 5th, '81.

**Kind Friend:** At the request of our school Principal I will endeavor to give you an account of myself and people. I was born in S. C. in the year 1858—June 21st. At an early age my father died leaving my mother a widow with three children. I was the youngest and was moved to Charleston, S. C., about the year 1866, where I taught school for two scholastic years. While there I got along well, and was well liked and respected by the people, and my school prospered. Owing to the shortness of my school session and the expenses I incurred seeking other employment after the session closed, I decided to try my mind to stop in New York for awhile. I was there one year. The following year I went to Boston, Mass. where I remained up to the time heard of my present school, which was broken up through the war. I then came to Hampton teachers. I attended school while in Charleston; got along well. Left Charleston for Columbian 1870. While in Columbia I was employed as a messenger in the printer's office. Two of my sisters attended Hampton; after their completion my mother sent me, which was in the fall of 1873. My mother was a very kind and loving person; with the assistance of my loving sisters and kind friends I met at Hampton I was enabled to complete my course. After leaving

I arrived here on the 30th of Nov. 1880, where

I was placed in charge of the colored school. I have an enrollment of 61, with an average daily attendance of 45. The school is doing well. My school is prospering. I am the only and first colored teacher in this county. I attended the county institute where I am always selected to give a lesson to the white people in a class. I am thrifty and determined to make an honest living. We have three churches that are doing nicely. I am superintendent of the St. Pauls school, where we have a good teaching staff and a plant worth \$10,000. Our population here numbers about 3000, 200 or more colored. You see I have been quite a wanderer, but through it all I have learned a lesson. I am glad to see that my country is attributed to Hampton. Going there made me what I am today. Hoping for your health, and returning many thanks for your interest in me while at Hampton.

Respectfully yours, J. L. Rouse

Respectfully yours, J

FROM A HAMPTON SINGER.

A young man who was a member of the band of Hampton singers, whose sweet songs introduced Hampton to many new friends seven years ago, writes pleasantly of his experiences as a teacher in his country home and at the "Butler."

Hampton Va. Feb. 5th, 1881.  
Kind Friend:--

Doubtless the writer of this letter is unknown to you until you have carried your mind back to the years '75, '76 & '77 when you will remember receiving letters of thanks to you for the aid you were giving in my behalf.

entered the Junior class. In February of the next year I joined the "Hampton Singers" and was with them about five months. I kept up with my class at school (we studied ancient Greek and Latin) and in the summer of 1902 I was given the next term I was promoted to the Middle class. Before leaving home, I had some advantages of a private school, but feeling the need of an education for myself, and seeing the need of an education for my race, resolved to become a teacher. I decided to train myself to become useful as a teacher among my people as that was my paramount desire. After completing my course at Hampton I was somewhat prepared to enter the field which lay before me. My first attempt at teaching was at my home town, but I found that I was not qualified to teach for them, and all my efforts were fruitless. I thought nothing so easy in the line of work as teaching school, but I found I was sadly mistaken before the

I had no real school-house, but used a little house <sup>built</sup> for other purposes. It was more like a <sup>summer</sup> foder house, than any thing else. All went on quite nicely until the cold November winds began to blow, then I knew that something had to be done, and done quickly too, or I could not stand it for the winter. I made some complaint about the poor condition of the school-house, but help did not come the time I wanted it, so I became my own carpenter and went to work, putting on boards and shingles until the house was quite comfortable.

My school-house happened to be situated on the land of my former owners, (you know I was born a slave) and of course I had some pleasant recollections of my childish days, and often thought of times when I was on the very spot, and could not dream of being a teacher, when seventeen years ago the very name of a school for colored pupils was forbidden. However I found my old owners to be very kind, and even helped me to repair my school-house.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

DEAR HEART RETURNS TO THE WEST.

Six years ago Bears Heart left the Indian Territory, a United States army prisoner, clad in a blanket and moccasins, with his long hair flowing down his back, his ears jingling with ear rings, and his tomahawk and bow and arrow swinging from his side. In this condition he was torn from his friends and sent to Florida, where he remained three years a prisoner of war, and the other three years he has been a student at the Hampton Institute.

A few days ago he left his home. "But what a change! Instead of his blanket he wears back a neat suit of the school gray uniform decorated with a sergeant's and color-bearer's stripes which he has well earned."

Instead of the tomahawk, he takes back a chest of carpenter's tools; instead of his bow and arrow, he takes the bible and many other good volumes. His long hair and moccasins he has long since forgotten, and instead of the weak, dirty, ignorant piece of humanity that he was, with no correct ideas of this life or the next—his only ambition being to fight the white man—he goes back a strong, decent, Christian man, with the rudiments of an English education, and hands trained to earn himself a living at the carpenter's bench or on the farm. I can almost see him as he arrives home. He is surrounded by a crowd. See how they gaze and wonder at his changed appearance. What has he done to himself? Is he the same man that left us a few years ago? Ah! his aged mother hears the news and runs out to meet her captive; son the light is almost too much for her. Overcome with joy, they sink down in each others' embrace. But now comes his trying time. He enters his mother's house. It is not his clean airy room that he left at Hampton—no pictures are on the walls, no clean smooth beds, but the house is dark and gloomy, dirty and dirt there, and no signs of order and comfort. Bears Heart thinks of Hampton, he wishes himself there. He takes courage. He lies down and rasts his body on a bed of rags, as best he can. He gets up in the morning resolved to make a change in the appearance of things, and he quietly and resolutely goes about his work of reform. In a few weeks I can imagine the appearance of his mother's house entirely changed, and Bears Heart going about trying to help his neighbors.

Who knows but that the capturing of Bears Heart and his associates marked the beginning of the solution of the Indian question? Brave Bears Heart! Noble Little Chief! Praised be all that hand of prisoners, for the transformation begun in your Florida prison has roused the nation to think that it is its duty to educate all your brethren.

Bears Heart was one of the most obedient and kind hearted students that ever entered this school. He was always ready to inconvenience himself to please others.

On the day of his departure, he said that he would like to speak to the Indian boys and girls before leaving. They gladly assembled to hear his parting words. He was a great favorite among the students, although not one of them belonged to his tribe. When they had finished singing a hymn, Bears Heart rose and said: "Dear Scholars: I am pleased to give you a few remarks in regard to my departing from you all. I am glad that I have been friends to you all and I am sorry that I have to leave Hampton. But boys and girls remember that it is better to obey your teachers and all the others. You must all study hard and try to see what boys or girls will go ahead of all the others and also you must all attend prayer meeting and Sunday school just as well as going to school through the week. You must all try for yourselves and learn how to read and write: that is what you all left your homes for; to learn to read and education. For some people think that Indians can not learn, so I will say once more try hard in your study. I bid farewell to you all. Boys and Girls good bye." When he had finished, "I am sorry" "I am sorry" echoed from all parts of the room. After singing another hymn, Bears Heart withdrew to pack his trunk for the far West.

## ORDER IN HIS ROOM.

One of the boys who had been troubled by other boys playing too much in his room, put the following notice up behind his door:

"MARCH 28, 1881.  
H. N. and A. Institute.

## Dear Friend Boys?

Please, you must not play in here. If you want play go outside, play, and don't fool in here dear friend! That is way to do good way. This all I have to say, my dear friends Gentleman, his wrote,

Mr. Langhing Fecé.

## ZIEWIE AND HER FATHER

The following story is told about Unspessee the father of Ziewie, by Mrs. D. T. When Ziewie left home in 1878 to come to the Hampton Institute she left her father in his blanket and long hair, living in a tipi and in all things leading a regular Indian life. Ziewie's going

away to school, made such an impression on him that he resolved to change his mode of life. When he began to reform Mrs. D. was not at home. When he returned after some weeks' absence she saw a gentleman sitting up in the house talking to Mr. D. She did not recognize him. Mr. D. asked her if she was not going to speak to Unspessee. She could hardly believe her own eyes when her husband told her that it was Unspessee. How different he appeared to her with his hair cut and citizen's dress on. Unspessee sat smiling all the time receiving the greatest enjoyment from the joke. He has built himself a nice house and has it well furnished. A short time after he began to wear citizen's clothes he got Mr. D. to purchase a small stock of goods for him in order that he might start a store. Mr. D. purchased the goods for him. Unspessee started his store with small capital. Since that time by patient industry his business has increased and he is now worth three thousand dollars. While making other reforms, he reformed his name. Unspessee in English means *Don't know how*, but he thought that it would not do to have all that pointed on his sign so he abbreviated it and hung out his sign marked *D. K. Howe*. At his present rate of improvement I think he can safely change his name to *Do Know How* in a few years. How

of a little trouble aroused in the council of the Seminole Nation. This was the case of witchcraft, in which they had on trial an old Indian woman about seventy years old, saying that she was a witch, and was to be shot the following morning in sight of Mrs. Constan's door; she then petitioned to the Chief begging him to save her, to which they paid little attention, she also wrote to her neighboring missionaries and they failed to aid her, then she immediately wrote to the Indian Agent, Tufts, in which he readily replied to the Chief not to touch her, and the witch was saved. She often visits Mrs. Constan with tears in her eyes. Nov. 1st 1880 started for this place and arrived here on the fourteenth, which was on the Sabbath, this being my first sight outside of the Territory, everything seemed very strange to me, but I soon became familiar with the people. I like the school very well. My intention in coming here is to stay until I graduate, if possible, then I shall return home and try to do something for my people. Before I come here I read to take the Southern Workman and read all about this place, which I thought was very grand. I have a brother that will come here next year; this is the first school ship letter I ever wrote and this is the best I can do. Yours Truly,

Wm. McGLIBRY.

VIEW FROM ALENORA, STICKEREN RIVER.

pleasant it will be for his daughter Ziewie to go back and find her father so far on the road to civilization.

B. T. W.

## SCHOLARSHIP LETTERS.

FROM A JUNIOR.

Hampton, Va. Jan. 12, 1881.

Dear Friend: I am requested to write you a letter of congratulation and to give a sketch of my life. I thank you very much for your kindness. I was born in the Indian Territory and was raised there, my home is on the Canadian river. I was born the eighth of Jan. 1861. My principal occupation at home is farming and stock raising. I never was a slave but my parents were; they are both dead. My father was a blacksmith and worked for the government during the war. I never knew my father until I was thirteen years old. I then lived with him for five years. I have never been to school but a very little. I went four months at one time, and then was out five years; last year I went four months again, which makes all of my schooling, eight months only, though I had a very good teacher. She has done more for the colored folks and Indians than any other teacher in the Territory; this year she was deputed of her school in which she taught for seven years, on account

FROM A MIDDLE.

Hampton, Va. Jan. 12th, 1881.

Dear Friend:

I was requested by the Principal to write you a letter. I will first tell you the kind of work I did as I worked out last term. I worked on the farm apart of the time and in the shop the other part. While I was in the shop, I learned to make several small articles. The head blacksmith was in school but he worked in the shop two days in a week and I worked with him until the twenty-seventh of September. He went home, but I had learned enough so that I could do the work myself. I have charge of the shop now, and two Indian boys and one colored boy work with me. Since the blacksmith has been gone we have been doing such work as raparing and shoeing horses, we have ironed one cart and era working on another. I will tell you about our night school. It commenced October the first 1879, and continued until September twenty-sixth, 1880. Our teacher was a graduate of the school. He would teach from two to two and entered the Middle class and all the rest entered the Junior. They seem to do as well as the students who were in school last term. The boys who worked out last term some worked on the farm and some worked at the mill. The students in the school used to laugh at the night students and tell them they

could not get in the Junior class, but when vacation was over and school commenced the "Pucky class," as they were called, showed that their night school was not a mere name. They all came up and stood the examination like men. Gen. Armstrong promised the boys who worked out he would give them two weeks vacation and they could go home if they liked, so I went home on the sixth of June, and came back on the second of July. While I was home I went to church on Sunday morning and went to Sunday school in the evening. I liked the sermon very well and also the Sunday-school. The children seemed to be interested in their lesson and their parents seemed to encourage their children all they could, and I was glad to see it. After Sunday-school was over, the superintendent of the school asked me to say something to encourage the children. I expected he would call on me so I prepared a short speech before I left school as I knew what would suit them best. I received a letter from home a few weeks ago stating that nine boys have gone to school from that town. Two of them wanted to come to this school, but they made their application too late. The school presents a somewhat different appearance in what it has heretofore. Several new buildings are being erected. The Academic Hall which was burned last term is now being rebuilt and is nearly completed. The saw-mill which was heretofore incomplete is now finished and will soon have room to accommodate a number of students. Another building is being built near Virginia Hall for the purpose of an office. I am now in the Middle class. When I look back and think what my parents would have given to have had this opportunity of going to school I can hardly find words to express my feeling to you for your kindness for providing for us our tuition.

Yours Respectfully,

S.

FROM A SENIOR GIRL.

Hampton, Va., Jan. 12, 1881.

Dear Friend:

I shall now try to tell you something of the place in which I live, also a few things about the school. I cannot write any thing interesting about my vacation, as I would like to do, because I was sick all the time. I live in a little village about one and a half miles from the school. I have been living here five years, and you would be surprised, I know, if you could see the change of things in this time, especially in such a small place, it has improved greatly. When I first moved here it was quite a country home, but now it is almost ready to call it a home in a little town. It is a very nice summer resort, consequently a great many people come here in summer to take advantage of the bathing and other things that are inviting to those who are inhabitants of hot cities. I think the number of inhabitants of this place is from four to five hundred, but about this I am not sure; it is simply what I think of it. The chief occupation of the people is farming, though there are others who are engaged in different kinds of work. There are in my little town two churches, one colored, the other white, two hotels, several private boarding houses, three shoemakers shops, six grocery stores, five or six dry goods stores, and quite a nice market recently finished. We have a very good public school too, known as the Butler school; it is on the grounds of the Normal School, which owns the building, but gives the use of it to the town for a free colored school, only appointing the teachers. About two hundred children attend this school, and there are three teachers, each having a room of his own, in the room where the most advanced scholars are I think the number is seventy, in the next room about eighty, and in the next where the very small children are, about fifty. Each teacher has as much as he can do to keep them all busy. I think the Normal school numbers three hundred, quite a full school this year. A great many improvements are now being made on the grounds, there are three buildings going up, viz. the rebuilding of the Academic, the Saw-Mill, and General Armstrong's office with the Library above. After these buildings are finished they will be quite an addition to the beauty of the place. General Armstrong's office is being erected through the kindness of some of his friends. The Academic Hall which was destroyed by fire is now going on nicely, and we expect soon to have the pleasure of having school in it; it used to be our school for recitations, but since it has ceased to exist, we would have had an inconvenient time as to where we should recite. If General Armstrong had not given us four rooms in his dwelling house, and we use Virginia Hall also; this is where the teachers and school girls reside. We have a class of forty seven to graduate this year, and I am happy to add that I am a member of this class. I feel more than grateful to you, kind friend, for paying my tuition for me, and I hope you will accept my thanks, though they are very poorly expressed. May the good Lord bless you is the earnest desire of

Yours respectfully, E.

## SKETCHES OF MISSION LIFE.

No. V.

BY MRS. C. A. ARMSTRONG.

## EXPERIENCES IN MICRONESIA.

It was a general custom among the natives to exchange names as a sign of friendship, at the same time exchanging gifts of coconuts, bread-fruit, wreaths of flowers, etc., and promises to assist each other in time of need. Between two individuals who had done this, there would be somewhat more intimacy, and although they would still steal from each other, it was with a little moderation. A son of the chief Hape, had given Mr. Armstrong his name, Yokelma, and had in return taken that of Limalakaka, (Strong-arm) while the woman Tilihita had done the same with me. As I had succeeded pretty well in my sketch of Papatuti, which had been admired by his friends with vociferous words and gestures, I did not find any difficulty in getting others to sit for me. Somehow the remainder of my paints had arrived the changes and protracted journey to the tropics, and though why I had brought them at all, I could hardly tell. I now found out that they were human beings. In color, of Tilihita, Yokelma, Koko, and Tamsihitu, a chief who wore as a head dress the hair of his victims. As they stood or squatted before us, it was hard to realize that they were human beings. I should have felt that I was putting on my paper, the likeness of some strange animal, only that the work required some changes, more as well as physical.

## RELIGIOUS ENCOUNTERS.

After we moved into our new home, the house which we vacated, (Hape's) was arranged as it had been before our occupancy, and used for religious meetings. The people would come together and squat around the stones, when the preacher would lecture them to be quiet. To this there would be a general assent, and at the same time a general elbowing, and ordering of each other to be quiet, which would end in universal confusion and laughter. A word from the Chief of the Sandwich Islands, under such circumstances, would have made the people tremble with fear, but here there was no such person. In the midst of the service, their dandiness would twinkle with mischief, and in some shape or other, they would manage to get up a disturbance. I remember once when the meeting was under a big tree, a signal was given, and with a yell and a rush, the congregation left the preacher, and ran to the water which was near by. The preacher followed to see what the excitement was that was so much more attractive than the preaching one found that it was particularly large flying fish.

It was not unusual for them to cry out in the midst of a sermon, when told of God and of his power, "You lie, your god is good for us, and ours is good for us." They were inclined to ridicule, and gave us much trouble in that way. We had given a black coat to a man who had lost it, and promised to his friends of both sexes, and one Sunday a young man clad in this coat, with no other garment, appeared during the services, just outside the house, where all could see him; and so perfectly imitated the motions of the minister in preaching and praying, as to excite the risibilities of others than the natives.

On another day, a Saturday I think, a man donned the black coat, borrowed a tin book, and went through the valley from house to house, telling the people to be sure and go to church on the following day. The consequence was a greater rush, which probably delighted the author of the joke.

## NATIVE CHARACTER.

It is, as can well be imagined, impossible to describe in detail, the daily life and habits of these people. Decency forbids even the mention of much that we saw and heard. At times we could almost have wished our eyes to be blinded, and our ears deafened. Their superstitions and "taboos" were numberless; and women especially were kept under many restrictions. They were not allowed to eat with men, and many kinds of food, such as chicken, fish, bananas, etc., were entirely forbidden them, though they would get them and eat, when they could do so unseen. Both sexes spent much of their time in the water, being almost amphibious. A mother, swimming with her baby on her back, was a common sight. Even in their sports they were cruel, and though they seemed fond of the young cattle we had brought with us, were very rough with them. A stout man would grasp the tail of one of the calves and run with the poor frightened creature, while a crowd of men and women followed shouting with delight at the performance. Their dances too, the hula-hula, were wild and rude, and always accompanied by stamping of a sort of drum, and a monotonous chant, not unpleasant to bear.

When any man among them who professed to be endowed with supernatural power, died, there was great excitement, for in addition to their drunken revels, feasting and dance-

ing, it was considered necessary that the gods of the gods should be appeased by offering them a human victim. Such an one died in another valley, among people who were at enmity with the natives in our bay, and great excitement prevailed, because it was supposed that the victim would be sought for among our people. They watched every night on the sea shore, as it was customary for their enemies to approach in canoes with muffled ears, land softly, and enter a house where all were asleep, grasp a victim, and run with him to the boat. A report was circulated that a missionary would be taken, as the natives all envied Tilihita his possession of these riches, but we escaped and heard nothing more of the matter.

I had been told that the natives were much afraid of whistling, believing it to be evidence of the presence of ghosts, which they feared. So one night when I was weary, and unmoved by a roomful of visitors, I turned away and softly whistled, with most satisfactory results; my room being so quiet that I was undisturbed. Once when walking with my husband, past a house where idols were kept, which was as usual open on one side, he asked if I might enter. "No!" he said, with the reply, "I will die if I go into that house." I then said, "I will not enter without your consent, but will you stand by and see me enter and die?" "Yes," they said, "you may enter, but you will die." I went in, walked leisurely about, looked at the idols, and came out. The men gazed; I said, "Here I am, not dead." Their speedy reply was "You are a white woman; one of our women would have died."

## WAR.

When war was proclaimed between the tribes in the different bays, men climbed to the top of the hills, and shouted to the natives beyond, that they were ready to fight. This proclamation would be passed from one to another, with much boasting and shouting on both sides, though they were really great cowards.

They had a few muskets which they managed very awkwardly; but their spears and clubs of iron-wood were used with some effect, although few were injured. After the fight, peace was proclaimed from the hills in the same way, and the enemies met together, and had a time of general feasting and amusement. Fighting and feasting alternately, seemed their joy and delight.

## HAPE'S DEATH.

The poor old chief was consumed with disease, and angry with us because we could not cure him. As soon as he died, his funeral ceremonies began, and although I shudder at the very remembrance of them, I will try to describe them in detail, for few people can have had such an experience as we were then called upon to pass through.

His body was placed in a trough, similar to a canoe. Some ornaments were in his case, a long string of whale's teeth around his neck, shells, dog's teeth, and human hair, on his wrists and ankles, with white and red bark cloth fastened over the whole. On his head was a large spreading ornament, of the long tail-feathers of some bird. This trough or coffin was placed in the house in which he had been living, and against the side near Hape's house was fastened a roasted and put made of bread-fruit, for his soul to feast upon. His principal wife sat on the floor, near the body, and ate and drank there, until the putrid carcass was removed. During this time the terrible sound was prolonged into a hideous wail, that seemed as though it issued from the regions of despair. At its summons, people came from all parts of the bay, and from other valleys, bring preparations for a general feast going on all the time.

A large number of men and women set together on the ground, chewing the sea root, and ejecting it when thoroughly masticated into a canoe which lay beside them. When a sufficient quantity was ground in this way, water was poured on and it was left to ferment, by which means it became an intoxicating drink. Other natives were occupied in roasting pigs and bread-fruit, while some wailed day and night. Women gashed themselves with shark's teeth or stones, until the blood streamed out, and in some cases knocked out their teeth. When the feast was ready, they anointed themselves with oil, put on their best attire, and commenced a general wailing or chanting, accompanied by an incessant thumping upon drums made of a piece of a hollow tree with fish skin drawn tightly over one end. They would also strike with the palm of one hand on the flesh under the opposite arm, producing a sound which echoed from the hills. It was noisy, drunken, lewd, noisy, lasting for several days and nights, and though I ventured out among them once with my husband, I soon returned from the loathsome scene, if words are inadequate to describe, even if decency would permit.

As so many people were collected in and around the house where Hape lay, it was thought well to attempt to hold a religious service. The permission of the wild multitude was obtained, and for a while the revelry was suspended, and they might listen to the teachers. The stench, however, was found to be so offensive that the services were speedily ended, when the revels were at once resumed. Sometimes a breeze would bring the infected air to the mission house, and make them almost unbearable.

When the body was entirely decomposed, it was taken to a stream, where the flesh was washed from the bones, and they were laid on a pile of stones to bleach in the sun, for the dead was now buried.

## MORRISON'S DEATH.

In the midst of these exciting scenes, a native came one night for Mr. Morrison to go with medicine to Morrison as he was sick. It was a dark dismal night, made doubly so by the doleful groans of the "couch," and all the surrounding circumstances. There was some doubt as to whether Morrison was really sick, or whether the sending for help was merely a trap. With one of the other missionaries, Mr. Armstrong started out, leaving with me my husband John for a protector, though my fears were more for my husband than for myself. After a while he returned in safety. Morrison was dead. The next day, his body was taken to a grave, and the body, with mats wrapped about it, was lowered into it. Some friends threw in pieces of baked pig, but before the grave was closed, they were quarreling over the few articles left by the dead man.

Morrison's own account of himself was that he was of English birth, and had been on the island only seven years. He was certainly a complete heathen in all his habits, and spoke the language with such fluency, that he was often consulted by the missionaries.

The eight white men whom we found on the island, were all living just as the natives, and there is no doubt that the influence of such men is a greater obstacle to the progress of Christianity and civilization, than is heathenism itself. They used sometimes to come and hear sermons, and were frequent listeners, especially at meal times, but after Morrison's death, it was satisfactorily ascertained that he had been consulting with natives to destroy the missionaries.

## VISIT OF REV. WM. OSMOND.

One day there was great shouting, "waka, waka!" and when the vessel he was in sight, we were delighted to find that it was a schooner from Tahiti with an English missionary on board, and a number of natives. It was indeed a pleasure, once more to welcome a Christian friend, and certainly him as a guest, and the intelligence which he brought us had a very important influence upon our actions.

The English Mission at the Society Islands had received information from England, that they were about to send out missionaries to the Marquesas Islands, and that the field was already occupied. Mr. Osmond came as a delegate from the Mission, to say that if the American Mission already there, would relinquish the station, they would occupy it; otherwise their new men would go elsewhere.

We endeavored to look at the question in all its various aspects, and to consider our own position as carefully as possible. It was evident that the report as to the population had been greatly exaggerated, and that the natives who were within our reach, were wild and warlike. Our supplies must be obtained from whence white ships, as to get them from the Sandwich Islands, Cape Horn was too expensive, and whale-ships were a most uncertain dependence, as there were few inducements for them to call at Nuhiwa. At the Sandwich Islands, more teachers were needed, for the people were anxious for instruction, and instead of a few hundred in Nuhiwa we would have access to thousands in Hawaii. On the other hand, the English Mission at Tahiti kept a sailing vessel to run from one station to another, and the Marquesas mission was so near them, that it could be cared for regularly, the knowledge of which would considerably restrain native violence. If we left Nuhiwa, English missionaries would take our place under altogether more favorable circumstances, while we should be free to work in a field where we were sure greater good could be accomplished.

So, after much serious consideration, we decided to return to the Sandwich Islands, and Mr. Osmond's cheering, pleasant visit came to an end.

## VISITS OF WHALE SHIPS.

In the spring, our life was made somewhat less lonely by the visits of occasional whale ships which touched at the island for wood and water. While it was often pleasant to feel that we were in this way brought into a sort of connection with civilization, still it is a painful fact that the majority of the men on

these ships are thoroughly unprincipled, and their visits increased, if possible, the immorality of the natives. The result of the presence of a whale ship was to increase the demand for medical aid among the natives, by reason of the diseases so awfully propagated among them, to cause a direct decrease of the population, and in many ways to add to the darkness of heathenism. Alas for the consequences which have been left on the bleak shores of Patagonia!

To the honor of some men be it said, that this dark record had its gleams of light. Many a noble heart throbs under a sailor's garb, and the conduct of some of our visitors was all that we could ask. Some of the captains and men were kind and friendly with us, and seemed pleased to partake of our plain fare, and to sit at the table spread in the midst of this wilderness of pollution. The mate of one ship, seemingly in a dying state, was brought on shore, placed in a room partitioned off from mine by a curtain, and nursed back to life.

It was difficult sometimes when we had these guests from abroad, to get up any palatable dishes for them, and well do I remember our "custard pie," which were always eaten with approbation. I made a greater by punching holes with a nail through a tin plate. On this I grated some of our fine, large coconuts, and as our supply of cow's milk had to be saved for the children, we had no eggs. I seasoned the milk of the nut as well as I could, added it to the grated meat, put it into a crust shortened with the fat of salt pork, and baked it in an iron kettle. It was, really, an edible dish, and we reserved it for great occasions.

## AN ENGLISH CAPTAIN.

Now that we had decided to leave, it was necessary to do so as soon as possible, and this was not at all an easy matter. Many of the sailors believed that to take missionaries on board would bring them bad luck, but finally a good English captain volunteered to assist us. He succeeded in obtaining the reluctant consent of an American captain, to take us to the Sandwich Islands, where he was bound; though he refused entirely to take our goods, which was of course a great inconvenience. The Englishman then kindly offered to take our effects to Tahiti, and ship them from there to the Sandwich Islands. This necessitated a long delay; but it was the best that he could do, and as the vessel was to leave soon, we were forced to a quick decision.

So one night our little windows were darkened, and the night was spent in packing and preparing our few possessions. Sailors from both ships assisted, and the next morning saw our goods safely on board the English ship, with the exception of the few absolutely necessary articles which we were forced to take with us. The news of our proposed departure soon spread, and the natives gathered round us with spears and clubs, with the evident intention of attacking us. Every precaution was taken to conciliate them; we gave them presents, and told them as kindly as we could, that as they did not cure for instruction, it was best for us to leave them. In time, they should learn to care for knowledge, and perhaps other missionaries would come to them. In the meantime, our houses were left to them, and they were certainly none the less obedient, and they seemed to care. They asked that Little Hape (my boy) should be left with them, promising that some time or other, they would send him to his parents in a big ship. I told them that he could not live on their food, that he needed my care and love, for a long time to come, but perhaps when he was a man, he would return to the land of his birth and teach them, if they still wanted him. They shouted, clapped hands, and said "motaki, (good) he may go." The air resounded with "Kanoa Koto" (good bye) as we women with our children left the shore. The men remained to bring some cattle for use on board ship, but at last they too were safely on board, and Oh! what a sense of relief filled each heart.

It was a critical time, for the natives were like friction matches, ready to explode on the slightest provocation; and when the sails were spread, and the shores of Nuhiwa, receded from view, we gave thanks to God, that during a residence there of eight months, he had saved us from the fury of that heathen race.

## OUR DEPARTURE.

In a few months two English missionaries, with their wives, took the same station. The women remained a short time, and were then sent away by their husbands for safety. Then my step a little longer, but being convinced that health and life were a vain sacrifice among such a people, soon for the Society Islands, where the inhabitants had never been so savage. Some years after, the French became ambitious for territory, and grasped Tahiti in a most inglorious manner. They took possession of Nuhiwa, fought with and destroyed many of the people, built a fort, and attempted mission work, but I believe with very limited success.

## A TRIP

On taking of the state of the Bay, we people "Inauguration in everybody colored girls, self, and no vacant places vice and two woman with by one of the by the other and wanted to others; and a girl held travelling the girls first on the motion of The village, in, region.

## A TRIP TO THE SHENANDOAH VALLEY.

BY ORRA LAMBORNE.

On the 2nd of March, I set out on a long talk of visit to my old home in the Valley of Virginia. The car I entered at Lynchburg station was pretty well filled, and many fears were expressed, that when the train from the South, for which we were waiting, came up, we should be greatly crowded, as so many people were coming from everywhere, to the "inauguration," a word which seemed to be in everybody's mouth. There were two colored girls in the car, each in a seat by herself, and no one seemed disposed to fill the vacant places. At last a white man with his wife and two little children came in, and the woman with the baby in her arms, sat down by one of the colored girls, and the husband by the other. The children were restless, and wanted to pass from one parent to the other; and finally the men civilly requested the girl beside him, to sit by her dark fellow traveler, and let his wife sit by him; to which the girl at once readily consented. A few years ago the presence of colored people in a first-class car, except as servants in attendance on their employers, would have excited a commotion in Virginia, but no notice is now taken of such incidents of freedom.

The ride from Lynchburg to Charlottesville, is, for the most part, through a desolate region. In Amherst and Nelson Counties, little but rough craggy hills and bare fields can be seen from the car windows. At long intervals, an old fashioned farm house with the mud-deubed, wood chimneys, windowless cabins, once occupied by the slaves, now deserted, and the ruins, came into view, and gave the impression of a God-forsaken land, unlured by nature, uncherished by man.

But the newspapers tell us there is hope in the near future for this former looking district. These rugged hills are full of fine minerals, which are fast attracting the attention of capitalists at the North and West, who are making large investments here, and who declare that the Virginia iron, with excellent coal close beside it, is better than that produced in another section.

At a public meeting held lately in Lynchburg, the editor of the "Iron Age" expressed the opinion that our city would ere long become a second Pittsburgh, and predicted for her people, an era of prosperity, far beyond anything known in the pinkest days of the slave system.

For grain, much of this region is valueless; but on the creek-bottoms, and in the little valleys that nestle among the mountains, little tobacco and they are grown, and fruit yields bountifully. The cherry, the apple, and the peach, are sent all over this country, and to England, and the vineyards yearly planted on these many hill-sides, send their juicy products to distant markets.

As we approached Charlottesville, the soil looks more fertile, the fences and buildings improve, and gradually the dome of the University comes in sight, and we feel that we have entered the land of the living. The glorious Jefferson lived, and wrote, and dreamed and hoped for the young Republic, he loved so well. West of the town, we are soon again in the mountains, and as the train just overcomes the rough stretch of borderland between "Old Virginia" and "the Valley," the traveller, now buried in the bowels of the earth, as we fly through a tunnel, now gazing from dizzy heights on peaceful vales dotted with field and woodland, glistening streams and sleeping hamlets, rests calmly in his cushioned seat, and takes little thought of the gigantic efforts of science and industry, which has "removed mountains" and embellished space, to give him this luxurious journey.

What wonderful changes Virginia has seen! What throes have convulsed her bosom since Spottwood, with his "Knights of the Golden Horseshoe," stood on these mountain-tops and looked over the pathless forests, inhabited only by the wild beast and the fierce Indian, in their first exploration of the Shenandoah Valley.

Arrived at Staunton, I rested while at the comfortable "Virginia House," where some months ago, Fred. Douglass was entertained, on the occasion of his visit here to speak of the "exodus," and then took the B. & O. train for Harrisonburg. Here again, I met the excursionists to Washington, chiefly colored people. I talked with some of them, and found them very merry over their trip, and apparently cheerful and contented in their lives. A chatty little black woman, sitting next me, gave me a full account of herself and her proceedings. She and her husband owned what she evidently esteemed very valuable property. He worked the farm of a neighboring gentleman, on shares; they got their fuel and most of their food from the farm, and always had some wheat and corn to sell. She took in washing, usually hiring an assistant. "Staunton is a splendid place for washing; the school girls, especially the rich

ones from the South, have so much fine washing and pay well for it."

Staunton has five or six hundred girls in her female seminaries, so it may be supposed there is a deal of washing to be done there.

As we approached Harrisonburg—a charming handsome town of some 3,000 people, surrounded by one of the most fertile and prosperous districts of the state, my heart throbbled with the anticipation of beholding again my dear ones, and the loved scenes of my childhood.

From colonial days, my people have lived in this fair valley. In the cemetery on the green hillside, which overlooks the town, five generations of my kindred are sleeping; each hill and dale, each tree and stone, bears for me tender associations of joy and sorrow; remembrances of childhood passed in days of peace, of youth spent amid stormy scenes of civil war, of womanhood saddened by weary efforts to reconcile the luxurious tastes and habits of life under the old regime, with the stern necessities brought to us as we began life again in our new South, regenerated by its baptism of blood and tears. I felt as if in a dream, as the green meadows, and rolling uplands of my native land rejoiced my eyes, and gazed about me helplessly, wondering when the train stopped, and familiar voices called me by the dear old name of my childhood—hardly know to the strangers of my new home. I have only been in the valley for a few days, and I am dying to visit, chiefly spent among my own relatives, as family interest drew us together, and greatly enjoyed this stay of four weeks, which gave me time to look around, and see the people of the country, and note the changes time is making in the land. When I reached Harrisonburg, two subjects of interest absorbed the village center of the Valley. The Methodist Conference was open, and "Sam Purdy," a famous traveler just presented by Jas. R. Keen of New York to a citizen of the town, was expected by every train. "Sam Purdy," has trotted a mile in 2.20, has won many a race, and has been much, been greatly admired, and once sold for \$50,000, has now at the age of thirteen left the turf, and will in future be kept for raising improved horses in Virginia. The next day was Sunday, and crowds of comfortable looking, well dressed people, fresh from the country, poured into the town to attend the Conference. It was pleasant to see the strong feet of the Valley farmers, after the lean and ragged miles and oxen which are always to be seen in the Lynchburg district, where a good team is a rare spectacle. About 6 o'clock, a telegram was received by "Sam Purdy," the owner announcing the approach of the distinguished stranger, who shortly arrived in a special car, and the majority of the whole population at once adjourned to the Railway station, where many of them forgot all about the Conference, and after a few were too late for church. For several days the town was full of preachers and people attending the services. All the Churches in the town were open for the use of the Conference.

Twice on Sunday, and several times in the week, some of the white ministers preached at the colored churches, the colored brethren uniting with them in offering prayers, giving out tracts, etc.

I made many inquiries as to the condition of the colored people, and heard gratifying accounts of the progress of those whom I had known as slaves. Nearly all of these colored people, most of them too independent to need to go into service.

The young people are scattering all over the Union, attending schools, teaching, doing business; one as a member of a band of public singers, another as an aspirant for some public office, with a good prospect of success.

One of my pleasures in a visit "home," is in seeing the old family servants, and in talking over with them efforts of mutual interest, present and future. In one case, four generations of one family went representatives to see me; among them a Hampton graduate, who was born my slave, and is now a sensible well educated teacher in the public schools of our native country; highly respected by all, and doing a good work among the people.

My young teacher brought two of her pupils, her sister's children, six and seven years old, to see me, and made them recite some of Mccall's grand poems, which she had taught them, and the little creature rendered the recitation in wonderful style. The family are possessed of much talent, and I have great hopes for those so fortunate as to grow up in an era of education. The Hampton teacher expressed herself as well contented with her life and prospects. The county schools hold only short terms, but the county director has arranged to have the teachers go from one school district to another, thus giving them employment for eight or nine months of the year. In her present location, she tells me, she obtains comfortable board with a private room for \$6.00 per month, in the family of a Negro blacksmith. This man affords one of the few cases I have known of a Negro going from town to country to live. The smith had owned a snag property in Harrisonburg, but finding his trade unremunerative there, sold

his house and bought a small farm in the country, where he lives comfortably, does a good business, and gives many new ideas to his rustic neighbors. The young school teacher, who is a nice looking, merry, and intelligent young man, tells me that she finds the white people in the rural districts, where her work lies, kindly disposed,—sometimes visiting her school with curious interest in the methods of teaching. Occasionally they ask her to their houses, probably to examine her clothes, which I noticed were of good quality and neatly made,—but never invited her to take a meal or spend the night, countries almost universally shown by white people, in country neighborhoods to each other.

The prejudice against "eating with Negroes" seems one of the most deep rooted in the South, but since Fred. Douglass has been entertained at a Virginia hotel, with the entire approval of the community, we may predict that this like other prejudices produced by slavery, will pass away in time.

During my visit, I talked with the pastors of both the colored churches, and learned from them that in spite of the hard winter, which had forced many more people than usual to seek aid from the authorities, the churches were in a prosperous condition; the Methodists having recently purchased a large brick church; the frame building erected in the first days of emancipation, being now much too small for the congregation.

Rev. Mr. Robinson, the Methodist preacher, is a man of large experience, and in telling me something of his history, related one of those queer stories, one often stumbled on among the Negroes.—He says his great-grandmother, was one of the white women sent from England, in colonization days; and was sold for a term of years, to a Virginia planter, the ancestor of the Curtis family of Arlington. A mislaid daughter of this white slave, was the nurse of General Washington in his last illness, and is mentioned by name, in Sparks' life of Washington. In connection with her services, and the valuable information in regard to the first President, which she furnished to the historian, Mr. Parke Custis set her free, late in life; and gave her a pension to support her.

His great-grandfather, he told us this story, and as he says, received his freedom in "a historical manner." The rest of his family remained slaves, until President Lincoln set them free—which I think future generations will also consider a "historical event."

Harrisonburg is an orderly little town, except on Court day, which is apt to be a turbulent as Dennybrook fair, being the occasion for horse-trading, the meeting of people from all parts of Rockingham and other counties, political discussions, and whiskey drinking! On such days, ladies cannot appear in the streets, and there are frequent disturbances, requiring the appointment of extra police.

One of the regular officers of the village, is a young colored man, with whom I had several opportunities of conversing, and learned from him, that the number of arrests were about equally divided between the races, that the white people recognized his authority, in token of which he always wears his official badge, and whites too more object to being lagged off to jail by him than do the people of his own color. When I asked if he thought the whipping post an effective remedy for law breakers, he said he saw no other effect from that to make the thieves go somewhere else to steal; a person who had been whipped in his bellwink, being seldom caught there again. Still he did not think flagellation reformatory; he would incline to imprisonment for all offences, if it were not that in cold weather, the lowest class of criminals were but too glad to find shelter in jail,—on the whole he thought imprisonment for a long term, with hard labor, the best discipline for idle and lawless characters.

I might continue my notes on the Valley much longer but fear that I have already occupied too much of the valuable space of the "Workman." I will bid adieu to your readers for the present.

## MAJORITIES AND MINORITIES.

For the first time in several years, the majority of both branches of the Legislative Department of our Government are in political accord with the executive. To be sure this majority is a small one; nevertheless, it is a majority. To many no doubt this is a matter of unqualified satisfaction; but to those in power who think all on the subject, the satisfaction must be tempered with this thought. Whenever public action be taken, the present dominant party will be held responsible. Party lines are so close together, and the minority lack so few of being a majority in the Senate and House, that the majority cannot afford to make one mistake. To combine two of Cardinal Richelieu's aphorisms to the conspirators, it may be said to the majority, "Loose not one single thread." "The headmen stalk behind thee."

For a party to have on its shoulders the welfare of this great nation is no small burden,

stalwart though they be; what succeeds will be praised, for nothing is so successful as success; but what fails will be booed by millions of tongues from the Gulf to the St. Lawrence, from the Pacific to the Atlantic. In two years hence those bootings may easily crystallize into ballots, and the present majority in the Legislative branch become a snarling or whimping minority.

The power of the executive of the United States is very limited; he may suggest laws; but cannot make them; and is bound by oath to carry out laws duly passed, even if he utterly abhors them.

Considering the various opposing elements of which the present dominant party is composed, it is almost certain that the edict leaders of the minority will have every throwing firebrand, some of which will surely start a spark. The only salvation of the majority lies in the fact that the minority contains about as many elements of discord as the majority, and fire is best with fire fought.

The minority in the legislative branch have fully as much to do as the majority. They must sleep on their arms, and at every weak point of the majority they must hurl a lance. For the country at large this state of affairs is a blessing; for every public officer should be constantly and vigilantly at his post. With so evenly opposed forces, petty fences of partisanship are likely to be disregarded, while the heights of public good will be sought by both parties. The result must be that our present administration will be more national than sectional. The majority cannot afford to lose a point, still less can the minority. National questions are bound to come to the top, and miserable party "spats" sink to the bottom.

If this be the political outlook, it behooves all citizens to take heed to their political conversations, lectures, newspapers, etc., reach beyond petty personalities, and up to national questions; of the latter there are enough in all consciences, and any of them are big enough to swamp the petty policies of petty partisans.

The Terrell, National Banks, Refunding Navigation Laws, Monopolies, Mr. Monroe's Doctrine," etc., etc., are quite sufficient to gross public attention, and need all the time and brains our legislative department can possibly afford.

The very closeness of party lines on most questions is a hopeful condition, for inevitably in the decay of the old will find the growth of the new. The partisan questions and war cries of even a generation ago are to-day incapable of raising even a ripple of excitement. Times change and we must change with them, or we will be left as heracles on rotten logs, or as rare fossils with a market value only on account of our scarcity.

Unless all the signs of the times tell, nationalism is to take the place of sectionalism, and questions of fact, out of letitudes and loagitudes, will engross political attention. This fact is as important to the members of parties as to their representatives in congress, and it is safe to predict that in 1883, no congressman will be retained, who in this congress proves himself "hide-bound," or too small to digest large questions.

The majority and minority must both struggle hard for converts, and the party with the most truth to offer will likely succeed the better. The time for feeling fallen on falsecies is near, but even at least the dispensers thereof will soon find themselves dispensed with. T. T. B.

## SEVEN MONTHS WELL SPENT. MORE ABOUT THE "PLUCKY CLASS."

Seven months ago, two young men, Julius Murray and Joseph Haws, came here without money enough to pay their way in the day school, so they have been attending night school and working in the day that they might earn money with which to pay their board in school next year. Murray began to work at the blacksmith's trade and Haws at the wheelwright's trade. They have so far mastered their trade that, a few weeks ago, with a little aid, they made a first class cart. Murray doing the iron work and Haws the wood work. Neither of them ever worked at their trades before coming here. They have not only done well in mastering trades that will be worth every thing to them in the future, but both have been earnest and faithful in the night school and are doing well in their studies. Why could not the thousands of young men who hang around the streets of our cities imitate Murray's and Haws' example? n. t. w.

WHY not on reasonable terms 18 acres of land on Hampton River, opposite Normal School. For terms etc. address Box 20. Hampton, Va.

## At Home.

### THE FAMILY.

The family is God's institution, and so he honors and guards it. He intended it should be the seed-plot of society. Let all the families of a community be what they should be, and the community will be what it should be. This is according to the natural course of things; and then we have the promise of God for it: "Train up a child in the way he should go; and when he is old he will not depart from it." Let the spirit of the family be one of industry, economy, kindness, cheerfulness, temperance, purity, liberality, and godliness, and the promise of God will be made good, however unfavorable the circumstances may be by which they are surrounded. When three young men, more than three thousand years ago, were cast into a burning fiery furnace, they were not in favorable circumstances, but they came out with no small of fire upon them. Mark Hopkins, D. D.

### WHO IS A GENTLEMAN?

What is it to be a gentleman? Thomas Hughes says that it is to live a simple, manly life, to speak your own thought, to play your own way, and to do your work, whatever it may be; and he adds that "you will remain gentleman so long as you remember to give you have to sweep, crowning for a livelihood." Frederick Spielhagen defines the gentleman as one in whom the vigorous and the delicate are happily united. "The soft, the refined, that which comes from frequenting the society of women of culture, lies in the 'gentle'; the strong, the firm, the stern, that which comes from battling with men, lies in the 'man.'" Still another recent writer thinks that the character of a gentleman is denoted by a true and fine unconcernness: "The true gentleman is never quick to take offense; not seeing any sufficient reason why any one should want to affront him, he is not prone to detect an intended slight in every piece of careless behavior, or a studied insult in every thoughtless expression. It is almost enough, of itself, to mark him as a fine and true character,—not that the gentleman lacks fiery courage, but that he does not go around in a perpetual readiness to be insulted or slighted. To miss the title of gentleman is sure to be the fate of those who go prowling in search of something to which to be hurt." S. S. Times

**OTMEAL.**—From the earliest times of which we have any record, oatmeal was the staple food of Scotland. A French officer who accompanied the Scottish army in an invasion of England, that probably which terminated disastrously at Flodden, told the historian Brantome that the Scotch were the most easily victualled soldiers in the world. Each carried a bag of oatmeal, and when he came to a stream, mixed a little of it with cold water and made his porridge. This preparation is what the Scotch call drummick, and he is sometimes resorted to when boiling water to make "parritch" cannot readily be obtained. Burns speaks of both of these simple preparations of oatmeal in his poems, and also of an other called cakes. A rich kind of short bread is called "Scotch cakes," but that was not what Burns meant when he addressed "The Land o' Cakes." The real Scotch cakes, which are to be found all over Scotland, are made of oatmeal damped with water, well kneaded, rolled out and hardened on a griddle, or, as it was called, griddle, being a round iron plate hung above the open fire.

If children are reared on oatmeal and outdoor exercise, the constitutions thus formed are likely to be fresh and vigorous at adolescence and then, and they will be all the more so, if oatmeal porridge has formed a part of the morning meal through life. Not only is this about the most wholesome dish of the whole day, but the pleasantest and cheapest, for a handful of meal swells so as to make a large bowl of porridge.

### COUGH SYRUP.

This simple and inexpensive remedy has been used with much benefit in Hampton Normal school.

1 oz. Thoroughwort, or Bonset, 1 oz. Hoarhound, 1 oz. Flaxseed, 1 oz. Liquorice Root, 1 oz. Slippery Elm.

Simmer altogether in one quart of water until the strength is nearly exhausted; then strain carefully, add one pint of best molasses, one half pound of loaf sugar. Simmer them all well together, until quite the thickness of syrup; add the juice of two lemons, and bottle tight. If desired to be kept in warm weather, a little spirits can be added. A few doses of one tablespoonful at a time, will alleviate the most distressing cough, and soothe irritation, which, continued, might end in consumption; breaks up entirely the whooping cough, and no better remedy can be found for croup, asthma, bronchitis, and all affections of the lungs and throat.

## Health and Humanity.

### HOW DAME TROT BALKED.

It was not the Dame Trot that "Went to the Fair." With her cat on her shoulder, to see the folks there; but a fat, sleek, chestnut horse that was owned by a physician.

Before Trot came into the possession of Jovial Dr. B., two boys were in the habit of driving her. One very cold night she was taken from her warm stable to go a long distance, and as she showed much unwillingness to go, one of the boys gave her a hard whipping. Then she refused to move.

After that, Dr. B. was told he could have her if he liked. The good Doctor, having confidence in his persuasive powers over man and beast, had no doubt of his being successful with a hally horse. So the first time Dame Trot stood motionless, notwithstanding the necessity of using her utmost speed, the Doctor was equal to the occasion.

He got out of his carriage and patting the horse's head said to her: "Now Trot! you're a fool! you needn't think you can play that game on me!" In this way he talked some time, stroking the horse's head, patting her and seeming to be in no hurry.

Then taking some wintergreen lozenges from his pocket, he held them on his open hand before Trot's nose and said: "See here, old lady! if you'll be good you can have some candy!"

Trot smelt the candy, then turned her head away, as if she were not to be bought off in that manner. Then she took another one of the lozenges out of the hand that held them, then she slowly licked the candy and finding that it tasted good, she ate it all, the Doctor meanwhile waiting patiently until the last crunching and sucking were over. Then he patted the horse's head again, and said: "Now we are going on old lady! as fast as we can go!" and jumping into the carriage he took the reins and Trot proceeded on her way with perfect willingness.

Ever since that day she has served the Doctor with the most devoted affection, proving the truth of the theory that something done to divert a bawky horse's attention will accomplish much more than scoldings, jerking or whippings.

Our Dumb Animals.

### STABLE FRIENDS.

The following case of animal intelligence has been communicated by Professor Schluttenberger of Strasbourg to the *Revue Anthropologique*: A gentleman owning a kitchen garden remarked that a basket which held a quantity of fresh carrots got quickly emptied. He spoke to the gardener, who said that he could not understand it, but would watch for the thief. A quarter of an hour had not elapsed when a dog was seen to go to the basket, take out a carrot, and carry it to the stable. "Dogs do not eat raw carrots so further search was necessary." The observer then found that the dog had business with a horse, his night companion; with wagging tail he offered the latter the fruit of his larceny, and the horse naturally made no difficulty in accepting it. The gentleman seized a stick, and was about to punish the dog for his thieving; but his master stopped him, in order to watch further. The scene was repeated until all the carrots had disappeared. The dog had long made a favorite of this horse. There were two in the stable, but the other received not a carrot.

### A PARROT STORY.

The remarks made by parrots, apparently with pertinence, are sometimes grotesque and astounding—as in the story told of a parrot who was present on board ship during very bad weather, when the sailors knelt on deck in a circle to pray for deliverance. The parrot watched their movements, no doubt, for he correctly remembered the circumstance. It is said the captain came up from the cabin where he had been to examine the chart, while the men were at prayer, and cried aloud, "Leave off praying, you lubbers, and get to the pumps! we're nearing land!" On seeing the pump, the parrot was told to a clergyman, and in due course was placed in the vicar's dining room. The first morning after his arrival there, he saw the servants come into the room one after another, and kneel down to prayers with the family. Polly's memory instantly reverted to the scene on board ship, and he cried out with a loud voice, "Leave off praying, you lubbers, and get to the pumps! we're nearing land!" A bombshell in falling amongst these devout persons could not have put them into a greater consternation than they were put by this irreverent exclamation. —*Animal World.*

## Teacher's Cable.

### ASKING QUESTIONS.

REV. GEO. P. HAYS, D. D.

As a very considerable number of students look forward to teaching as the profession to which they would be disposed to devote themselves, a few articles in relation thereto may not be out of place in a college paper. As questioning is one of the difficult and yet necessary duties of a teacher, we begin with that. It is possible to conduct a recitation without asking questions by substituting for questions commands, but these are only questions in another form. To say "Give the sub-kingdoms in the animal world" is the same as to ask "what are the sub-kingdoms of the animal world?" So it is in every case. These commands will therefore fall into the same classes into which questions fall. These classes of questions are mainly four. The first is questions for information. Here the questioner must indicate by the question what he does know of the subject, and by that bound off what he does not know, so that the answerer may see definitely what to assume as known, and what information to give. The teacher ought not to ask such questions, but to put such questions to his pupils. It is a good discipline, however, for the pupils to be compelled to frame their questions properly. Very often a questioner knows much knowledge, or ignorance, as a good answer.

The class of questions next in order of frequency or infrequency in the use of the teacher is such as are called leading questions. It is often said that a leading question is one which can be answered by yes or no. But this is only the extreme example of a leading question. The true definition of a leading question is one which conveys to the person answering the answer desired by the examiner.

Any one who has attended court will know how often attorneys exhibit no little skill in avoiding questions answerable by Yes or No, and really tell their witnesses just what they want them to testify to. There are, therefore, all grades of leading questions. To ask "What battle at Yorktown between Cornwallis and Washington in 1781 closed the revolution?" is to let the pupil all about it. To ask "How did the Revolutionary war close, is to ask him a question and tell him nothing. When, then, pupils fail in the ordinary recitation work, the teachers are anxious that the pupils ought to recognize the character of the leading element introduced into the questions, as the same thing is made by each new question a little more plain, so that all would know these new questions were a really help, as if the teacher had told them outright.

The other two kinds of questions are those which ought to be the teacher's method in class-room work. The first I call *defining questions*. These are to show the pupil his mistake, awaken curiosity, and give him a hint as to the method of obtaining the desired information. The famous case of Socrates with the boy is a perfect illustration. He asked him the size of a square foot. The lad answered, "One foot." He then asked how large the side should be to enclose two square feet. The lad answered, "Two feet." Socrates now asked how to draw it, and the lad at once saw his mistake. So he went on, telling the youth nothing, but directing his own investigations, till the lad had taught himself a good lesson. In assigning future lessons these questions are of great value. They are not to be answered at once, but are the gist of what is to be found out for the next recitation. They also often serve a good purpose in taking the conceit out of self-sufficient new pupils. It is good service to those who are not aware of their own ignorance to show them how much they do not know. These are also of high value when they are used to call out in buildings and fences has, no doubt, put off the evil day, but at our present ratio of forest and timber denudation the day is not far distant when Pennsylvania will have to draw more heavily than at present upon the timber lands of Michigan and the Northwest. Perhaps an important factor in solution of the problem is an encouragement of this substitute of other metal for wood, and if so, much may be done by the intelligent appeal of your body in bringing the matter to the notice of our people, from whom, in the end, every practical remedy must come.

This question will be assigned to Thomas Mehan, the botanist of the Board, for a careful examination, and report during the coming year; and he will willingly co-operate with any committee that may be organized. While the theories of Mr. Mehan do not freely correspond with those expressed by some of our members, yet we assume that this very disagreement among practical men is proof of the need of investigation on the subject before any beneficial action can be taken.

Washington Jeffersonian.

## Agriculture.

### FARM NOTES.

A crop well put in is half made.

There is no crop raised which yields so large an amount of food and with so little labor as Indian corn.

Potash is absolutely necessary to successful potato growing. The easiest and the best way of supplying it is in the form of wood ashes. It is furnished also in soft coal ashes and well rotted yard or stable manure. Grow potatoes in Malarious districts. Its seed is recommended by poultry fanciers as an excellent food. It is said to greatly increase the brilliancy of the plumage and also stimulate the production of eggs.

It is estimated that insects injure the crops of the United States to the value of \$10,000,000 annually, and it is believed that much of the greater part of the loss might be avoided by preventing the destruction of birds.

A cow ought to be let dry at least six weeks before calving. It is well known that if she is milked up to the time of calving she will be very deficient as a milker, even though she had formerly been a good one. It prevents improvement of condition, from a very lean cow there is not much to be expected.

It is asserted that the dairy products of the United States have twice the volume of the wheat crop.

**CLEAN UP AND WHITEWASH.**—This is the month when all poultry fanciers should make a thorough cleaning. The poultry houses should be whitewashed inside and out; for the inside we would recommend that you use two tablespoonfuls of carbolic acid or a pound of sulphur to a pailful of the wash (this is to kill the vermin); do not be afraid of putting on too much, but apply the wash to every corner and crevice in the building. If you have plank floors, clean them off nicely and put on about three or four inches of fresh earth. Dirt floors should be dug up to the depth of one foot. Wash your windows if you have any in your houses, and if you ought to have them, so that the fowls can see daylight, and in bad weather they will enjoy the confinement of the poultry house much better. Wash the roosts with kerosene oil at least once a week. Take every nest-box and whitewash inside and out, and put in clean straw, sprinkling out some sulphur or loose tobacco. Observe these few rules, and your fowls will do better and keep healthier. —*Planter and Farmer.*

### NEW SOURCES OF PROFIT.

Following is the conclusion of Secretary Elgie's report regarding upon new sources of profit to the agriculturists of Pennsylvania:

### FORESTRY AND TREE PLANTING.

That the rapid denudation of the timber areas of our country is producing serious climatic and physical results can scarcely be controverted, and a practical and efficient remedy for the acknowledged evil is a work which may very properly claim your attention and consideration. We may and do differ materially as to the exact manner in which these results are produced and also, to some extent, perhaps, as to the nature of the results themselves, but we all agree upon the final result. That while our average annual rainfall may not have been diminished, yet its former distribution, and that we are subjected to greater extremes of drought and floods. The time will no doubt come when this evil will in a measure correct itself by a direct appeal to the pockets of our capitalists, but if it is possible, by any means, to hasten this period, it will result to benefit of the State at large, and to no class more than our farmers and stock-breeders, who are the main sufferers by the change to which we have alluded.

The gradual substitution of iron for wood in buildings and fences has, no doubt, put off the evil day, but at our present ratio of forest and timber denudation the day is not far distant when Pennsylvania will have to draw more heavily than at present upon the timber lands of Michigan and the Northwest. Perhaps an important factor in solution of the problem is an encouragement of this substitute of other metal for wood, and if so, much may be done by the intelligent appeal of your body in bringing the matter to the notice of our people, from whom, in the end, every practical remedy must come.

This question will be assigned to Thomas Mehan, the botanist of the Board, for a careful examination, and report during the coming year; and he will willingly co-operate with any committee that may be organized. While the theories of Mr. Mehan do not freely correspond with those expressed by some of our members, yet we assume that this very disagreement among practical men is proof of the need of investigation on the subject before any beneficial action can be taken.

Dealer in  
**STATIONERY AND FANCY GOODS,  
PICTURES & FRAMES**  
in all varieties, at low prices.  
Hats, Caps, Lamps, Groceries, etc., cheap for cash.  
Those call and examine our stock.  
**YANISON'S NEW BUILDING, NEAR ZION CHURCH,  
Chesapeake Township, Hampton, Va.**

Outfit sent free to those who wish to engage in the most pleasant and profitable business known. Everything slow, capital not required. We will furnish you everything \$10 a day and upward night. No risk whatever. Many new workers wanted at once. Many are making fortunes at the business. Ladies make as much as men, and young boys and girls make great pay. No one who is willing to work full to make more money every day than can be made in a week at any ordinary employment. Those who engage at once will find a short road to fortune.  
Address H. HALLITT & Co., Portland, Maine.

### STAR CANE MILL.

Double the Capacity—Cheapest Mill Made—Warranted in Every Respect.  
Manufactured by  
**J. A. FIELD, SON & CO.,**  
Eighth and Howard Sts.,  
ST. LOUIS, Mo.

### BIG GIANT FEED MILLS.

HAS CAST STEEL GRINDERS.  
SIFTS THE MEAL.  
The only Mill that will corn with Husk on without extra expense. The only Mill grinding Corn and Cob successfully that will grind shelled corn fine enough for family use.

**HELP** Yourself by making money when a golden chance is offered, thereby always keeping poverty from your door. Those who always take advantage of the good chances remain in poverty. We want many men, women, boys and girls to work for us right in their own localities. The business will pay more than ten times ordinary wages. No one who engages calls to make money very rapidly. You can devote your whole time to the work, or only your spare moments. Full information and all that is needed sent free.  
Address STRAW & Co., Portland, Maine.

### INDIAN PICTURES For Sale!

Photographic or heliotype pictures, cabinet size, showing the appearance of the Sioux Indian children on their arrival at Hampton, November, 1878, and as they appeared after fifteen months of schooling, sent by mail, for fifty cents a pair. From three to eight Indians in each group. There is also a large photograph 9 x 11 inches, giving an excellent picture of the sixteen Apaches, Pima and Papago youth, with chief Antonito, as they appeared on arrival at Hampton, February 15, 1881. Price sent by mail, one dollar. Apply to

### Hampton Normal and Agricultural Institute

INCORPORATED IN 1870.  
S. C. ARMSTRONG, Principal; J. F. B. MARSHALL, Treasurer.  
Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.  
Terms of admission: a knowledge of reading and writing, and of short and long division.  
Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.  
The institution is aided by the State but is supported mainly by voluntary contributions.  
Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.  
The great need of the institution is a permanent fund.

### FORM OF REQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable &c., &c.  
For further information address,  
**S. C. ARMSTRONG, Principal,**  
Hampton, Virginia.

### HORSFORD'S ACID PHOSPHATE

affords nourishment to the Cerebral and Nervous systems.  
\$10 Outfit furnished free, with full instructions for conducting the most profitable business that anyone can engage in. The business is so easy to learn, and our instructions are so simple and plain, that any one can make great profits from the very start. No one can fail who is willing to work. Women are as successful as men. Boys and girls can earn large sums. Many have made at the business over one hundred dollars in a single week. Nothing like it ever known before. All who engage are surprised at the ease and rapidity with which they are able to make money. You can engage in this business during your spare time at great profit. You do not have to invest capital in it. We take all the risk. Those who need steady money, should write to us at once. All furnished free. Address TRAW & Co., Augusta, Maine.

### BOOTS AND SHOES!

N. McNEILL invites attention of the public generally to his large and carefully selected stock of Boots and Shoes of the  
**Best City-made Work,**  
which I will sell at and below cost. All other goods in my store will be sold lower than ever, in consideration of the time. Please give me a call and see for yourself. Ladies' and gentlemen's work made to order, and repaired neatly.  
**MRS. N. McNEILL, HAMPTON, VA.**

### HORSFORD'S ACID PHOSPHATE In Typhoid Fever.

I have been greatly benefited myself, as also have others, from using Horsford's Acid Phosphate. I have used it to the exclusion of all other remedies, in Typhoid fever, with very gratifying results to myself, and thank you for my patients for so agreeable a remedy.

VOL. X.

HAMPTON, VA., JUNE, 1881.

NO. 6.

THE SWAN.

## FROM SAN FRANCISCO TO JAPAN.

Mr. Wm. N. Armstrong, from whose private letters we have been permitted to make the following extracts, is, as Attorney General of the Hawaiian Islands and Royal Commissioner of emigration, accompanying King Kalakaua in a journey round the world, which, as will be seen, gives him special opportunities for observation.

Steamer Oceania, Feb. 17th, 1881.  
Heavy rain last night, but the vessel is large, and the motion so slight we hardly felt it. There is no better evidence of man's wonderful conquest over nature, than to sit in a large well-furnished saloon, well-warmed, and to dine at leisure on regular courses served as if on land, while we are driving into a head sea, pitching into great waves, with the wind making the ocean white with foam. We are out of the track of vessels, with three thousand miles of water before us, but make slow time as we have strong head-winds. Yesterday was Washington's birth-day, and at the King's request, I offered a toast at dinner, which all the passengers drank standing. The day was memorable in another way. We crossed the 181st parallel of longitude, and in order to keep the reckoning straight, a day had to be dropped, or rather the morning was called Feb. 21st and the afternoon the 22d.

The Japanese tattoo very artistically, and in color and blue colors. The Emperor of the steamer showed me this morning a snake tattooed on his arm, which was perfect; another officer has an eagle, really a work of art, on his breast. In doing it, no blood is drawn, the ink is pricked in with needles, giving very little pain.

March 3rd, (at home it is March 4th.) The President is being inaugurated to-day at Washington, and we shall see to-night, at midnight, the lights on the coast of Japan, the first glimpse of the "Shining Orient." If I were younger, I should say I was about to realize the dreams of my youth.

March 4th, 1 p. m. Yokohama, Japan, and now we are ashore! The Oceania steamed up the bay in the early morning. The weather was cloudy, so that the coast was not well defined, but we caught glimpses of the villages on the shore, and about seven o'clock sighted the ships in the harbor of Yokohama. Then the royal Hawaiian Standard was hoisted. As we drew up to the city, we saw riding at anchor many vessels of war, seven Russians, of which three were huge iron-clads, two French iron-clads, two British and three Japanese war-ships. As we neared them, suddenly and as if by magic, they were covered with flags; fifteen war-ships covered with a glory of bunting. As our steamer came abreast of the fleet, the great guns opened a saluting fire. For fifteen minutes it was a deafening roar of cannon, while vast clouds of smoke rolled away to leeward. The standard and pure discharges from each ship seemed to shake our vessel. The yards of all the ships were fully manned from top gallant mast down, a thousand sailors standing erect, and in line on the spar. And as we passed each ship, the crew gave a tremendous cheer! On coming to rest, two man-of-war boats came along-side and the French and Russian officials came on board to pay their respects. Soon after the Japanese man-of-war boat came up, and six of the officers of the Mikado came on board. With them were two commissioners detailed to receive the King, and extend to him and his suite the hospitality of the Japanese empire. We soon entered the boats. The royal standard was raised, and a steam launch brought us on shore. At the landing place, was an arch of flags, and just as we touched the dock, the military band struck up the Hawaiian national anthem. It quite upset us for the moment; we had scarcely expected this, and I know that I could hardly control myself. What changes! Here was the shining Orient of olden travellers, the nation of a day, its walls of exclusion only down since yesterday, meeting us with our national anthem!

On landing, we were received by two lines of soldiers and entered a pretty cottage house close by. In the parlor, the King received military and naval officers. They came in, one by one, in full uniform, were presented, they bowed low, so did we, and they retired. Wine was then passed around, and the Imperial carriage, that of the Emperor himself, drove up to the door. We entered it and were driven to the Palace through streets lined with people, thousands of men and women crowding on each side of the road, the women with their heads stolid, painted faces, and the babies carried on the mother's back. Every where on the public buildings, the Japanese and Hawaiian flags floated together. In about ten minutes, we reached the Palace, the summer palace of the Emperor. We were taken into a parlor exquisitely furnished; beautiful loquacious work in different parts of the room, dwarfed shrubs in pots of richly colored porcelain. Another presentation was made of high officers, wine was again passed around, and we were then shown to our bed-rooms.

I write in mine. It is furnished in the European style and the windows look out on the bay, where the ships of war are at anchor. A host of servants are at hand. We have just had lunch served in French style, in eight courses with six different kinds of wine. Three of the officials speak English well, as they have all lived abroad. To-morrow we go to Tokio, at twelve noon. The Emperor will receive us at the railway station. Affairs have changed here in a rapid and surprising way. A few years ago, the Mikado never left his palace; it was death to look upon him. Our reception ceremony has been carefully arranged, and an officer has just left for Tokio to prepare for to-morrow. It is now snowing slightly, a very unusual thing here.

During the evening, by the order of the Governor of Kanagawa, fire works were discharged in front of the Palace. This sight was rare and beautiful. At one time it seemed as if the sky was lit with volcanic fire, and then it was filled with drooping fiery willows. As the fire works ended, I heard the deep, solemn tones of some great bell. I said to an officer, "What is that?" He replied, "It is the bell of the Buddha temple." So I heard for the first time the religious expression of Buddhism, though I do not see the "Light of Asia." For twenty years, I have about twenty that religion which has its grip upon such a vast portion of the human race. For the first time, in the sounding of that great bell, I am before it, and feel it. I stood among a dozen officials in uniform and polite bowing expression. Yet these men are nominally all Buddhists and what we call "pigs."

## TOKIO, TWELVE O'CLOCK MIDNIGHT.

At eleven o'clock this morning, five officers of state in full uniform called at our residence at Nocesama, and notified us that the train was ready. The Mikado's carriages were at the door. As we drove out of the Palace grounds, military escorting parties and military were driven to the station. On leaving the carriages, the officers of the Japanese navy received us and escorted us to the special train and to the royal apartment. The city of Tokio was reached in about forty minutes. When we arrived at the station, we were received by a large number of officers in full uniform. After remaining in a waiting room about twenty minutes, during which the Emperor's carriage was presented to the King once by one, we entered the Emperor's carriage. A troop of about a hundred Lancers escorted us. On each side of the road for two miles, soldiers were drawn up, some mounted and some on foot. Vast crowds of people lined the streets, many of them bowing to the ground as we passed. We were driven across three wide moats which formerly protected the city from the Tycoon, and after riding through about four miles of streets, with a vast throng of people crowding the road, we reached the Emperor's palace. We were all of us, the King, Col. Judd and I, in full uniform. On leaving the carriage, we were met by officers of the household, the ministers of state, at the entrance to the Palace. At once we were marched through several corridors and entered a large reception chamber. In the center of it, the Emperor of Japan stood alone. His Lord Chamberlain immediately presented the King, and after that time, Col. Judd. We did not expect, and did not expect, to hope, that we could see the Emperor, as his public appearances have been rare. But immediately after our reception, the Emperor led us through the corridor to another reception room, where the Empress was sitting. The King was then presented, and we after him. The Emperor, Empress and the King took seats; all the rest of us, numbering perhaps forty, including the entire government of the Empire, stood in silence. The Emperor and the King spoke through an interpreter. Beside the Empress stood a really beautiful Japanese girl, dressed in the latest European style, with a Gainsborough bust and feathers. When the Emperor ceased talking, I heard a low, sweet English voice, deep throated and perfectly modulated, say, "Your majesty, the Empress desires to say that she hopes you have had a pleasant voyage from your kingdom to this country." It was the pretty Japanese girl who was speaking. She is the daughter of the minister of Foreign Affairs, was sent to England when quite young, has returned on accomplished woman, and now attends the Empress as companion. After a few words more with the Empress, large baskets of cake were brought in, and then the King arose and took leave. We again entered the Emperor's carriage and were driven to the place where I am now writing, one of the palaces of the Emperor. The room I occupy is one of the best used by Gen. Gainsborough's daughter, the Emperor. There are a vast number of rooms, furnished with every perfection of Japanese art.

According to etiquette, the Emperor returned the King's call in about an hour. We stood in a large hall, the King in the center, I just back of him and on one side. Then the Japanese galloped up and formed in line, the Imperial carriage drew up to the door, and I met the Emperor at the carriage and escorted

him to the hall, where the King received him. I led them to the large parlor, where they took seats and engaged in conversation. The retinue of officers remained standing in an adjoining room. The Emperor staid about fifteen minutes, and then rose and took leave. After that, the Princess of the Empire called. Then she threw off our gorgeous uniforms, put on citizen's dress, and under the guidance of one of the Secretaries of the Foreign Department, the King and I visited one of the Buddha temples. It covered several acres of ground in the midst of a sacred grove of most ancient trees. It was so vast, so curious, so strange, so mysterious, I cannot describe it. On returning to our Palace, we received the Princess of the Empire at a State dinner, served on exquisite plate of the finest Japanese work. The style of the dinner was French.

To-morrow we visit the national exhibition of manufactures, and for every day there is some curious entertainment provided."

## CO-OPERATION.

Co-operation, (in its accepted sense) has proved a success and a failure. Co-operative stores, conducted by intelligent merchants, succeed, just as intelligent merchants themselves succeed. If it is conducted by ignorant people, failure is assured. There is no guarantee of success in co-operation. The co-operation of the thirteen colonies was a success, the co-operation of the late Confederate States is a matter of history. A co-operative store, even if well managed, must have the same rent, the same wages, the same cost of stock, and the same interest account as a store, equally well managed. If conducted by an individual with his own capital. The co-operative store must have its capital, and it gets it from the co-operators. If no capital were obtainable, the co-operative store would not exist. As a co-operative store or association are more loosely managed than individual affairs. The co-operation of human nature must be kept in view: if a farmer belonged to a co-operative society, and found that he could only get fifteen cents for a dozen eggs in this co-operative store, and twenty cents from an outside, the co-operative store would not get that dozen eggs. As a rule, it may be stated that the co-operative stores or associations are more for the members than for the public. Change the word "firm" into association—a corporation—or a co-operative society, and the truth of the above is none the less manifest.

Out of nothing, nothing comes, and no amount of co-operation will ever make it come. That there is "strength in union," but few deny it; nevertheless the strength will only come from homogeneous particles being united. A pint of water and a pint of oil no doubt measure a quart, but for all that, no union or strength exists.

The fallacy of co-operation as a sure cure for all ills are too numerous to mention; but they mainly spring from the idea that you can "eat your cake and have it." Many who talk about consumption and production, are unable to define the words. It may be fairly stated, that nothing is produced without an equivalent consumption, and nothing consumed without an equivalent production.

If this axiom be an axiom, then it is useless to say that anything will be produced by co-operation unless an equivalent be consumed. Those who hold the opposite, must grant that man can create matter, which is an "attribute of God alone."

Neither production nor consumption, or what is the same, change, ever has or ever will create capital by itself. The mother of capital is the power to save; change of form, time, and place, is its father.

I was recently told of one well managed co-operative store, that sold \$600,000 worth annually and cleared \$250,000 net profit. It seems to me that the goods, on an average, must have been sold at over 50 per cent. gross profit, which is much more than individual merchants generally expect to realize. To be sure the reply will be at once made, that the profits were divided among the stock holders or co-operators—but for what good? If for everything that cost one dollar they were charged more than one dollar and a half, and then had fifty cents retained, they were out of pocket the interest on one dollar and a half, to say nothing of their share in paying managers, clerks, rent, etc., etc. A man who buys closely, is one who best avails himself of the competition between the parties who have to sell what he wants to buy.

Capital is any means of profit saved. Those who have never saved anything, and whose ancestors never saved anything for them, have no capital. Deny this, and further argument is useless. Yet some people will tell us that those who have nothing but their labor to depend upon, will, by the magic means of co-operation, become capitalists at once.

We are told that this more a man buys in a co-operative store, the bigger his income. One might as well try to lighten his blanket by cutting off a foot from one end to see six inches on the other.

The whole question of co-operation lies in

the fact how intelligent the co-operators are. Suppose ten thousand men should discover that a telegram was a useful thing, and none of them knew about telegraphy. Would any co-operation on their part, erect a line, or be able to send a message, even when erected? Co-operation of men, as we have seen, needs a leader, or in plainer English a mob, amounts to nothing, when brought face to face with trained troops—the co-operation of brains, capital, and muscle, is the only co-operation that shows good results.

What does co-operation really mean? In wide sense, it means "lifting together;" but what or who are lifting together? Surely, as in all else, the two lifters are Labor and Capital. Neither by itself can lift an ounce. If Labor has nothing to lift, it lifts nothing. If Capital can not be lifted, it is stationary.

To imagine something very improbable, let us suppose one thousand ignorant men each had one thousand dollars, and concluded to "pool their issues," and start a bank. Its capital would of necessity be a million of dollars. That would be co-operation. As none would know anything of banking, in a short time the capital would be sunk; and that would be ruin. What factor of success would be missing? Surely the factor of education. Merchants or bankers are no more born fully fledged with the feathers of their calling, than are lawyers or ministers. Ten men who know nothing of law could not make one tenth of a lawyer, although some claim co-operation would do it. So far as I know, the sum of ten zeros is zero.

An old Arab story says, that a fairy promised a "beggar" her everything he could get, a dollar in his pocket, he would find two dollars next morning. The beggar went his way, thanking Allah and the fairy. Suddenly it occurred to him, he did not have the dollar to put in his pocket, and his dream of two dollars was lost. It is with many, who enter co-operative schemes; they firmly believe that by some mysterious power, corn will grow where not planted, and be harvested where there are no harvesters; but alas, they will ever find that there must have something exchangeable in order to make an exchange. Fairy stories of goblin gold ought not to be much credited in this half of the nineteenth century. Still some faith exists in them.

Communism and co-operation are beautiful in the abstract; but, unfortunately, men are not abstractions, and we must regard them and their abilities as they are, if we would look at them practically. Dreaming as to what they may do or might be is well enough in its place; but for practical purposes we must take man as we find them.

I grant that a million dollars are more powerful than one hundred; yet it depends on who holds the power, whether it be for good or evil. A ruler bent on empire and slavery are both co-operative. Who would call the slave the slave?

I have never heard of a co-operative firm that amounted to anything, unless with some wider basis than mere co-operation. The Shakers have been successful; but with them, co-operation is only a part of their religion.

The principle underlying dynamite and gunpowder, lies under co-operation. In skillful hands, all three can be made to aid mankind; but in unskilled hands, grave dangers await not only those handling, but their neighbors.

I doubt if many parts of the world are yet ready for co-operation. In some places it will succeed, in more it will fail. In itself there is no mystic power; to succeed, it must have a sum of positive forces greater than the negative forces that will oppose it. A co-operative society with \$100 capital cannot afford to sell as cheaply as an individual with \$10,000 capital.

Many people are deluded by co-operation pleas, and seem to think that all that is necessary to get rich is to co-operate. This is a huge blunder; if not one ten thousand men know the alphabet, no amount of co-operation would make any one of the ten thousand read.

T. T. B.

In Mr. Gladstone's household at Hartwarden, was an old woman servant who had a son inclined to go wrong. The mother remonstrated and advised her boy, but all to no purpose; he seemed determined on a headlong course to ruin. At last, the mother in her desperation caught the idea that if she could persuade the Premier to take him in hand, perhaps the prodigal might be reclaimed. "Screwing her courage to the sticking point"—for what was a mother not to do for her child?—she approached her master, and in trembling tones preferred her request. Mr. Gladstone responded at once, and, though the Premier of the greatest kingdom in the world pressed heavily upon him, with genuine simplicity of character, he had the lad sent to his study, where he spoke tender words of advice and remonstrance, and eventually kept down and prayed a higher power to help in the work of redemption. This kindly action was effective, and the lad became a reformed character.

# Southern Workman.

**TWELVE PAGE MONTHLY.**

*Reduced to eight pages from July to October, four months.)*

**S. C. ARMSTRONG, Editor.**  
**W. W. LUDLOW, Editor.**

**Regular Contributors.**  
Mrs. M. F. ARMSTRONG, LL.  
Mr. W. N. ARMSTRONG, LL.  
Mr. T. T. BUICE,  
Mr. B. T. WASHINGTON,  
Mrs. CHAS. LAWSON.

**Terms: ONE DOLLAR a year IN ADVANCE.**

Specimen copies sent upon application. To secure safety, it is important that money should be sent by check. Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent. A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1 1/2 columns.	2 75	7 50	13 50	23 00
2 columns.	5 00	13 50	23 00	40 00
3 columns.	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

For further information, address  
**J. F. B. MAHESHA,**  
**Business Manager, Hampton, Va.**

Entered as Second-class Matter in the Post Office at Hampton, Va.

*The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute, and printed on the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work, from all parts of the country, is solicited, and will be done cheaply and well. Estimates will be sent on application.*

Subscribers are reminded that, from July to October inclusive, this paper is reduced to eight pages, resuming in November the twelve page form.

Mr. Ackrell E. White, class of '78, whose letters from his missionary station at the Mendon mission in Africa have interested many readers of the Southern Workman, has returned after four years service, for a few months visit, bringing with him two young native African boys to be educated at Hampton; bright young fellows, with already considerable knowledge of English and elementary studies.

Mr. White is in good health and spirits, and hopes to interest some of his Hampton comrades in the work to which he has devoted his life. A further report from him may be expected in our next number.

Probably no American has ever had an experience quite like that of Mr. William N. Armstrong, from whose very interesting journal we are permitted to extract an account of the reception of His Hawaiian Majesty Kikakua and Suite by the Japanese authorities, and of the procedure of an Asiatic Court (See page 52).

## REPORT OF THE PRINCIPAL.

*To the Trustees of the Hampton Normal and Agricultural Institute.*

**GENTLEMEN:** This is the twelfth annual meeting of the Trustees, and it is thirteen years since the opening of the Institute, in April, 1863. Never were its work and growth so encouraging as now.

Since the last census, the Negro question has assumed a new importance.

Heretofore, the talk about his deplorable illiteracy and dangerous ignorance has been met with doubt as to his permanence, seemingly well founded on the published death-rates of many Southern cities.

It is startling to find that our colored population has increased from 4,886,387 in 1870, to 6,577,151 in 1880; that it has gained 33 per cent while that of whites with all the aids of immigration has gained only 31 per cent. That race should now be a greater concern than ever to a country whose foundations are confessed to be intelligence and morality.

Although the pure blooded Negro is

the exception rather than the rule in the more northerly Southern States, the gain has been none the less for the mixture of blood. Our experience since 1868 shows, in common with that of others in like work, that distinctions between the two classes as to brain and moral quality are as old as the race, and as old as the power. The pure blooded have, however, an advantage in physical stamina, especially in malarious regions.

Octoroons, many of whom are not known as having Negro blood unless they confess it, are classed with the blackest of the black, and occupy a most painful position. They are really white people at disadvantage. Disowned by both races; disarmed, by the implied shame of ancestry in them, of one of man's highest and best incentives; practically without redress when they need it most; subject to special temptations and capable of high cultivation, they accept quietly their lot, making excellent pupils and teachers. The stamp of the life they have led is upon them, and they need the same regime as the rest. The good women of this class have the saddest lot in American life.

The feeling between colored and black, so late here in Jamaica and elsewhere, is real but safe here, all making common cause over against the dominant race whose prejudices arise at the remotest relationship to the Negro race.

The Negro student from mountain districts is of a better average type than one from tide-water country. The former has more individuality, a fiercer temper, and is more energetic. He not only has the advantage of climate, but of a less repressive and more domestic form of slavery, due to the necessarily sparse Negro population where large plantations could not thrive.

The advantage of the white man over the Negro is not, I think, in his ability to learn much more or behave much better than the other. It is not very marked in school life. There is no failure of colored students in Latin, Greek or Mathematics in Howard, Atlanta or Fisk Universities, or at Berea or Oberlin Colleges where they have long been tried; in the two last in constant and successful competition with white students.

The Negro is more successful in getting knowledge than in using it. To him as to all, knowledge comes easily, but wisdom slowly. Only in generations can he develop those guiding instincts, and intuitions that the Anglo Saxon has reached through ages of hard experience. He has more genius than "gumption". Knowledge is power only as it is digested, assimilated. His mental digestion is weaker than that of his pupils on nothing more than that more knowledge is not power. They are not the only ones who need to find that out. They may have enthusiasm for learning, but hardly comprehend the need and meaning of discipline and of self control. There is a tendency among our advanced students to throw off the minor discipline to which they at first readily submitted. In the College life of whites, restiveness appears more in the early years of study; but among these in the later. There is a danger in unregulated brain power; it is a value to a man only as it is restrained and guided by wise perceptions.

The colored race has never, except in Liberia and Hayti, lived under an organization of its own, and so far its efforts from colonies to co-operative stores, have been without marked success. Here is its weak point and its problem, as seen in every Negro debating or other society. It little comprehends the "wait till next time," the common sense, the "give and take," policy and the spirit of confidence, and the self-restraint necessary to all associated work. It is apt to work from the point rather than to it. "The rule or ruin" idea is apt to pervade its proceedings. But it has no monopoly of these weaknesses.

Its success in future will depend far more upon this slowly acquired power of seeing and doing the wise and fitting thing, of judicious compromise, than on the passionate and unanswerable eloquence that has silenced all expressions of contempt for it, in legislative halls, from Maryland to Texas.

Single handed, the Negro is full of resource; as a unit he is strong, but as a unity or race he is weak. Slave-

ry developed individual resource. In an emergency he is heroic; he is as capable as any man of sublime action; he is not a coward. I say this from constant experience with the race since 1863, nearly two years of that time in active warfare. In flood or fire, a Negro may risk his life as quickly as a white man. But it takes pressure to bring him out; he is not, as a rule, self-active. His best is good enough. How shall it be brought out in daily living?

The most powerful educative force in the world, is that of surrounding influences. Contact with the energetic white race, at proper points, is the best thing for the black and like races. By contact with the whites of the South they made a splendid start, but at terrible cost to the latter.

A Negro regiment or brigade between two white ones, was as good as any part of the line.

In the march of our civilization, the Negro column, judged by a brain or property or even moral test, is not an isolated body in the rear, but mingles with vast numbers of whites in like condition, flourishing best in the South where, what is his trouble, it can most successfully compete for agricultural and mechanical labor, buy land and become a power. It owes its freedom and highest hopes of education to Northern help and sympathy, but shrinks from Northern competition which forces it to mental stations.

The Negro who wishes to do a man's work, goes South to live. There is his empire. He may make, in some cases, more money in the North, but accumulates more in the South, where relatively he is more of a man, from his importance as a voter and laborer. The fringe of Negro population that clings to many Northern communities is not hopeful or progressive. There is marked, often bitter, jealousy between the blacks of the two sections, each claiming superiority.

A had effect of this contact is that the black man has, in some measure, accepted the white man's unflattering theory of himself, and lacks the self respect that the race has in Africa. It is as little or no *esprit de corps*, and in this differs from the red race. It is a unit against a common enemy, prejudice, but, that aside, is almost destitute of harmony, of mutual respect and support. The Negro does not prefer a black lawyer or doctor or "boss" however good, to a white one; he does not usually rejoice at the promotion of his fellow over himself, and sometimes is loth to wait on a worthy brother at a hotel. He is sensitive as to his rights, but is not considerate of his neighbors; he will not play into his hands. He thus sacrifices the benefits of co-operation that might create great wealth among his people. The hard sense or bottom significance of his position, he is slow to realize; hence a tendency to vanity. Promotion dazzles and even consideration may spoil him. "Clear headedness is the last product of civilization."

I speak, of course, of the average or typical Negro, not of the right minded ones whom one need not go far to find anywhere.

A complete education is a matter of a few years, is common and is possible to men of any class; a complete manhood is a matter of generations, and is seldom attained. Yet there is much manly quality and possibility among the "despised races."

The educator of the American Negro is, I think, dealing with the most responsive and satisfactory student material to be found among the less favored races of this or of any land.

When and where have manumitted slaves, or any men in like low conditions, in half a generation, produced and accumulated property, as they have; or been so law abiding, or sought and secured so earnestly and successfully the ideas of civilization? There never has been such a harvest from spelling books as from those scattered since 1863, through the South.

The greatest difficulty with the Negro is deficiency in moral strength.

He has enough physical stamina, as the increase of population and of property shows; and brain enough. No school for freedmen ever found serious difficulty at this point. Morally, the race must con-

cess to weakness. This is worse than ignorance. Inferior tendencies are like mill stones about their necks, dragging them down.

Our graduates, who are usually keen, disinterested observers, give varying accounts of the condition of the colored people in this and the four neighboring States.

There are Negro communities moved by a common impulse to better things, and others where morality seems to have utterly broken down. Where a teacher of their race must run a gauntlet of temptations, and character is tested in a way unknown where decency prevails; where religious leaders cannot reduce gross misconduct in their church members and one who raises a voice in behalf of good conduct is denounced. Education is not appreciated, for the people say that they themselves have got along without it and their children can. Their children are practically slaves till of age, and fare far worse than under the old regime.

Appeals have come to us to take the one or two worthy young men and women who were left in such places, that they might not go down with the rest, but be educated, and return as their teachers.

Even among the better class who are making the most of their opportunities, inclined to education, thrift and temperance, yet ignorant, a fall from virtue is not deeply felt on moral grounds.

But those who never rose never fall.

It is to be regretted that the terms usually applied to such people have a needless reproach or sting, as the words, "despised," "degraded." It would be better if the idea of being behind, implying lack of opportunities, rather than below, implying a fall could be conveyed in our descriptive phrases; this would not wound their self respect.

The Negro and the Indian are low but not degraded. They are not a moral ruin, like reprobates from a high civilization, whose fall is as into a bottomless pit. The reprobate who lives on their plane is far lower than they. He is demoralized; they are not. They are not conscious of being debauched; he is.

The surprise of our work for both races is the growth of character.

Colored youths who have lived in society not recognized as respectable, with all that heredity can do to push them down, soon show a moral sense and a self respect that, with three years growth, has been well sustained in after life. In ten years, not six per cent of our girl graduates have gone astray. I think we may hope for good results from our Indians when they shall return.

Intelligent and well directed action of both physical and mental energies, and systematic living are, on the human side, paramount to the development of moral strength in the lower races, as they are the basis of all stability of character.

I have increasing faith in the power of right surrounding influence and wise training to build up character.

While selected individuals with special opportunities, may make rapid progress, the main line of people must move slowly.

Patience is quite as important as hope, in dealing with our race problem.

No one will, I think, deny that the colored race has made more relative progress, from ignorance to education, from poverty to prosperity, from their starting point in 1863, than the white race, during that time. The statistics of the Indian department, show that the red man had gained greatly as a producer in ten years.

The rate of progress rather than results, is the main thing.

## THE TWO RACES AND THEIR MINOLING.

The submissive Negro not only provides for himself, but his productions keep busy a thousand mills and are shipped abroad to pay our foreign debts. The black race has not thrown a paper upon the nation.

Of the proud Indians, about one half are in the national poor house; the rest no more than taking care of themselves. The superior personality of the latter is in a body whose habits are opposed to industry and whose weakness unites him so far for competition with any people.

The severe discipline of slavery strengthened a weak race. Professed friendship for a strong one has weakened it. A cruel sem-

balance of justice has done more harm than direct oppression could have done. The Negro is strong, the Indian weak, because the one is trained to labor, and the other is not. I am told that the ex-slaves of the Indian Territory, are now much more prosperous than their former red-skinned owners. One has had too little and the other too much freedom. Both are now eager to improve; both will make the best of their opportunities for practical education. Both have capacity to become citizens and perform all duties. With both, the question of progress is only one of opportunities, which it is the duty of the white race to provide, and thus settle the question.

Colored and Indian youths mingle pleasantly in school, as they have whenever they have been brought in contact, and the effect is stimulating to both; the Negro in advanced, the Indian in primary classes, mixing in the intermediate; the former by influence and example pushing the latter along. There has not been, in three years, a serious fracas between them. Both departments have steadily gained in numbers. I have taken special pains that colored students should have no just ground of grievance on account of Indians. The feeling between them is good.

Our limit for Negroes is an average attendance of 300; for Indians it is 100. The work is well in hand, never so easily managed as now.

This is a school for the civilization of the weaker races of our country.

#### THE DUTY OF GOVERNMENT.

In cognom with every one who cares for them, I use every opportunity to press upon public attention the need of sufficient and well directed government aid for the welfare of both; aid that will be given only as the people shall demand it.

Forty thousand wild Indian children are helplessly looking to the country to save them; fifteen thousand of them should now, by treaty stipulations, be at school. The total school attendance is not over seven thousand.

Swift and liberal action is necessary to save them from vagabondage and pauperism. Stagnation, want of vim in Congress is the trouble. This is a crisis in Indian progress. No more nomadic life is possible to them. Practical education is the alternative. The people must press this work or it will not be done.

The presence of a hundred Indian students at Hampton (with 300 at Carlisle under Capt. Pratt), within easy access of our citizens and legislators, proving their capacity, will, it is hoped, give a new foundation for public confidence in the plan of humane treatment.

One quarter of the money spent in the past five years in fighting them, would educate them all.

The government from 1865, to 1870, through Gen. O. O. Howard Commissioner of the Freedman's Bureau, expended three and a half millions of dollars for the education of the Negro; and has done no more since.

The Southern States, one by one, from 1872 to 1876, took up the work of educating the Negro. There is a better sentiment on the subject, and more earnest work, every year; and they are now devoting over a million of dollars annually to this cause.

Northern charity has, since 1862, sent South over six millions of dollars to educate the freedman, of which four millions were expended by the American Missionary Association of New York. Friends in the North, are now sending South over \$450,000 a year, for the mental and moral improvement of the ex-slaves. This has been done under a deep sense, not so much of individual duty, but of their duty as part of a nation that has a duty in the matter. The true protection is that which helps a man to protect himself. This the government owes, but has refused to give, except as it has promoted party success. Rights, without ideas, has been its reconstruction policy.

The mass of negroes are from their ignorance, dangerous as voters, and will be till, as a class, they can read and write and so be able to form intelligent opinions.

President Garfield in his Inaugural Address, recognized this, and urged the true and only remedy; adequate educational measures, which, northern charity and

southern poverty alone cannot provide. England, after thirty years, was compelled to provide schools for the ex-slaves of Jamaica. France is educating her voters. This country will by and by be forced to do the same, and will suffer for the delay.

#### OF COLORED GRADUATES AND THEIR WORK.

The increase of the one and the extent of the other, and the importance of an active interest in and relations with them, have made necessary the appointment of a special correspondent. Mrs. E. C. Dixon, who since 1873, has been connected with this work, has accepted the position of graduate's correspondent.

The total number of graduates is 362. This year's class will make it 403. Mrs. Dixon has, since January 1st, written to 325 of them, and to 33 undergraduates, who, for various reasons, were unable to take the entire course of study. The returns are not all in: 165 answers have been received, each replying to a set of questions, and the leading facts in the life of each one have been recorded.

Of those who reported, all but two have taught. 111 are now teaching; 7 are in Collegiate or professional studies; including 3 at Hampton headquarters, 5 are office clerks; 1 is a printer, 1 a tailor, 1 an agent of the Kansas Relief Association. Reports from the field, which is principally Virginia and the four adjacent states, are exceedingly encouraging. The work of graduates is more than keeping school a few hours each day.

They gather the young in Sunday schools and the old in night classes, struggling with the latter "to get them out of their superstitions."

"Our religion is good enough for us," say those whose sensuous worship is more like a stimulating drug than true devotion.

They lecture on practical duties, and especially on temperance. The waste of small earnings on liquor by the colored people is most a terrible fact in their life.

Drunkness among them seems to be on the increase; dram shops are everywhere.

A strong sentiment has appeared in this and other Southern states, expressed in the form of "Local Option" laws, which are either passed or being pressed.

Our Negro population needs workers who shall apply themselves to whatever is weak or wrong among their people. Many find teaching harder than they expected it would be, from small pay, short sessions, few facilities, and are sorely tempted to find other employment.

Graduates as a rule, have shown fine spirit. Often with their own hands even girls have repaired their school houses. They increase attendance by calling among the people and, as a rule, are asked by the officials to return for the next session.

They testify to the universal kindness of the better class of whites to a colored teacher who does good work for his race, but complain of the lower whites as not favorable to education. They try not to come in conflict with the old time Negro preachers, many of whose ideas they cannot but oppose, and are looked upon by them as dangerous radicals.

Regarding their *Aims*, for their teachers, and for the friends who have helped them to an education, runs through all their correspondence.

During the year, reading matter has been distributed among graduates, to whom any interesting matter is most helpful, in the remote country regions where many of them work. I hope next year to systematize and increase the circulation of books and papers among them.

When completed up to July last, Mrs. Dixon's report will contain valuable information which I am not now able to give.

#### OF STUDENTS AND STUDIES.

Senior class, 48; Middle class, 75; Junior class, 101; Preparatory class, 38; Night class, (work students) 69; Indian class, 64 (besides the 16 Indians in the Junior class).

Total, 385; of whom all but 24 are boarders, representing twenty four different States and Territories, mostly, however, from Virginia and North Carolina. No. of Col'd boys, 209; Col'd girls, 108; "Indian" 59; Indian 21.

Average age of Negro Students, 19 yrs. "Indian" 17.

Total last year, 334; gain this year, 51; of

whom 19 are colored and 13 are Indians.

Number of Officers, Teachers, and assistant Teachers in all departments, 41.

There are 59 young men who work in the Huntington's Industrial Works (saw mill) knitting room, and other Industries all day, and study two hours evenings; thus making mental and pecuniary preparation for the regular course. While "work students," they get in some respects, the best training of the course.

The completion of the Stone Memorial building will give the girls a similar chance: such opportunities now being confined to boys.

A large number of colored youth do not make up their minds to get an education till 18 or 20 years of age. They are beyond legal school age, and their only hope is to enter some institution and begin at the bottom. Being able bodied, but poor, their labor is their only resource. We have no more earnest students than those in our night classes, who, after ten hours hard work, study two hours most diligently.

The course of study is three years. The first two include elementary studies, of a wide range; the last, higher mathematics and some scientific instruction; enough, I think, for the purpose of the school, which is to develop character and educate teachers, for the colored race. Political, natural and moral science in the senior year, test their powers and are needed both for mental discipline and for their practical value.

I need not dwell on the Academic course of the Institute, although it is the leading department, to which all others are subsidiary. It requires the entire time of eighteen teachers. It embraces the studies of a primary, grammar and high school course. No dead languages are taught. Our advanced work will be more and more scientific. In this direction almost nothing has been done for the colored race. It will be of great use to them in the development of the resources of the country about them.

The standard of admission, a knowledge of reading and writing, and of arithmetic taught Long Division, cannot be raised till more thorough work shall be done in the public free school. The crowds that irregularly attend them, as badly off for books as for clothing, make slow progress. The school must go to its students that they may get to it.

In order that students of both races, shall return to their people in sympathy with them, above them, yet of them; it is important that, at school, extravagant appetites and tastes shall not be formed.

We have provided for them costly buildings, the influence of which stimulates their self respect. There is no need of saying "Do not mark the walls." They mean that, and are seldom wilfully marred. But what touches the person, the appetite, is simple.

The beds, their furniture, their meals, their clothing are good, but no better than they can, by due industry, get at their own homes. There should be when they return, no collapse from a high to a lower plane of living. Here is a danger that has not been appreciated, a rock on which much good work has been ruined.

Bad as is the mental and moral condition of our less favored races, there is a per cent, perhaps small, of excellent student material, making an aggregate of many thousands, which, if educated, will be as heaven to the rest of their people.

On the women of both black and red races, the past has fallen most heavily. For them special efforts should be made, for their condition is the test of progress.

#### THE "STONE MEMORIAL" BUILDING.

FOR COLORED GIRLS.

AND INDIAN GIRLS' BUILDING.

I am glad to refer to the "Stone Memorial building, chiefly for colored girls' industries, to be built with \$30,000, a gift from Mrs. Valeria Stone of Malden, Mass., and to one for Indian girls provided for by contributions from friends amounting to \$25,000, for its construction and furniture. The corner stones of both are to be laid tomorrow. Both lines of our work will thus be strengthened where they meet and will be a thousand dollars

Mrs. F. Marquand of Southport, Conn. has kindly given a thousand dollars

for an exercise room for teachers. On this basis has been planned a plain gymnasium, 100x40 feet, to cost \$300.00, a mere frame or shell, in which both students and teachers can get exercise and recreation during the many rough days from December till April. Much of the labor of building this will be done by Indians.

#### INDIAN EDUCATION.

(From the Report of Miss Isabel B. Eustis in charge.)

There are at present 76 Indians in the school; 50 boys and 26 girls; 33 of these (33 boys and 7 girls) are of the party brought from Dakota by Capt. Pratt, in Nov. 1878, and expect to return to their homes next November, being the first large number sent back from Hampton. The Indian course is three years.

Besides a knowledge of simple English, which has been the chief drill of the school-room, they have mastered the first four rules of Arithmetic, with the Multiplication Table, and are able to work out simple problems in Analysis. A part of them are now working in Fractions. They have also had instruction during the last year in Geography, Natural History and Natural Philosophy.

The minds of the Sioux are keen and clear, and they show in the study hour a capacity for independent and continuous mental work, but their progress in English has been hindered by an almost insurmountable reticence and reserve, and a strong disinclination to respond to oral teaching. The last party from Arizona, of Pima's and Apache's, fourteen boys and girls, are noticeably more docile and responsive, and seem likely to make more rapid progress in the school room.

Their health has proved the most serious question in the present year. 13 deaths, 30 per cent of the 49 brought by Capt. Pratt, have broken down in health during the three years; 10 of these, (20 per cent of the whole number brought), have died, either at school or after their return to their homes. It is fair to say that this does not seem to be due so much to the change to civilized life, as to inherited weakness and diseased constitutions, and to an utter disregard of all laws of health.

There has been, however, no death among our Indians since June of last year.

This example we believe is largely owing to the care of a skilled nurse from the New Haven Training School whose whole time and constant watchfulness has been demanded.

They have, as a rule, their arrival, absolutely no idea of obedience. They yield to a command which they feel is just and reasonable, but simple obedience to authority seems an idea quite foreign to their minds, and is one of very slow growth. The girls prove themselves more intrinsically and unmanageable than the boys; perhaps because, with the same inherited spirit of independence, they have formerly yielded only to selfish fear. An exceptionally strong sense of justice, and of necessity of penalties for wrong conduct, is the saving force in their discipline. An Indian who is made to see clearly he has done wrong would rather be punished than not, and then accepts the penalty gratefully as part of his education in the good road.

They come with the traditional ideas of the inferiority and insignificance of women, but they grow to a spirit of courtesy and chivalry towards their teachers, and to some extent toward the girls of their own race, which is pleasant to see.

The religious teaching of the Indians is full of interest and reward. We meet no old superstitions. They are earnest and reverent, and accept simply and heartily the idea of a sincere conversion of themselves to God's service, to be shown in their lives rather than by their words.

The younger a child is sent to us, the greater the hope, of course, of influencing his character, but there is danger of teaching those who are very young from their own people, and making the return to their home a bitter experience.

Should three years prove long enough to effect a sufficient change in thought and be a lasting inspiration to those who come to us already somewhat mature, it would seem desirable that such be selected for education at the east. They will go back to their homes with the old ties still strong, and of the age to be traditionally the rubbing spirits in Indian life.

The general rule is, mornings, from half past eight until twelve, for study; afternoons for work; evenings for study. Saturday is a play day.

Six are working steadily, all day, at trades, studying nights. All are paid for their labor and buy all but their outer garments; this teaches them the use of money.

A party of sixteen boys and six girls will be sent, as usual, to Berkshire Co. Mass., for the summer months.

The crucial test of our work for Indians will be on their return to their people

where the surrounding current of influences will be as adverse as it has been favorable here.

Will they stand? Of the thirty-two whose time will be up next November, a few may be selected and consent to remain for special and higher education.

The rest will go in groups. It is hoped not only that they will sustain each other but that both missionaries and agents will care for them, give them employment and encouragement. The kind of white people they shall meet will even more than their own people decide their future.

Secretary Kirkwood of the department of the Interior, recently told me that he meant to compel the employment of Indians at the agencies instead of whites, whenever they could do the work to be done; and that he wished to try a few young trained Indians, in his office at Washington, to fit them to go back as clerks.

I now propose to spend a part of August and September next among the Indian tribes, chiefly those represented here; with a view to general information, but especially to arrange for the reception of those who shall return home next fall. There will be hope for them if girls can be placed under some supervision, among their people, but not beyond the influence of good friends; if the boys can get work at their respective trades, as carpenters, blacksmiths etc. or farm work. Some could teach or interpret. I hope to secure steady employment for all; idleness will be their ruin. Each one should slip once in a groove of active living on reaching home.

There is great danger of failure of our work from a lack of care of those who shall return to their tribes.

#### INDIAN WORK.

Each girl has a share of dining room work, and washes and irons under the supervision of one of the Indian girls. Their work is examined and they are marked according to merit.

Afternoons they sew one hour and a half; make and mend their own clothes; are inclined to neatness in their persons, and have made excellent progress in all industrial ways. A characteristic of Indian work is nicety; they are cheerful about it and seem anxious to learn. They cannot endure continuous hard labor.

There are fifteen Indian and three Colored boys in the Indian Workshop; of the Indians eight are carpenters, four are shoemakers, two are tinners. They keep up general repairs on the place; they have made all needed tables and desks; seventy well finished benches for the new Academic Hall, and forty window frames for various buildings. They repair shoes for our 400 students and teachers, and the families on the place, and make many pairs to order; also repair harness for the farm.

All tin were needed for the school and families, together with repairs of stoves and all stove pipe, glazing and whatever painting is required for their work, is supplied or done by Indian workmen, under the direction of a skilled mechanic, Mr. McDowell. They work willingly; have natural aptitude for mechanical work and compare well with white boys of the same age and advantages.

Seventeen Indian boys are employed on the school farm. They have planted corn, potatoes, peas, beans, cabbage, tomatoes, lettuce, strawberries, etc. They have practiced plowing, have care of feeding and cleaning stock, harness, and care of carts and carriages. Four are in the wheelwright and four in the blacksmith shop, in the farm department. They make as good carts as any body need wish.

The Government sends Indian youth to us, a private corporation, paying their fares to and from the Institute, and \$150 per annum for all expenses, renewing the contract every three months. They are on our lands the entire year. Their board, washing, lights, fuel and medical attendance is charged at ten dollars per month and, at that rate costs \$120 per year. Clothing costs about \$60 apiece per annum. Their tuition, or cost of education of \$10 yearly, is met by annual scholarship donations of that amount from private charity. Allowing \$30 a year as the value of their work, the total annual cost is \$220

apiece, of which government pays only \$150. Individuals have applied most of the extra amount, and have also provided funds for building. Since November 1878, they have given over \$40,000 for construction alone.

Total last year charges for board and clothes to Indians.....\$9043.41  
Paid by government.....\$8048.46

Deficit.....\$904.95  
For this deficit and the tuition at \$70 a piece for an average of 85 Indian students, amounting to \$4,550, we look to the public. Two hundred and twenty dollars apiece per annum is not a high price for the work we are doing. We have so far expended for Indians more than two dollars from charity for every one dollar from government.

There is excellent accommodation for at least 50 Indian boys; next November we hope to be ready for over 50 girls. Our maximum should not exceed 100 Indian youths, 50 of each sex.

#### INDUSTRIAL EDUCATION.

On the Farm, in the Hampton Industrial Works, the Workshops, the Knitting Room, Sewing and Household departments, the total earnings of colored students last year were \$18,808.94, to be increased the current year. In this way school hills are principally paid.

Last school year (of 8 1/2 months), total charges to colored students for board (at \$10 per month) clothing, books.....\$25,005.45

Paid in cash by them.....\$5,033.16  
" labor.....\$18,808.94  
" aid from friends.....\$2,373.66

Credit balance.....\$28,211.70  
.....\$25,005.45

This credit balance is due to accumulations of students' earnings in the workshops, which they will gradually draw out after entering the regular course of study.

The problem of the school is how to make this vast amount of labor as instructive as possible and yet as profitable as possible. Instruction is before production, but the loss must not be too heavy and as a matter of fact, lessens every year. Much labor (over one half of it) is given out at a loss of from 20 to 40 per cent. There is, however, an actual profit in the labor at the Saw Mill and Knitting room. As a rule the Industrial departments are self sustaining, not counting salaries of managers. If our object were to make money, we would discharge nearly half of our workmen. Student labor is generally inferior to that of hired hands.

Farm work has recently been increased by the purchase at a cost of \$4500 of "Canebrake," a farm of 250 acres, adjoining "Shellbanks," which was given two and a half years ago by a friend, making an excellent stock and grain farm of nearly 600 acres. It provides work for the boys, especially the Indians, and supplies a portion of the 70,000 lbs of beef and pork which the school consumes every year.

The farm department employs 85 students. Agriculture is the Negro's stronghold and should be, as it is, our leading industry. With the school farm proper, we have in all 750 acres of land.

The knitting department is filling an order for thirty thousand dozen pairs of mittens and can do much better in its prospective quarters, in the "Stone Building." It employs 45 students.

The "Huntington Industrial Works" have been completed during the year, and will soon begin the manufacture of doors, sashes and blinds for the general market. It is doing a prosperous lumber business, and has employed 24 students.

There are eight students in the engineer's department, who, under direction are doing nearly all the gas and steam fitting and iron work of the school.

Brickmaking, wheel-wrighting, and blacksmithing, are under the care of the farm manager and employ ten students. Outside hands are chiefly employed in brickmaking. A million and a half bricks were made and used on the place last year; an equal number will probably be made this year.

The printing office employs one Negro and two Indian students, five ex-students, of whom two are girls, and one white apprentice. It is to be transferred to the "Stone" building.

In the sewing, or girls' Industrial department, fifty-two girls are employed.

The household work department employs ninety-four girls; the laundry forty-two. Many are employed in both departments.

There is, besides, a large amount of janitor and office work, cleaning, scrubbing, waiting, patrol and general duty, employing thirty-eight boys.

Students' earnings average seventy dollars per annum.

The spirit of labor is good. There is some annoyance from the natural hilarity of school life, from scuffling, wrestling, and violent play, into which more vigor is often put than into routine work.

Habits of labor are important for our graduates, who often can teach but six months in the year. They employ their off-time in raising cotton, hotel waiting, common labor, or at farming. Their safety is in constant activity.

The reports of the various Industrial departments, herewith submitted, contain detailed information. The report of the Treasurer, Genl. J. F. B. Marshall, contains valuable summaries, and shows the loss or gain, and cost of each department; to all of which your attention is invited.

#### NEEDS.

The school needs are as follows: Six thousand five hundred dollars, to pay the cost of the new Academic Hall, above the avails of the insurance funds. The new building is one hundred per cent better than the one destroyed by fire, and is almost fire proof.

Four thousand two hundred dollars to meet the cost of a large boiler, and of laying underground steam pipes, which will carry steam from one central boiler to three large and three smaller buildings, at great saving of heating expense.

Two thousand four hundred dollars for the balance of payment on the "Canebrake" farm.

Six thousand five hundred dollars, for a brick workshop 130 by 40, two stories, for Indian boys, who now are learning the trades in a damp and crowded basement.

There ought to be a new cottage dormitory, in the form of a Greek cross, to cost \$12,000, which shall provide rooms for fifty young men. We have 203 male Negro students, and proper accommodations for but 145 of them.

The present "Marquand" and "Grove" cottages would be greatly improved in appearance and in accommodation for students by the addition to the rear of a wing, which would contain eight rooms, two in each. The cost of each wing would be two thousand dollars.

#### CURRENT EXPENSES.

The annual cost of the Hampton Institute is about \$42,000, of which \$10,000 are paid by the state, as interest on the Agricultural College land fund; the rest is given by friends, chiefly in the form of annual scholarships, of seventy dollars each, which provides the tuition of a student; he or she to pay for board, clothing, and books (about \$100, a year), principally in labor. This meeting them less than half way is both wise and necessary. The student cannot pay the cost of his instruction.

The annual cost of each student is about a hundred dollars more than he pays. I have been told that the same is true of students of Harvard college.

The salaries of our forty-one officers and teachers amount to \$25,000 per year. A seventy dollar scholarship for each of 350 students would amount to \$24,500.00. Government does not pay the tuition of Indians.

It is constantly necessary to remind people that this is a private corporation and not a government school.

General donations are quite as important as any other, but are harder to get, yet.

The cost of insurance, repairs, and expenses generally, amounts to over ten thousand dollars a year, and must be met. I would suggest the formation of a

#### HAMPTON CENTURY LEAGUE.

for the benefit the Hampton Institute, the object of which should be to enlist at least a hundred contributors every year, who

should give Fifty Dollars each; thus adding five thousand dollars annually to an income for general purposes. This would be asking no one to assume a heavy burden and, while hoping for renewals, no one would be pressed for pledges ahead. Gifts of \$50.00 would be conditioned on securing the entire one hundred, or absolute, as the givers should choose. I believe that this definite point or suggestion would be successful. Certainly indefiniteness is not stimulating. Friends would join the "League" and persuade others to do the same. We would raise the money without paying anything for getting it.

Students' letters would not be sent as they are in response to annual scholarships of \$70, but each member would receive our twelve page monthly "The Southern Workman," and be kept informed of our work in all its branches.

#### ENDOWMENT.

I have repeatedly urged the need of an endowment fund which should yield an income of not less than ten thousand dollars. The ten thousand a year from the state may, by the terms of the grant, be at any time withdrawn. This institution should, as soon as possible, have an invested fund of

#### THREE HUNDRED THOUSAND DOLLARS

There would then be over twenty thousand dollars a year to collect, for current expenses, to say nothing of funds for building and improvements; but public interest, never so strong as now, would, I think, readily supply that. A measure of dependence on the people is well.

I would suggest, the following treatment of the Endowment question, supposing that the fund would yield not over four per cent interest.

For expense of administration (Principal and Treasurer's salaries).....\$100,000  
For a "Foundation" the income of which would forever pay the salary of a teacher of useful practical knowledge to the Negro and Indian races.....\$15,000

Not less than twelve such foundations are needed. But a large fund for general purposes is the most desirable.

Negro and Indian civilization need as strong and permanent foundations as any other. This idea of Hampton is to always meet the need of the day; to do what is needed most and what is needed now.

There comes naturally a time when a work like this should pass from active pressure on the charities of the public and, with a secure endowment, yield its place to the work that an advancing civilization shall require.

The only expense of collecting funds the current year has been the travelling expenses of the Principal and other officers.

Excepting to a young colored man, agent for the Southern Workman, who has a small salary, this institution does not pay a dollar for the services of any agent or solicitor of funds.

#### LIBRARY.

(From Report of Miss E. H. Lothrop, in charge.)

The Library contains nine hundred volumes about twenty-five per cent of which are useful to the students, adapted to their tastes and abilities. The reading of the boys is confined almost entirely to history, politics and the lives of statesmen. The number of readers has increased since the new books were added to the library. The students have become very much interested in these books. With their readiness to read it is a pity that the library should not contain books enough for them. Duplicates are desirable. Their tastes are similar, many students call for the same book. The boys are careful of the books and prompt in keeping the regulations. The girls, with few exceptions, are less observant of the rules of the library and are not careful with the books. They read stories only. The average number of books out at one time is one hundred and twenty-five.

#### MILITARY.

The detail of Brevet Capt. Henry Romeyn, 5th Infantry, as Military Instructor, expires June 1st, 1881. By order of the President of the United States, Lieut. George LeRoy Brown, of the 11th Infantry, has been detailed to take his place, the detail is for three years. Lieut. Brown has lived many years

among the Indian tribes who are represented here, and knows something of their language.

Under Capt. Romeyn's instruction, the Cadets have acquired excellent proficiency in drill; their marching at the late Inaugural Ceremonies at Washington, having attracted special attention. The Captain has organized a non-commissioned officers' Court, to which his relation has been advisory; by which many cases of discipline have been well settled. During the past year I have not had occasion to set aside one of its decisions. This is education for the officers, and good for the students. I believe in a maximum of self government in school.

The cost of a full uniform is too great for all to buy, and to give it would be unwise. Some change might be made.

The school fund is in excellent condition. Internal economy, care of rooms, bathing, etc., is an important part of the system. In this respect, there has been, of late, decided improvement. Students' rooms never were so tidily kept as now. Your inspection of them is invited.

You are referred to Capt. Romeyn's report for further information. I gladly testify to Captain Romeyn's efficiency as Commandant, to his devotion to the interests of his command and to those of the Hampton Institute. He will always have the best wishes of the many friends of the school who know of his work here.

#### IN GENERAL.

Dr. M. A. Waldron, a recent lady graduate of the Women's Medical College of Philadelphia, also a graduate of Vassar College, later a teacher at Hampton for two years, and for three years at the head of the New Haven Training School for Nurses, has accepted the position tendered her by the Executive Committee of Resident Physician of the Institute, and teacher of Hygiene, Physiology, and Science. Matters of diet, ventilation, and general health interests, will be under her care. The school has been at some expense for the training of a teacher of Cooking, just graduated at Miss Farn's Cooking school in Boston. Our cooking school promises to become permanent and satisfactory.

For the first time the school has been this year properly "Normal." Practice teaching of the Senior Class in the "Butler" (a large public school of over 200 children, on our grounds, whose teachers are our graduates, but salaried for four months by the County, and for four months by this Institute), under the direction of Miss Hyde, has fitted its members for thorough work among their people.

Kitchen Garden instruction was commenced at the "Butler" a few months since, and has now become a special care and interest of Miss Emily Huntington, of New York, the founder of the system. By the use of models, the entire range of household duties is taught practically.

The services of the children soon have an increased market value. The effect of their training has already been seen in many of the homes of the Colored people.

This school is in the form of a Greek cross, each arm being 150 feet in length. It was built in war times for "contrabands," has a good frame and foundation, but needs re-shingling and internal repairs that will cost a thousand dollars. I hope a special effort may be made to get this amount.

The anniversary exercises of to-morrow will be out of routine, not only by reason of the special new building interests, but also from a change in the rhetorical exercises. The essays and orations will be by former graduates or Alumni of the Institute, instead of the graduating class, as usual. This course seemed advisable to the faculty, for reasons. The class appointments hold over till next anniversary.

I think the change might well be permanent on grounds not limited to this Institute. Our anniversary days have not failed in brilliant effects, but they have been "worked up" too much. The under-graduate does himself credit, and is pleased, but there is lack of perfect sincerity of true appreciation and knowledge of things. The day should be for the Alumni; for workers, for utterly genuine

and sincere expression by the toilers for, and representatives of the negro race; men and women whom the school has educated, who shall come back, and tell the public that comes from far and wide to hear them, of what they think and know.

Scholarship and discipline are impaired by the long preparation needed by and the necessary exceptional privileges granted to "honorary" students. Our Senior Class, should, I think, give its entire energies to thorough scholarship; and at this time he examined far more carefully than has been the custom, and by a well selected committee. This will be better for those who have only three years of systematic study in all their lives.

I cannot but refer to the great and unexpected kindness of friends during my absence from the country last summer, in contributing over seven thousand dollars, towards the erection of a neat and solid building to contain offices and a handsome Library which should bear my name. The gain in comfort and convenience will be unspeakable.

I can make no other return than that of my best services to the cause whose importance it signifies; but prefer that my name shall not be used in connection with it, for reasons that a man who has not finished his work must have.

The school is fortunate in securing the services of the Rev. H. B. Frissell, of New York, as Chaplain and Pastor of the Bethesda Church Chapel, in the National Cemetery, as well as in the order of ex-President Hayes permitting the Chapel to remain next to those for whom, while living, it was built, and whose resting place it consecrates and adorns.

The usual Institute for special instruction of the graduating class in the theory and art of teaching, will commence next Monday, the 23rd, and will continue till the close of school, June 15th. Special help in conducting it has been secured from the Old Day State.

Rev. Dr. James Curry, D. D., agent of the Peabody Fund, who is devoting his time at his disposal largely to training teachers, has, through Hon. W. H. Ruffner, Supt. Public Instruction State of Virginia, devoted a sum of money, to be expended in providing the best instruction for an Institute for Colored teachers of this State, to be held from June 27 to July 16, at this place, under our control.

A hundred and fifty teachers are expected to be present.

Prof. Warren, head of the State Normal School of New Hampshire, will conduct it. Our relations with the State of Virginia continue to be satisfactory. There has been no change in the State Board of Curators, who examine into and report on our use of the estate funds entrusted to us. The ten thousand dollars a year have been given regularly.

Our work is better and better appreciated. Its effect on southern public sentiment is not the least valuable of its results; that alone justifies all that has been done.

Real progress is not in increase of wealth or power, but is gain in wisdom, in self-control, in guiding principles, and in Christian ideas. That is the only true reconstruction; to that this work is devoted; it never was so promising as now. We may be hopeful for the future.

Respectfully submitted

S. C. ARMSTRONG,

Principal.

Hampton, Va., May 18th, 1881.

#### ALUMNI MEETING.

The second triennial meeting of the Alumni Association of Hampton Institute was held May 20, over eighty graduates present, representing every class but the first two. The evidences of growth in every good way, of loyal spirit and faithful work, were most encouraging and made the meeting one of the pleasantest features of the anniversary. Want of space obliges us to defer any details for the present, but a full account in our next number, will make that number one of special interest.

#### LETTERS FROM HAMPTON GRADUATES. FROM A GRADUATE OF '72. A KIND MASTER. PRESENTIMENTS OF FREEDOM. OFF WITH THE ARMY. APPRECIATION OF PRIVILEGES. WHAT HAMPTON DID FOR HIM. RACE RELATIONS.

FROM A GRADUATE OF '72.

The following letter from a young man of the second class that graduated from Hampton, is rich in experiences of the old times and the new, which are naturally growing scarcer from year to year among the students. The writer has, ever since his graduation, been a credit to his "alma mater," and done good work among his people. Like many, he has a comparatively pleasant experience of the old life to report, having had

A KIND MASTER.

Va., March, 5, 1881.

Gen. S. C. ARMSTRONG,  
Dear Sir:  
In accordance with your request, I now venture to give you a compendious account of my birth and early life. I was born in \_\_\_\_\_ County Virginia, June 8th, 1848. I was born a slave, (so-called,) but I was too young to be oppressed a great deal, yet I had a taste of slavery. I was treated very kindly in some respects, especially as I was an orphan. The white people with whom I lived, treated me with kindness, and thought I was a deal of as I was motherless. My mother was burned to death, when I was four or five years old, leaving myself and two sisters. After her death, the white people paid special care and attention to me. They treated me comparatively as one of their family, in many respects. I was not maltreated as many others were, yet I thought as I began to grow older, that I ought to, or could, have been a freeman. I had many thoughts about slavery, and how wrong it was to be used as a tool.

#### PRESENTIMENTS OF FREEDOM.

The visions of freedom which floated before the fettered mind of the slave, supplied to him the common necessity of mankind of an Unattainable to reach after; and, growing sometimes into absolute conviction against all human probability, sustained him till that wonderful day when "the expectation of the poor did not perish."

I always said to myself—from my youth, that some day I would be free as other men. I have at along the woods and fences, many a Sunday with my playmates and talked with them about slavery, and told them that I would some day be free. I would often catch myself talking in a loud voice, and saying to myself, "Never mind; some day I know I will be free." I have frequently taken up pieces of paper that had reading on them, and put them in my pocket, to look at. When one piece wore out, I would get another piece. I would often sit down alone, and take them out of my pocket and say, "Never mind; I know some day I will be able to read this," (holding the paper in my hand). There was always a consciousness accompanying me all the time, telling me, "Some day you shall be free." I was very young at that time; I wanted and desired to have liberty and freedom as others.

#### OFF WITH THE ARMY.

The older whites of the family were willing to have me learn how to read, while on the contrary, some of the younger ones were reluctant. I never learned a letter of the alphabet while I remained with them. I continued with the whites, until one day in February, 1864. That day about twelve o'clock, some recruiting officers came to the house, and asked the men if they wanted to enlist in the army, and they (the men) said no, but as I was so very anxious to get away, I and one more boy about the same age, volunteered to go with them. As we were not old enough for soldiers, we had to steal away. The soldiers at that time were encamped at \_\_\_\_\_, Va. (my home). I remained in \_\_\_\_\_ with the soldiers nearly two months, with the expectation of being a soldier.

Notwithstanding I was too young, I was examined by the surgeon, and was pronounced sound in body and constitution, and received my uniform and was placed on the roll with the other recruits. I had to drill twice a day, as was the custom in the war. The soldiers had marching orders, and of course I marched with them. We took a steamer at Cherry-stone Va., and next morning found me somewhere on the water, but where I knew not; that was the first time I was on a steamer.

#### A "PURE YANKEE."

The first flush of joy in his newly gained freedom was associated in the freedman's mind with the idea that the spelling book contained the open sesame to all power and pleasure. With disillusionment, came some shattering of enthusiasm for education among

the older ones, but on the whole it has held its own remarkably, and is reviving again in the young people, as the increasingly full school attendance everywhere shows; while, fortunately for them, they now find "pure" Southerners as well as "Pure Yankees" glad to put the reading book into colored hands.

Some time next day we landed at Fortress Monroe. I was thinking when I got to the Fort, I would be made a soldier. One afternoon the recruits were formed into a line, and to my surprise, I was informed that I was too young for a soldier. When to do then I knew not, but luckily, an officer desired a boy to wait on him, so he came to me, and asked me, if I would like to wait on him and I told him, no sir. My next reply to him was, I want to be a soldier; but he being so kind, and taking a fancy to me, prevailed after some time with me, and finally I concluded to go with him. In a few days after I went with him, he bought me a book with the alphabet in it, and I think the name of the book was John Comely; this was May, 1864. In a few days I learned my letters with it, and in a few days, I could spell. The officer paid special attention to me, and urged me to learn, I did so for a short time, but after a while I gave it up, and lent my book to another man; (The officer no doubt was a pure Yankee, his treatment was somewhat different from home treatment. He gave me many good advice). I remained with the soldiers until the Christmas of 1865, and then came home.

#### APPRECIATION OF PRIVILEGES.

The young generation of freedmen, can scarcely imagine the intense appreciation by the freedmen of the new privileges of liberty to work for wages, and go to school. Still the appreciation of privileges grows with time and experience of life, and many a Hampton graduate has returned to give thanks after years of teaching, for what Hampton did for him.

As I was all my life accustomed to work, I hired myself to a farmer, who gave me \$85, for the year. I thought that it was nice to have my own money paid to me, I worked with different farmers until Sept. 1868. In this same year, two of our girls that had been to Hampton, returned home, and they appeared to know so much it made me anxious to go to H. I thought they had made rapid improvement in a short time, and it induced me to go. My qualifications were poor, but I thought I might learn something if I could be successful enough to enter the school. The girls persuaded me, and another young man, to go. We had very little money, and few clothes, but I was determined to go. Sept. 5, 1868, I went and was delighted to see so many interesting things. I and my mate were examined by Gen. Armstrong. We knew little but he said he would try us, and if we were diligent we could remain there. I had no knowledge of geography or arithmetic, and could not read and spell very little. I never forget H., and the knowledge I received there. The instructions I received have been the making of me. While at H. I received much useful instruction by which I have accomplished many complicated things. I am satisfied that no one that has ever been to H. can regret his stay there.

The knowledge, and instruction I received there laid the foundation, that has enabled me to build until the present. We should as Hampton graduates ever love our alma mater. I must say that the instructions and knowledge, I had while at H. have not only done me good, but it has been the means of assisting me to do good to others.

In my middle term at school, I taught school in Charlotte, Co. Va. three months and gave perfect satisfaction, or at any rate the Supt. was pleased with me.

I remained at H. from Sept. 5, 1868, to June 12, 1872.

#### IN THE FIELD.

Since my graduation, I have seen many hard times. After I left Hampton I went to Co. Va. to teach. When I first went there, I had to go around to get up a school; but I had no trouble with my examination and the Superintendent was much pleased with my qualifications. I taught school in \_\_\_\_\_ four terms, and the community stated that I gave perfect satisfaction. They have often written for me to come back, and take the school again. I left \_\_\_\_\_, and came home, where I have been teaching ever since. Our Superintendent and Trustees of the schools give me many cheering words, and recommend me very highly. Our County Supt. has told me that some of my scholars give me great credit. Yet through all of the many eulogies I receive, I feel my incompetency. I have at this time, a very large school, with a total enrollment of one hundred. My average attendance last month was 70.65, so you see, I have no time for play, and some times I have no time for night. I must take here, that I am a great sufferer with the rheumatism and have been for nearly eight years.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

RETURNED HOME.

Bears Heart, the list of the St. Augustine young men left at Hampton, has returned to his home in Indian Territory with no other company than a young Pawnee who travelled under his charge. Letters have been received telling of his safe arrival and meeting with his old mother and other relatives, to whom he must have seemed to return like one from the dead, after an absence of six years which has wrought in him so entire transformation. He goes back under good auspices to the kind and wise care of Agent John D. Miles; and has already got to work, as appears from the following one of his letters.

DALINTON, INDIAN TERRITORY,  
Cheyenne and Arapahoe Agency.

April, 1881.  
My dear friend:—I got home all safe. I was very glad to see my mother and my sister and all my relations. They were glad to see me. All of them are well, none have died. The Hampton boys are well and have work. The female boys (probably those of the prisoners who went directly home, not stopping at school) are very poor, I am sorry for them. I am very busy now. Write to me please. I am.

Your truly friend,  
JAMES BEARS HEART.

TO A LITTLE INDIAN, FROM HER FRIEND.

Poor Wolf, a chief of the Gros-Ventres, whose visit to Hampton is described in an article on Indian Education in Flapper's magazine of April, since his return to his home in Dakota has written a fatherly letter of encouragement and advice, to a little girl of his tribe at Hampton. His letter, written from dictation, is rendered into English by the missionary at Fort Berthold, and will speak for itself as to the Indian's regard for their children and interest in education.

Fort Berthold, D. T. June 1st, 1881.

Daughter Sarah:—When I saw you at Hampton, I told you my mind; and I wish to say something again. I saw that you were in a nice place, and that your teachers were good to you, my heart was glad. Be diligent in writing and in learning white woman's ways. Your father and mother and all your relatives are all well, none have died.

We shall be glad to see you again, and have you with us, if you have learned to his good and wise.

Your "Father,"  
Poor Wolf.

The missionary adds a few kind words to Sarah and the other girls from Fort Berthold, saying:

"Your friend, Poor Wolf, sends you a good letter. Let me say just a word to you and Josephine and Annie. How glad I am that you are so well off. I saw your father last fall, as I passed by his place on a steamboat. He was the same as ever, cheerful and at work.

Come back and teach your poor people better ways. We are all well and hope to see you soon.

Your Friend,  
C. L. Hall."

A GIFT FROM AN INDIAN SHOOMAKER.

One of the Sioux young men who is learning the shoemaker's trade at Hampton, has just sent a neat pair of shoes of his own manufacture entirely, to Dakota, as a present to his good friend the missionary at his home, who will perhaps pardon us for giving our readers a sight of the letter which accompanied them, as we have the writer's permission to do so, and it will interest many. He "drops into" Sioux now and then, whether as more practicable or more confidential.

Hampton Normal School, April 21st, 1881.  
Rev. Joseph W. Cook:

I am going to write to you again and tell you that we are doing well, and that we are well. The last time I wrote you I was sick, but now I am well again. There is a great deal of work going on here, among the Indian boys and girls. We are trying very hard to make ourselves men while here at Hampton. Many white people come to see us work in the workshop every day. We have a good man to teach us how to make many useful things, I myself can do most any thing in the way of making shoes. Some of which are among the best ones, so Mr. McDowell said. I can peg them just as good as anybody else and welled, stitch down, and make the narrow parts pretty. I can make any kind of fine shoes if I have fine leather with bottom. I like my trade very well, and I hope that I may have a chance to make money at home in this way. There is one new building just connecting for boys to work in, and there is one also for girls. Several more buildings are going up, in a few days the school will be

gets a little town for Indian students. \* \*  
A holiday today and tomorrow, so that we are resting from working. It is getting warm here, and the trees are blooming and many pretty flowers are in bloom. I am going to send you one pair shoes that I made, by mail, so that you can see how we are getting along here. I have a toppling working in the shop now though, and work on the farm for awhile. But I will soon go back again I think, for I like it. Now I must soon return to bed. God bless you all is the wish of your affectionate,  
S. B.

WOOD CARVING AND FLUTE MAKING.

Mr. McDowell's report of the Indian boys' progress in the trades they are learning, is very encouraging. His formal statement will be found in another column, embodied in the report of the Principal. The boys lighten their more serious tasks by various kinds of fancy work of their own device. Wood carving and cane making are just now in fashion. Much skill is exerted in carving the heads of the cases into dogs and horses' heads. Two or three young men have made flutes of a peculiar construction, the barrel being divided into two sections by a disc which encloses it in the center. The air blows through the first section, rises through a hole against a sort of hand standing up on the outside, so curved and grooved as to direct it both forward and downward through second hole, into the second section of the tube, which is furnished with the usual stops. What the special use of this "winding bout" for the "hiked sweetness long drawn out," I am not musician enough to guess. No care is taken to give resonance to the hood, which is merely a rather thick bit of any kind of wood which comes to hand, cut into the desired shape. Neither is the darning disc of any particular thickness or resonance. The flutes are made either of wood or tin. The tone is soft and pleasant.

REVERTING INTOBURN.

The latest comes from Arizona, seem less shy and reticent than the Sioux at first were, still they are not always amishly responsive to advances from strangers. A lady visitor to the Indian workshop, recently passed to watch a tall young Apache, at his carpenter's bench. He was evidently "not at home" to visitors, and turned his back ungraciously. The lady, unassuming of the strength of his disapprobation, leaned forward to see his face, bending to follow it as it turned away, till, in utter exasperation, he suddenly turned upon her with a fierce scowl, and a hissed out "Zu-chank!" (Step back!) which had the effect of sending her back as if a ton of lead had been flung at her. The experience will shake her faith, I fear, in Indian capabilities for civilization, though she may sometimes carry their frank method of saying "I'm pleased to meet you" to an unwelcome visitor.

## ORIGINAL COMPOSITIONS.

THREE LITTLE INDIAN GIRLS.

The following letters were written, without any assistance, by three little Indian girls, Sioux and Winnebago, at Hampton. Sophie came to the school last July, as she states; Mary, in Nov. '79; Carrie in Nov. '78. The first two could speak quite a little English when they came, but all have learned to write since coming. They are dear little girls, and are doing nicely.

HOME AND SCHOOL.

I am going to tell you about my home here at Hampton School. I been here ten months now I came here last June and I am trying very hard to learn to sew talk English and be a nice little Indian girl at Hampton School. We sew our dresses sometime, and I like to sew very much and I left my home and I cry and I want to learn that is why I came and my mother said my little girl, when you go to Hampton try very hard and be a good Little Woman and learn, and I am very glad White people help the Indian, give money to them. I think them for giving money to make a new house for Indian girls and very much I like all teachers, and I learn how read, and I know how write, and my mother she said my father said you be good girl going to Hampton School, you be a good girl.

A LETTER.

My dear friend,  
I am going to write you a letter and tell you something. We go to sewing school every afternoon and if we want to sew more we go to Mrs. Seymour's room and when I get tired I go out and play with Sophie and Little Bear. We have nice time and we play in the boats and when the steamboat comes it rock us up and down.

We wash dishes every morning and every evening. Every month we have two dollars. I take care of the molasses closet.  
I bought a white apron and a ruffio and a

thread. I was hungry and I bought a pie and apples and cakes two.  
from your friend  
MARY THAYER.

OUR INDIAN GIRLS' BUILDING.

We are going to have a new Indian building and we are very glad. I know we have been here two years and a half but we haven't any building that is the reason the girls ain't as happy as the Indian boys are. I hope there will be some more girls coming to Hampton school. I should think if the Indian girls building is done, I know we should be glad and happy. I was glad to hear that the people at New York was giving up their money for the Indian girls building and at Boston and at Springfield. I am glad the white people are so kind to the Indians and are trying to make the Indians be civilized. I am very much obliged to you all. I like this school very much. It seems to me that I didn't know nothing at all when I first came here. But now I have learn great deal. When I go to my old home to Dakota I guess I will think about this school very often, because I like this school very much indeed, and my teachers too, and I know I will never forget this school in my days.

Carrie Anderson.

## ORIGINAL COMPOSITIONS, DICTATED BY INDIAN BOYS AT HAMPTON.

The following compositions were prepared for speeches by two Sioux boys of 20 and 17, at Hampton, who came to the school, in Nov. 1878. Yellowbird knew a little English when he came; Bushooter, none. Both could have written them for themselves, but as they were intended for speeches, to save time, they were taken down verbatim from their dictation by their teacher. The English is, therefore, their own.

MY COUNTRY.

At my home a good many Indians live just like white people. Some Indians live in tipis and some in log houses. We have two churches at my home and a schoolhouse. Some Indians wear blankets and paint their faces but a good many wear white men's clothes. The Indians at my home like to dance. Some Indians that wear white men's clothes sometimes take off those clothes and put on Indian's clothes and dance. I think you would all like to know how commence the war-dance. First one woman cooks for those who dance and great deal. When I go to tell one old man, and that man tells those who belong to the war-dance; then those who belong to the dance all come together to one house, and have good time all day. About ten men sit down together and drum and sing, and about thirty or forty who belong to the war-dance sit round in a ring, all dressed in Indian clothes, and have their faces painted, with beads and feathers. One man gets up and begins to dance, and then another one, and then another one, and he and she, they are all dancing. Then in a little while, the singing stops and they all sit down. Then they all get up and begin to dance again. Sometimes they dance so all day and all night dancing and eating all the time. Then, when they get through dancing, they all go to their homes.

Last summer, I went back to my home with Miss Mather and Capt. Pratt and one other Indian boy to help bring more Indians to go to school. We went to Spotted Tail's Agency. The Indians there were all wild Indians, not like my home. They got no farms. I didn't see any houses, only tipis. They don't work, they doing nothing but walking around. They had one church. Just a few Indians went in to the church, and a great many Indians outside on horses looked in at the windows and listened. I stayed there two weeks, with Miss Mather at the Agency house; and Capt. Pratt and the other Indian boy went to Red Cloud's Agency. Indian men come to see me every day and talk about Hampton; and when I go outside all the time they talk to me. They talk to me in my language and say "What kind of school is Hampton? Is that good school?" and I tell them all about. "We go to school and girls go there and learn English just like white people and we work," and they listened to me just like I was a big man and knew about everything. And I tell them send their boys and girls to school, and when I walk and see some boys playing I tell them to go to school and be like it and give their children to Capt. Pratt.

I think my country is a good country, and my home is a good place because the Indians are working there, but I want all the Indians to learn to work and leave the Indian ways that are bad and learn the white man's ways.

Yellowbird.

MY NEW THOUGHTS.

I want to tell you what I was thinking of before I came to Hampton.

When I was at my home I thinking one way, but when I came here then I thinking another way, and the last thinking was very good.

Before I came to Hampton school I thinking it is good not to work. I think now it is better to work than to do the Indian's way, because the Indians are lazy and make the women work. I think it is better for them to work and help themselves, and get more things than they have before.

I never thought it very good for women to work. When I was a very little boy, and my mother used to go and cut wood, I used to help her, and she told me to stay in the house but I wouldn't stay. And now when I see the white men working hard and the women working inside the house at easier work, I sit down and think, just like I ask myself a question, and I say "What makes the Indians lazy and have the women work for them?" They ought not to do it. God made every one to work, and women are not so strong as men.

If Indians learn how to work, they can do things themselves. They ought to know how to make a plow and build a house and make bricks. All those things they don't know. They ought not to sit still, and get something to eat from Government. We ought to work hard and get something ourselves.

I used to think it is not good to stay in the same country, but go away somewhere else and stay there a few days, then go away somewhere else again and have a good time hunting and all those things, but after while I change. Now I think it is better to stay in one place so the children can go to school, and not take them away and go somewhere else keep them there till they learn all the good way. If Indians stay in one place near good white people, then they will learn good ways; and how to take care of everything, and when the mothers and fathers die, their children will know a little, and then if they stay in one place their children will know more, and so on and so on—and at last they will be a good people, but if they move about all the time they will stay just the same as they are now, and never learn anything.

The Indians choose a chief because he is brave and a good fighter, and when he dies his son is chief, but I think they ought to choose a chief because he is a good man and knows more than the other people, and when he dies they ought to choose another good man.

I used to think it was not good to study, but now I think it is good to study and think about hard things. The Indians' minds are too small. If they study hard their minds will grow strong, they will have big thoughts in their heads, and they can think something hard and find out with their minds. If an Indian gets a letter from his friend who is away, he cannot read it, and he and he after a long time perhaps he get somebody to read it for him, but that is not good. Every Indian ought to know how to read and write himself, so he can write to his friends when they are a long way off. The Indian ought to read in a book so they can know about God. They don't know about God, what he says, and they think the white people make it up about him just now, but when I read in the Bible then I know what God says, and I read about Jesus myself and I know what he says. I know now it is very old. I know now it is true. I think every Indian ought to read the Bible for himself and then he will believe God, and then God will help them and do them more good.

Indians don't know about Heaven. They think when people die their souls stay somewhere, where just like this world, and hunt and live just the same as they do in this world. They ought to know if they do right they will live long with God, and he will love them and help them all the time.

Geo. Bushooter.

ONE HOME BUT NOT GONE BACK.

On Bears Heart return to Indian Territory, one of the other Cheyenne young men, who went home several months ago, was stimulated to write the following pleasant report of himself to one of his former teachers.

Darlington Indian Territory, April 14th '81.

Dear friend:

Miss L.—It is a long time I have not write to you. And when came here Bears Heart he told me about yourself I am very glad I heard from him. And but now I am going write to you, and I have so much to do work every day and I have not get time and every Sunday morning I am go to Sunday school. I do not want the Indian way any more. And the Cheyenne we are going to try to get the white man's road and to work hard in the farm all right way now. And just the same the Arapahoe. And I have not forget to you some time I am thinking of you often. I hope you will write to me. I must close for this time, good afternoon.  
from your friend,  
Wm. Coteau.

## SKETCHES OF MISSION LIFE.

No. VI.

BY MRS. C. O. ARMSTRONG.

## RETURN OF MISSION TO OAHU.

The whale ship upon which we sailed from Niihau, was not intended to carry passengers, but nevertheless the voyage was the most comfortable we had ever made. It was pleasant to hear the songs of the sailors at the ropes, and their feet tramping the deck, instead of savage yells, and wild clapping of hands, while to us there could hardly have been more soothing melody, than the sound of the sea breeze in the rigging, as we left behind us those horrid scenes, of which for years we could not think without a shudder.

At last with a thrill of joy we saw old Diamond Head rise on the east, with sombre brow frowning like a giant, and the water that foamed and tumbled at his feet. Soon we caught sight of little Honolulu, dry, dingy and uninviting, for the lack of water made the prospect very different from Niihau, which revealed in a luxuriant growth of trees and shrubs. But there were the mission houses, and what a joy it was to feel that a comparatively civilized country was near. Instead of fierce tattooed warriors, with fierce yells and vulgar clamorous tongues, we should be surrounded by natives, noisy enough, but gentle compared with Marquesans, for here the gospel had sent light into many hearts, and as heathen clouds were dispersing.

The prospect of an opportunity for successful labor was encouraging after eight months of useless toil, sacrifice and danger, and we landed to meet the warm "Aloha" of the natives, with a full appreciation of the advantages which this change from Niihau would be to us, and to the mission which needed fresh laborers so much.

## GENERAL MEETING.

In May or June of each year, the different families of this mission, met at the Hawaiian Jerusalem, to devise plans for the spread of the gospel in the various islands. At that time of our arrival they were thus gathered together, and as it was desirable to take new stations as speedily as possible, our little Marquesan band was soon scattered, my husband and I being sent to Hialeka on the island of Maui. We took passage upon a small and filthy schooner, and were about a week in reaching Lahaina, a passage now made by steamer in eighteen hours. From thence we travelled some ten miles by canoe, riding at two or three o'clock in the morning, to avoid the hot sun. I was ill and miserable, but carried the infant Hepe in my arms, while the little girl was with her father. An ox cart met us at the landing, and we were taken over a stony plain to Wailuku, where we rested for three days, and then proceeded, again in our ox cart, twelve miles to the thatched hut which had been set up for our use. It was about thirty feet long, twelve wide, and eighteen feet high in the center, and was soon partitioned off with coarse mats into bedroom, study and dining room. We were nearly destitute of furniture, for our ship did not arrive from Tahiti for a year and a half, so that I have a difficulty in remembering every article with which we set up our second attempt at home. The child of one of my co-workers, we had a small plain table, two yellow chairs, and a rough shelf. In the bad-room, a bed, a rough box for table, our trunk and two or three chairs, including a rocking chair which was our only luxury. The floor of the house was coarse mats laid on dry grass on the ground. We had three doors and three windows with six panes of glass in each, and at a little distance from the house, a thatched cook-house with stoves for freplace, and iron bake-kettle for oven. Fortunately, the situation was charming. We were well up on the side of the old extinct volcano of Haleakala, (House of the Sun,) which rose thousands of feet above us, while the broad blue Pacific Ocean lay spread out before us, only two miles distant. Level lands were broken on either side of us by ravines and valleys, which extended far up into the mountain. The trade winds were strong, and when it did not rain, the air was pure and balmy, and it was so pleasant to feel that here was at least a temporary home where we could begin the work we were so anxious to do.

## OUR FIRST WORK.

By order of the chiefs, a thatched church and a school house were soon erected by the people, who brought poles, posts and grass and put up the buildings in the native manner. Mr. Armstrong, speaking himself diligently in the language, mingling daily with the people, while as soon as I was strong enough I commenced a weekly meeting with the women for Bible and general instruction. I took both the children with me, having a native woman to carry the baby, and as the meetings were well attended, and I improved in the language, I was quite satisfied. It was however much more difficult to teach the children than to learn the language, as she had to avoid speaking it at home, and to keep her children from it as much as possible.

## COOKERY.

Some of our most annoying, perplexing and often ludicrous experiences were connected with the culinary department. A native man or boy had to be chosen for cook, because he could chop wood, lift heavy articles, bring water, etc. They were of course, awkward and ignorant, not very honest, and dirty beyond belief. They worked for food, and clothes, (to be clad in a shirt was to be well dressed,) and generally considered that they were doing us a favor when they permitted us to teach them anything.

They learned quickly to use tinner, flat and steel, as that was an improvement on their tedious way of getting fire by rubbing two sticks together, but it seemed impossible to teach them to set a pot or teakettle on the fire without upsetting it. It required much patience and perseverance on their part to learn how to fry or bake, and the best of them could not be trusted to set the frying pan on the table, use the towels for handkerchiefs, and put the dishcloth in the coffee pot, which latter we found imparted as unpleasant a flavor to our coffee. The only milk that we had was from goats, and we found that when our cooks were too lazy to milk, they would draw a little, and then add water to make up the desired quantity; which showed that they were not altogether ignorant of the arts of civilization.

Our lander was enriched by frequent gifts from the people, as the chiefs had told them to be generous to us; and I am sorry to say, that sick chickens and eggs and for us, not seldom found their way to us.

## CUSTOMS.

The land is the Hawaiian Islands was all owned by royalty, that is by the chiefs, and their will was law. If a petty chief was displeased with a tenant for any reason, or took a dislike to him, the tenant would be ordered to leave with nothing for his family, and there was no chance for appeal. This state of things tended to make the people improvident, for they knew they neither did nor could own anything. Civilization was of course much less advanced here than in Honolulu, and there was plenty of lying, petty thieving, and worse, among the people with whom we had to deal. We insisted first of all upon the establishment of the marriage ceremony, and here we met with many comical experiences. The clergymen always demanded a fee, as it added, in native eyes, to the importance of the occasion, and in this way we obtained a very miscellaneous collection of articles. Laziness was universal, and this, combined with their entire ignorance of anything like a legalized family relation, made infanticide very common among them. The children who were permitted to live, were not taken care of, and it seemed marvelous that they continued to exist. Their parents had no control over them, for if they attempted anything like punishment, the child would retaliate with kicks, blows, and perhaps a shower of stones. Many were called "parent," and if the child was aggressive, they would run from one parent to another for sympathy and protection.

Their names were curious, often taking their origin from circumstances, and being common to both sexes. The child of one of my co-workers, a bright little girl, was named "Hailpepe" (pig pea), and such names as "Poo," "Crazy," "Chicken," etc. were common among them.

## IMPROVEMENT.

We had a few printed school books, and the Bible was much used and revered by our pupils, who were some of them, in their ignorant fashion, very devout. I remember once, in the middle of the night, we were roused by a loud rap at the door. Supposing it was some one who was sick and had come for medical aid, we got up, to find an old man who had walked fifty or four miles to ask us if it was right "to pray with a shirt on." Not being accustomed to wearing such an article, he was afraid that his heart might be lifted up with pride, and he had come for advice as to the propriety of keeping it on when he prayed.

We had great trouble in managing them when ill, because some of them would not take our medicines at all, while others would swallow both their own and ours; to ensure recovery and keep the favor of both sides. Still in one way and another, we could see signs of improvement, and worked on hopefully, unconscious of the trials which lay before us, and which were so soon and so severely to test our faith.

## INTERUPTED WORK.

In a few months the rainy season came on, and our mission house proved to be very leaky. The weather was cool, the winds strong, and at times the rain poured down for days in succession. Mr. Armstrong, protected by the old travelling cloak, kept on with his work. The house was damp and chilly, and there was no place for a fire, except as we made one in a tin-pot, in the centre of the room, which produced a very disagreeable smoke. All of us caught severe colds, and little Hepe became

very ill, and continued so for weeks. We had to nurse and give medicine without aid from any one. It was the only time in my life that I and my children had to suffer for the lack of suitable and sufficient clothing and bed covering.

We had no comforts of any kind, and were so isolated that we could not except with great difficulty, communicate with any of our fellow missionaries. The cotton cloth that was supplied us to hire natives with, we were obliged to spread on our beds, and that was literally all we had. Mr. Armstrong's cold grew worse, my cough became alarming, and both the children were ill—the baby so very ill that we despaired of his life. Weeks passed, and the rain hardly ceased for an hour. Mr. Armstrong's cold culminated in a fever, but he could not leave his bed. He prescribed for himself and us, and I did the best I could, having no help but that of the natives, who were very kind, but I expressively awkward and ignorant. It seemed to me at times that my reason would fail me, and I can never forget the night when our misery reached its climax. I lay down on a half-mattress on the floor, with the sick baby in its cradle beside me, and my husband on the other half mattress on the bed. I was physically overtaxed and exhausted, and was hourly expecting the birth of my third child. I felt sure that I should be ill before morning, but did not dare to tell my husband, for there was no one with which reach, but some kind natives, all we had. Mr. Armstrong's cold aggravated his fever. As I lay there, my head, I looked up to God for help and counsel, and, as I believed, by his wisdom, laid my hands for the next day.

By early dawn, I got a messenger and sent a note thirty miles to Lahaina to the Rev. Mr. Richards. The resident doctor was unable to come, so I sent some of the natives of my own wife, but Mr. Richards was soon in the saddle, and reached us before eight.

As he entered our house and beheld our pitiable condition, solitary, sick and helpless, he stood speechless, but the tears flowed freely down his cheeks. He grasped my hand and said with a decision that lifted a weight from my heart. "It is not at all that you should struggle any longer, you must come back with me." So in three days, whether rain stopped, Mr. Armstrong was laid on a litter made by his scholars, and on their shoulders carried twelve miles over hills and valleys, to the next mission house. Though utterly unfit for the journey, I made it on horseback, preferring that to the jolting of an ox cart, and the two children were carried by natives. Mr. Armstrong's illness made it necessary for us to proceed in perfect silence, and the day was a wearisome one for all; but night found us in a comparatively comfortable house, and though for a good many hours we thought my husband must die, he was spared, and under Mr. Richards' kind care, gradually grew better. The baby too, after days of weepy wretchedness, seemed to improve, but it was evident that it would not do for us to return to the damp, leaky house which had probably been the cause of our ill health.

## CHANCE TO LAHAINA.

As soon therefore as we could move, we went by ox cart and canoe, to Lahaina, where we stayed at the doctor's house. Very soon after we had been born, and in spite of the damp, chilly weather, we were all getting better, when erump, which was prevailing in the neighborhood, suddenly attacked my poor little suffering Hepe, and in twenty-four hours he died in his father's arms, beside the bed where I lay with my weak old baby. The anguish of my heart as I saw my child's sufferings and could do nothing to soothe or comfort it, cannot be described.—God keep all mothers from such agony!

Kind hands put on a robe for the grave, and the little silent sleeper lay, until moved to his last resting place, beside me, in my room. It was small and gloomy, entered by a flight of shaky stairs, with no window except a little opening, covered by two board blinds, which when closed made almost complete darkness. But there was no other place, and there we had the funeral of our first born son, whose name, William Nevins, we gave to the babe whose little life had just begun. His father and little sister followed him to the grave, and I was left alone in the gloomy room, to realize that my child was at last beyond the reach of suffering, with Him who had said: "Of such is the Kingdom of Heaven."

After this my husband grew stronger, and in a short time was able to ride back to our desolated house. The rainy season had gone by, and he remained about two weeks with the people. I was alone with the two children in that sad and desolate room; but as soon as I was well, Mr. Richards came with a canoe, and took me over the channel to Molokai, to his hospital home, where I was cheered by the kindness and sympathy of old friends. Even the greetings of the natives whom I had known when there before, were sweet to my ears after those months of loneliness and sorrow.

## A CANDIDATE FOR EXTERMINATION.

Those who know John D. Miles, the Quaker Indian agent at the Cheyenne and Arapahoe Agency in Indian Territory, know that he is not a man given to sentiment and gush. He has the Quaker qualities of cool-headedness and a business way of looking at things, with a flavor of the church militant about him, albeit he is a man of peace. The following letter has just been received from him, concerning the return of Bear's Heart, an Indian student from Hampton.

This is one of the savages to educate whom, according to some, is futility and folly—whose proper future is extermination by a civilized Christian nation.

Six years ago, he was carried in chains to St. Augustine, a U. S. prisoner of war; three years ago, he was brought to Hampton school, earnestly asking to be taught the white man's road of study and work. Now he has gone home, by his own desire, to show it to his people.

Shall we exterminate them?

"Chey. & Arap. Agency, Darlington, I. T.  
4th mo. 29th, 1881.  
Capt. Romeyn,  
Hampton, Va.

Dear friend:

Bear's Heart reached home in due time, and after visiting his friends in camp for a few days only, applied at my Office for work; said he could not be idle, and had no desire to remain idle in camp—but was anxious to show his people that he had been taught to work, and that it pays to work, and that it is honorable to work. He told his people the first Sabbath in Sabbath School that "the Bible religion has work right along with it." I put him in the Carpenter shop, where he seems quite at home, and I am confident his example will influence him to be on the right side.

Send us more such men.

Your friend,

JOHN D. MILES,  
U. S. Indian Agent."

The following Law of this State, prohibiting the sale of liquor to Normal School Students, has been in force since March 3rd, 1880.

## Chapter 135.

As act to prevent the sale of liquor to students of the Hampton Normal and Agricultural Institute.

Approved March 3rd, 1880.

I. Be it enacted by the General Assembly, That any person who shall hereafter sell directly or knowingly indirectly to any student of the Hampton Normal and Agricultural Institute, alcoholic or malt liquor, shall be guilty of a misdemeanor, and, upon conviction thereof, shall be fined not less than twenty nor more than fifty dollars.

II. It shall be the duty of the county court from which the party convicted under the first section of this act obtained his license, forthwith to revoke the same; and no other license to sell liquor shall be granted to such party, within two years from the date of said conviction.

III. This act shall be in force from its passage.

Mrs. Elizabeth Comstock, of the Kansas Relief Committee, says in a published statement:

"Upwards of one thousand letters have been received by us, within the past six months, inquiring for women skilled in the different departments of housework; and, out of sixty thousand refugees in the state of Kansas, we find very few who are competent to do the work required."

What the Negro race needs most of all, is practical training.

The ills over which politicians scream, are not to be compared with what this people is suffering from want of skill in the departments of labor where they are needed.

Good training would bring into their reach an immense amount of wage-money; for want of it, there is wide spread wretchedness among the freedmen.

## OFFICIAL GAZETTE OF THE UNITED STATES PATENT OFFICE.

This valuable publication is regularly sent to the Normal School Library, which has been designated by Hon. John Gooda to receive it. The copies are accessible for reference to all persons who may desire to examine them.

# TWELTH ANNIVERSARY OF HAMPTON INSTITUTE.

The twelfth anniversary of the Hampton Normal and Agricultural Institute took place on Thursday, May 19, and was, in several respects, one of peculiar interest.

The new Academic Hall, which has risen from the ashes of the old, was dedicated and occupied by classes, and the cornerstone was laid of two new buildings the money for which is in the treasury—the one, an industrial building, chiefly for young women, given by Mrs. Valeria Stone of Malvern, Massachusetts, from her husband's large bequest to educational purposes, and named for him the "Stone Memorial"; the other, also for the benefit of women—the Indian girls' building, the expression in brick and mortar, of the interest recently aroused in New York and Boston and elsewhere, by the speeches of Mr. Schurz and Gen. Miles and Dr. Potter and Phillips Brooks, and Capt. Pratt who generously left his own fold to lend a hand in the common cause, and other eloquent friends of the most heavily burdened half of an oppressed race.

President Garfield, who was on the school's first board of Trustees, and has always been its friend, had accepted an invitation to lay the cornerstone of the Indian girls' Lodge—dead-locks in the Senate permitting—but was prevented by the illness of Mrs. Garfield, and sent, at the last minute, a cordial letter of regret.

Among the honored "guests present" were Rev. Henry C. Potter, D. D., of Grace church, New York, who had kindly consented to act as the President's substitute in the cornerstone ceremony; Maj. Gen. O. O. Howard, by whose hand, eleven years ago, the cornerstone of the original Academic Hall was laid, and the chief part of the money given for its erection, from the Freedman's Bureau fund for such purposes; and who was now appropriately the one to dedicate the new building Gov. Holliday, of Virginia; Rev. Philip Schaff, D. D., of New York, President of the American Board of Bible-revision; the venerable Bishop Payne, of the African Methodist Episcopal church, former president of Wilberforce College in Ohio, whose recent invitation to preach in one of the largest white churches in Virginia has been widely recognized as evidence that the world do move; Hon. Josiah King of Pittsburgh, who, as agent of the "Avery" educational bequest, in 1867, laid the financial cornerstone of Hampton's work for the freedmen, by giving to the American Missionary Association the first \$10,000 to purchase land and establish the Normal and Agricultural School; Hon. Felix Bruno of Pittsburgh, the well known representative of the interests of the red man; Mr. Geo. N. Tins of Pittsburgh; Mr. Robert Treat Pauley, of Boston; Mr. Brown of Boston, whose name is like ointment poured forth to many a lonely Hampton graduate teacher in the south; Dr. Harrison of Chicago, Mr. Moses Pierce and Mr. Geo. Pierce of Norwich, Conn.; Capt. Brewer of Boston, formerly of Hampton; Mr. F. C. Gillet of New York; Rev. John Harding of Long Meadow, representing the Springfield Republican; Miss Susan Hayes Ward, the New York Independent; Mr. Frank Foxcroft, the Boston Daily Journal; Mr. C. T. Clark, the Philadelphia Evening Bulletin; Mr. Glennan, the Norfolk Virginian; Mr. Perkins, the Norfolk Landmark; Mr. J. K. Willis, the Hampton Monitor; and Mr. Bodell, reporter for the Associated Press; Mr. Deane of Norfolk, Member of Congress elected from this district; officers from Fort Monroe, and guests from the Hygeia Hotel.

In the afternoon, an excursion boat arrived with a party of visitors representing the best society of Norfolk. There were also present a number of the leading citizens of Hampton and the neighborhood, and most of the Trustees and Curators of the school, comprising the following gentlemen:

Trustees:—Rev. M. E. Strieby, D. D., New York City; Hon. W. R. Hughes, Judge U. S. District Court, Norfolk, Va.; Mr. Chas. A. Mead, of New York; Rev. Thomas K. Fessenden, Farmington, Conn.; Rev. Henry W. Foote, Boston, Mass.; Mr. Robert C. Ogden, Philadelphia, Penn.; Mr. Anthony M. Kimber, Philadelphia, Penn.; Mr. Z. S. Ely, New York City; Hon. Lewis H. Steiner, Frederick, Md.; Mr. Elbert B. Monroe, Southampton, Conn.; Judge F. N. Watkins, Farmville, Va.; Mr. James M. Brown of Brown Bros. New York was elected Trustee at this meeting.

Curators:—Col. Thomas Tyb of Hampton; Mr. Revm of Petersburg; Gen. Page, Supt. of Schools in Norfolk; Rev. Jas. H. Holley of Petersburg; Rev. J. M. Dawson, of Williamsburg, and Rev. Wm. Thornton, of Hampton.

## DEDICATION OF ACADEMIC HALL.

BY GENERAL HOWARD.

The day was cloudy and remarkably cool, but the threatening rain held off but for a few drops in the afternoon, and the clouds did

more on the whole to add to the comfort of the day than to mar it. There was no large crowd of visitors, and, full as the programme was, all had ample opportunity of room and time to enjoy it.

The exercises began at nine o'clock with a review of the Hampton Institute battalion of cadets, Capt. Henry Romey, Commandant, by General Howard; after which the procession was forward of the school and visitors, escorted by the Normal School band, and marched to Academic Hall, for the dedicatory services. The opening prayer was made by Bishop Payne, and the following dedication ode was sung, written for the occasion by Mrs. F. E. Harper, the colored authoress and temperance speaker; the music to which was composed by Mr. R. H. Hamilton, a Hampton graduate, of the class of '77.

### DEDICATION HYMN.

Today we come with joy and song,  
A free and rising race;  
To wisdom, knowledge, love and truth,  
We dedicate this place:  
For aye, let our pathwayward  
The gloom of slavery's night,  
Thill God arise and changed our lot  
From darkness into light.

The knowledge from our fathers laid,  
We now may learn to prize;  
The word we took by freedom's hand  
Is open to our eyes.  
Oh may the lessons here we learn,  
Be loved like precious seed,  
Whose fruitage shall in after years,  
Be high and holy deed.

May blessings like the morning dew  
Be on their path distilled,  
Who kindly gave us of their store,  
Our hall anew to build.  
For aye, let our pathwayward  
The gloom of slavery's night,  
Thill God arise and changed our lot  
From darkness into light.

The Hall was then dedicated in the following speech

BY GENERAL O. O. HOWARD:

"Ladies and gentlemen, pupils, teachers and Principal."

I have selected a few passages from the Memphis Appeal of March 18th, 1867, which I notice, with other remarks have been republished in the American Missionary for May. They are as follows:

"We can rescue the negro from the ignorance that threatens him and us by establishing good public schools—not grudgingly, as if we were conferring an unwilling charity—but in a broad, cheerful, and good neighborly spirit, as if we were performing a duty—a paramount and most important duty. Under God this is the only remedy for negro suffering. It is a waste of time to talk of abridging it. 'Revolutions never go backward.' The best answer to that sort of talk is that the United States never were so strong or so prosperous as they are at this moment, when public sentiment is in all the States demanding the most absolute assertion of democratic life and living. Instead of looking back, we must look forward; nay, we must go forward, and we must take the negro by the hand and make him feel that he is a part of the great column of the people; that his destiny is interlaced with ours; that we must not stand apart, isolated and at enmity, but go forward, each doing what he can to strengthen the community at all points moral and physical, to uphold and defend our democratic form of government and perpetuate unassailed the liberties which have survived the chaos of civil war and reconstruction."

I have been absent for more than six years from this part of our land. The Indians who are so well represented here have in a measure absorbed my attention, so that except through Judge Tourge's progressive books, I have not followed the changes of sentiment which have been taking place. Judge then of my gratification and surprise at these noted words from Memphis:

1. "Establishing good public schools."
2. "In a broad, cheerful, earnest and good neighborly spirit."
3. "Education the only remedy for negro suffering."
4. "Revolutions never go backward."
5. "The United States never were so strong or so prosperous" as now.
6. "Instead of looking back, we must look forward, nay, we must go forward."
7. "His destiny is interlaced with ours."
8. "We must not stand apart and at enmity."
9. "Each doing what he can to strengthen the community at all points moral and physical."
10. "To uphold and defend our democratic form of government and perpetuate unassailed the liberties which have survived the chaos of civil war and reconstruction."

These are ten glorious propositions. They have the ring of Senator Hoar's pleading.

Notwithstanding the bias and prejudice, which belong to the place of birth, or to some unexplainable misunderstanding, this southern man who writes such sentiments and the northern man who introduces a bill to enable the United States to relieve itself of Hittcrey, are not far apart.

It takes all the philosophy I can muster to keep the longings of my heart under proper control. When, at a meeting which I attended ten years ago in Brooklyn, a prominent southern statesman stood up and called upon us in graphic and eloquent terms, to extend the hands of kindness and sympathy to the southern people I sprang to my feet and warmly responded. My friends shook their heads saying, "you are too sanguine! One bird does not make a summer." The speaker himself was not quite ready, to let extreme meet. He wanted conservative and not radical friends. But since then Atlanta University has received a handsome appropriation from democratic legislatures. Howard University has been aided by a conservative Congress and Hampton is receiving a perpetual endowment from the Old State of Virginia. May I not then begin to go back and gather up some few crumbs of comfort from the reflux currents, which a few years since in their sanguine onward flow, set in motion such institutions as Hampton, Atlanta, Fisk, Tougaloo and Straight universities? May I not use the same scripture which Mr. Lincoln did, when, seeing his country already beginning to emerge from that chaos of civil war, he said solemnly: "stand still and see the salvation of the Lord!"

I do particularly rejoice in the 7th proposition, namely: "His destiny is interlaced with ours!" Oh, yes, in childhood, in youth, in manhood, in the sports of lance and sword in the hard work of years—in education and production—in the offices of kindness and the services demanded by religion—in healthful life and in the hours of death, in time and eternity there is an essential interlacing, a commingling and a co-responsibility from which no race differences will ever emancipate us. And let us today give thanks to God, who has taught our thinking men how to meet the difficulties of every new and unexpected situation; and has helped and cemented that work by inculcating in all the grandest truth in the universal law of its deity on its face, viz: "Love the Lord thy God with all thy heart, mind and strength and thy neighbor as thyself."

Indeed the thorough possession of this truth as an active principle in the minds and hearts of the different members of the human race which are here represented, is the true guarantee of their union, their progress, their success and happiness in civilized life, and, as we believe, of their ultimate and eternal joy. Speaking of the negro, your Principal General Armstrong says: "He is sensitive as to his rights, but is not considerate of his neighbors." This is doubtless true. However, there are for it two corrections; one is enlightened self-interest, and the other is that self-denying love which so many of your successful graduates have manifested in the communities where they are laboring with their people up out of darkness into light. Remember that this self-denying love is not crying nor profuse promises, but constant wholesome performance.

Eleven years ago I had the honor of laying the cornerstone stone, on account of the fire, becomes today the corner stone of a new and really better building, the corner stone of this grand and complete "Academic Hall." It gives me now a sincere pleasure to speak the words of dedication. Your friends have already dedicated it in their hearts to the uplifting of young men and young women who are destined to become the leaders and teachers of the peoples to whom they belong. The principle of the donors, the principle of the trustees who work without compensation, is the twofold one which I have named, viz: Love, Godward and manward; so, let us write its motto high on its front, a motto which I trust is already in our souls: "This structure, an expression of love toward God and His children."

### CLASSES AND INDUSTRIES.

Immediately after the speech of dedication, the classes repaired to their new and comfortable recitation rooms, and the visitors followed to listen to the examinations, or started with guides on a tour of inspection through the various industrial departments; the Indian work shops, Huntington Industrial Works, Barn, Farm, Printing office &c. There was, as usual, an exhibit of industrial products, in the Assembly Hall. The examinations were creditable for both colored and Indian students. The lately arrived Pimas and Apaches were for the first time subjected to the inspection of visitors, and did it well. The dedication were then briefly pronounced by Rev. Henry C. Potter, D. D., of New York.

In the name and behalf of the Officers and Trustees of Hampton Normal and Agricultural Institute, I lay this corner stone of a building to be devoted to Indian girls; in the

prond and picturesque in their shining white plaques and bright red kerchiefs, went off through the operation of waiting on imaginary dainties and setting Lilliputian tables with dainty dishes, and washing up the latter in Lilliputian pans, in a way that promised well for their future homes.

### "STONE MEMORIAL."

At noon the classes closed and the procession, forming again, marched to witness the ceremony of laying the cornerstone of the Stone Memorial building, the foundations of which are laid nearly opposite the Wigwam, fronting the shore. The corner stone in this—as in the Indian building—is a handsome block of red sandstone. It contains various photographs, a catalogue and map of the school, a copy of the Southern Workman, and papers of the day, the order of exercises, postage stamps and small currency of the day.

After the singing by the school choir of "Hail to the Lord's Anointed," the building was dedicated by Rev. M. E. Strieby D. D., President of the school's board of trustees, and Secretary of the American Missionary Association, under whose auspices the work for the freedmen was begun on this spot. Dr. Strieby spoke as follows:

"It is about twenty years since the first Freedman's school was established in the United States, and it was at a very short distance from this spot. This little school may be considered the beginning of that which we see here today; and all that is doing for that race in the United States. While that school was starting, a gentleman of wealth was living in Boston who knew little or nothing about this school, and this school knew nothing about Daniel Stone. Yet there is a connection between these two circumstances.

By the three cardinal means of making money—very strict integrity, very agonizing industry and very good fortune, he accumulated \$2,000,000. He had hardly thought what he would do with it; he just lived on, in a quiet unostentatious way. But, as near to 80 years, the end of life drew near, his good christian wife, Mrs. Valeria Stone, persuaded him to make a disposition of this great property. He was at first indisposed to do, but after giving his thought to it, he made arrangements, which provide handsomely for his wife, and then he have distributed one and a fourth millions of it by himself and his wife if he lived, or after his death by herself and three trustees, to benevolent work, especially to the work of education in the South.

Rev. Dr. Wilcox of Boston, was the principal advisor. This large sum has been thus distributed, and this hall, from the Atlantic to the Pacific, bearing record of Mrs. Stone's good work for the people. She first gave \$150,000 to the American Missionary Association, but this was not for Hampton. By and by Genl. Armstrong asked for only \$7,000 to half build this industrial building for girls and sent his letter to Dr. Wilcox to present to Mrs. Stone. Dr. Wilcox took the liberty of saying that Mrs. Stone would like to give the whole instead of the half, and make it a memorial hall to her husband's name. Genl. Armstrong's letter was seconded by that noble man Dr. Mark Hopkins, zealous in all good works. So the money was given. It is the work of a woman for women, a noble christian work for the race which has had a hard struggle in life. Woman has the disadvantage in life—man can go out in the world with ten or one chance, and occupations open to him. God bless the heart that thinks and feels and acts for her.

I think the Almighty is pleased every opening spring to see this fair world, He has made, put on the beauty of bud and leaf and blossom, and the full year go on through the summer days to harvest. May we not say, without irreverence, that so the child of God will rejoice in the dispensing of her bounty, in seeing every year a corps of girls prepared and sent forth from these walls into the world to bring back the harvest of Christian lives? This satisfaction Mrs. Stone will have.

And now, in behalf of the trustees of this Normal and Agricultural Institute of Hampton, I lay this corner stone, and in the name of the lady giver, I name it the "Stone Memorial Building"; and in the name of the Father, the Son, and the Holy Ghost, I dedicate it to the cause of Christian education."

A prayer by Rev. Dr. Schaff, and singing by the choir of "We will end this war closed these exercises.

### THE INDIAN GIRLS' BUILDING.

After the usual mid-day rest and lunch on the lawn and piazza of the Principal's house, the company gathered around the foundation of the Indian girls' building, which faces the shore, on a line with Virginia Hall, but further up the creek. The choir sang, "Westman tell us of this night," and the words of dedication were then briefly pronounced by Rev. Henry C. Potter, D. D., of New York.

In the name and behalf of the Officers and Trustees of Hampton Normal and Agricultural Institute, I lay this corner stone of a building to be devoted to Indian girls; in the

language of the hymn sung at the dedication of Academic Hall, the name of "Wisdom, Knowledge, Love and Truth." Other foundation can no man lay than that is laid, which is Jesus Christ."

The choir sang the Gloria, and then Dr. Potter, ascending the platform, made a felicitous speech—short, in consideration of the threatening clouds, and the fullness of the day's programme:

"Are we not reminded, as we stand on these beautiful shores, of the early history of the old state of Virginia? Do we not recall the scene of the marriage of Pocahontas with the young Englishman? We are come here to-day to marry the Indian and white race in a new tie; to marry these Indian girls to eastern civilization; with the hand of love and brotherhood, to lift them out of the old degradation, and open the door before them to a nobler future—the future common to all to whom God gives conscience and intelligence, and his brother man gives opportunity and encouragement. I know not the feelings of others if they have not kindled like mine to-day in these wonderful class rooms, looking into the faces of these Indian girls learning to know our God; our way, and best, almost, of all, to respect themselves and support themselves by their own independent efforts."

You have heard, perhaps, the story of the English traveler, who remarked to a Western settler, "How ad it is to look on this broad territory once occupied by the red man, and watch the Indians retreating to the Western sun!" "Yes," replied the settler, "it's rather hard on the setting sun."

But we have learned, let us hope, a more Christian view of it. This great work has shown us that they are of one blood with us, with the same sympathies, the same aspirations, the same possibilities. They only need what you and I have here to-day—black and white—a fair chance. May God bless those who give it to them. May he crown this work."

The Principal, remarking that the good wishes and good will of the colored race have been a significant and helpful feature of this effort for Indian education, asked Rev. Mr. Dawson, one of the school's colored teachers, to read a note brought here by the Principal, and a note brought here by Dr. Potter, from Miss Catherine Wolfe, of New York, regretting her inability to be present, and enclosing a check for \$1,000, to start the much needed Indian workshop, which is the next want and project of the school.

**CLASINO EXERCISES IN VIRGINIA HALL.**  
**REMARKS OF ALUMNI, AND SPEECHES BY ORATORS.**  
 The afternoon exercises in Virginia Hall, which was comfortably filled, were carried out according to the following programme.

**ESSAYS AND ORATIONS,**  
 BY  
**ALUMNI OF THE INSTITUTION,**  
 who have been engaged from one to eight years in educational work among the people.

**Music.**  
 "The Night School at Hampton."  
 ROBERTA MASON, Class of '80.  
 "How the Old Meets His Neg."

ALEX. R. MCNEIL, Class of '77.

**Music.**

"Our City Work."  
 LAURA HAVIS, Norfolk, Va., Class of '76.  
 "Shall we go to Africa?"

WM. REID, Class of '77.

**Music.**

"The Negro and the Indian."  
 R. T. WASHINGTON, Walden, W. Va., Class of '75.

"Our Outlook."  
 L. B. LANFORD, Abingdon, Va., Class of '73.

**Presentation of Diplomas to Graduating Class.**

**Music.**

**A NEW DEPARTURE.**

It will be observed that the essays and orations of the anniversary exercises, were made by alumni of the Institute, instead of by members of the graduating class—as usual in former years, and in schools and colleges generally. The increased interest of the exercises fully justified the wisdom of the change, which might, perhaps, be followed with advantage in other institutions. At any rate, it is felt here to be in the direct line of the school's effort for reality and common sense. The endeavor has always been, in the appointment of subjects and supervision of the essays, to have them conscientiously the student's own thought and expression, simple and within the bounds of his experience. But there is always an element of unreality and lack of interest to all but himself and his nearest friends, in the worked-up effusion of a new fledged graduate, whatever his name, even if he has been at school and college all his life instead of three or four years—he says—or tries to—what he ought to feel rather than what he really can. Then the amount of special preparation necessary, while it is good dirt in one

direction, takes too much time from other study and too much special favoring, for the best advantage of the honor man themselves, and of the class in general. This has been increasingly felt at Hampton. On the other hand, the alumni of the school, who have been faithfully working among their people, have earned a hearing. They come back now and women, with some experience of real life, and some idea of its relative values. They bring back reports from the field, and in their own language tell just what people want to know of the condition of their race as they see it, and the work among them as they have shared in it.

These considerations make it probable that the new arrangement will be continued for future anniversaries. The graduating classes will lose something of the glow and perhaps false excitement of commencement day, but, on the other hand, they will see the honorable position of the faithful graduate worker, and gain a new incentive to go and do likewise. The success of the speaker—but not one of whom had not more than three weeks notice, for preparation—can be judged from the comments of the addresses which followed. The reporter present from the "Pitts. Evening Bulletin," remarks of them in that paper:

"A youth who is just leaving school rarely has anything to say that an intelligent grown person cares to listen to. But the alumni of the Hampton Institute, especially those who have been out in the world at work for several years, must have much to say that will interest everyone who has watched the operations of this school, and who cares for the mighty matter of negro education. Some of the speakers yesterday were men who had been engaged in teaching people of their own race in the South since they left the Institute, five or six years ago. What they had to say was said with clearness and force, and sometimes with eloquence. It is to be hoped General Armstrong will pursue this policy every year."

Diplomas were presented to graduates, young women, and young men, by Rev. Dr. Stribley, as president of the board of Trustees, with a kindly and happy address to the class, as follows:

"In presenting to you these diplomas, it is done this year without the presentation on your part of the usual graduate address. But this is only a postponement; I wish you to understand that a commencement speech is not the most important thing in the course of a College graduate. We have all heard of the sky-rocket; with what a rush and brilliancy it goes up—and some of us know how it comes down—like a stick. It is not always what makes the most noise that does the most good. The earthquake, the volcano, the tornado, work devastation without uproar. But when the sun rises in the purpling east, no noise heralds its coming to bless the earth. There was lately a time when all the North was bound in fetters of ice and snow. No one heard, but softly and silently stole the warm breath of spring down to the roots of life; and now all nature is beautiful and glorious."

But one thing more I want to say to you, dear young friends: when that soft, warm influence came, it had fallen on dead roots and buds, all nature would now be dead as it was in winter. I have often enjoyed, at my home, watching the gradual coming on of spring; first the swelling buds, a soft haze that enveloped the woods; then a sudden burst of tender green; then the full foliage of summer. It seemed like a change of the whole mass; but it was not so—every little root and bud had its separate part in the work. So it is with Hampton's work. You have heard the parable of the servants entrusted with their Lord's money: one with ten talents, and another with five, and another with only one. Each was responsible only for just what was given him, and each did his best to improve it, except one, who went, as you know, and buried his and let it lie idle and unimproved."

Among the Hampton graduates, that odd fellow has hardly been found yet, and if he is to be, you've got to furnish him. I don't believe you'll do it, from what I've heard. I believe that you will come back and speak on this platform some day, as God has given you each talents. In token of which, I present to you the diploma which has been awarded to you by the Principal and Trustees."

**GENERAL HOWARD AND ANTONIO.**  
 General Howard had kindly consented, like Dr. Potter and Dr. Stribley, to contribute a double share to the day's interest, and gave an interesting reminiscence connected with quite a dramatic scene of the day.

"In 1873, Gen. Grant sent me to Arizona with the hope of making peace with the only tribes then at war. It seemed doubtful for some time whether I should succeed. We had a council; some Papagos, some Arimas, some white men, some Papagos, Pimas and Apaches. One night it seemed very doubtful indeed how it would turn out, but the next day gave us peace, and I started for Washington with ten Indian delegates."

We marched, day and days, and days together. One of the delegates was a young Pima, son of the head chief. He had done much to assist my efforts to make peace. His name was Antonio. We would surprise him on the march, to meet him here to-day. You ought to have seen the tears in his eyes, and the glow in his face as he caught sight of me and grasped my hand. It would have given you a new idea of the stoical, unathletic Indian. That visit to Washington was his first view of civilization, and here he is to-day with his little son, because he wants to learn English and the white man's ways. If our Government could have spent one tenth of what it has spent on the Indians, for such work as this here for them, Indian civilization would long ago have been here a peradventure."

**A GOOD STORY FROM AN. POTTER.**

"While listening to the speeches of the alumni to-day, I have been reminded very strongly of an interview I had on the train between Savannah and Charleston, with an old colored man who came through the cars with a basket of roast chickens to sell for lunch. While enjoying a very tender second joint, I said to him, 'Uncle, where did you get those chickens?'"

"Boss, dem chickens two bits."

"But where did you get them?"

"My ole woman cook dem chickens, boss."

"But I asked you where you got them."

"I say, boss, he you a republican?"

"Yes I am."

"Boss, he you a frien' ob dem brack man?"

"Oh, of course."

"Dea, Boss, ef you is a republican, an' a frien' ob dem brack man, you better not in-quire too curious what I got dem chickens."

Some such thought went through my mind to-day. I confess—that being a friend of the black man I had better not inquire where they got those essays. But I did inquire, however. I asked General Armstrong whether they were strictly the speaker's own, and I thank God, he told me they were, and when he tells me anything I always believe it. Young men, I congratulate you. I am free to say that never at any College commencement, have I heard more common sense, more true and manly and womanly thought and expression. Never have I heard a definite of civilization such as Mr. Washington gave us to-day—the true test of civilization in any people is the desire shown by that people to lift up those who have been less fortunate than themselves. I never heard it given before, yet I venture to say it is better than any other I have ever seen written."

God forbid that any narrowness of ours should shut out either race representation here this afternoon from any path of progress.

I asked an old Irishman in a Northern city how he was getting on. "Very poorly," he answered, "but the angels all coming in to me, and the heathen Clannan, immigrating fast, we nifty as well take to the woods."

My pride is that the first African bishop who went out from this country was consecrated in my church. I hope the time is not far distant when a Hampton graduate will preach in my pulpit. If he preaches better than I, I will accept Pat's philosophy, and 'take to the woods'."

**FROM THE GOVERNOR OF VIRGINIA.**

Governor Holliday, like General Howard, has lost a right arm in the war. Their meeting seemed affecting to both.

Governor Holliday, being introduced to the audience, addressed them as follows:

"Mr. Principal?—I did not come here to talk, I came to see. Like the gentlemen who preceded me, I have not been disappointed. I have been greatly surprised. I have been gratified. All the more to see again upon the soil of old Virginia another link in the cause of civilization, the battles of which she has fought for so many generations. On this day devoted to come here ever since I have been in office, but somehow your invitations always came after I had accepted other appointments, so it was impossible for me to accept. But I determined this, the last year of my administration, that I should avoid all other invitations that I might come here to see this great germ which is destined to flourish so much. Since I have been in this vicinity, I met this morning, on the stand, a distinguished Federal officer [General Howard], who addressed you then, and whom I am happy to see here again, this afternoon. We shook hands, of course, over our introduction. I have met him again; and taking me again by that hand which is nearest to each of our hearts, he expressed his gratification at meeting me. He bubbled up within my heart the noblest impulses that can affect a man. Because we had met as foes upon the field of battle; I felt then that there was coming out from my heart the noblest of all inspirations, and I trust that it went down that arm and penetrated to his heart. I felt, sir, as if again there was a dawn upon us, a time of peace; as if a happy recognition was coming, never more to be disturbed."

Since I have been here, and on my way, I have met many gentlemen, and seen ladies from different parts of the country, and I know there are many others. I would say to them on behalf of the Principal, I would say on behalf of the Board of Trustees, I would say on behalf of the people of Virginia, whom I have the honor, as Governor, to represent, I did all here welcome to the soil of the Commonwealth. [applause.] Whether you come from Maine or California, whatever section you came from, I feel now as if I were looking into the faces of citizens, as if I were looking into the faces of those who would respond to every word I have uttered, and who hope, with me, that once more our country may be united in the bonds of peace and reconciliation. [applause.] I may say to you ladies and gentlemen, I may say to these people around me, that we are looking upon one of the most important scenes in this broad land. The representatives of three continents are around and about me. You may talk about Africa, you may talk about Europe, you may talk about Asia, or any portion of the world, but here stands the Negro, here stands the Indian, and here stands the Caucasian, in the providence of God, never more to be sundered. In this little school there are forces, grand forces, which are working to the dignity of our republican growth. They are about us now, and you cannot, by any possibility avoid them. Wherever you go you will meet these people, but you cannot avoid it. One of the most distinguished modern statesmen has said that it is the unexpected that is constantly occurring in public affairs. This is a striking truth. Can any man hope to hold high public office, particularly in the time in which we now live, and take no account of this? The battle has been fought, the victory has been won, and the revolution is tiding on—the revolution of ideas. The old world has never witnessed such a revolution as is now transpiring upon this Continent."

The Indian and the Negro are sitting at the feet of the Anglo-Saxon Gamelle of modern civilization. The arrows have been plucked from the quivers, and the iron has been stricken from the limbs of the slaves, and the trio are marching forward with weary steps, not as captives at the wheel of the triumphal chariot, but as the morning onward with a firm and steady tread, under the moving standards of an untrammeled race.

Now, Mr. Principal, what are the lessons taught by this? I want to know what the character of the studies are, for upon them depends the character of the Institution. Reading, writing and ciphering to the rule of three—if this is all that is done it is a profound error. These are nothing in the world but the mechanics of education. Behind these there may stand a lying genius who may wield them for the destruction of all the rest, or a good and earnest spirit who may wield them for its glory.

If the great end of education is reading, writing and ciphering, education is an abortion and the foundation is laid for all sorts of errors. Reading, writing, and ciphering have been taught, but there have also been taught something higher than these, and it is how they shall become good men and good women. For, my friend, character is another profound truth to an living in a republican government, for out of this comes the good citizen. Did you ever reflect upon what this means? It is the most comprehensive term to us Americans, the most comprehensive term in the whole range of our language. It comprehends all other terms and all other things. A good citizen! In the hands of the people, under the numerical majority, are intrusted the destinies of the country. If the citizens are good, the government will be good. If the citizens are bad, the government is bad, and the whole system must fall to the ground.

Mr. President, I say I ought to be gratified. I am gratified beyond measure, for I see in the future of this school the very work, the doing of which I believe to be the most essential for the advancement of the interests and the glory of America. And when they come out into the world, wherever their lot may be cast, they are but cogs in the great wheel of human machinery, and when they go out their duties will be performed faithfully and well."

Now I have to thank you for the kind attention you have given me. If you leave this institution in the same frame of mind as I do, you will be satisfied that we see here a great center from which will come out all that is good and great. Out of the abundance of our wealth and power we have given a well contented gift. Knowing full well that you will all find a place in the scheme of that machinery which rules over nations and among men."

**IN CONCLUSION.**  
 The Principal, returning thanks in behalf of the school to all who had contributed by word or presence to the pleasure of the day, the exercises were closed with singing of the doxology, and the benediction pronounced by Rev. Dr. Stribley.

# HAMPTON STUDENTS' OWN.

## From the Senior Class.

### ROME WAS NOT BUILT IN A DAY.

This is a true statement. Rome was building for many years, yet hundreds of years. How long was it losing its power and falling from the height to which it had built itself? Was it like the "Early Britains" who reached the summit of their glory in a moment, as it were, consequently soon fell?

This teaches us a grand lesson, and that is that slow progress gives to any nation a strong foundation which may not be undermined by trifles.

We have learned that when man begins to retrograde, he soon gets below the standard of common decency and morality, then he is said to be low; and this point is reached very soon for he travels this road with great velocity.

We must not murmur about the past, but look out for the future, pay no attention at all to our past treatment, cast it into the sea of forgetfulness, but work slowly and surely for our advancement in the future.

Like the workmen on the Egyptian Pyramid, our ends will accomplish some day. We know that. "The heights reached and kept by great men are not obtained by sudden flight, but they, while their companions sleep, toil upward in life." So must we, if we expect to be estimated and counted as men and not as three-fifths of a man. We must press forward; for it is only one step and then another, and the longest walk is ended.

We may try to build ourselves up in the world and do well for a time, and then fall. Mind it not, for the only way for us to make ourselves a nation and have a good history, is to look before we step, and if we should fall, try it over again, only with a greater will. It is the way of most every man under the sun, to try to get into situations which he is not able to fill. This is one of the greatest obstructions in the way of those who have been recently counted as men. They think because they are men they fill the situation as well as any one else. Physically, they may do what any other men can do physically, but not intellectually.

This is a false idea.

So let us think of this matter and go into the places we are best fitted for, and we shall soon become a useful and important element in the population of our country.

W. A. II.

### LECTURE ON CLEANLINESS.

This is an important subject to think upon. It is stated in the Bible that our Lord told the men that were lepers: "Be thou clean." He did not say: "Take up thy bed and walk," yet in either case they could have been healed.

But it seems that our Lord desired to impress the idea of cleanliness. Most diseases, or perhaps all diseases, are created by dirt and filth. Then, my friends, you can see at a glance the all important necessity of keeping ourselves clean.

Our bodies are given us to keep in good order for the dwelling of God; they are his temples, and he will not dwell in us if we allow our bodies and souls to go unclean. The heart as well as the body should be purged; we should not allow ourselves to listen to wicked words, and think bad things or say ugly things, for this defiles our inward selves.

Prayer and strict watch over our doings, will keep our inner part clean, and water and soap will cleanse the outer part; this you all know by experience; you know how pleasant we feel after a nice bath, it keeps the pores of our skin open and allows the pure air to enter which is so invigorating.

Now we should keep our houses and the grounds about them clean. Cleanliness is the secret of health.

Yet some clean people are sickly. Well, dirt will make the well ones sick and sick ones die. Some people are naturally sickly, it is the decree of Providence that we are to suffer some in our bodies to make us better.

S.

### THE ADVANTAGES OF AN EDUCATION.

Dear friends, the subject on which I speak to you is the advantages of an education. Education is something of which a great many people have a vague idea. It comes from the Latin word *educare* meaning to draw out. We have first to take in, and not keep it but give it out to those around us. And therefore do not do as the miser does; always taking in and never giving out.

The reason we want an education is to enable us to control not only our private business but to take part in public affairs and know what is going on daily in our own and other countries, thus making ourselves acquainted

with the welfare of all the nations.

Education has existed among mankind ever since the time of Adam. In one way or another, if they weren't educating their mental powers they were their physical. The Romans, Spartans and other nations attended mostly to the development of the physical, while the Athenians after their fall from political power, attended to the mental.

In Germany, they have among the best schools in the world. America is advancing steadily and has taken her place in the race, if the other nations are not careful she will soon pass the goal and be crowned with the Laurel wreath of success. Old England the mother country is also pushing forward and looking with an anxious eye toward the goal.

Some people have educated their muscles to such an extent as to be able to lift one's heavy ponderous weights; some to walk for many days at a very fast pace, and others to perform such perilous feats that when we see them go through the performances we expect to see them a lifeless corpse every minute until they have finished.

With a good education a person has within his grasp almost any mark in life he may choose. One having educated and got the control of his mental powers can put himself on an equality with the majority of intelligent men.

Without an education a man is a mere tool in the hands of other men. In some of the states there is a law which will not allow men to vote unless they can both read and write. In that case you are no more than a slave before the rebellion unless you can read and write. You have no voice at all in the government by which you are governed. What will the Negro in Florida do now that the bill has passed there. They will either have to read and write or not have any voice in the government.

The Negroes have been down in the lowest grade of civilization and they want to raise themselves up and education is the only thing that will do it. I advise you to educate not only yourselves but your children. All the races on the globe are making rapid progress in civilization, and the way they are doing it is by education. What is education doing? It is raising the world. How could man reach and make such things as are beneficial to this great world if it wasn't for education. The Negro race is low in grade of civilization, and the most of this race instead of helping each other, when they see them trying to reach a certain mark and be able to compete with the great men of the present day they put all the obstacles they possibly can in their path. The progress made by the Negro race is the past fifteen years is not due mostly to their energies and efforts but mostly to their friends.

The most of you say I want to reach the highest point of civilization. How can you if you do not get an education. Shakespeare says "Ignorance is the curse of God, knowledge wings wherewith to fly to heaven." What I say first I say last; get an education before all things.

### WHAT TO DO FOR THYSELF.

Hard work is one of the essential things for success; idleness is what makes men rich, no blither no sweeter. He who wants to live must eat for himself; and the same case holds good with improvement; he who wants to have improvement must work for it. Every man must work for his own improvement. Hard work leads to the best broodcloth, and he who is ashamed of it will soon be able to do without it. Hard work is the mother of good luck. Idleness is the backbone of poverty. Slow and sure for good success; every little helps. "If at first you don't succeed try again." Don't give up; brick by brick houses are built. We must stand alone before we can walk and walk before we run. Haste makes waste.

If you want to have success, you must be sure to begin right, a bad beginning makes a bad end. Look before you jump. Don't give up a small business before you are sure of a larger one.

Even drops are water. From bad to worse is not improvement. For success you must keep right at your work. Remember, you can't get honey and fight at the bees at the same time.

M.

### From the Middle Class.

#### A DESCRIPTION OF MY HOME.

My home is in the north-west corner of the Indian Territory. The Agency is situated about a mile from the Washita River, on a wooded bluff which screens it from the north wind.

The school building used to be burnt out prominently, before it was destroyed by fire; which

happened just before I came east to school. It was a two storied house with two wings, well adapted for the reception of one hundred pupils. The Agent's house, a neat frame building, office and other appointments, lie to the right; the Engineer's house, the house of the physician, and one or two to the left.

In the fertile valley below is the Agency farm; further to the left is the saw mill, and beyond, the farm of the Indians, whose little houses are abetted by the woods and by the cliff. The old Indian huts are rapidly replaced by log houses mostly put up by the Indians themselves.

Some of the Indians live about thirty miles from the Agency on their farms, raising cattle, hogs and ponies, and plenty of wild game all around them. Sometimes they can stand at their doors and shoot a deer or a turkey without having to run around through the woods and tire themselves; and they like to live in a country where there is plenty of game.

Before I came east, I used to think that the Indians settled the country very thickly; but they live from about one or ten miles apart; some places farther than this. But now I think they have made their settlements very thinly, compared with those made by white people in the states.

The Indians have no education, though they have various ideas about it, and they have many superstitious ideas. They think the medicine men can make the rain to come or turn very cold, or kill any one who is not any ways near them by sending medicines through the air; though that never happens very often. But they believe that their medicine men tell them, and everything that they say, must be done or their lives are in danger.

J. D.

### INDOLENCE AND INDUSTRY.

Indolence is one of the most worthless kinds of habits which a person can get by idling around when there is plenty of work to be done.

And this should be well guarded when we are young; for in youth is the time to form good habits, if we wish to have useful lives in the future.

Indolence, or I should say habitual idleness, in the first place commences in neglecting to perform little things, which is not felt at first to be doing any harm, but which has often led to miserable ends. And so it is very important for little things to be noticed as well as large things.

Although any person's aim in life may be a good one, if he at the same time allows himself to spend his time in a idle way and neglects to do his little duties, it is a sign that he is getting into idleness. And at last, he will find it hard to overcome these things, which at first seemed harmless. He will then become an idle, lazy man. He will despise labor, and then there will be no hope of his getting along in this world successfully, if he despises one kind of labor. And poverty is the result of such a habit.

But what a great difference we see in comparing industry with indolence. Habitual idleness brings good success, and it is the kind of habit that should be formed in youth. For instance, one who is diligent in his work, and in his lessons in youth is laying the very foundation of a useful life, and will no doubt attain good fortunes in times to come. M. O.

### DISAPPOINTMENTS OF LIFE.

In our every day journey of life, we have various things to meet with; some probably for our good, and others for our disappointment. As we go from day to day attending to our daily business, we meet with things which are not always pleasant to us; but we must not give up to these disappointments, because they are for us all in this life. We can not expect to go from day to day, without meeting with disappointments. I think disappointments are good at times. For one reason, if a person had no trouble nor was never molested he would not feel for those who have hindrances and disappointments. My advice is, try hard and you will be successful. Never give over for every trouble you have, although it may be very hard, for if we don't at first succeed we should try again. Disappointments are not only for you and me, but for every one. It is impossible for us to live without being put to some disadvantage. We may have an object in view to accomplish; something may arise just at that time, and prevent us from accomplishing our design; or we may call this a disappointment in life. We sometimes give up in despair thinking we can not accomplish anything more than we have done, but it is not so, we simply waste our energy about ourselves to overcome difficulties and disappointments.

W.

## From the Indians.

### ABOUT OUR SCHOOL.

Indian boys have been working on the farm, planting corn, fruits, and some digging for building. The new boys work in the morning and go to school in the afternoon. They are learning how to talk English very well. Stago, one of the smallest boys, plays rough, and when he get mad he calls them bad John. He calls all the boys "John." When the boys fall in ranks to march over to their meals, as soon as he get in the rank he would commence in giving commands as this: "Front Forward, March." Some officer would try to make him behave while in the ranks. He would say "bad John."

Bears Heart and Johnathan Inatiese went home on the first day of April. Bears Heart talked to his schoolmates before he went away.

Every Saturday we have a meeting with Mr. B. T. Washington, to talk to us what he thinks we ought to do and what we ought not to do. When his meeting is over, then he lets the Indian boys have their meeting. When then elect a President, Secretary, and a Chaplain. Then the Secretary calls some boys to speak, some boys learn pieces in books, and we are doing well. For many times they try to talk to others, and how the meeting is going to be useful to them if they just keep on trying to talk English. Some boys were at first ashamed; they did not try to speak. But few advanced boys have their talk English, they can just come in front of the others and speak like a man, and many times Thomas Wildcote have talked to us, then way we ought to do in the meetings. He is one of the leading Indian boys here.

Have been noticing among ourselves to see if they like this school as well as I do. Well, the boys that had been to school before like this school because they learn the English to each other as white boys. Then others, especially the Sioux, go to the Indian School. I will not say that they don't learn, for I do not know anything about them. They go to this afternoon. There are more Sioux boys here, and they generally talk in their own talk, but they try to talk English, and they can talk well now. I see that they like this school, some have written to their people about it, for they want to stay another year, and their time will soon be out. I know one Indian boy that wanted to go home, but Mr. Washington talked to him, which made him feel strong, and have never complain about it anymore, and is now here as cheerful as he can be.

Here at this school, we learn how to read, write, cipher, and work, which at our homes they learn how to read and can't talk English so many talking the same language that they don't try to talk in English much. I know people who taught us in one of these schools. They made a rule that they must talk English or else go without their meals for sometime. So in this way we used to try to talk it all the time, and that is the best way in teaching them how to talk English language. For myself, I went to a school that had a rule like this one. Well I learn how to read, cipher and spell, but did not know how to use the language.

Now we have heard of starting another school at Genora, Nebraska, for Indians. I hope it is so, for there are many children that want to go to school and I believe the Government will do the best to start this school for Indians. So many little children in the Indian villages doing nothing, and I think this will be another good school for them as Hampton and Carlisle.

The people are doing more work for the Indians than I ever knew. They are so kind for sending us here and helping us in this school. The only thing the Indians can say when we Chiefs to talk about, about commencing another school, and that is what they need, it is the education they want, and that is what they ought to talk about, nothing else. I meant the Government.

### WITCH WATS AMONG THEM.

Indians thought that they can kill a man by throwing medicine in the air, and believe that they are powerful in killing a man and making him well again. In their medicine dances as one year I saw them, they used to have every night worshipping through God as their Church I think. Every evening I went to the lodge where they had it. Before they commence, a man would talk to us as prayer; when that is over, then a man comes out, goes upon the lodge and cries up towards Heaven, bows down to the chimney and then the others cry out just the same. Four times he does; then they commence their slight hand performances. Swallowing spears, and arrows,

AMONG THE ICEBERGS.

## CORRESPONDENCE.

Shanghai, April 5, 1881.

Though I am attending the King of the Hawaiian Islands, on his trip around the world, I do not forget that I am rated as a "special contributor" to the Southern Workman. My relations are such that much which I see here I cannot make public; but there are some subjects upon which I am at liberty to write, because they do not concern national or private affairs.

A few days ago, the steamer *Pou-tah*, belonging to the China Merchants Steamship Company, was put at the disposal of the King of the Hawaiian Islands, to make such use of as he chose. She is a large, swift, steamer, built in England. Some of her cabins were especially refitted for the reception of the King. He and his Chamberlain, and I embarked. We were the only passengers. In thirty hours we reached the mouth of the Peiho river, and after passing many forts, reached Tientsin, a large city, about fifty miles from the mouth of the river. At that city, the tea from the southern part of China are collected and dispatched to Russia, on the backs of camels, for the Russians believe that fine tea are injured by sea voyages. That city is also the seat of Peking, the capital of China, and is also the residence of Li-Hung-Chang, the Viceroy of the province of Chihli, the Commander in chief of the armies of China; the greatest of living Chinese generals. He rules despotically over forty millions of people, and is, to all intents and purposes, an absolute monarch. He is a self-made man. During the great Taiping rebellion, in which millions of men were killed, and eighty thousand beheaded for rebellion, in Canton alone, he rose to the supreme military command, and is now the first man in this Empire of four hundred millions. Moreover, he is a progressive; his troops are drilled in European tactics, he owns war vessels, powder factories, and arsenals, he employs European officers, and watches them too; he keeps around him able Chinamen, who have lived in Europe, and speak the European languages. Last winter he went to a dinner party at the Russian Embassy, and to the honor of all European ladies which he has not gone so far as to produce in public the female members of his own family. Moreover he is pure Chinese. The reigning dynasty at Peking is Tartar, and it has kept its grasp over these millions of Chinese for some centuries, by the force of its superior ability and skill. But many of the Chinese look forward to a time, when the Tartars will be overthrown and Chinamen will become Emperor, as the Tartar dynasty is becoming weak, vacillating, and "behind the times"; it is believed that before long another revolution will take place, and Li-Hung-Chang will lead it, and in the end become Emperor, and throw down, on all sides, the walls of seclusion which nearly encircle this vast nation. I was, therefore, deeply interested in meeting this great man. Shortly after our arrival at the dock in Tientsin, an official came on board, and said that the "Tontal" (the Mayor) of the place would pay his respects to the King. The King went on shore, to a large house, put his things down, and shortly after entered the reception room. The "Tontal" sent in his cards, his name and titles being printed on large red pieces of paper. The "Tontal" entered the room, leaving his retinue behind him. After a formal reception, he presented the cards of the Viceroy, and said that the Viceroy would receive the King at three o'clock the next day at his own palace. The next day at 3, P. M. three sedan chairs were brought to the steamer's side. Each chair was carried by four men, called "coolies" by Europeans. The King, his Chamberlain and I, dressed in full uniform, entered these chairs, which were "lifted up at once, and the procession moved away. At the back were four mandarins, on horseback. A large square banner was carried in front. Behind them came police-men. Behind the four men who carried sedan chairs, there were men of petty rank, who trotted beside the chairs and pushed away any obstacles. Three miles of streets had to be passed before the Viceroy's residence could be reached, and these streets were hardly twelve feet wide. The buildings are made of bamboo plastered with mud. So the color of the land and of the buildings is an inky high. The houses swarmed with people. They came to the front as we passed. Ox carts, donkeys, men carrying burdens were hustled into side streets. The people knew about our coming, and showed the greatest curiosity. Finally we reached the Viceroy's residence. Our chairs were carried through a gate, set in an immense wall; within were two lines of soldiers, who presented arms. Then the band played. The music was indescribable. After passing through the line of troops, we came to an inner gate. Here the chairs were brought to the ground and we got out. Before us were perhaps fifty officials in full costume, standing in silence. Usually the Viceroy receives a guest in his reception room, but sovereign

must be met at the threshold of the residence. When the Viceroy met us, he shook hands with us, for he has adopted this European custom, while dealing with Europeans or foreigners. Then he led us through two lines of bowing officials to the reception room, and a round table in the center of the room. Etiquette was carefully preserved. The King sat on the Viceroy's right; I sat on his left, and the others were seated below us. Tea in beautiful porcelain cups was at once served. The Viceroy is a tall man, with a keen, bright eye, and a spare frame. He commenced talking at once, through his interpreter. His questions were many and to the point. After twenty minutes talk, we were led into an adjoining room, and were seated at a table covered with sweetmeats, etiquette being carefully preserved during the seating. I did not touch the sweetmeats, but I did think of my boys in Hampton, who would have readily taken my place on the occasion. After an hour's talk we left, and returned in the chairs to our ships, the same ceremony being observed in returning as in coming. The next morning the Viceroy returned the call. It was done with great ceremony. He invited us to dine with him in the evening, so we went at seven o'clock, to a large hall, where we again met him. The high officials of the Empire, residing in the city, and the representatives of foreign nations were also invited. The Hawaiian and Chinese flags were draped together about the room. Pieces of English lacquer work were about the room. Extracts from the sayings of Confucius, in Chinese characters, were written on the walls. One of these translated, reads: "Only he who is a president, and obeys his parents can be happy." It was not a bad sentiment for men whom the English people call "pagans." Twenty-five persons were at the table, seated according to rank. The King sat on the Viceroy's right, I sat on his left. The King's Chamberlain sat opposite next to the "Tontal." Next to me sat the Viceroy's son, a bright looking man, twenty-seven years of age. He spoke English well, and he learned it through an English teacher. The dinner was not purely Chinese. For chopsticks were beside each plate, and knives and forks were at the courses numbered about twenty. In a purely Chinese dinner, they reach a hundred. The principal Chinese dishes were bird's nest soup, and shark's fins. The bird's nest soup for twenty-five people cost not less than three hundred dollars. At the close of the dinner, one of the high officials, who spoke English well, rose, and said that he would propose a toast, by the direction of the Viceroy. He said: "The Viceroy desires me to propose your Majesty's health. He wishes to thank you for the kind treatment which the Chinese have received in your Kingdom, and he hopes that the relations of the two countries will always be pleasant." At the King's request, I replied, through the interpreter, saying in substance that the King was glad of the good opinion which the Great God of his Kingdom, that it was the aim of the government to make all men equal before the Courts, and especial care was taken of those who did not understand the language of the country. After this we left the table, after four hours' session. The next morning we left the city. When we reached the mouth of the Peiho river, the great forts which line the river bank on each side for two miles, fired a royal salute, while the ramparts were covered with men, displaying banners. Every tenth soldier carried a banner in the Chinese army, and the effect of some hundreds of these, waving above the high, massive walls, was picturesque and grand. The Hawaiian flag dipped in reply, and we moved out to the river into the Chinese or Yellow Sea.

The steamer on which we took passage, belongs to the China Merchants Steamship Co. The Chinamen are rapidly overtaking the Europeans, in the steamship race. This line runs at present over thirty steamers, and they trade with all parts of the Pacific. There is a vast money capital in China, but the people are conservative about investment. Some of the more enterprising engaged in the steamship business, but did not succeed at first. They bought English ships at large prices. They did not know how to manage them. Like all men who go into affairs in which they have had no experience, they had much to learn, and their losses cost them dearly. Mariners cannot be made in a day. Captains, and engineers of steamers, cannot be had out of a race that never built steamships, or sailed over distant seas. These men could not match Europeans in trade, could make the Pacific coast of America tremble at their thrift and economy; they could not manage steamships. It was a new business to them. They had money in vast quantities, but it paid no interest. A vast fleet covered the sea along this coast, and made an active competition with the trained Merchant service of Great Britain. They did not profit. Here this great fleet of thirty steamers, was converted from a losing, discouraging investment, into one of great and astonishing profit by the splendid management of a pure Negro from America. I shall

relate hereafter.

It now pays largely, and is destined, it is quite probable, to control the vast commerce of the Pacific.

I will close by describing the modern method of commerce in the cities of the East, as practiced by foreigners. About ten years ago, a missionary in Japan built a large, two wheeled baby carriage. Shafts were attached to it. A coolie or laborer's pay is about ten cents a day; so he put a coolie behind the shafts, got into the wagon and started off; at once the invention took. At present in Japan and China, one sees everywhere these carriages, called jin-rik-shas, in all the streets. If one wishes to ride, he calls on a stevedore, and is carried off at full speed. He never walks. Sometimes an extra coolie is hired to push. The effect of a hundred of these big baby wagons, in which large portly men are seated, is curious and amusing. But the coolies die rapidly. Running at full speed they become heated, and in the winter time they frequently have to stand in the cold air for hours, they take heavy colds and do not live long.

W. N. A.

## A VISIT FROM THE PRESIDENT.

President Garfield, accompanied by his daughter and son, Secretary Hunt and Mrs. Hunt, Col. and Mrs. Rockwell, and daughter, visited the Normal School, and the Navy Yard, on Saturday, June 4, in the Government steam yacht *Dispatch*, and on Sunday morning, drove out to the Chesapeake Soldiers' Home, and to Hampton Institute.

After service, the President announced the presence of the President of the United States, and expressed the hope that he would speak to the school of which he had so long been a friend, and was once a Trustee; in this most fitting place, with the graves around us of those who have died that these might be here to-day.

The President responded to the request as follows: "As I drove through these grounds to-day, I was impressed with the thought that I was between the representatives of the past and the future."

Crippled and bent with service and years, those veterans in the Soldiers' Home, represent the past. You represent the future—the future of your race—a future made possible by the past, by these graves around us.

Two phases of the future strike me as I look over this assemblage. For I see another race here; a race from the far west. These two classes of people are approaching the great problem of humanity, which is *labor*.

I would put that problem into four words: *Labor must be free.* And for those of you from the far west, I would omit the last word in order to enforce the first lesson. To you I would say: *Labor must be—* for you, for all—Without it there can be no civilization. The white race has learned that truth. They came here as pioneers, felled the forests and swept away all obstacles before them by labor. You come from a people who have been taught to destroy—to fight but not to labor. Therefore to you I would say that without labor there is no future. The first step in your civilization is: *Labor must be free.* You of the African race have learned this text but you learned it under the lash. Slavery taught you that labor must be. The mighty voice of war spoke out to you, and to us all, that labor must be forever free.

The basis of all civilization is that labor must be free. The basis of every great thing in civilization, the glory of our civilization, is that labor must be free.

I am glad to see that General Armstrong is working out this problem on both sides—reaching one hand to the South; and one hand to the West—with all this Continent of Anglo-Saxon civilization behind him; working it out in the only way it can ever be worked out; by the way that will give us a country without sections; a people without a stain.

After church, the President and his party walked through some of the buildings, saw the students at dinner, and then took lunch at the house of Gen. Marshall, Treasurer of the Normal School; where the teachers and officers of the School were presented to the President, who pleasantly said that he felt like wishing he were a Hampton teacher. He then ordered a little singing by the Normal School choir, the party left for the Fort, and returned to Washington the same evening.

## AMONG THE ICEBERGS.

"And I then there came both ice and snow And it grew wondrous cold; And ice, mast high, we floated by."

As green as emerald."

"An iceberg is one of God's own buildings," says Dr. Kane in the most graphic and fasci-

nating of all stories of Arctic exploration.

"An iceberg is one of God's own buildings; preaching its lessons of humility to the miniature structures of men. Its material, one colossal Pentelonic; its mass, the representative of power in repose; its distribution, simulating every architectural type. It makes one smile at those classical remnants which our own period reproduces in its Madelines, Walhallas, and Girard colleges." "Certain, I am that no objects ever impressed me more. There was something about them so slumberous and so pure, so massive yet so evanescent, so majestic in their cheerless beauty, without, after all, any of the salient points which give character to description, that they almost seemed to me the material for a dream rather than things to be definitely pointed in words. The first that we approached was entirely unaccessible. Our commander, in whose estimates of distance and magnitude I have great confidence, made it nearly a mile in circumference. With the exception of one rugged corner, it was in shape a truncated wedge, and its surface a nearly horizontal plateau. Another was a monster ice mountain, at least two hundred feet high, irregular in shape, and its surface diversified with hill and dale. Upon this one we landed."

The general color of a berg may be compared to frosted silver, but when its fractures are very extensive, the exposed faces have a very brilliant lustre, nothing can be more exquisite. The iceberg is always dressed by ships in Melville Bay, we were completely surrounded by them. We made fast on the shore side, to one of the most majestic proportion that had anchored itself in the floe. To seaward I counted seventy three. As the tide ebbed, the floes choked in around us, so as to prevent the possibility of warping from our position, and the kindly bergs began to meet, crushing one of them in bulk more than equal to two of our own, advanced at the rate of a knot an hour, crumbling all opposing floes before it. The two bergs were just about to meet, crushing our little vessel to atoms in their embrace. It was a sight to make the bravest hold his breath. But we doubled a projecting cape and the peril was past. Just as the drifting berg was about impinging on the other, it yielded a very little to some inexplicable counter-drift, moved slowly round on its axis to the northward, and passing within fifty yards of the brig, continued its majestic progress directly in the wind's eye. It was a narrow escape; the Rescue was keeled over considerably by the floes which were forced in upon her, driving in her port bulwarks, and demolishing her monkey rail."

## A SOUTHERN SUPERINTENDENT'S TRIBUTE TO A COLORED TEACHER.

The death of Mr. Lindsey Hayden, a graduate of Hampton, of the class of '77, has been noticed before in the Southern Workman. His widow, also a Hampton graduate, has sent us to read the following kind letter of sympathy which she has received from the County Superintendent of schools under whom she and her husband were teaching. We take liberty in publishing it, sure that its tone of cordial respect and appreciation will give to many a pleasant, and perhaps a new idea of the relations which may exist between the colored teacher and the Southern superintendent, though in many cases one is an ex-slave and the other an ex-slave holder. Race prejudice exists—North as well as South. Education is the only upward road out of it. Many a Hampton graduate is proving that true and unassuming worth will win its own level. Mrs. Hayden writes:

"I am trying to teach again, and give this sad event up to the Master, but it is the hardest thing I ever tried to do. Generally, I believe my dear husband is in Heaven, for he certainly tried to live the life of a Christian. I mean to try and meet him there. I ask you to pray for me."

Your sincerely grateful pupil,  
Della E. Hayden."

The enclosed letter is as follows:  
Office of County Supt. of Public Schools,  
Lynchburg, Va., February 5th, 1881.

Mrs. Della E. Hayden:

I desire to express my sincere sympathy for you in your bereavement. The death of your husband (Lindsey Hayden) is a loss not only to this colored people of this immediate community, but throughout the County. He was an excellent teacher and loved the employment for the good which he thereby aimed to accomplish. I sought his co-operation in efforts for the improvement of the colored teachers of the County, and found him ready to do all in his power to aid the accomplishment of these objects. His death is a loss in this respect, and I feel that loss deeply. I was absent from home nearly all of the time of his illness, and feel sorry that I did not see him before his departure. I wish to best wishes for your welfare, I am  
Yours truly,  
J. A. Davis.

Hampton, Va.

The *Southern Workman*, devoted to  
the interests of Negro and Indian civil-  
ization, is edited and managed by the  
officers of the Hampton Institute, and printed  
on the School Press by colored youth  
trained in the office. Subscriptions are a  
help to the School. It is sent on trial for  
four months for twenty-five cents. Job  
work, from all parts of the country, is so-  
licited, and will be done cheaply and well.  
Estimates will be sent on application.

Subscribers are reminded that, from  
July to October inclusive, this paper is re-  
duced to an eight page form, resuming in  
November the twelve page form.

The assembly of the Hampton Alumni  
on Friday, May 20, the day after com-  
mencement, may be considered an event  
in Negro education. Out of the three  
hundred and forty living graduates who  
are scattered throughout this and the  
neighboring states, ninety-five were present.  
The average was about twenty-four  
years. Each one had come out of a dark  
past, received a three years' training, and  
had been engaged in teaching his race  
from one to nine years. Nearly all had  
grown, both physically and morally.  
Their faces were stronger from hard ex-  
perience, and the story of difficulties over-  
come, was written on many a countenance.  
As we looked down the long tables, at the  
Alumni dinner, or moved among them in  
a social way, the gain in power, in settled  
purpose and in character, were manifest.  
All were neatly dressed, free from fanciful  
adornment, and as to ease and grace, and  
dignity of manner, had no comparison  
to fear. The young women, who  
composed about a third of the company,  
best illustrated the farthest point from  
"chattel" life that has been reached:

As a whole, free from political ambi-  
tion, most of them, in a moderate way, prop-  
erty holders; clearly realizing the way  
forward before them as teachers, and their  
Christian duty to devote themselves to it,  
they represented a new and hopeful force  
in the South; one that needs reinforce-  
ment.

This gathering was, we believe, the larg-  
est of its kind ever held. They had no  
grievances or outrages to report; their  
testimony to Southern kindness and fair  
treatment was general and cordial.

They called for more teachers and books;  
for men who could build their own school  
houses, make their own benches, brave  
difficulties, risk pay, and be careless of  
comfort.

Such workers are the product of  
institutions built up by the North, appre-  
ciated, and in some cases, aided by the  
South.

Every year they pour out a stream of

earnest, clear headed men and women about  
five hundred in number, who, having them-  
selves been lifted out of the depths, go  
out to lift their people.

There should be a thousand instead of  
five hundred a year, for the six millions of  
Negroes in the land.

## THE DIOCESE OF VIRGINIA ON NEGRO EDUCATION.

Recognition by the South of the su-  
preme necessity of educating and elevating  
the ignorant millions in her midst, is  
growing both in church and state. A new  
stand for this duty was taken by the re-  
cent Episcopal convention in Danville, Va.,  
at the instance of the earnest and practical  
Bishop Whipple, and the "Diocesan  
Work," the organ of the church in Vir-  
ginia, thus reports and comments upon its  
action.

"Our Church in Virginia, through its  
Council, recently assembled in Danville,  
has spoken brave words in favor of Negro  
evangelization, and has announced a new  
departure, and has adopted a new policy.  
We are to have no more make-shifts. We  
are to have no more ignoring, no more  
neglecting of a most patent duty. We  
are to have no more evangelists relieving  
our parochial clergy of the responsibility  
of preaching Christ to the larger bulk of  
the people within these parochial bounds.  
The work of bringing the seven hundred  
thousand negroes in our midst to Christ  
and the Christian life, is placed where it  
belongs—upon the parochial clergy and  
their vestries. Such work they cannot  
ignore. Such responsibility they cannot  
avoid. The church has spoken. Hear the  
unanimous voice of the church in Virginia,  
the voice of bishop, and clergy, and laity,  
as expressed in solemn council at Danville:

"We believe, that the time has arrived  
when our parochial clergy should recog-  
nize the fact that the Negroes within their  
parochial bounds are an integral part of  
their parochial work, and that such work  
can no longer be ignored nor neglected."

We ask the clergy and vestries of Vir-  
ginia to weigh well this solemn utterance  
of their Diocesan Council. We ask them  
to read it in the light of that sublime  
"Go ye," which Christ decreed from the  
Mount of Ascension. We ask them to  
read it in the light of that peculiar pa-  
rochial organism which has been grafted upon  
our ecclesiastical system. At any rate,  
the church in Virginia has adopted and an-  
nounced a policy. For this we say, *Laus  
Dei*. Now let clergy and vestry act.  
Otherwise at their door a fearful respon-  
sibility must rest."

We are assured by a clergyman of Vir-  
ginia, that this hearty comment is a reflex  
of public sentiment in the diocese, and that  
the wishes of the Council will be carried  
out. Practical aid like this is worth more  
to the colored race than a great deal of  
talk about rights and social equality. It  
is putting it on the only direct road, whether  
short or long—to all those rights, and  
its true level. And it will benefit the giver  
as much as the receiver. No one can do  
hearty Christian work for another's good,  
without rising himself to a higher plane,  
and finding his interest increased in those  
for whom he labors.

We regret to say that, our regular con-  
tributor and friend, Mr. T. T. Bryce, has  
been obliged by illness resulting from  
overwork, to give up business entirely for  
the present. He has gone, with his fam-  
ily, to Clifton Springs Water Cure, New  
York, for medical care. His business is  
being closed up by his friend and agent,  
Mr. F. Richardson, of Norfolk. We are  
glad to state that notwithstanding the  
last unfavorable year for crab and oyster  
canning, the business is settled in good  
shape for all concerned, though the in-  
crease and efforts, no doubt, contributed to  
the proprietor's break down in health.

Mr. Bryce's departure from Hampton  
will be felt as a serious loss in all classes  
of the community, and in the illness which  
made it necessary, he is sure of wide-  
spread and hearty sympathy. Hundreds  
of poor people have found employment in  
the large canning business which he has  
been building up for the last two years.

The difference it has made in their lives  
is sufficiently shown by the fact that when  
the county school closed at the Butler  
school this spring, it was reopened the  
next week as a pay school, with nearly  
two hundred children, twice as many as  
have ever been able to attend it before.  
His employees will miss not only their  
wages, but his untiring interest and kind-  
ness; his clerks, the evening class he held  
for them in disregard of his own fatigue;  
the colored people across the creek, the  
Sunday service and lecture he kept up  
regularly till he left, cutting short his own  
hours of rest to lift them into better lives.

By the Normal School he will be great-  
ly missed as a friend and neighbor, and  
as an able and successful teacher, which  
he has been for the last four years, keep-  
ing up one class, even after entering upon  
business. He imparted to his classes an  
inspiration from his culture, and experi-  
ence, and personal influence, and his stu-  
dents always loved him.

The Southern Workman will seriously  
miss his clear and vigorous contributions  
which have been so much appreciated by  
its readers. Concerning some of these  
articles collected to meet a demand, and  
published at the Southern Workman of-  
fice, in a pamphlet, with the modest title  
of "Economic Crumbs," the New York  
Herald justly declared, in an editorial  
notice, that they are the clearest elucidation  
that has been given of the principles of  
civil economy, of which the treatise  
"Wages" hope earnestly that Mr. Bryce's  
cessation from business has been prompt  
enough to ensure an early restoration to  
health and return to its activities. Mean-  
while, we assure him of our best wishes  
and sympathy, and those of many friends.

Our editor in chief, Gen. Armstrong,  
sailed for Liverpool in the *Algerie*, on the  
15th inst., for a few months' refreshment  
of European travel with a sister residing  
in Germany. It is possible that he may  
also meet his brother, Mr. Wm. N. Arm-  
strong, Attorney General of Hawaii, with  
whose unique letters of travel we have  
been favored, and King Kalakaua, on their  
tour of the world, from the East. Having  
thrown aside all editorial burdens and  
promised no letters from abroad, if any are  
received they will be a welcome surprise.  
The same steamer carried out a party  
of summer tourists, among whom are the  
lady-principal of Hampton, a present, and  
a former teacher. With a different but a  
pleasant programme, they will spend the  
season in England, and the continent. We  
wish them all a delightful journey and a  
safe return.

It is Gen. Armstrong's intention to re-  
turn in the latter part of August, and  
make a trip to the Indian Agencies in  
Dakota, before the opening of the next  
school term. Meanwhile all business with  
the school or paper will be attended to by  
the Treasurer and vice-Principal, Gen. J.  
F. B. Marshall.

## ON THE THRESHOLD.

We heartily recommend to all who are  
beginning life with some desire to make  
it significant, Mr. Theodore T. Munger's  
excellent little book, *On the Threshold*,  
published by Houghton, Mifflin and Co.,  
Boston, a copy of which has been kindly  
presented by the author to the Normal  
School Library. Advice to young people is  
apt to be more freely given than valued, till  
it is worked out in the experience of life  
by each for himself. But practical and  
really helpful counsel is not, after all, so  
very abundant, and a word in season with  
no suspicion of insincerity to disgust, a  
common sense hint, or suggestion, may  
sometimes be the turning point and inspira-  
tion of a whole life. Just such sugges-  
tions and honest timely hints are in this  
little book, we think. The subjects con-  
sidered are, Purpose in life, Friends and  
Companions, Manners, Thrift, Self Reliance  
and Courage, Faith, Reading, Amusements  
and Faith. The Normal School has proved its opinion of it by using  
a timely donation from a friend, to give a  
copy of it to each young man of the gradu-  
ating class. We wish it might be in the  
hands of every graduate.

## THE ALUMNI ASSOCIATION.

To give further encouragement and uni-  
ty to the work of the graduate teachers,  
and keep up their acquaintance and con-  
nection with their Alma Mater, the Hamp-  
ton Alumni Association was organized in  
1877, to meet triennially, at the School.  
At their second meeting, held this year,  
the day after the School Anniversary,  
seventy eight graduates were present,  
about half of them young women. Every  
class was represented except the first—'71.

At the business meeting in the morning,  
handsome resolutions were passed, of loy-  
alty to the school, appreciation of its work,  
and thanks to its Principal and to the be-  
nevolent friends who support its efforts.  
After the drafting of a new constitution,  
to replace the one burned in Academic  
Hall, and the election of the next officers  
and orators, a motion was carried to raise  
a fund to be devoted to the benefit of a  
student in the Hampton Institute, and a  
committee was appointed to receive sub-  
scriptions and select a student. The Al-  
umni scholarship reflects honor upon the  
graduates, and will be a new tie between  
them and their Alma Mater.

The afternoon exercises in Virginia  
Hall were well attended and interesting.  
The speeches were very well delivered,  
and showed thought and mental growth.  
An address of welcome was made by the  
President, Mr. Geo. Davis, a resident gradu-  
ate, an oration on Men for the Times, by  
Mr. Robert Keler, class of '76, and essays  
on the Virginia State Debt, by Mr. Thomas  
Cayton of '73, and on Brutus, by Mr. Wm.  
Greenhow of '74. The Principal was called  
on for a speech, but introduced first,  
Hon. Josiah King, of Pittsburg, Penn., who,  
as trustee of a benevolent bequest known  
as the Avery fund, gave the money with  
which the Hampton School ground was  
originally bought by the American Mis-  
sionary Association, for the Hampton In-  
stitute. Mr. King, in a speech in which  
was much dry humor, gave an interesting  
history of his relations with the School  
and its cause, and heartily endorsed its  
work.

The Principal then expressed the School's  
warm congratulations and welcome to its  
graduates, and his joy in feeling more than  
ever before as he looked upon them, the  
success of Hampton's work, urging them to  
keep up the family spirit with each other  
and the school, feeling themselves always  
a part of it, carrying on its work, and re-  
turning from time to time to get acquaint-  
ed with the new recruits, and renew the old  
associations and inspiration, of the old  
home that would ever give them welcome  
and encouragement. Gen. Marshall ad-  
dressed a few words of congratulation and com-  
pliment in his own felicitous manner.

The "crowning event" of the day, in the  
opinion of others than the graduates, was  
the Alumni supper, in the evening. The  
Principal, Vice-Principal and about twenty  
other officers and teachers who had been  
long enough at Hampton to know some of  
its graduates, were invited by the Al-  
umni, and sat down with them with great  
pleasure, at their bountiful feast. Nearly  
one hundred were seated at the one long  
table, which reached almost from end to end  
of the large dining room. The tables were  
beautifully decorated with flowers, and  
the supper did credit to the managers.  
Looking up and down the long vista at  
the bright happy faces, beaming with in-  
telligence and refinement, and manly and  
womanly earnestness; and reflecting that  
each represented a light for the enlight-  
enment of the race, a past of struggle and  
success, and a future of hard work and  
hope, is it a wonder that the hearts of  
Principal and teachers of Hampton swell-  
ed with emotion in the thought, these are  
Hampton's jewels!

The toasts of the evening—which no one  
however was materialistic enough to  
think of drinking even in water—were  
"THE EXORDIUM," proposed by Mr. W. L.  
Hamlin, "INDIAN EDUCATION," Mr. E. A.  
Bird, "OUR MISSIONARIES IN AFRICA"—  
not knowing that one of them was even  
then nearing our shores—by Miss Lavina  
Lewis, "THE ALUMNI OF HAMPTON IN-  
STITUTE," Mr. Fred. S. Phillips. The speeches  
were good and greeted with applause.  
Gen. Marshall then proposed THE RES-  
IDENT GRADUATES, knowing more of them  
as he said, and thinking them certainly a

A handsome little sheet with the title, "devoted to the interest of the graduates of the Hampton Institute," has been started at Hampton, as, in some sense, the outgrowth of the Alumni meeting. Its object, as set forth in its salutatory, is to bind and continue the friendly ties which exist between the graduates, to inform each other's work, and to comfort those who labor in lonely places." It is printed in the Normal School Press—terms cents a year in advance. It is edited and managed by several of the resident graduates at Hampton Institute, and has already hearty approval and good wishes. It is a signal and a promise that the graduates of the school, who are so thoroughly familiar with the object of the school, will be glad to accept its proposals, and be a source of pleasure profit and good fellowship in the sense of the word.

## INCIDENTS OF INDIAN LIFE

OFF AGAIN FOR BERTSHIRE.

The great advantage resulting to the Indian students, in the past two summers, from placing them on farms among the hills of Berkshire, Massachusetts, and the general satisfaction of employers and employed, made it easy to find places again for a larger number than ever. On the fifteenth of June, accordingly, the party started, sixteen boys and seven girls, under charge of Miss Eustis and Mr. R. H. Hamilton. With but one exception, they were selected from those who did not go last year, chiefly Sioux, but including also, Gros Ventres, Menominees, Pawnees and Absentee Shawnees. All have been at Hampton from a year and a half to two years; the later comers, the Apaches and Pimas, waiting another season for their turn. They had a smooth passage, to New York by the outside line, and took much interest in inspecting the Old Dominion Steamers especially the machinery. They were met in New York by Mr. Riley A. Brick, who took them to his house to breakfast, and devoted himself to their interests with such kindness as to lead one to ask, is there not, after all, something in a name? He gave them a fine view of the city in a trip on the west-side elevated road up to One Hundred and Tenth street, its elevation and bewildering outlook starting them frequently out of their Indian etiquette of reserve. After breakfast, they saw several visitors who had been invited to meet them, among them, Rev. Dr. Watkins of the church of the Holy Trinity, and Rev. Mr. Baker of St. Luke's Hospital. With Mr. Hamilton's guidance and support, the Indian students were willing to sing one or two hymns they have learned at Hampton, and after a few kind words of encouragement and advice from Mr. Brick and Mr. Watkins, to which they listened attentively and understandingly, they left for the day-hoast for Bridgeport, receiving, as a pretty bouquet for their kindness from Mr. Brick, a New York paper notice—the fact, which we are glad but not surprised to learn, that "After reaching the side walk, many of the Indian youths lifted their caps in polite farewell to the ladies who were watching their departure." From Bridgeport they were to take the Housatonic road for Great Barrington and Stockbridge. We expect to hear good things of them.

## THE HOME CAMP.

Some of those who went to Berkshire last summer, and stay at Hampton this, looked rather wishfully after their departing comrades. Most of them, however, preferred to remain, appreciating the growing shortness of their time at Hampton, and anxious to make the most of it in improving at their various trades. They will have to be restrained from over-work rather than urged to industry this summer. If it remains as comfortable for working as it has been thus far. The boys who stay are divided into two squads that alternate with each other in a three weeks camp-out in tents at the Shellbanks farm, on the borders of Cook River, an arm of the Roads. The camp is under the charge of a Colored graduate of this year's class, a faithful young man, with experience as a farmer. The Indians have spent the morning of the day, with a long nooning, from eleven to two, and half Saturdays to themselves. At the school, they are under the charge as heretofore of Mr. McDowell for mechanical training, and Mr. Davis for farm work. They will probably, for part of the summer, have an hour of school in the day. But in all, their health will be carefully watched by the lady whose devotion and skill as a trained nurse, has saved the life of more than one of them in the past year.

## INDIAN SENIORS.

Among those who have gone to Berkshire, are two young men who, with one other who remains this year at Hampton, were promoted at the close of this term from the Middle to the Senior class of the Normal School, to graduate with it next year. They represent three different tribes, one of them being a chief. Having had some instruction in mission or agency schools, and quite good knowledge of English before coming to Hampton two years ago, they were able to enter the regular Junior class, are faithful scholars, and have been steadily promoted. One is learning to be a printer, another a carpenter, and the other a farmer. They are industrious and earnest, and it is expected that they will be very useful to their people on their return. The last day of school, when the promotions are announced, is always an exciting one at Hampton, and when the three Indian boys' names were read for the Senior class, no Indian reserve could conceal the delight and pride on the faces of their Indian comrades, of all tribes. To have three of their number enter the grave and revered Seniors is a matter of not unworthy pride, and will incite many a new fidelity and effort.

## A RECREATION AFFAIR.

Having looked from afar with admiring eyes on the splendors of the Senior Class supper, and perhaps caught a glimpse even of the Alumni feast, a brilliant and daring idea took

possession of the Indian girls' brains, and with rapid development that spoke volumes for their advancing civilization, soon found expression in excited whispers, in the suggestion that the Indians would many of them be returning home before another year, like the Seniors, and would it not be the right thing for the Indian girls to invite their friends to a farewell supper, as the Colored girls do.

Of course it took but brief consideration to see the eminent propriety, not to say duty of such a proceeding. In short, "it was their duty, and they did it." Some help and counsel were of course gladly extended, but much of the real work was done by the girls themselves, and the cooking class distinguished itself in making the cake and the coffee, as well as in halving the strawberries. Then a delicate question arose in the minds of some. The girls would "like to invite all, but there were those new comers, it was whispered: "They are not so civilized as the rest of us, and they may eat too much." Fortunately for the liberal side, this scruple was settled on the liberal side. The night arrived, and they were proud to admit their friends and teachers to look at their pretty table, handsomely spread for all seventy eight, and decorated tastefully with baskets and vases of flowers, arranged by their own hands. They were even shyly willing to let the spectators remain to see the grand procession, enter, led by chief Antonio and his little son, and make the circuit of the table to their appropriate seats; each young brave fortunate enough to escort the fair, politely careful to seat her before sitting down himself. The young men seemed indeed quite roused to appreciation of their sisters' effort, and not ashamed to reward them by showing it in smiles and exclamations of admiration, and even surprise, when one was asked to declare "I shall remember this as long as I live."

We will leave them to enjoy their feast by themselves, simply remarking as one could hardly help but do, that the girls really were pretty and bright, and the boys as intelligent and well behaved, and their entertainment as attractive as if they belonged to a race susceptible of civilization.

## REPORT ON GRADUATES.

BY MRS. E. C. DIXON.

As mentioned in the Principal's Report, Mrs. E. C. Dixon, whose labor among the freedmen, during and since the war, and connection with the School since 1872, fit her especially for the work, has undertaken for the last year, the position of graduates' correspondent.

The effort of the School has always been to keep in close and constant relation with all its graduates, by correspondence with them and with the county Superintendents under whom they teach, following up their work and giving them encouragement and assistance in it. The good results of this course have been most apparent in prolonging and extending the influence of the School and furthering its true work.

A handsome book has been prepared, in which every graduate's name is entered with its appropriate record, according to items of interest specified in the report, and not only of graduates, but of others who, though not having graduated, have devoted themselves to work among their people. It is a roll of honor which will be carefully preserved, and whose interest will increase with years to those whose names are in it, and to their friends.

Mrs. Dixon's interesting report, based on the investigations made to complete the record up to the present time, is as follows:

To the Principal of the Hampton N. &amp; A. Institute;

GEN. S. C. ARMSTRONG:—

On a careful examination of the Catalogue, beginning with class of '71, I find (male) 273, females 129; 378 Seniors, whose names I have entered in the new "Record Book" of whom 340 were graduated; 22 of these have died, 1 became insane, leaving 323 to whom, during January last, 1881, I have written and sent your "Circular Letter" and "Blanks," with a copy of Miss Longstreth's New Year's letter "To the Hampton Graduates." Of the interest specified in the report, I have retained 32, 31 under-graduates; 1 has died, leaving 31; to whom, and to 50 other under-graduates who have taught more or less since they left Hampton, I have also written and sent the same.—Total 404. Of the 378 seniors graduated, I have learned that 283 have taught.

Since January, I have received letters—chiefly Scholarship—Blanks, from 181 Graduates and from 21 of the under-graduates; Total 202; most of whom report that they are teaching, and have made it their occupation since they left Hampton. Eight are pursuing their studies at other institutions: one is studying Law; 2 studying Medicine; 2 Book-keepers; 0 Clerks; 4 Farming; 0 keeping store; 1 Apprentices in a Printing office; 3 Seamstresses; 1 Butler; 1 Waiter; 1 Coal-digger; 1 raising poultry; 1 Fish dealer; 1 Paper; 1 Logging; 1 Tobaccoist; 2 Carpenter; 1 Sign painter; 1 Agent for a Maine news-

paper; 1 helping to take care of Indian girls; 1 Collector of Internal revenue for a county, is also teaching; 1 Inspector of Pension claims; 1 Agent for Kansas Relief Association; 1 Tutor; 1 Superintendent Indian Students on School farm; 1 Charge of a lady's place, North; 1 Keeping a Light-house; 2 Doing general Housework, North;—while 1 says, he does "whatever comes to hand."

Of those who except two, report having taught more or less since they left Hampton. 77 report owning land or other property. One says: "I have 103 acres of land, a house, hogs and some chickens." Another 80 acres, and 2 houses. Others, 001 acres; 40 acres; 33 acres; 00 acres and a house; 30 acres and horse and wagon; 17 acres and 2 houses; 13 acres horse, cow, and other property; 10 acres and a house; and so on down to 1/2 acre, or "small lot with house on it."

One reports "\$3000 worth of property." Another \$1,500. Others \$1000; \$800; \$600. Two \$500; \$200; \$125. And a female teacher who has taught between three and four years in a city public School, has saved \$1000. Another female teacher owns her School house; another, a sewing machine; while the under-graduate teacher says: "I don't own anything, but my mother owns real estate in Staunton Va., valued at \$1,500. Sixty-five of those recorded are reported married. Their letters are generally encouraging. One writes: "I enjoy my work very much. I get along well with the children and parents. I have started a Sabbath School, which some of the parents attend as well as the children. I sometimes think that my pleasantest hours are in the school room. I teach according to Col. Parker's Method,—the "word-method," and am surprised to find that the children learn so fast. I tried; I did not believe in that way until I read myself; the parents say their children never learned so fast before."

From the vicinity of Norfolk, one writes: "Many of the colored people own their homes. The town of Jordanville is owned altogether by colored people: there are at least 15 colored homes, who own from 25 to 200 acres of land; some from \$20 to \$50 per acre. One man, Jacob Reid, has recently bought a farm of about 200 acres for which he paid \$2,500. He sends three children to school. The people here generally are doing well, though as elsewhere, there are some who are making no progress whatever. Their property is chiefly due to the fact that for the past six years, there has been no intoxicating liquor sold in this district. License for the sale of liquor is not granted in this district. I think if this law could be enacted throughout the entire State, many families which are now living in poverty would have comfortable homes. An under-graduate writing from Sumpter, S. C., says: "Know a man here who owns 150 acres and 4 mules. The temperance societies here have great influence; a policeman told me that he does not make a dozen arrests a year." From Aiken S. C., one writes: "My people seem anxious to get homes and to educate their children. The feeling of animosity that existed soon after the emancipation, between the whites and colored, is fast being forgotten by both races. The whites are not so hostile towards the colored as they were when first set free. The relations between the whites and blacks would be better if the blacks were educated." Another says: "As the colored people become more educated we see a change in the relations of the whites. They have respect for intelligent colored people and treat them civilly. Education and property are the two things which acquired by the colored people in the South, will remove all barriers that tend to hinder their progress." From Nelson Co., Va., the reports are not so encouraging. One says: "Very few colored people own land in this county; they find it impossible to get a legal right to it after they buy it." From Natick, Bridge, Va., "There isn't but one colored man that owns any land here, and that is an old man who has been free before the war; he has 6 acres and a house. The farmers will not pay more than seven or eight dollars per month, so the colored are obliged to work for that; then they are paid with corn or orders to the store; in this way they do not make enough to feed themselves. Every time they settle they owe the white man."

From Pulaski Co., one says: "The poor whites seem to have no respect for colored people, and seem jealous of them, and sometimes get up trouble with them. Many of our people here are very poor; I know three families, each lives in a freight-car box about eight rods from the railroad. There is a great deal of drunkenness here, but it is confined among the wealthy class; yet many will have their 'dram' as they call it, if they shouldn't have a cent for anything else. Whiskey drinking will be the ruin of the colored people as well as of the whites, if they don't stop it."

Many testify of the low state of morals among their people. One writes: "Their conduct is very bad, but not so confined to the colored people, for the morals of the poor whites are lower than any colored

people's. They look upon this, and drinking and lying, as hardly a sin, yet if you dance or play at a party you must be turned out of church. Some of the old time folks have very peculiar ideas about religion, they seem to think that religion consists in shouting and making all the noise they can."

From a different part of the State, another says: "Our people are taking more intelligent views of what true religion really is, while some of the old preachers and people are very superstitious, and like what they call their dreams, and visions; there are many who are not satisfied with such, and demand more intelligent preaching. The old form of worship is going out, and the uneducated class-leaders and preachers, are giving up their places to those more capable of filling them."

Nearly all from whom letters have been received, state that they have established Sunday Schools and Temperance societies where they are teaching, which they "try to get the parents as well as the children to join." One writes, "I gave my people a lecture last term on Health, and how to keep it; and I expect to give another one soon on Temperance." Another writes, "I am in the little town Mt. Crawford, where I don't a drop of whiskey nor any other alcoholic liquor is sold, and the people here are generally industrious and getting along very well."

Several speak of the demand for "Hampton Graduates" as teachers; one writes: "In my county are eight colored teachers, six of them Hamptonians; a class-mate of mine teaches near where I do; we board at the same house and have made considerable progress in our studies together." An under-graduate who entered the middle class in '79, but not having means, was obliged to teach, says: "I expect to make teaching my business, and I would like to be as thorough as I can. I never taught before; it is quite hard work, and requires a great deal of patience; but I like it and am trying to do all I can toward elevating the minds of my poor race." Another says: "My ambition is to serve my people. I do not look for a great future, but I do look for a respectable one for my race; I hope those who have aided us to get what education we have, will not be discouraged, because some are worthless—some are good and worthy." Another says: "I love my work, I hope to spend the remaining days of life in it, not for the money I get, but for the good I know I can do my people." Another, who is studying, writes: "I expect to return in the fall and teach again in the South, and devote the remainder of the working years of my life, and whatever capacities I may possess, to the work, to the education, morally and intellectually, of the Freedmen."

Some state that "The want of suitable buildings, and the necessary school apparatus, is a great hindrance." Two or three write that they have been furnished with maps, charts, &c., for their schools, by a Northern gentleman.

Many of them express great attachment to the school, and seem to realize more than ever the advantages they had there. One writes: "I shall always feel under obligations to my dear Alma Mater, and shall never forget the kindness, faithfulness and patience of its Principal and Teachers; nor the benevolence of its Northern friends who have aided us, and through us, as teachers, helped to educate hundreds of others."

Respectfully submitted,

E. C. Dixon.

## ABOUT CONSUMPTION.

The following extract from a letter from an eminent clergyman of Boston, will be read with interest.

"I want to call attention to Sir James Simpson's experiences among the cotton people in Glasgow and elsewhere. He noticed that cotton spinners were much more liable to tubercular disease than wool workers. He traced the distinction—and it proved that the wool men are covered with their work. They get so used to it that one of them told me that he had drunk a pint of oil when challenged to it."

Simpson satisfied himself that external anointing was a preventive of tubercular disease, or hindered it, and under his lead it has been largely introduced in Scotland.

My own family physician, Dr. George Hayward, visited Simpson in 1858, and carried away impressed with the value of this treatment. Thanks to him it has been largely introduced here. In my own family we keep a bottle of sweet oil in the children's precincts always, and I know no refreshment equal to an anointing from head to foot. I always have sweet oil in my dressing room. Your coconut oil in "lomi-lomi" is not a lubricant merely. It is food introduced by the pores. I will ask Dr. Hayward to send you or your physician, Dr. Simpson's tracts on this subject. It may be that in making our Indians clean, we are removing the natural food which grease gives all primitive races. This is a matter I have interested myself in for twenty years."

## OUR TENANTS AND CUSTOMERS

BY ORLA LANGHORNE.

As we are very closely connected in business relations with the colored people, I have thought it might interest the readers of the Workman, especially those of the North, to hear a little of our personal experience.

My husband, whose father was a large slaveholder and carried on an extensive business in farming and milling, found himself at the close of the war, in very poor circumstances. His patrimony had come to him in the shape of land and slaves. The land had been sold and he had consented to receive the payments in Confederate money, thinking to reinvest it at once. Contrary to the agreement however, the money was not paid until near the time of Lee's surrender, when it was comparatively worthless, and in 1865 he found himself in possession of a large amount of the currency of Dixie's land, and a four-acre lot in the suburbs of Lynchburg, on which two or three cottages were standing. He had lost his sight at the age of twenty-three, and had a very independent spirit, looked forward with horror to a life of poverty and dependence. Mr. Langhorne has a great advantage over most blind men in having (before the war) made about business in early life, and he at once set out for some means of making a living. About this time, the cottage he was living in, which was comfortably furnished, was burned in the night with all its contents, including his entire wardrobe, and his life was barely saved by a colored woman, who had been his slave and still lived near him, rushing into the flames and dragging him out. Soon after this, he rented a mill and for some years managed his business quite successfully. With the money made in this way, he put small dwellings on his lots, which were rented chiefly by colored people, who were at that time just beginning the world on their own account, and were anxious to bring their families together and go to housekeeping.

In the course of time, the owner of the mill sold his property to other parties, and after our marriage in 1871, Mr. Langhorne determined to build a house for himself on a lot he had recently purchased near the first one, and open a little grocery and feed store of course, employing a clerk to sell goods for him, and relying upon our tenants and the neighbors, who were then few and far between in this suburb, for our customers. This plan has been carried out, and we have now nine or ten colored families living on our premises. About half the rents are required to pay the taxes and insurance, and keep the tenants' houses in repair; the latter being a serious consideration, as the houses are all framed buildings, and many of the tenants have very little idea of taking care of property. Upon the whole, we consider this tenancy a safe, sound, and profitable investment, which averages 5 or 6 per cent interest. One of these houses is a one roomed cabin, plastered and weather-boarded, with green blinds, and one double the middle, and provided with separate doors and staircases. The other houses contain two or three rooms each, and every house has a small yard and vegetable garden attached, except the one roomed building which stands in the yard with the grocery store. At first the negroes were very poor, small houses were scarce, and rents high, and several families would crowd into one house, but the changes have taken place in the condition of the colored people in these ten years. Many other persons have followed my husband's plan and built houses to rent to negroes; many of the better class among them now own property, and some build houses and rent them to white or colored people as occasion offers. Only the very poor and degraded are willing to live huddled up together as most of them were once forced to do, and rents are about one-half lower than in 1870. Mr. Langhorne has tried to improve on every house he has built, and I think his last cottage is quite a model residence for a laborer's family. It is a small white cottage, containing two rooms, each 18 x 20 ft., with a big chimney in the middle, a small entry in front with transom light over the door, and a large closet in each room. Large windows with green blinds, and back doors opening into the yard from each room, give full ventilation to the house, which is set upon brick pillars 2 ft. high. Locust trees in the front yard, and a little garden in the rear, with an excellent well close at hand, make this dwelling an attractive home, and renting at \$5.00 per month which pays about 6 per cent on the investment. It is never long without a tenant. We have written contracts with all our tenants, and I find the number increasing who can sign their names, or sometimes an old woman who don't know a letter in the book, will bring along a bright looking son or daughter, and say with much pride, "I nint got no learnin' but my darter or my boy dar' has had schoolin' an' dey kint sign for me." We find it more and more difficult to get good tenants, as the Negroes are very ambitious of owning property and often leave us to go into houses of their own. In several cases, we have kept tenants for seven

years or more, and two families are now with us, who came to us seven years ago. In one instance, a Negro carpenter rented 2 rooms, and in seven years was never one month behind with his rent. I was once much struck with the change brought about by the little bit of time, when this old slave came into our little cottage with a white man, and saying with a somewhat important air that "this man was working for him." He desired the clerk to furnish his white employee with some groceries, adding that he would stand for the bill. I learned afterwards that the Caucasian, very poor and dialled looking when I saw him, had once been a thriving negro-trader, and he was an unbounded faith in "the institution," was found at Lee's surrender with a large "gnug" of slaves for sale.

My husband will never make a tenant who has not some trade or "virlin' means of support," and by adhering closely to this rule, we have avoided serious trouble, as a general thing, in collecting rents. Mr. Langhorne has never levied on any property of his tenants, but when he finds them hopelessly in arrears, as occasionally happens with thriftless families, we send a notice to leave, and put a card on the house stating that, it is for rent, and the premises are promptly vacated. Our tenants are usually factory hands or mechanics, the women nearly all laundresses, and not seldom we find the women the efficient part of the family, while the man loaf around to be supported. With the thrifty ones, there is generally some understanding between husband and wife, or parents and children, one member of the family undertaking to "keep up" the rent and the "wood for fuel," while the others will buy provisions, clothing etc., the women rarely shirking their part, when able to work. When a new tenant applies, Mr. Langhorne usually requires him to give a note from his employer or his last landlord, if he is a stranger, and in default of either to get some colored person in the neighborhood to "stand for" the application as a character.

Sometimes I heard some colored men talking in the porch with my husband, and recognized the voice of a very dusky neighbor as he said "I just came along air, to tell you air, that this reliable gentleman sur, he wanted to rent a house an' I can testify for him air." Stepping into the porch, I found the efore said neighbor and Mr. Langhorne, holding counsel over an old colored man's article of a walking rag rug, his clothes presenting the greatest variety of textures imaginable, and a combination of color which would have thrown Joseph's famous "coat of many colors" quite into the shade. Only one button was visible on all his garments, and that being of white porcelain, and size suggesting a dinner-plate, seemed so indispensable to the attire of our proposed tenant, that it was impossible for me to feel that he was fit to let. If my accident it should be displaced. The old man myself professed to be a woodsweyer, and as his trade is very largely overdone, Mr. Langhorne would have refused his application, but for the assurance of his friend, and his own assertion that his wife was very smart woman, they had no children, and a nephew possessed of large means would reside with them and pay board. The absence of children, and of their destructiveness, and tendency to make mischief between families, induced him to rent a vacant cottage to this ragged apparition, but the bargain proved a bad one for us, and after two months, no rent having been forthcoming, the "reliable gentleman" with the big button and variegated garments was requested to seek other quarters.

The rents are usually paid much better in summer than in winter, the factories being generally closed or worked irregularly in the cold season, and the Negroes, who are but too recklessly wasteful with their earnings when work is plentiful, find it very hard to procure food and fuel in the winter months. Not seldom Mr. Langhorne gives them a month's rent, when he sees them disposed to pay what they can, and finds them orderly and careful in their use of his property. When the factories work, the hands are paid off on Saturday night, and this is also the usual custom with the "bosses" of mechanics. This certainty of drawing regular wages, is of great advantage to the laborers and through them to their landlords and grocers.

I wish this system could last, every department of life, but am sorry to say that in private families, employers are often extremely remiss in paying servants and laundresses. I have known a Negro woman, who had at one time three children unable to walk, go three times a long distance through the snow, to get money for her washing, and when asked for her rent, which was long over due, she produced a nicely written note from the gentleman whose clothes she washed for, saying that, "it was not convenient for him to pay her just then, but he would soon do so." This gentleman and his wife occupied high social position, were members of a fashionable church, kept a carriage and riding horse, and considered themselves among the gentry of the town. I think a "washerwoman's bill" ought undoubtedly to be introduced into our

General Assembly, which would give the laundress the same claim to the clothes she has washed, without being compensated there for, than the "Mechanics Lien" gives to builders.

After long experience Mr. Langhorne does not hesitate to say that he greatly prefers Negroes as tenants, to the low class of white people. We have once or twice had tenants of this kind, but always found them quarrelsome and annoying with their colored neighbors, hard to collect rent from, and much more unpleasant to deal with than the miserable colored people, who have as a general thing lived on intimacies terms with white people of "quality" as they say, and acquired often in a wonderful degree the refined manners and ideas of their owners. One advantage we have at present with our colored tenants will be lacking in the generation to come after us, which is their ignorance of the forms of law, the better understanding possessed by the poor whites teaching them to evade the payment of their debts by tricks unknown to the simple minded African.

Among my duties is that of "Inspector of fencibles," an occupation requiring due diligence, as the tenants if not closely watched in the winter would soon make way with the planks or rails. I go very often through the lots and houses, examining the premises, looking after locks and hinges, window-glass, etc., and doors, etc., and thus see a great deal of our tenants, who always give me a smiling welcome, offer me the best chair etc. On occasions of a wedding party in any of the houses, we both receive a formal invitation, and it is not unusual, portions of the refreshments are always sent us. We usually attend the funerals, several of which have been conducted in our house, always so far of the air as to be very comfortable. We have heard most impressive discourse delivered extemporarily by a young Negro, who was an "Exhorter," in the Methodist church, though he had had very little chance for education and had no literary attainments.

There is a great deal of tender love between the Negroes for their families, and I am often struck with the care of the old people, who are past work, and on our occasions we heard most touching stories upon children by their parents. In one of our houses, which swarms with children, the tenants, who are a remarkably industrious and thrifty family, have lived with us six or seven years, and kept the property in excellent condition, opening drains and fertilizing the gardens of their own accord. I have often commented on the comfortable appearance of the children and upon the all were of great size and strength, and that their teeth were remarkable for their perfect form and structure, strength and beauty and freedom from caries.

Thinking you and your assistants for the kind and efficient and generous of the recommendation and securing of valuable models, I am most truly and respectfully yours,

C. A. KINGSBURY.

## THE NORMAL CLASS.

The Normal training class which supplements the Senior's practice teaching through the year, at Hampton, between the Anniversary and the close of school, was conducted this year by Mrs. E. N. L. Walton, of West Newton, Mass. wife of Prof. Geo. Walton, agent of the Boston Board of Education. (It was in some respects the most interesting and successful one that has ever been held at the school. We had intended to give a more detailed account of it, but as most of our graduate teachers will find one more valuable when their schools are opening in the fall, we gladly defer till then the publication of a synopsis of the lectures themselves, from Mrs. Walton's own pen which we are so fortunate as to have her promise of, for our Teacher's Table.

The following Law of the State, prohibiting the sale of liquor to Normal School Students, has been in force since March 3d, 1880.

## Chapter 135.

An act to prevent the sale of liquor to students of the Hampton Normal and Agricultural Institute.

Approved March 3d, 1880.

It be enacted by the General Assembly, That any person who shall hereafter sell directly or knowingly indirectly to any student of the Hampton Normal and Agricultural Institute alcoholic or malt liquor, shall be guilty of a misdemeanor, and, upon conviction thereof, shall be fined not less than twenty nor more than fifty dollars.

It shall be the duty of the county court in which the party convicted under this act obtained his license, forthwith to revoke the same; and no other license to sell liquor shall be granted to such party within two years from the date of said conviction.

This act shall be in force from its passage.

ing ways, many of their habits being peculiar to their class, but fearing to make my sketch too long, I will postpone further remarks for another number of the Workman.

With best wishes for Hampton and its workers, I am yours very truly,

O. L.

## THE TEETH OF INDIANS.

Dr. C. A. Kingsbury, the founder and President of the American College of Dental Surgery in Philadelphia, being about to visit Europe, came to Hampton, recently, with the express purpose of examining and obtaining models of the Indian jaw and teeth. The following interesting letter has been received from him since his departure.

Gtn.'s. C. Armstrong, Esteemed Friend:

I have this day sent per "Adams Express" a box to your address for the benefit of the students of the Institute over which you have the honor to preside. You will recollect that on the occasion of my recent visit to Hampton, with the view of making examinations of the teeth of the various tribes of Indians represented in your school, and obtaining models of special cases for scientific purposes, I promised the Indians that I would send them a box of toothpaste as a proof of my appreciation of their kind and ready co-operation in carrying out my wishes. Now although white men have so often broken their promises to their red brethren that it has become a proverb among them that "white man is mighty uncertain," I trust that it will not charge me with the sin of making promises only to be broken. You will please express my kind regards to the Indians, my deep interest in their welfare, and most sincerely wish that they may fully appreciate and improve the privileges they enjoy under the fostering care of your Institute.

I am fully persuaded that the Hampton Institute is doing a great work, not only for the education of the free colored millions of the South, but also for the civilization and mental elevation of the Indians of the West. This is the true way to capture the hostile tribes and bring them into peaceful relations with the ever advancing white population of our great West.

I will state, in conclusion that I fully realized the object of my visit in regard to Indian Odontology. I found that in almost every case the jaws of the full blooded Indians were of great size and strength, and that their teeth were remarkable for their perfect form and structure, strength and beauty and freedom from caries.

Thinking you and your assistants for the kind and efficient and generous of the recommendation and securing of valuable models, I am most truly and respectfully yours,

C. A. KINGSBURY.

## THE NORMAL CLASS.

The Normal training class which supplements the Senior's practice teaching through the year, at Hampton, between the Anniversary and the close of school, was conducted this year by Mrs. E. N. L. Walton, of West Newton, Mass. wife of Prof. Geo. Walton, agent of the Boston Board of Education. (It was in some respects the most interesting and successful one that has ever been held at the school. ## At Home.

## MOTHERHOOD.

In her pretty willow cradle softly swaying,  
Lulled to slumber by her tender rhythmic praying,  
Lies my baby, while my mother heart is saying,  
"God keep her there!"

Keep, O keep her sunny head upon thy pillow,  
Shining out between the twining wisps of willow,  
Rocking lightly as a bark on fairy billow,  
"God keep her there!"

Breathing sweetly with a baby's soft pulsation,  
To the measure of the cradle's light vibration,  
In the cadence of my parting aspiration,  
"God keep her there!"

## How to Break Oneself of Bad Habits.

Understand clearly the reasons, and all the reasons, why the habit is injurious. Study the subject till there is no lingering doubt in your mind. Avoid the places, the persons and the thoughts that lead to temptation. Frequent the places, associate with the persons, indulge the thoughts, that lead away from temptation. Keep busy; idleness is the strength of bad habits. Do not give up the struggle when you have broken your resolution once, twice, ten times or a thousand times. That only shows how much need there is for you to strive. When you have broken your resolution, just think the matter over, and endeavor to understand why it was that you failed, so that you may be upon your guard against a recurrence of the same circumstances. Do not think it a little or an easy thing that you have undertaken. It is folly to expect to break off bad habits in a day, which have been gathering strength in you for years.

A nice soap for washing dishes can be secured by placing in an old dish (and occasionally adding water) all small and bits of hard soap which are too small to use for washing.

When you clean your lamp chimneys, hold them over the nose of the tea kettle when it is boiling furiously. One or two repetitions of this process will make them beautifully clear.

Sweep carpets gently. Even a rag carpet should be treated with consideration. A severe digging with the broom wears the warp, and scrapes out the lint of the rugs quite nearly.

A year ago last Fall a list of questions relating to kerosene lamp explosions were inserted in this paper. In response air experiences have been received. Three of these were not explosions, being confusions from plain acts of carelessness. One of them was caused by the deliberate pouring of oil into the reservoir of a German student lamp while it was burning. In these lamps there is a ball valve placed at the bottom of the oil receptacle to prevent too much oil accumulating in the reservoir, and in this case, as in a second, where some one by repeatedly lifting the inside receptacle caused a surplus of oil in the reservoir, the surplus oil overflowed the wick and caught fire. In neither case was there any explosion. The only suggestions we are able to make from the small number of cases at hand: 1. Never fill a burning lamp. 2. Clean your lamps at least every other day; better still every day. 3. Be careful not to turn down the wicks so far as to allow a burning wick to fall into the oil receptacle. We have known this to happen in our house and yet no explosion follow; but it is not a safe experiment. 4. Lamps that are kept burning all night should be specially cared for, and the flame left sufficiently high to consume all its smoke. Aside from palpable carelessness, kerosene explosions are remarkably rare, considering its extensive use and the filthy condition of so many lamps. More deaths are caused by breathing the impure air of rooms lighted by smoking kerosene lamps than from explosions, the item of carelessness as a cause being excluded.—*Christian Union*.

An easy way to make hard water soft is this: Fill the wash tub with hard water, then put half a teaspoonful of wood ashes into a little cloth bag; let this lie in the water until that is warm enough to use. This is worth knowing.

POTATO SOUP.—Pare six large potatoes, and boil. When done, put them through a sieve, and allow half the water to remain in the kettle. Add one pint of milk, half a cupful of butter, one tablespoonful of flour, and salt and pepper to taste. Cook a few minutes, and stir often. This is a favorite soup in any large family. M. H. K. Auburn, N. Y.

FRUIT CANS BREAKING.—The season for causing fruit will soon be upon us, and the following rule to prevent glass jars from breaking, will be in order. After having rinsed the jar, place a spoon or fork in it, and pour the boiling fruit in when half full, take out the spoon and place it in the next jar. Try it, you can fill jars by the dozen and not break one.

## Health and Humanity.

## HOW TO KEEP WELL.

It is not every doctor that will take his own prescriptions, but there is no better illustration of the value of the following suggestions than their author, the Rev. Henry Ward Beecher, whose splendid physical health supports an amount of mental strain which would turn most brain workers into wretched dyspeptics.

HINTS FROM A WORKER AND A THINKER.

1. Select a good father and mother to be born from.  
2. Then, having a good body, regard it as a machine, and keep it in perfect order by the same methods by which you would keep any other machine in order. The body is an engine; food is the fuel; blood is the steam; the head is the cylinder where the steam works. One must not create, by too much fuel, an excess of steam; that will strain the engine and make poor work. You must not let the fuel get out and the fire grow low; then the engine will not work at all. Most men eat because they are hungry, or because the food tastes good. There are two very respectable facts; nevertheless, a man who is working ought to eat rather with reference to what he has to do, determining both quality and quantity by that consideration. He should sort his food as an engineer does coal and pine wood. If I have to do a pretty sharp morning's work, I eat eggs, toasted bread, and coffee, which combine a great deal of nourishment with very little weight, and are easily digested. On the yolk of two boiled eggs, a slice of toast, and a cup of coffee, I can work from eight to two without a break. In summer, I generally make my breakfast of bread and butter. A light breakfast suits me. It may not another. I need but little food. I can eat all things eatable, provided I do not overfill.

3. Next to firing up comes clearing out the ashes. What is called being tired is nothing in the world but ashes in the body; for every vital act involves a consumption of fibre or nerve material, and the consumed material collects. When a man has been working all day, whether with his brain or with his muscles, his body is full of waste material which has not yet been carried off. When he goes to sleep, the whole system recuperates and re-integrates itself; the brain recovers; the various capillaries and excretory organs take up the waste, and clean the system out. In the morning, every man ought to give nature an opportunity to complete this cleansing operation, and he ought not to begin work till it is completed. It is as important as morning prayers. If a man is covetive, his brain will be muddled, and his prayers will be muddled. In a this connection comes the morning bath. A great deal of waste should pass off through the skin, and it is of the utmost importance that its pores should be kept open, that they may do their work. I have been accustomed most of my life to take a cold bath in the morning when I get out of bed. That, however, is an experiment which every man must try for himself. If he does not get up a reaction, and the cold water turns his lips and nails blue, he must modify it.

5. Sleep is a great restorer of nervous energy, and it ought to be taken regularly and systematically. I think a man should go to bed at ten o'clock, and his hours is a fair amount of sleep. Where a man is living under pressure, where his employment necessitates incessant brain-work of an exciting kind, more sleep may be necessary. As a rule, I allot the early morning to study, the afternoon to social work, and the evening to special recreation.

6. Good fuel, well adjusted to the capacities of your machine and the work it has to do, an engine kept clean inside and out, and sleep enough, constitute the essential physical conditions of health. There is some other condition quite as important: Refuse to be unhappy. The man who sleeps well, keeps himself clean, and feeds well, and then refuses to be unhappy—who makes account with himself that unhappiness is wrong and ought to be thrust out; who believes that he ought to maintain a trustful, cheerful frame of mind, and does it; if he has a fairly good body to start with, ought to be able, aside excepted, to keep in good, vigorous, working condition up to the end, or nearly to the end.

The Methodist society in Mendon, Vt., has put about a dozen good horse-sheds at the church. That is practical religion, and worth a dozen exhortations on "feeling from grace," or sanctification. A man who will take a horse to a fence in a cold winter day, and do horse to talk about "faith" and "love," "sanctification" and "election," lacks some essential feature of the gospel of Christ. The church is more of the Christianity which builds horse-sheds, pays one hundred cents on the dollar, treats the horses kindly, cares for the stock, and is not domineering in the family.—*Vermont Tribune*.

## Teacher's Table.

## "QUESTION AND ANSWER"

Suppose a class has just finished studying the geography of the United States, and that each child has been asked to select a city, and study about it so that he can describe it. One of them begins: "I know a city in one of the Southern States. It is not on the sea-coast, but it is on a large river. If you were there, you would see many ships and boats lying in the river, and on the wharfs near the river, you would see a great many piles of cotton piled together." Here the class would begin to look intelligent, and as the pupil goes on to say, "You would probably see some hogheads of sugar and molasses, and perhaps hear some of the people speaking French," nearly all of the hands would be raised, and many voices would be ready to exclaim, "It is New Orleans." Or, let each of the class select a short journey within the limits of the United States, and tell what he would be likely to see in taking that journey, showing on the map what route he would take, and describing all objects of interest. If some of the class can describe the journeys they have actually taken, the interest of the exercises will be increased.

With very little children the exercises must be much simpler. Suppose you ask the children one day to bring into school something that is beautiful—a stone, a toy, a flower—anything that they think very pretty—and to be ready to tell you why they like it. Then talk with the children about these things, and see if you do not suggest and develop some ideas of beauty that those children will never forget.

Or, ask each child to come prepared with a question beginning with "Why?" Why is there dew at evening? Why does smoke go up the chimney? Why is there snow in winter, but only rain in summer? When a question is given, write them on the slate, and tell the children to think for a little while, and see if they can answer any of them. Those that are not answered at once may be left for the children to think of or to ask their friends about; and at last, those that the children do not answer, the teacher may answer, if he can. But if the teacher is often obliged to say that she cannot answer these questions, it will not harm the children to let them know that there are stores of knowledge which she herself has not learned, or which human wisdom has not yet found out.

Penn. School Journal.

## INSPIRATION.

A SUNDAY-SCHOOL teacher read to his class the Ethiopian eunuch went on his way rejoicing after Philip had talked with him, and then asked, "Why did he rejoice?" The boy answered, "Because Philip was done a teacher's heart." It is too often true that there is great rejoicing when the lesson is finished. Attending a lecture lately, the speaker was long, learned, but dreadfully tiresome. When he had finished there was a loud applause. "Why," he asked, "he might have gone on longer."

The teacher should study to make the recitation a pleasure. The examination should be one that renders the pupil happier, brighter, and sends through him feelings of strength. He should not talk too much himself, but question and lead his pupils to talk; thus teaching them to think, inquire, and reason. The talking should be mainly on the scholar's part.

The teacher should, like the chairman of a meeting, keep the others in order, so that the business will be transacted. If this is properly done, the pupil rises refreshed. His mind has collided with another mind; there has been attention, there has been reasoning, there has been expression. New York Journal.

Learning the book is not thoroughness. Learning infinite details is not thoroughness. We mean by thoroughness the mastering of principles and their application. The demon of so-called "thoroughness" does us much mischief. It leads to burdening the mind of the learner with a mass of useless details. In its name the child-mind is crammed with abstractions. This principle needs to be carefully considered. A pupil who has mastered the principles of arithmetic, and who can readily apply them, is thorough, though he may not have worked one-tenth of the exercises, and may not be able to write a single rule verbatim. Penn. Sch. Journal.

We should always look ahead, and always habituate our pupils to look ahead, to see what manhood demands all through its course; to see what good citizenship demands for its special duties; to see what added power would be more of the Christianity which builds horse-sheds, pays one hundred cents on the dollar, treats the horses kindly, cares for the stock, and is not domineering in the family.—*Vermont Tribune*.

## Agriculture.

## KEEP THE WEEDS DOWN.

Crops are reduced, and labor greatly increased by a profuse growth of weeds. A prominent point is *never to attempt their destruction in cultivated fields by hard labor*. It is too expensive. It would be cheaper to follow one entire season, by sweeping broadcast with plow and harrow, as the weeds are ancessively about to appear, than to pull them out by millions with thumb and finger, or to cut them up laboriously with a hand-bye. But it is not necessary to lose an entire season with the fallow. Lose an entire season of the plowing or harrowing as often as the green points of the weeds are seen peeping at the surface, from May till September, will do much towards giving a perfectly clean field, and will bring the soil into admirable condition for sowing winter wheat. For some other crop, a shorter fallowing will answer. It may be continued through May and June for turnips or corn fodder, and through May alone for corn, if the earlier sorts are planted. The slip-shod practice of allowing weeds to have their own way during all these vacant intervals, is a costly waste.

This subject is worthy of some further detail. For the longer fallow to precede winter wheat, one plowing and subsequent harrowings may be sufficient; but more thorough work would be made by plowing two or three times at long intervals, and harrowing often between. The plow would throw up the seeds of weeds which will not germinate when buried deep, and as they sprout and grow the harrow would destroy them.

Much will depend on using the most efficient tools. A good plow will answer, but the common square-toothed harrow is greatly inferior for this purpose to either of the alders, such as Shaver's, the Disc, or the Acme harrow. The last named will go over ten acres in a day, and make thorough work. It is worth while to give an estimate of the cost of this clearing out the weeds in one season, and giving an excellent preparation for winter grain, with the most thorough treatment, or with plowing once a month and harrowing once a week.

See 2 plowings, \$1.50 per acre.....\$4.50  
See 3 harrowings, 30 cts. per acre.....\$9.00

Cost per acre.....\$13.50  
It will be observed that the labor of such stirring will be greatly decreased, and its fine condition for the succeeding crop will be better than any field ever reached by ordinary treatment. We have seen Canada thistles, quack and other perennial rooted weeds totally destroyed in a single season with an equal or less amount of labor and less harrowing; but to clear the soil thoroughly of the seeds of annual weeds, an occasional deep stirring and more frequent surface stirring are required.

It is a common practice in planting corn on inverted soil, to plow late or just before planting. We find it better to turn the soil early, and then give successive harrowings with the Acme, which leaves two or three inches of the top soil in a mellow and very clean condition. This implement serves to intermix well with the soil any top-dressing of manure spread upon the inverted soil. We have given these details, as we regard an easy and cheap method of extirpating weeds, and securing a well-pulverized surface soil for all cultivated crops, as one of the most important means of making farming pay.

Garlic is hard to get rid of, but the work may be accomplished, as with all other weeds, with sufficient appliances. There are three modes for extirpating garlic: 1. If in small or limited patches, it may be pulled out by hand—doing the work after the seed heads have formed, but before the seeds have grown in size—doing it after a heavy rain, when the ground is soft. Carry off the plants to the brush heap. 2. It may be reduced in large fields, and if thoroughly treated, destroyed, by manuring well to give the crops a strong growth, cultivating with hoe crops, and never allowing any of the plants to appear above the surface. 3. Smothering. Turn the whole deeply and completely under with a very strong team and a double mould board plow, mowing a foot deep, placing the plants beyond the reach of air and of disturbance by common culture. Those who have had full experience with garlic may be able to say approximately how many dollars per acre it reduces the value of good land. Country Gentleman.

Of twenty President of the United States, only three—Washington, Hayes and Garfield—mentioned agriculture in their inaugural addresses.

If you want good verbenas (and who that raises flowers does not), see rotten time or old plastering, well worked into the soil. Plants raised from seed are stronger, and bloom more freely, and are usually odoriferous.

HAMPTON, VA., AUGUST, 1881.

NO. 8.

## CORRESPONDENCE.

COLORS MEN IN CHINA.  
Singapore, May 10, 1881.

In a previous letter I spoke about a Negro, S. A. Butler, a resident of Shanghai, China. His career is quite remarkable. His parents were Africans, or pure Negroes. His father, a preacher in Washington, D. C. He was educated in Paris, and there learned to speak French, Italian, German and Spanish. When he was a student in Paris, he met Butler in Paris, made him his private secretary, and took him to China, where he became familiar with the

poor Chinese. Mr. Burlingame always put him on a footing of social equality. Wanting to go into business, Butler left the American Embassy, and took a post in one of the great American trading houses. Subsequently he went into the service of the Shanghai Navigation Company. For some time past, the Chinese officials and some of the rich Chinese merchants have been watching carefully the operations of the Europeans in steam navigation, supported by European capital. These prudent, careful men determined that if there was any profit in the trade, the Chinese should have it, and not the *for qui* (foreign devil). Therefore they began to have steam ships themselves, and to run them to and from their own ports. They organized the China Merchants Steamship Company. They put their own, and not foreign money into it. They purchased the Shanghai Company's Steamers, and Butler went into their employment. Still, these Chinese, careful and economical as they are, did not understand the business of running steamships, for it is a business which requires special training. These men were created by Europeans in the quality of the vessels sold, and they were held in great contempt by Europeans and Americans who kept lines of steamships in the East, and who believed that their dominion over the sea would never be successfully disputed by the pig tails.

The Chinese considered it would be well to employ Europeans at first, in the most responsible positions. But the trouble has been that Europeans have generally tried to rob the Chinese, when employed by them. The owners of this new Chinese Line, including some of the most influential men in the Chinese government, put Butler in charge of one of the most important departments of the business, and authorized him to reorganize the service in his own way. He is a natural organizer, one of those men who know how to put things in their proper places, how to put down confusion. He systematized the business, enforced discipline, and rivalled the Europeans in their steamship service. The result is that after two years' work, this Chinese Steamship Company, instead of running at a loss, has earned over a million of dollars net profit. The prospect now is, that it will earn very large annual dividends.

The Chinese official who is at the head of the company told me that they considered Butler not only a man of great ability, but a honest man. He said that he was a very safe adviser, and they regarded him as an important agent in the future operations of the company. Now this Chinese Company own already thirty six steamers. They are hiding for the grade of the Pacific Ocean. One of their vessels lately went to San Francisco, and reduced the price of freight to China. The American and European lines are by no means easy at the appearance of this great steamship fleet; no one knows where its operations will stop. As these people learn more thoroughly the steamship business, they will become more formidable rivals to the Europeans, and as they are content with much less profit than the Europeans, and the business is conducted at their own homes, and not with a distant European base, it is easy to see that the time is soon coming when the vast trade of the great Pacific Ocean will be Chinese hands.

Coal is an expensive article in China. Supplies for steamers are brought from Australia and Java. Now there are immense coal fields in China. The Chinese will not let the Europeans touch these coal fields under any circumstances, but they can touch them themselves. Already they have opened a vast colliery about eighty miles from the coast. It is situated in the mountains of the coast. The coal is owned by the same people who control the steamship company.

This year coal will be delivered to ships. If the Chinese prefer to consume the coal in their own vessels, instead of selling it to the foreign steamers, it will not take long to wipe out the foreign service, as the cost of the coal will be so much less than that now used by all steamers.

Butler is a leading man in this magnificent enterprise in China. I have related this incident because it bears on the question of the "color line," and I write this from a city where the presence of twenty-six different nationalities has obliterated all color lines. There is a lesson in Butler's life. He fought for his position and won it. He did not sulk for it, or cry for it, or beg for it; he commanded it. He made himself the peer of men about him, and they acknowledged it, as all men will admit it, when forced to seek the matter. Men sought him, as they always seek men who have advantages, either in brains or experience. Interested as I am in the negro question, it was to me a most important incident to meet on the seashore of the great Chinese Empire, an American negro, intelligent, capable, doing his work well, and a leader among men.

Several weeks after meeting Butler, I was with the King of the Hawaiians on board the royal yacht of the King of Siam, on the river Menam. On the way to the capital of the Country, Bangkok, the yacht stopped for a moment at the custom house, in order to take on board some officials. I noticed a negro sitting in the stern of a boat, and inquired of the boatman, who was the man. He said he was a merchant said to me, "He is at the head of the custom house on the river. It is a very responsible place. This negro is a man of considerable education, is honest, and capable; so he was appointed to the place, and discharges the duties well." I had place, and I spoke to this man, but I could not get another incident of my trip that I had met another negro who was doing credit to his race. I have written this letter for the sole purpose of presenting these facts to the younger colored people in America, that they may know that their race can hold itself up.

Mr. Armstrong adds to the above valuable information, a few notes on readers, which we are sure will interest our readers. "The city of Bangkok contains about 400,000 people. Through the centre of it flows a large river; from the river, canals are cut in every direction; and while most of the people live on the land, very many thousands live on the water entirely. A raft is made of bamboo, and tied to the river bank. A house is then built on the raft. In it are one or more families. The raft is used for living purposes, while the front part, facing the river, is used for stores or manufacturing purposes. One wishing to do some shopping, hires a canoe, rowed by two men. This canoe is moved along the river, and stops in front of the houses. The passenger, sitting in it, leans over the side and inspects the articles in the house on the raft; when the trade is over, the canoe moves off to another place. It is in fact a river carriage. These water houses extend for three miles up and down the river. They rise and fall with the tide. In rowing the canoes or boats, the men stand up facing the bow. The bar is fastened to a stake in the water, and the rowers dip the oar in and pushes it, while standing.

About one year ago, the Queen of Siam, while passing up the river in a royal barge, was run down by a steam tug. There were numbers of people standing by, but none of them dared to rescue her, because she was a queen, and could not be touched; so the poor women went to the bottom. Just before we arrived at Bangkok, she was cremated; a vast temple was built for the occasion, and an altar of sandal wood was erected in the centre of it. In this body was placed, and burned to ashes. Festivities continued for ten days. The total cost of the cremation was above one half million of dollars. Cremation is universally practiced in Siam. In many cases, the bodies are taken to a temple, and exposed in the open air; vultures and carrion birds come down in dense flocks, and consume the flesh in a few moments. The bones are then burned, and the ashes are scattered in the waters of the sacred river, Menam.

The Siamese are a pleasant people, but very lazy. Rice and fish are their food, and if the people can get this food, they will not work. A few of them are farmers, and the rest are slaves, that the Chinese come in, get the best lands, and do the best part of the business.

In the end, the four million of Siamese will pass away, and the country will be in the hands of the Chinese entirely. It is a case of the "survival of the fittest."

The Chinaman is the New Englander of the Pacific is his energy and pluck. The Chinese of the Northern part of the Empire does not emigrate. Though he is poor, he prefers his mud hut, and his associations, to foreign lands; no inducements so far have brought him out of his home. The Southern Chinese, living along the coast, is the vicinity of Canton, are the people who emigrate. All who have left are, however, but a fraction of the people in only one province. 75,000 of these people, Australia, perhaps, as many more. What are these numbers to the 40,000,000 of one province alone in South China?

I do not despise their religion. Let no one despise any religion which contains a good. The central doctrine of their religion is ancestor worship. It is believed that the spirit of the father or ancestor wanders about in an unhappy, restless condition, unless it is worshipped, while every Chinaman worships, therefore, the spirits of his forefathers, he is always on the look out for a son who will, in turn, worship his spirit. This is no idle business with him. It is no Sunday affair. It will not do to meet in the temples and say we ought to worship our forefathers. They do it. It is a practical belief which controls every day of his life. The father, while living, is the head of the family, and the profoundest respect is paid to him till he dies. If a Chinaman has money, he would starve himself just as quickly as he would allow his father to go without support. Of the thousands of poor "coolies" or laborers, who have gone from China to the Hawaiian Islands, to work on sugar plantations at \$3 per month, the majority remit money to their parents; so a missionary in Hong Kong told me; much of it went through his hands. But the worship of ancestors requires presence at the tomb. The Chinamen, the moment he has obtained a little money, returns home and worships at the tomb. But every Chinaman must have a son, as I have said. (Of course, under this system of religion, early marriages are the rule.) Probably every one of the 5,000 Chinamen in California is a married man, but has left his wife at home. It is clear to me, that they would not hesitate to bring them, firstly, if they could afford it, secondly, if they felt secure of property and liberty. The Chinaman has found that so far as he is concerned, the treatment given him by the proud and christian civilization of America, is more unjust than that of the most despotic of any "totaht" (magistrate) of his native land.

It is said in America, "Oh! these Chinese don't intend to stay, they will not mix with our people. They make money and go home." True. But here are some twenty "treaty ports" in China and Japan opened to Europeans and Americans. These people come here, engage in business, make money and go home. There is not an Englishman or a Frenchman, or an American, or a German who doesn't frankly admit that he came here to make money, and that he shall return home at the earliest possible moment to spend it. Make none of these foreigners believe that his life must be spent here, in the East, and he would look about for his razors.

Here, in Singapore, the Chinese are at the helm. Look at the map, and you will see the commanding position of this place, at the southern extremity of Asia. Have the trade of the East centres. The English took it over sixty years ago, when its population numbered about four thousand, all Malays. Now there are 137,000 people, and of these 60,000 are Chinese, who have come from China, in thousands and miles away. All that is valuable, in the way of trade, or business of any kind whatsoever, is in their hands. The Malay cannot stand against them for a moment. They out him at every turn. Trade from Japan, Northern China, the Philippine peninsula, the East archipelago of immense islands which include Sumatra, and Borneo, stretching away for three thousand miles to the skirts of the Australian continent, centres here. Thirty languages are spoken, but the Malay is the dominant trade, because it is easy to learn. Though, as I say, the Malaysians are of little account here, they were at the start the dominant race; and their language became the language of trade, because the score of languages which meet here, though they have gone into the great struggle of the great struggle, they have left their language to the common use, till some other takes its place.

The similarity of the Malays to the Hawaiians is striking. Though these two nations are five thousand miles apart, and there is no tradition of any intercourse in the ancient days, even the languages have words in common. For death, the Malay says "mate," the Hawaiians says "make;" for eyes, the Malay says "mata," the Hawaiians says "muka." For want of thrift, laziness, and supreme indifference to the future, the Malay and Hawaiians are one and the same. The Chinamen will soon be masters of the situation here, and the Malay will submit to it.

W. S. A.

## WESTWARD HO!

Few persons who have not visited the country lying west of the Missouri river, can form a correct idea of the rapidity with which it is being settled up. The advice of the veteran editor of the New York Tribune, "go west, young man, go west," has been acted upon by so many, that if the migration is continued, it must soon be useless. Within the last year another trans-continental line of railroad has been opened, while the Northern Pacific, after a dull period of several years' continuance, has developed new energy, and is rapidly pushing westward, having completed over two hundred miles of track west of the Missouri river, and will, before this season closes, have reached the base of the Rocky Mountains in Montana, while at the same time it is being extended from the western terminus, eastward, having already over one hundred miles in operation in Washington Territory. A Western man has said "the locomotive is the great civilization," and the saying appears to be a true one. Along the lines of all the western railroads, towns spring up like Jonah's gourd, and, like them, they are short-lived plants, many of them soon die, still, under the rule of "the survival of the fittest," others grow and flourish, gathering about them all the adjuncts of similar places at the west, and soon the prairie, so lately the grazing ground of the buffalo, is spotted with the tamar herds of civilized owners, or is "white already to harvest." The advent of railroads and telegraph lines, with the accompanying breaking up of the soil for culture and improvement, changes to a greater or less extent, the climatology of the plains, more especially as regards the rainfall, and it is a matter of record, that in western Kansas the rainfall increased nearly one hundred per cent, in four years after the opening of the Kansas Pacific Railroad, thus rendering the lands once thought only fit for grazing purposes, now adapted for raising of crops. The present best producing region of the continent if not of the world, will probably be between the Mississippi river and the Rocky Mountains, although there is a large quantity of "bad land" in Dakota and Montana, that for centuries to come, will produce nothing, and from which the internal fires have scarcely died out. The Indian who has long stood in the way of civilization, must sooner or later accept of it, and the process of reclamation of the wilderness will go on unchecked, till this already great nation, having filled up its own waste places, shall look about for new worlds to conquer.

## IT MOVES.

In view of the time, place and circumstances, certainly the most remarkable of all Decoration Day speeches was that made this year by the Hon. Frederick Douglass, at Harper's Ferry, Va., the subject of which was John Brown.

In the large concourse of people assembled to hear him, were ex-slave holders and ex-confederates prominent among them. The State attorney on Brown's trial, and this gentleman was one of the first to congratulate Mr. Douglass upon his speech.

John Brown was hung on the 3d of December 1859. A wilder visionary than the old man would have been needed to have foreseen on that day the path on which this nation has come to the 30th of May 1881. Yet there are men who people than brother Jasper who do not feel the world moving.

The Southern Workman, devoted to  
the interests of Negro and Indian civiliza-  
tion, is edited and managed by the  
officers of the Hampton Institute, and printed  
on the School Press by colored youth  
trained in the office. Subscriptions are a  
help to the School. It is sent on trial for  
four months for twenty-five cents. Job  
work, from all parts of the country, is so-  
licited, and will be done cheaply and well.  
Estimates will be sent on application.

Subscribers are reminded that, from  
July to October inclusive, this paper is re-  
duced to an eight page form, resuming in  
November the twelve page form.

Centralization has meant something new  
for the last four weeks. The White House  
in Washington has been the centre of the  
nation's heart, throbbing in unison with  
every fluctuating pulse recorded in that  
darkened room, where the President of the  
United States still lies battling for life  
against the buffet of an assassin. The first  
shock and horror at the appalling news; the  
bewildering possibilities of cases and con-  
sequences; that seemed to shake the very  
foundations of the Republic and open  
gulfs of anarchy and nihilism at our feet;  
the universal exorcism of the perpetrator  
near or remote; the rush of tender sym-  
pathy that came with thought of the strick-  
en wife and mother, and hastened before  
them to the suffering bed of the nation's  
second martyr to unflinching honesty and  
patriotism; the revelation of reviving hope  
the trembling between fear and joy—who  
can ever forget, who has passed through  
these last four weeks in America?

But hardly was the first surprise over,  
before the practical mind of the nation  
turned from the calamity itself to find a  
way out of it and to ask what it all meant.  
And now that we dare to trust that the  
President is out of danger, and to talk of  
a general thanksgiving to God for his  
wonderful restoration, the papers—great  
and small—are overflowing with "lessons  
of the hour." And with good reason, for  
they are many and important, and if the  
nation can forget them it will deserve the  
ills it fears. A lesson—might we hope the  
last one needed—on the folly of throwing  
the offices of the country's service back in-  
to a political grab-bag every four years,  
while the Chief Executive of the nation  
stands before the world holding the  
strings, a target for disappointed "victors."

A lesson on the danger and despicabil-  
ness of partisan passion and scheming.

A lesson too, thank God, of the beauty  
of goodness in high places, of heroism in  
manhood and womanhood; on the advan-  
tage of a pure life and an unflinching trust.  
An inspiration in the discovery that the  
old Roman idea of the white robed candi-  
date has not become all a farce; that far

above the mire of party politics as Gar-  
field is above his assailants, there is a serv-  
ice of our country—for the humblest as well  
as the highest—worth living for, ordy for.  
And best of all and deepest of all, is the  
lesson that party politicians are not the  
people, any more than party politics are  
their cause.

We have learned now only to know our be-  
roic President better, but to know each other  
better. In the electric thrill the wires sent  
through North and South and East and  
West, on the second day of July, our  
hands all lightened in the clasp of brother-  
hood. They may drop somewhat apart  
again as the excitement subsides, but it  
can never be with as quiet as it has been, for  
we have seen ourselves one people and the  
vision has warmed our hearts. We are  
one people, and our President is one of us.  
This is what keeps us strong and calm—  
this is what shows the fallacy of any com-  
parison between America and Russia.  
Corruption enough exists, but it is not the  
abscess eating hopelessly into the nation's  
vitals that will leave it in new health and  
safety. Some time before the murderous  
assault, the President, warned by a friend  
as to the danger of an attempt upon his  
life, calmly answered: "I must come and  
go as usual, and I cannot surround myself  
with a body guard. If the good of this  
country, the interests of pure government,  
and of the people against one-man power  
demand the sacrifice of my life, I think I  
am ready." Heaven has known how to  
accept the sacrifice beyond his thought  
yet spare the willing victim. Let us not  
make one drop of that generous blood un-  
available by our forgetfulness of its mean-  
ing. Shutting our eyes to nothing, let us  
nurture the young tissues of the nation  
not in hidden sneers at political corrup-  
tion, but on faith in God and loyal devo-  
tion to a country for which a Lincoln and  
a Garfield have thought it "sweet and be-  
coming," if need be, to die.

The results of the colored Teachers'  
Institute at Lynchburg last summer, in-  
duced the state board of education to use  
a thousand dollars of the Peabody ap-  
propriation at their disposal, for a similar  
one this year. The expenses have fallen  
within the appropriation. On request of  
Dr. Ruffner, State Supt. Hampton Nor-  
mal School very gladly opened its doors  
to the Institute, and its new Academic  
Hall was placed at the state's disposal. It  
being evident, on inquiry, that only a lim-  
ited number of those who would attend  
could be accommodated in the town of  
Hampton, arrangements were also made  
for a hundred and fifty at the Normal  
School, in the buildings just vacated, in  
part, by its own pupils, though over a  
hundred of these still remained on the  
place as work students through the sum-  
mer.

Prof. Henry P. Warren of Plymouth,  
N. H., Principal of the New Hampshire  
State Normal School, was invited to con-  
duct the Institute, with assistance of his  
selection, who were Miss E. M. Reed and  
Miss S. M. Cate, experienced normal  
teachers from his own school, and Prof. I.  
Freeman Hall, who was a chief assistant  
of Col. Parker in the Quincy schools, and  
is now Supt. of schools on the Quincy plan  
in Dedham, Mass. Prof. Hall was recom-  
mended as one of the very best men for  
the work by Col. Parker, who does not lose  
his interest in Hampton or the race of col-  
ored teachers.

Prof. Warren's long experience and  
success as a Normal teacher, and his full  
sympathy with the advanced educational  
ideas, especially fit him for the work for  
this new people, which cannot afford to  
waste any time on wrong ideas and meth-  
ods. He is a New Englander who has  
lived some time in the South, and is a  
man of general culture and breadth.

## MR. SCHURZ ON THE INDIAN PROBLEM.

The June number of the "North Amer-  
ican Review" has a deeply interesting pa-  
per by the former Secretary of the Inter-  
ior on the "Present Aspects of the Indian  
Problem." Any thing that Mr. Schurz says  
on the subject with which he is so

identified must indeed be of interest and  
value. He treats it with his usual com-  
mand of clear and vigorous English, and  
in every "aspect," from the stand point of  
the philanthropist to that of the frontiers-  
man. "The disgraceful history of Indian  
wrongs is a fact too well known to re-  
quire proof." "Government is not guiltless"  
in allowing them, or free from blunders in  
its policy. "Yet it is only just to say that  
its treaties with the Indian tribes were as  
a rule made in good faith." The Indian re-  
servations were set apart with no idea of  
the marvellous advance of settlement. "By  
have sprung from the greedy encroach-  
ment of white men upon Indian lands"—  
This is the story of the past—what is the  
outlook for the future? "No intelligent  
man will to-day for a moment entertain  
the belief that there is still a nook or cor-  
ner of this country, that has the least agri-  
cultural or mineral value in it, beyond the  
reach of progressive civilization. Districts  
which seemed to be remote wildernesses  
but a few years ago, have been or are now  
being penetrated with railroads; Montana,  
Washington Territory, Idaho and New  
Mexico are now more easily accessible  
than Ohio and Indiana were at the begin-  
ning of this century, and the same process  
which resulted in crowding the Indians  
out of these States has begun and is rap-  
idly going on in these Territories." With  
the best intentions, Government is no more  
powerful now than to resist the inevi-  
table pressure.

"What does, under such circumstances,  
wise and humane statesmanship demand?  
Not that we should close our eyes to exist-  
ing facts, but that, keeping these facts  
clearly in view, we should discover among  
the possibilities that which is most just  
and best for the Indians. I am profound-  
ly convinced that a stubborn maintenance  
of the system of large Indian reservations  
must eventually result in the destruction  
of the red man, however faithfully the Gov-  
ernment may endeavor to protect their  
rights. It is only a question of time.  
What we can and should do is, in general  
terms, fit the Indians as much as possi-  
ble for the habits and occupations of civil-  
ized life." "The end to be reached is un-  
questionably the gradual absorption of the  
Indian into the great body of American  
citizenship. To fit them for this, three  
things are suggested by common sense as  
well as philanthropy.

1. That they be taught to work by mak-  
ing work profitable to them.

2. That their youth of both sexes be  
educated.

3. That they be individualized in the  
possession of property by settlement in  
severalty with a fee simple title, after which  
the land they do not use may be made  
profitable to themselves in the only way  
possible by selling it at a just compensa-  
tion, thus opening it to general settle-  
ment and enterprise. The allotments to  
be made inalienable for say 25 years."

Will Indians work? Indian farm-  
ing, increasing yearly in extent and  
value—their requests for agricultural in-  
struction, implements and stock, increas-  
ing with the disappearance of game; In-  
dian freighters, the most honest and effi-  
cient Government ever had; Indian ap-  
prentices in all sorts of shops at the agen-  
cies as well as eastern schools; Indians  
building houses for themselves and now  
and then showing striking ability as trad-  
ers, answer that question.

Can Indians be educated? Mr. Schurz  
points to Hampton and Carlisle, in an-  
swer. He says: "I see no reason why  
Government should not establish many  
more like them. To make liberal ap-  
propriation for such a purpose would be  
not only a philanthropic act but the  
truest and wisest economy."

In regard to his third proposition, Mr.  
Schurz regards it as of the utmost impor-  
tance, to the Indian as well as the country  
generally, that a policy be adopted which  
will secure to them and their descendants  
the safe possession of such tracts as they  
can cultivate, and fair compensation for the  
rest, and that, "before the protection of  
their present large possessions by the Gov-  
ernment becomes too precarious." As to  
their own wishes, while a majority are  
opposed or indifferent as yet, the idea is  
increasing in favor. Of course they do

not and seldom can see its full significance  
or necessity. "As they become convinced  
of the necessity of adopting the white  
man's way, they are easily made to com-  
prehend the advantage of owning a piece  
of land and a title to it. The anterior  
consequence, the gradual dissolution of  
tribal relations and the large reservations,  
will become intelligible and naturally ac-  
ceptable to them as they go on." The debate  
in the Senate on the severally bill last win-  
ter turned on its imperfections. "It would be  
impossible to draw up one so perfect that  
experience might not suggest desir-  
able amendment. But the essential thing is  
that opportunity be given to gain such  
further experience from the actual experi-  
ment, by the enactment of a law contain-  
ing the principal features of the plan, and  
allowing the Executive efficient latitude  
in applying it according to circumstances,  
whenever the Indians may be prepared for  
it, or whenever the exigencies of the case  
may demand prompt action."

A writer to the "Nation," before the  
Nation and Mr. Schurz became one, re-  
viewing his article on the Indian Problem,  
accepts his views as to work and education  
as "generally admitted," (but how short a  
time could that have been said, and to  
what extent is it due to Mr. Schurz's own  
efforts and policy.) His third proposi-  
tion, as to the division of lands in severalty,  
is taken exception to from a legal point  
of view, and chiefly on the ground that  
Government could not constitutionally pro-  
tect such Indians as soon as the territory  
in which they were settled should become  
a State. It would be interesting to know  
what Mr. Schurz would say on these points.  
Some practical plan certainly should be  
decided upon. If Government cannot  
constitutionally make these measures avail-  
ing, a constitutional amendment may be  
needed.

That some way of securing justice and  
the general safety should be found and fol-  
lowed is certainly, to the Indians and to  
the whole country, as Mr. Schurz has said,  
of the utmost importance.

Good news has come from our party  
of European travellers. All are enjoying  
their trips. Our Editor in chief has found  
time to send us a letter, published below,  
which, we can only hope, may be followed  
by others. He must have met before this,  
in London, his brother, Mr. Wm. N. Arm-  
strong, Attorney General of the Sandwich  
Islands, with King Kalakaua and his  
suite. We regret to hear of the sudden  
death of Judge Harris, Chief Justice of  
the Islands; also that of Mr. O. H. Green-  
way in Honolulu, formerly, for a year,  
connected with Hampton Institute.

## EDITORIAL CORRESPONDENCE.

STEAMER ALGONIA.

Atlantic Ocean, June 20th, 1887.

The first thing that strikes you on a Cunard  
is the discipline. Things go like clock work.  
No loud orders are heard; no rough language  
is used. Instructions are whistled to the men  
on the yards. Eternal vigilance is the price  
of safety, and we have it.

For a week our good ship has glided smooth-  
ly over a tranquil sea, with favoring winds,  
making about 310 miles a day. In such a voy-  
age 220 cabin passengers soon find each other  
out. Every one has a reclining chair of his  
own, not people lie about in them, well wrap-  
ped, for there is a chill in Atlantic breezes.  
Many promenade, or gather at the pool selling  
of bets on the day's run, go below to play  
cards or write, and novels are much in demand.  
By the fourth or fifth day the social ice is  
pretty well broken, and chat flows freely on  
all sides, between quondam strangers.

After six o'clock dinner on pleasant days,  
the sailors have entertained us with games.  
There is by the way a fine set of men on the  
ship, they look well treated and contented, and  
are certainly very cheerful. "Swing the mon-  
key" was performed by a jolly fellow, swung  
from the rigging by a rope and was fiercely at-  
tacked by the rest with soft woolen ropes. The  
man whom he hit back, in the course of his  
gyrations, was "it," and had to become a  
human pendulum. "Beat the Bear," was very  
lively. A sailor down on all fours, was the bear.  
Round the body was tied a ten foot rope, which  
was held by another, who struck with the  
same soft rope, at whoever approached. Ten  
or more fellows, would, from all sides, dash in  
to "beat the bear" and the game was to get  
out of the reach of the rope before catching it  
from the keeper. Whoever was hit was the  
bear. But the favorite game was "Jack,  
where are you?" Four or five blind-folded men

on all four, each with a tin cup in one hand, and a soft lash in the other, would grope about in a dingy formed by the compasses, each trying to find the other and administer a vigorous blow on his back. By rapping on the deck with his tin cup, each sailor would indicate where he was, and dodge quickly aside, that the blow aimed at him might miss. The wild hitting, the vigorous beating of the air, was very funny. Now and then they got fairly at each other, but nobody could hit. Passengers cheered the harmless duels. Steeply chased by men on all four, over their comrades' backs, and other games have entertained us so far.

We have sung college songs in a not very highly organized way, and had an imitative negro minstrel performance by an accomplished Columbia College student. Columbia and Vassar have a good representation on board. On Saturday a five minutes sermon by a Congregational minister, who got on very well with the Episcopalians.

June, 23rd.

The last two days have been glorious; yesterday as usual, a fair wind helped us, but it was very fresh, and as the careered over, bounding to the breeze that filled all her sails, we were unbecomingly of the energy of the crew that really pushed us on, and felt as if on a huge yacht, dashing the foam from bow and sides. It was magnificent. A Canardier under full sail may even be romantic. There is no sentiment about steam power.

We passed several ships under full sail, and could not too much admire their perfect grace. May sailing ships ever be driven from the seas by the economy of steam. Their beauty and symmetry are lost to the sea.

An annual affair was a dramatic performance by the sailors, whose brass band, Hamlet, Irish songs and recitations, made a pleasant evening for the passengers, who in their turn, made it pleasant for the sailors by a contribution of about \$50.00. The sailors' Hospital at Liverpool, was remembered with an equal amount. This being the one hundredth round trip of the steamer, and the second hundredth trip that our Captain had made, (the others being in the China) a testimonial of sixty pounds was subscribed by passengers and presented to Capt. Giff as a token of their appreciation of his fidelity to duty and his excellent care of the thousands of passengers he has conducted through the dangers of an Atlantic voyage. It was well deserved. The men who stand on the "bridge" day and night, peering anxiously into thick fog lest some sudden harm come to the ship, forgetful of rest till the danger is past, while multitudes sleep below trusting in them, are heroes. Winds and waves are nothing, storms are trifles, compared with fog, even in the smoothest water. Something terrible may happen any moment.

Friday, June 24th.

At noon, land was sighted. It was Fastnet, the last light house on the coast of Ireland, and Saddy Hook on the coast of America, distances are reckoned. The exposed south-west coast of Ireland is bleak and barren. Martello towers stand at intervals along the bold, rock-bound shore. There are no good harbors, and there is no hope or mercy for those who are shipwrecked here. The water is blue and deep up to the steep crags. In four hours quarters of the coast were seen, passengers roared and sent, burials are shouted and handkerchiefs waved, as over forty of our new made friends leave to "do" Ireland. We skirt the coast, where every inch of land is cultivated; the soil is rich, and the tithe thorough; as far as the eye can reach the land is divided into small, rectangular lots (bounded by hedges) where varying shades of green are beautiful and justify the appellation "Green Erin."

Trees are scarce; there are no forests, but nice looking white-washed stone cottages dot the country, and little hamlets of whitened or slated houses nestle in the hollows. It is evidently an old country, in which good land is carefully tended. I had secured a copy of the London "Times," and especially enjoyed it after newspaper famine of ten days; was more than ever struck with its clear, vigorous English. We don't have such writing on our side. Steaming through the Irish Sea, and up St. George's Channel, the water was smooth as a mill pond. Nearing Liverpool, Saturday morning, the mountains of Wales rose grandly on the starboard side.

ENGLAND.

The first sight of England is a sensation; it is hard to realize what you behold. In America we have history on paper, in the abstract; here it is in the concrete. This is the old home; it is old and new, strange and familiar. I never before comprehended what the Liverpool docks are. The Mersey river, on which the city stands, has a tidal rise of at least thirty-two feet. At low water, the coast ships at its wharves would be high and dry. You steam up the river and find miles of long granite walls on either side, covered with as many miles of long, low buildings, warehouses, behind which are forests of masts, thousands of ships. The river is merely a channel, up which large vessels can come only at full tide. The docks are really artificial lakes, open at high

water, so as to admit and discharge vessels, closed as soon as the water begins to run out. The water level at low tide outside, is perhaps thirty feet lower than that inside.

One's first glance at English people on land is interesting. How English looking they are! Is this the first thought. There is an individuality, a character in the oak tree; it is a type of the people. The Duke's stables look like a large institution, they are indeed a college for horses. His palace and gardens are probably as great a care to him as such possessions usually are to their owners. I carry him his glorious woods, more than his stately apartments. The charming river Dee runs through his grounds, and down to Chester—a lovely seven mile stretch for boating.

My first experience of an English hotel is delightful. The Grosvenor is very nice in every way; quiet, roomy and as comfortable as it can be. As usual the clerks are women, and know their business. English strawberries beat American, hollow. Their roast beef is an institution. The English go in for comfort, and have it. I miss everywhere the rush of our country, and enjoy their way of getting through a good deal with little fuss. Every one knows what he has got to do and does it. An American takes to be in two places at the same time. An Englishman doesn't.

LONDON.

In five hours' ride to London, one gets some idea of English scenery. The principal features are castles, sheep, grass, grass (principally wheat), meadows yellow with buttercups, and on all sides easy brick cottages, nestling amid shrubbery and trees, and clad in ivy. Tugboats are in the river, and there is no plenty of groves. Wood is scarce. A minimum of it is used in house building. Widow frames and millions are of stone. There are no barren spots, no waste land, no scrubby growth of trees, but open spaces through thousands of square miles, even in old Massachusetts. Here they have done their utmost with the soil. Hedges are the universal fence, and are very pretty. What an English One at first despises the rather small and ancient looking English "carriage." It has advantages; comparative freedom from dust, (a mighty thing) more room, no pressing of passengers, no crowded compartments, in which they put six where we should put at least eight people. No banging of doors and horrible drafts. Second class is not quite up to this. Locomotives are ugly but excellent, are heavier than ours—passenger and freight cars smaller and lighter.

The country from London to Liverpool is gently rolling. There are no surprises of surface, but many sweet scenes of scenery. There is evenness of cultivation, a justly deserved thrift on every side, a solid, well-to-do aspect, that is a natural expression, in fact a mirror of the people who inhabit the country. This surely is "Merry Ol' England."

CHESTER.

Chester is an hour's ride from Liverpool. Our party of seven went to the Grosvenor Hotel. After dinner we strolled round the city walls, (a distance of about two miles), walking easily two abreast on the ramparts, built by the Romans nearly two thousand years ago. The walls are about seven feet in thickness, and vary in height from fifteen to forty feet, or three feet higher, counting the parapet or outer wall, which protects the ramparts who stood on the ramparts. After 61 A. D., this was, for four hundred years, a stronghold of the Romans. It changed hands frequently, in subsequent local wars. I saw the tower where King Charles the First stood and saw his army defeated by Oliver Cromwell, on Rowley Moor.

Lots of interesting things in this city. "Too numerous to mention," says any guide book. Not the least so are the remains of a Roman bath and "God's Providence House," so called because it was the only one not visited by the plague which devastated the city in olden times.

The central interest is the Cathedral. There are several very ancient churches, all connected by a street under ground passages. The Doctor of Divinity was our party was deeply interested in the room where Matthew Henry wrote his Commentaries. Having rather dreary boyish memories of my father's reading there, I was less enthusiastic. The morning and evening service at the Cathedral. To describe this magnificent building is impossible. Portions of it are restored; much is unchanged since the 14th century. The choir of the Cathedral is the finest in the country; the responses were chanted exquisitely, and the service intoned. What seems artificial and odious in America, is natural and pleasant here.

To be in a place like this is an education. It makes history real; it reproduces the past, and makes it tangible, as books can not. Service was held in the choir. Above and on every side were superb architectural effects; distances, spaces, curves, arches, coloring, wonderful carving; and a certain august, eloquent presence that filled every part. The old defaced portion, where Cromwell stabled his cavalry horses (the largest nave in any English church), the quiet cloisters worn with the marks of a thousand years, the "old" every where attracted and took hold of us. All this must influence English character. America has no past; excellent will be written in books; no monuments, no ruins, nothing to excite veneration. The spirit of worship and of sacrifice that inspired these Cathedrals, is good for these days. It gave me a new sensation.

The verged pointed out a pair of battle flags of the 23rd Regiment of the Line, crossed and fastened to the wall at the end of the nave. They were from the battle of Bunker Hill. A grand organ recital followed evening service. Waves of sound rolled through the Cathedral and echoed among the arches. English people are always ready to give information to Americans, whom they easily detect. Perhaps they are not more kind hearted than we, but they take more time to explain and make you feel that you are well used. Somebody is always on hand to do the service you want, for a fee of course, and makes you feel like giving it, by his civility. One man touched his hat to me at least

twenty-five times, in carrying my baggage a hundred yards, doing it at nearly every other word. The water level at low tide outside, is perhaps thirty feet lower than that inside.

The Duke of Westminster's little kingdom is near by here, and was my first view of an English park. The rolling grassy lawns are fine, but the trees are ever few. There is an individuality, a character in the oak tree; it is a type of the people. The Duke's stables look like a large institution, they are indeed a college for horses. His palace and gardens are probably as great a care to him as such possessions usually are to their owners. I carry him his glorious woods, more than his stately apartments. The charming river Dee runs through his grounds, and down to Chester—a lovely seven mile stretch for boating.

My first experience of an English hotel is delightful. The Grosvenor is very nice in every way; quiet, roomy and as comfortable as it can be. As usual the clerks are women, and know their business. S. C. A.

#### THE TEACHERS' INSTITUTE.

The Institute opened at the Normal School June 27, and closed July 15, continuing three weeks. A hundred and sixty teachers have attended it from all parts of the state, representing thirty-two of our thirty-five cities. Richmond, Norfolk, Petersburg, Lynchburg and Alexandria. Superintendent Richard L. Carnes of Alexandria, announced with pride and pleasure: "Every one of my teachers is here." It is the first time that one of the only two superintendents—besides the state superintendent, Hap. Wm. H. Ruffner—who visited the Institute; the other being superintendent Peay of Richmond; which city was also well represented. Other county superintendents had expressed their intention of coming, but were prevented. Dr. Ruffner spent part of a day inspecting the work, and expressed much satisfaction with it, but to the disappointment of all was unable, from indisposition, to address the teachers. Superintendents Carnes and Peay made short speeches of congratulation and encouragement. Mr. Fox, Editor of the Virginia Educational Journal, also looked in on the proceedings.

The time being short, and every one in earnest, the Institute settled down at once to hard work. After a preliminary examination into the special needs of the teachers in their work, to decide on what points it was best to dwell, they were divided into four sections, (not grades) each of which carefully under each of the four instructors: Miss Reed and Miss Cate taking primary language and number teaching, and elementary reading and writing; Prof. Hull, geography and arithmetic; Prof. Franks, English literature and composition; and Prof. Warren advanced language drill, study of style and analysis of thought. By this arrangement, opportunity for attention to each one is given and a personal hold on the class which is not got at long range in a lecture room. The methods followed were on the Quincy plan—which is gaining ground in Virginia as elsewhere, where intelligent people in earnest about education, are willing to examine it. Training was given in teaching number and language first from objects; reading and spelling and writing together by the word and sentence method; geography by natural scenery, globes, moulding sand and

map drawing; language and composition by practice based on analysis. Each one was started also on home made writing and language charts and a school room outline map of North America. The character, as well as the methods of the teaching, was of the first order. Its patience, clearness, thoroughness, individuality—were in themselves an object lesson which must leave its impression on the minds of the learners more deeply than they were conscious of in the midst of their hard work.

The school hours were from nine to twelve, and from three to five, avoiding the heat of the day, the weather being however, with some exception, very comfortable, especially within the thick walls of the new "Academy." An evening lesson from eight to nine was begun, with lectures on history and instruction in commercial arithmetic, but was found to be over much work for the generally already tired teachers, who needed the time also for writing up their notes and preparing the lessons given them for outside study. The Professor's criticism was that they did not "boast down" to this outside study as teachers do at northern Institutes, but in the class room they worked faithfully for the most part, and if any came with the primary intention of having a good time they gradually became impressed with the atmosphere of the work around them, and woke up to a sense of their opportunities. Their appearance and hearing were generally excellent. Sober, intelligent, unaffected and earnest. Their work tied them pretty close to the Institute, but about half the number boarded in town, and there was more or less visiting of it. They were reported there as unexceptionable in their manner on the streets.

One evening in each week was given to a prayer and conference meeting. The attendance was optional but very general. Some interesting reports of their experience were drawn out of these, a few of which will be found in another column. On one evening, one of their number, Mr. W. W. Williams of Richmond, made there a lecture on the "Progress of the Republic." On another, Mr. Ackel White, one of Hampton's missionaries to Africa, gave them some account of the West Coast, where he has been for nearly four years. On Sunday they filled up the colored churches of the town, the services of those who are preachers being "made the most of," as their brethren expressed it. The evening service of preaching and door prizes—meeting at the Normal School was attended by many. One of their number, Mr. Jones of Richmond, accepted an invitation to preach there, but after an extra service won from him by an impromptu lecture, was unable to do so. On one evening a reception was given them by the officers of the Normal School, and they had one or two pleasant musical evenings. The Fourth of July, was the only day when the day's work was observed as described elsewhere. On the last evening, a Hampton graduates' Reunion was held in Virginia Hall Chapel, and some of their outside friends were invited to see a pleasant occasion. But most highly enjoyed by all was a moon-light excursion on the last Saturday of the Institute. The steamer N. F. Banks of the Old Dominion line, chartered for the occasion, carried a happy party out under the full moon-light of a perfect evening, up the shore to Newport News and the mouth of the James, and then out through the Roads almost to the Capes—a treat long to be remembered. The Institute closed at noon the 15th. The last hour was devoted by Prof. Warren to answering questions which had been sent in. One as to the mental capacity and prospects of the colored race, brought out a reply which we have not room for here, but will gladly publish in our next number.

Many pleasant things were heartily said at the close. Gen. Marshall, on behalf of the Normal School, commended the members of the Institute for their quiet and excellent behavior, and general consideration and promptness in settling their bills and regarding the regulations. Prof. Warren told them that he had never conducted an Institute where there was so absolutely no need to enforce discipline, or more desire to learn. Mr. Frissell, school chaplain, expressed his interest in the religious work they are evidently doing. Mr. R. H. Hamilton, resident graduate of '76, who has been secretary of the Institute, and attended to many of the details of its comfort, made a few farewell remarks on their common duty to their people.

On the part of the Institute, a vote of thanks was passed to the officers in charge, the instructors, and to the officers of the Normal School. A resolution was also framed and passed by acclamation, that a message should be sent to Washington, expressing the great joy and gratitude to God, of the Institute in the restoration, thus far, of President Garfield. With a benediction pronounced by the Chaplain, the Institute was closed.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

NEWS FROM BERKSHIRE.

The travellers to Berkshire, teachers and students, seem to have been two or three pleasantly occupied to write many letters to their Hampton friends. What news we have, however, is good news. All the Indian boys and girls have found welcome among the farmers, and are established in their homes, though somewhat more scattered than last summer. The girls are reported as "three at Stockbridge, three at Tyringham, a village about seven miles from Stockbridge, and one at North Adams." The boys are settled chiefly in Monterey and South Lee.

LETTER FROM A BERKSHIRE STUDENT.

The following letter has been received from one of the boys at Monterey—one of the Dakota boys, named Laughing Face—by one of his teachers at Hampton.

Monterey, Mass., June 24th, 1881.

My Dear Friend: Miss C. M. F. I will tell you about I came Monterey, very good time there. I am very sorry for you even, because I do not any stamp to write you even. I remember you always to you. I will try hard to work hard that here. I get very well here, and I want you send me stamps and papers too even in the spring, got very good money named Mr. Thomson, very nice indeed. I hope to know of my friend. This afternoon I went S. B. house. I saw two boys, I am very glad to say my friend. Please give my love to you. Your Friend, This is all I will to say.

Good night, I hope you good time down here at Hampton.

THE SCHOOL FARM AND SCHOOL.

The report from the Indian farm school at Hampton, made by the graduates in charge, Mr. Geo. Davis, is that the boys are working as well as can be asked, and are well and cheerful. They are gathering the crop of vegetables which they planted in the spring. Mr. Mc Dowell, in charge of the Indian workshop, gives good account of his mechanics.

LETTER TO WHITE WOLF.

Those who read the article on Hampton and Carlisle in the April Harper, will remember the striking picture of the three brothers of different and unfriendly tribes, met as comrades at Hampton—the civilized St. Augustine, Little Chief, welcoming the newly arrived blanketed Sioux and Red, and saying to them if the expressive sign language common to all three: "Look at me—I will give you the road." The picture was not a fancy scene devised in the photographer's saloon, but a reproduction of a real one that had impressed several of us who were fortunate enough to watch it. Those who noticed the sketch may be interested in the evidence that one of the invited ones—as indeed both—had accepted the out held hand, and was on the good road. The following is a kind letter from the missionary at Berthold to one of the two, White Wolf, the Arikaree, the man on the right in the picture. It contains also a good message from the Star, who visited Hampton a year ago, a magnificent ascription of an Indian chief.

Ft. Berthold, D. T., June, 1881.

My Dear Ahuk:—Your good letter to me has been read several times. Your progress in study and work pleases me and your friends. I have just seen Son of the Star, who sends you word to keep on till you come back. He will be glad to see you again, but wants you to understand English, and to be able to work like a white man. Son of the Star is not very well just now, but we hope he will recover and be as usual in a few days. He sends you the photograph of himself, which you desired, and can bring it back with you in the fall. I am glad to hear that Laughing Face has joined with you, to follow in God's ways, trusting in Jesus who came to take away our sins.

It will be hard for you to be true to Christ, when you get back. But God's Holy Spirit will make it easy for you, if you ask him. Remember me to all our friends at Hampton. Your friends here are well. Your father came around last evening with a good word, to have me tell him how you were and how you were doing the past month. He is always glad to get your care. Poor Mad Bear (Kunli-wah-ha) is dying, we think. I have just been to see him. Yellow Wolf (Steir na ke ta) is very sick too, with a cough. I have been trying to tell them about Jesus, who will take care of those who trust him, while they live, and not leave them when they die. Ahuk, you will not forget to pray to him.

Your Friend,

C. L. HALL.

## FROM ARIZONA TO HAMPTON.

GONE TO SCHOOL UNDER DISCUSSION.

The Reverend Sheldon Jackson, who was entrusted by Government with the task of col-

lecting Indian children in Arizona for Carlisle and Hampton, gives an extremely interesting account of the journey in his very wide awake and gritty little paper, the "Presbyterian Home Mission" (pity it had not kept its quaint name of "Rocky Mountain Presbyterian"). What would white people who enter at the idea of Indian caring for education do, if the road to the school house were as hard as a one to travel for them and their children as it was for Antonio and his little son? We Jackson's long and deeply interesting letters. The journey from Albuquerque, New Mexico, to their destination in Arizona, was made by Dr. Jackson and his wife in eight days of rough and dangerous frontier travel, by construction or emigrant train on unfinished rail roads, and by stage coach across trackless deserts haunted by hostile savages. On the morning of the eighth day, their journal states:

"We reached the Pima and Maricopa Indian Agency, and received a cordial welcome from the Agent, A. B. Lulliam, who for many years has been a well-known and honored member of Dr. E. P. Roger's Reformed Church, New York City.

An Indian day school of sixty to ninety, was in charge of Mr. and Mrs. J. S. Armstrong. The school was greatly hindered from insufficient appliances. This will be remedied by new buildings being erected by Special Agent.

Arranging for the specified number of Indian children from that Agency, I took the stage-coach at Wilcox Station, for the San Carlos Apache Indian Agency, one hundred and twenty miles distant. At San Carlos I found a well-ordered and well-managed Agency under Colonel J. C. Tiffany. The boarding-school building were nearly completed. The Agency farm, grubbed and broken up for the crop, and a new era of progress commenced for that once turbulent tribe. Returning two hundred miles six miles, I found the roughest and most dangerous stage coach on the whole trip. The ride over the boulders in the bottom of a rocky canon, and down hills so steep that passengers were warned to get out, and when the wheels were chained the horses needed to put on a gallop to prevent the coach running over them, can not be adequately described with words.

Monday noon, January 17, two teams drove up in front of the Pima Indian Agency to take a party of children to the railroad, en route East. A large crowd of half-killed Indians was gathered to witness the departure. It is an event that will affect the whole future of the tribe. For two centuries this tribe stood as a bulwark in the defense of the Spanish against the raiding Apache, and in later years, when the rush of gold seekers crossed Arizona, fighting with them on those arid plains, were found, guided to the secret springs among the rocks, fed and sent on their way, by this people. For all this we have made them very little return; but a brighter day is "dawning" for a few of their children are to be sent to Eastern schools, and the balance educated at the Agency school.

First comes Hor-tum-two-ah, (Evening Thunder), son and heir of the head chief of the Pima nation. He is a man thirty years of age, and leaves wife and children that he may learn the ways of the white man and become a wiser ruler.

A few of their children are to be sent to Eastern schools, and the balance educated at the Agency school. First comes Hor-tum-two-ah, (Evening Thunder), son and heir of the head chief of the Pima nation. He is a man thirty years of age, and leaves wife and children that he may learn the ways of the white man and become a wiser ruler. A few of their children are to be sent to Eastern schools, and the balance educated at the Agency school.

The next morning, preparing to go to the Pima Agency for a few children, we were officially informed that the chiefs and head men had held a council and decided that they would not allow any of their children to go East. This, however, did not deter us from going after them. Loading the Pima children into a hack, we drove south nine miles to their

"Mr. Armstrong passed through Hampton last month on his way to a school station in Dakota. It is hoped that the Pima school is not to be given up."

villages. Agent A. B. Lulliam, who gave very important assistance, sent for Juan, the head chief of the Papagoes. We showed him the Pima children that were going, told him the advantages that would come to his people, and asked him for some children. Mrs. Trole, daughter of a deceased chief, took an active part in the matter. There was a running to and fro, private and public consultations, and in two hours we added to our number two boys, Santiago and Pablo, and one girl, Francesca.

We had expected to leave Tucson on the midnight train, but the telegraph brought news that a band of the Apaches were again on the war path—that they had captured the stage coach, destroyed the express and mail matter, and killed and mutilated the driver and passengers. As the marauding Indians were directly in our path, we remained over a day to telegraph for a military escort. The delay brought us the danger of the Papagoes changing their minds and reclaiming their children. Early the first morning Chief Juan with one of his leading men came and asked they held a council, and the opinion had been stoutly maintained that the children had been bewitched and were being carried off by evil spirits. Upon the arrival of the chief, the children commenced crying for fear they would not be allowed to proceed. The frightened girl was called and closely questioned, and when she stoutly maintained, in the presence of witnesses of her own people, that she wanted to go, I was asked to draw up a paper, which the chief carried back to his people, certifying that she went willingly. All day long hundreds of the tribe were hanging around trying to entice the children away.

Unable to hear anything from the military, we concluded to go on, and in the afternoon sent ahead a special messenger through the kindness of W. G. Curtis, Asst. Supt. of S. P. R. R. When evening came, I had the car locked up, which prevented intrusion from outside Indians. At midnight our car was on the regular train, and as the conductor opened the door, three half-drunken Indians pushed in. It was chief Juan and two others. They were angry and boisterous, and we feared they might give us trouble. Soft words calmed them down, and the heat of the car and the liquor so stupefied them that they finally fell asleep on the floor near the stove. They rode until daylight, and then hid in a station house.

At Wilcox Station we met Agent J. C. Tiffany with seven boys from the Apache, Mohave and Yuma Bands, at the San Carlos Agency. They were about twelve years of age, and had been for two years scouts in the U. S. military service, and can make sixty miles a day on foot. But they are ready to exchange the camp for the school. Then came A-gua-ee, A-mo-ham-ma, H. boy, A-gua-ee, and Tel-ma. All but the last one are orphans, both fathers and mothers having been killed in the many wars waged by this once turbulent tribe. That evening we reached Deming, to find that, on account of the Indian raids, the stage-coaches were not running, freighters were laid up, and all travel ceased. For two days we had been telegraphing with Ben Thomas Thompson at the military agency, to convey us across the country, but had failed receiving the replies he had sent. At Deming we learned that the teams were waiting in the end of the track, some sixty miles distant. Our car was attached to the construction train, and we were soon under way. Midnight brought us to the end of the track, where we were warmly welcomed by Rev. Mr. Thompson, who had kindly accompanied the teams to render us what assistance he could. There were two other parties waiting for company, and they were anxious to start immediately, and get over our dangerous ground before daylight. But the children were sound asleep, thinly clad, and the night very cold, and we were unwilling to expose their health.

PERILS BY INDIANS.

By daybreak we were up, breakfast eaten, and on our way—three wagon loads and three mounted and armed horsemen. Small bands of hostile Indians were all around us, but none in sight. Two days previous three herds and two miners had been killed at Chiricahua Gulch. On the day previous two men were killed on the Upper Chiricahua, and, and so afterwards learned, at the same time was on the road, a man, his wife, child and mother-in-law were massacred at Carlisle. On following-day five men were killed, west of the Pima Agency, and on the 23d the buckhorn stage was captured, and driver killed. But we crossed in safety.

PERILS BY MEXICANS.

We escaped one danger to encounter another. We had escaped hostile Indians, but the excited Mexicans breathing out threats of vengeance and slaughter against all Indians. The Los Angeles paper of the day before had extolled them as the world's errand boys, and the Government was training up sixteen more Victorias to be more savage than their fathers.

The feeling was running so high that some friends had thought of telegraphing to our drive through the villages, but to pass around them.

At noon we reached Mesilla for dinner. Hundreds gathered upon the street to gaze at us, but there was no hostile demonstration. At sundown we reached Dona Ana, a small Mexican village. The whole valley was full of railway graders, and six new saloons had been started in this village to accommodate them. Drinking and rioting were going on, but there was no help for it, we could go no farther. One of the leading Mexicans kindly rented us a small room, that gave shelter to Mrs. J., the two girls and smaller boys. It had a cot, table, two chairs, bench, fireplace and dirt floor. The larger boys built a camp fire near the wagon on the outside. The army experience of Fry had made him familiar with guard duties, and I placed the camp in his charge. Guards were placed in the wagon, to prevent pilfering by the Mexicans that crowded around and greatly annoyed us. About nine o'clock I found, to my consternation, that my Captain of the Guard and two other Indian boys had been furnished with whiskey and were drunk, and drunken Mexicans were gathering in from the saloons ready for a war of races. Fry was at once deposed, and, with the other drunken boys, lifted into a wagon and kept under a guard of their own number. Some of the better class of Mexicans were called in to get the drunken ones away. The Pima and Papago boys, afraid to remain with the drunken Apaches (for a feud of centuries had existed between these people), were allowed to lay their blankets and sleep on the ground inside of the yard. A co-le-hut was made Captain of the Guard, and order was restored. It was, however, a long night of great anxiety, for the least hostile demonstration on the part of my drunken Indian boys would have raised a mob that would have destroyed us.

By daybreak we were again on the road, leaving until next when we went into camp for breakfast, the first meal we had since noon of the day before. About five in the afternoon, we reached the new railway village of the Colorado, to find that the train, which we had been assured did not leave until evening, had been gone four hours. The village was made up largely of gamblers and saloon-keepers. I could not learn of a hotel, boarding-house, tent, or even enclosed park, into which I could place my children. To camp out in the street would be to subject them to many annoyances and some danger. In the few minutes I was making inquiries of a hundred rough men, I had gathered around the wagon containing the children. In this moment of complexity, Lieut. Plummer, of the U. S. Army, rode up and invited us to his camp across the Rio Grande River.

The following day, at noon, we took the construction train for San Marcial, arriving about 10 P. M. The whole village was packed with Indians, and the Indians, as on the two previous days nine persons had been murdered a few miles distant. Then, to make the danger more vivid, that afternoon the mutilated bodies of four had been brought from the Mexican village a short distance away from an infuriated mob of between two and three hundred were assembled to view the remains of their friends. Their loud wailing of grief were mingled with cries of vengeance upon the Indians. Had the presence of these dozens of unarmed Indian children been known to them, the mob would have torn us limb from limb, for an Indian can not be more cruel than an infuriated Mexican. Arriving at the depot, our party kept their seats until the train was emptied and backed down to the yard. Ominous warnings were given by the railroad men that if the Mexicans found out we were there our lives would be worthless. Once in the yard, we were quietly and quickly transferred to a special car. The shades were pulled down and the lights put out. For three hours (it seemed an age) we sat in darkness, facing death, liable any moment to hear the cry of the frenzied mob for blood. The children were unworried by their danger, and slept, while we watched and waited on the promises. It was not simply the lives of the party at stake, as important as they were to us, but the education and Christianization of the tribes represented by these children on the Upper Chiricahua, and had been done that could be to secure the safety of the party, and now we were shut up to the simply waiting and training. At length there was a whistle, a puff of the engine, a jerk, and on our great relief we were under way. In the morning we were in Albuquerque, and the long strain of six days and nights of great anxiety was over.

At Albuquerque Mr. E. Conklin had gathered for us ten Pueblo children—five boys, Tommy, Santa-cho, So-we-ku-toh-ye, Domingo, So-a-cho, and five girls, We-sha, Mo-na, Kwa-ta-ma, Swamee, and a girl, So-dan. The children were at length turned over to the Carlisle and Hampton Training Schools for Indian Children.

## REPORTS FROM VIRGINIA COLORED TEACHERS.

Those who have been interested in the letters from Hampton graduates, published in the Southern Workman from time to time, will be interested to learn the statements of some of the other teachers of Virginia. One or two evenings of the Teachers' Institute at Hampton were spent in listening to their reports, from which we take the following notes: Mr. Alexander Truitt of Goodland Co. said:

"I have been teaching six years in Goodland Co., thirty-five miles above Richmond. The harmony between races is a good deal better than when I first went there. There are twelve colored schools in the county. In one district twelve new school houses have been built in three years; six white and six colored. They cost about \$110 to \$120 apiece—board of logs or planks, chinked and plastered, very comfortable, with blackboards. As to pay, we manage to get it two years after teaching—what is due for last year we may get summer after next. I have some warrants four years old. The discount on them is five dollars out of twenty if we sell them. It has always been so. I live near the county Treasurer, and some young ladies have sent me their orders to try to get them cashed, but I have always failed, as yet. There is no favoritism shown. We have got one of the best Teachers of favoritism in some places, but not in ours. He is an honest man. We are paid in routine as registered. The colored people are buying land; many have succeeded in getting homes for themselves. The colored population is the largest, though it always falls on election day. They are increasing in number. The white children mostly attend private schools, or are taught at home. The religious state of the colored people is 'very righteous.' I mean by that, that our people are the happiest people in the world at certain seasons of the year, but it freezes up about September, and don't open till May. I don't think before that. I went North after it—worked hard, and went to the Richmond Theological School to Dr. Corie."

Mr. Robie, of Loudon Co., said:—"I have held a pay school in this district about five years, at 40 or 50 cents a month for each child. When the war closed, I was the only colored man in—competent to teach school, and I wasn't very competent. I was a member of of the Presbyterian Church. I have studied for the ministry. I have taught public school for eleven years, from five to eight months in a term. I have met very little opposition either from colored or white. We have a better school board than my friend speaks of, only sometimes have had to wait for my pay one month—never any more. But our county is called the garden spot of Virginia. It is a rich county. There are fifteen colored schools in the county, sixty or seventy in all, white and colored. The parents want their children educated."

Mr. J. Austin said:—"It is pretty much the same in our county, have lived in it eight years; taught four. In winter there are a good many scholars, but they drop out to work in the spring. I had fifty scholars for a winter, but when I closed, only twenty one. People say 'I have got on without education, and my children can.' I tell them they need to have some one to take care of them when they get old. The people are trying to get homes. But very few are not buying. Some own fifty, sixty, a hundred acres, with some stock, free of debt. There are two men who own five hundred acres apiece."

Mrs. Jane Crouch of Alexandria said:—"I have been teaching twenty-five years. I taught when the colored people were not allowed to teach; I was a free woman myself, and I taught the free colored people at night; because I couldn't have taught if it had been found out. I was examined first as a public school teacher in 1871. There are eight schools in the city, ten months' term. We are paid by the city and state, punctually. We have an excellent Superintendent. I had a letter from him to-day, saying he had expected to come to the Institute, but was detained."

Mr. R. H. Ely, of Isle of Wright Co., said:—"I have been teaching since '70: first a private school in Alabama. I learned my alphabet the second year of the war, in a small school taught by a Northern lady. I have always had to work my way. The pay for teaching is not as much as it was at first. There were forty dollars a month, now only twenty-five or thirty. We never wait for it longer than one month, unless we choose to. The term is five months. I used to teach by the A, B, C method, but now I shall try the new way. I learned my A, B, C, and I remember how ashamed I felt to be learning it with little children. The lady I used to belong to tried to teach me that, but I couldn't learn it."

Mr. J. H. Johnston of Richmond, said:—"I am sure we are all more interested in hearing from the country teachers, but I will say all the if you wish. Since the war we have had colored teachers in almost all our schools, and the Superintendent says that they do as well

as the white. The colored children attend as well as the white children. The salaries of both colored and white teachers have been reduced. Once they were \$40 a month, the first year, to be raised after 3 years to \$45, and then \$50 for primary schools; more for grammar schools. Kinder people are sending their children to public schools more than they used to."

The Richmond schools are called the best public schools south of Mason and Dixon's line. There are very few private schools for the colored. There is such a rush for public schools that they can hardly get in. In some sections of the east and extreme west of the city there are no colored schools, so the children have to go long distances in some cases."

Miss Morris, of Alexandria, Superintendent of the girls' Department of all the colored schools in that city, was called on to speak, but modestly said little of her work in her very responsible position."

She stated in response to inquiry, that she has five schools under her supervision, with 350 girls, and one Kindergarten school, and has also charge of two grades in one of the schools as teacher of arithmetic, grammar, geography, history and writing."

## SUNDAY SCHOOL WORK.

On another evening, special inquiry was made as to the Sunday School and temperance work entered into by the public school teachers. Three founders more raised their hands when asked to indicate the number engaged in such work, in addition to that for which they are paid. The Normal School chaplain, Rev. H. B. Friswell, gave, at the close of a brief statement of the missionary work of the school, the organization of a Young People's Christian Association for out-of-school work in Hampton, assisting in the organization of the various churches there, Bible reading and missionary work in the jail and poor house, and among the poor in the town. He explained the unsentimental character of the school and its church, and the advice always given to its student members, to go home prepared to work with their respective churches, and not against them; or with any church with which they found themselves naturally connected, and most needed in their fields of labor."

Rev. J. E. Jones, Professor of Language and Philosophy in the Richmond Institute, followed in a cordial and interesting address. He said:—"I am glad to hear such an account of your work, and the interest taken in it by your teachers and pupils. I have been particularly interested in such work. I believe our teachers generally have been, and, as a result, will see a gradual change over the whole face of society."

But I am inclined to think we have not been as fully engaged as we should have been. In thinking out the cause, my experience has led to this conclusion, that people in passing from ignorance to intelligence often go from the extreme of superstition to the extreme of skepticism. I am inclined to think that some of our teachers have gone to the extreme of skepticism. It is not well to be over credulous, and that is not necessary. Then while many who have gone out from our institutions learning have done great good, there are a great many—many of those I come in contact with—who are not aware, as they should be, of the great responsibility resting upon them, because their advantage and opportunity increases with opportunity. No one who has been trained in these institutions of learning should help feeling himself debtor to the learned and unlearned, to the wise and unwise. The very fact a man is a child of God, and has received from God the means of improvement, must make him feel his responsibility to help his fellow men. I have travelled all over this state, and I notice a decided improvement in the condition of the people in all directions. I come in contact sometimes with men opposed to teaching, but that is now exceptional; once it was general, masses of the people are clamoring for education and educated leaders, as the congregations gather in the intelligent young people they begin to demand intelligent ministers."

The tide of improvement is going out from the institutions of learning. Shall it continue! It rests with you. If you neglect the great work before you, you do wrong. Remember if done at all it must be done by you. Some think that the very fact that they are educated, or rather partially educated, excuses them from going to Sunday School. This is not in keeping with the true ideas of refinement, progressiveness and intelligence. You have great field before you. Draw inspiration from it. Here are millions of human beings to elevate to a higher level of humanity. They are not responsible for the past, but they have not had many advantages. Do all you can for them. Some things you can do without injury among educated people, you cannot always do among them without harm. It may not always do to sing their spiritual songs, but you can sing here without injury. You can't afford to do any thing which would be misunderstood to their injury. Be careful to maintain manly dignity, suavity of manner, but above all a sound moral

character. You can do a great deal for your people. You owe it to them, to yourself, to God, to do what you can."

Mr. D. D. Williams of Worcester, Mass., spoke at some length on the necessity of cultivating decided and practical Christianity. I do not more short reports followed, which we condensed as follows:—

Mr. Weaver of Gloucester Co., a Hampton graduate, reported that there is not a teacher in his county who is not also engaged in Sunday School work, and therefore most of the little children attend."

Mr. Berkely, of the same county, added in reply to questions, that most of these teachers are young women, and that there are also some old people among the Sunday School teachers, getting instruction themselves in preparation at the teachers' meeting held once in two weeks. "I conduct one of them myself. We use the International lessons; explain it one Sunday to the teachers, who give it the next Sunday to the class. This work is spreading through the influence of the quarterly and yearly conventions. These are for colored schools separately; sometimes the white people visit our school."

Mr. D. W. Davis gave good report of the work in Richmond, which is thoroughly organized, with five thousand children in the colored Sunday Schools. On the Sunday school he attends, the 1st Baptist, the average is five hundred, and it has fourteen public school teachers, one of whom has charge of a normal class to prepare the international lesson. There is a colored Young Men's Christian Association in the city, which carries on Bible reading, class work and street preaching in neglected parts of the city and suburbs."

Mr. Morris of Southampton Co., reports the organization of a Sunday School association in his county. His own Sunday School has asked him about the International lesson, and has written to see what he can get for it. The old people are doing what they can, and they are coming themselves they send their children."

Mr. Wm. Cannaday—Hampton graduate—said he had taught in Sunday school ten years near Norfolk; 140 children in the school—for the past six months he walked six miles every Sunday to attend it. "I call it my church." No whiskey is allowed to be sold in the district where he lives; he has never seen a drunken man there."

Mr. Dyson of Halifax Co.—another Hampton graduate—had taught five or six years since he left the Institute. Had had some trouble from "old time preachers" opposed to what they call Bible religion and not heart religion."

A teacher from another county, gave a more favorable report.—The preachers "all all right" about 1000 children in Sunday school. Public school teachers almost all teaching Sunday school. A Sunday School convention is organized which does some work in helping the school to buy books. A teacher from Rockingham Co. told of her work in starting a Sunday school where there was no minister. She "found three or four Testaments, five or six spelling books, and 100 children, some of whom had to walk three and four miles."

Another noticed great improvement in his county: had had some opposition from the old people, but they allowed their children to go to Sunday School. A missionary society in the North had sent him Sunday school books. Another reported nearly all the children within ten miles round attending the school. The old people don't all go, but they want their children to read the Bible to them."

George Stevens of Winchester, Va., a Hampton graduate, said he had been teaching five years in both public schools and Sunday schools, chiefly in the Methodist church, though he taught in both that and the Baptist until the hours were changed so that both come the same time. The school is prospering now more than ever, and it is because there is a wide awake minister. He thought "if teachers get the cooperation of the minister, it is a great point gained. If you want to introduce new plans—the International lesson leaves for instance—you can do it with the help of your minister when you couldn't without; so I have found it. With his help, the school has gone up from fifty or sixty to two hundred. Many adults come, gray-haired men and women as like little children to learn the word of God. I spend two thirds of Saturday studying the lesson for them. If I had never been interested in this work, this night would have aroused my interest, not to die while I last. I am glad to say the Baptist Sunday school is doing equally well. A white lady—wife of a Judge, also of great interest in the work, and helps it much."

Prof. Warren said he was glad that some of them spoke well of the old men, and had succeeded in gaining their confidence and cooperation—that they must remember that while many are ignorant and some are bad, there is a great deal of strength and real goodness among them, and many kept alive faith and religion, and led their people in very dark times, and God had been with them. The

young people owe much to them and should never forget to be patient and grateful."

Mr. L. B. Langford of Abingdon, a Hampton graduate of '78—said "Yes, I always try to get hold of the old men. If a man is opposed to you remember he is the man to go to. If he is a very obstinate man, he is the very man you want—because he's got a will of his own, he's the very one to help you. Give him a position—if he can fill it, he will soon find it out and step back, and you will have no more trouble. I would have been glad to have heard more about the results of your work in conversations. I have gained them, and I have no doubt you have. This ought to be the aim and end of all our work."

The meeting closed with a few words from Mr. Friswell, enforcing the last suggestion, urging the teachers to work as far as possible with their churches and not at variance with them, and to be religious leaders of their people in the true sense of the word

## HELPING EACH OTHER.

[We have received the following pleasant contribution from a valued friend.]

Business called me to Tiffin, Ohio, immediately after the public exercises at Hampton, in May. I had been specially observant of the interest taken by the Colored students in the Indiana, and pleased with the care shown by some of the friends of the cause in helping over difficulties attendant upon their first steps in mental culture. It was one neglected race aiding another."

During my stay in Tiffin, while riding with a prominent member of its bar, he said suddenly, "Now we're on the Negrotown Road." "Why is it called by that name?" "Oh, many years ago, the fugitive slaves found shelter some miles from this place, in the settlement of a tribe of Indians, who protected them from those who wished to carry them back to slavery, and as this road led to their huts, it was called the Indians' sympathy for the fugitive in his quest for freedom. Just as at Hampton the negro is anxious to help the Indian along the road to civilization and knowledge, so the Indian had shown a similar disposition to help the negro to the blessings of freedom. The two incidents harmonized beautifully. Instead of the antagonism which is popularly supposed to exist between the races, there seems to be a God-given impulse to help each other, a fraternal tendency to extend a hand, which the weaker may grasp in its hour of need. Should not this fact stimulate those who have had higher advantages and greater privileges to perform their duty to both these races, so that they may rise to a higher plane, and be fitted to spend lives of usefulness as citizens of a common country? The dawn of a brighter day to both seems to be breaking; should not Christian men and women find it a pleasure to welcome it with joy, and do their part in bringing the blessing of a better civilization to the Negro and the Indian?"

L. H. S.

## LETTER TO SOUTHERN WORKMAN.

DEAR EDITOR:—You remember a letter of mine to Gen. Armstrong appeared in the May number of the Workman. I fear that some may misunderstand me, so I will write this card to explain."

I did not mean that there was no church near, when I said that I taught in a log cabin. School had been taught in the church, but at this time it was under-going repairs, meanwhile I taught for a few weeks in this log cabin. The fact that I meant to impress was, that there was no school house near. In stating that I found the Sabbath School poorly conducted, I did not mean that it never had been prosperous, nor that there were no faithful Sabbath School workers. For I did find some long tried and faithful workers. And that I took hold with them, as I stated, introduced the international lesson, gave new ideas in the work; and by their sanction and co-operation, awakened a new interest and love for the Sabbath School. I hope that no one will ever think that I meant to reflect upon those faithful workers, who deserve much credit for their work. Sincerely yours,

W. B. WEAVER,  
Cappahosic, Va.

## Horsford's Acid Phosphate

In Debility from Drinking.

I used Horsford's Acid Phosphate in two cases of nervous debility, from excessive drinking.

Dayton, O. E. B. DAVIS, M. D.

# THE KANSAS AGRICULTURAL AND INDUSTRIAL INSTITUTE FOR THE REFUGEES.

The welcome extended to the Exodus refugees by the State of Kansas and its generous-hearted Governor, must endear it to the remotest descendants of those who have thus found an asylum there. This organized assistance given by the Kansas Freedmen's Relief Association in distributing funds, food, clothing, farm implements, house furniture, and every other thing that could be thought of for their aid and comfort, doubtless saved hundreds of lives and sent hundreds of families on their feet, on the road to self support. \$70,000 were thus spent. As Governor St. John was head of this movement, his heart and soul, and life was Mrs. Elizabeth L. Comstock, of the society of Friends, (friends indeed, the colored people of America have always found them.) During the war, Mrs. Comstock found herself to the care of the sick and wounded soldiers, collecting and distributing with her own hands from hospital to hospital, supplies for their relief. Ever since, she has devoted her time and money and thought, with untiring energy, to the cause of the freedmen's elevation. They may well echo Governor St. John's enthusiastic declaration that Mrs. Comstock and her equally devoted co-workers, Miss Laura S. Haviland, are "the noblest women God ever made." The kind of relief supplied by the State Association was, of course, in its nature temporary, not to pauperize but to bridge over a time of distress. After two years, therefore, when this object had been attained, the question arose before these constant friends, what is the next step to the ultimate good intended—to help the people to help themselves! The agricultural and industrial college is the answer. The fact that Mrs. Comstock's name heads the enterprise should ensure for it the entire faith and grateful cooperation of all colored people. The following is Mrs. Comstock's own circular announcement of its object and plans.

## ANNOUNCEMENT OF THE AGRICULTURAL AND INDUSTRIAL INSTITUTE FOR THE REFUGEES.

Since the dissolution of the Freedmen's Relief Association of Topeka, it has been decided to start an Agricultural and Industrial Institute for the Refugees, in Southern Kansas. Owing to the fact that so large a number of the Refugees have been reared in cotton fields and on sugar plantations, these are entirely unprepared to make their living in any other place.

The purpose of this Institute is to teach the colored people how to do all kinds of work, and furnish labor for those who may arrive from time to time, till it can be obtained elsewhere. A beautiful location has been selected four miles east of Columbus. The farm at present contains 400 acres of choice land.

All branches of farming, fruit growing, and stock raising will be carried on by the colored men, under the direction of a general superintendent. Upwards of one thousand letters have been received by us within the past six months, inquiring for women, skilled in the different departments of housework, and out of sixty thousand Refugees in the State of Kansas, we find very few who are competent to do the work required; consequently, special attention will be given to the training of girls and women in all kinds of housework.

Not only will the Refugees be taught how to work, but the best religious and educational advantages will be afforded them.

It will require money to carry on this great work, and it is hoped that the friends of the Freedmen will be liberal in their donations.

A Board of Trustees, consisting of sixteen members, has been chosen by the committee appointed by the Kansas Yearly Meeting of Friends, to carry on the work for the ensuing year. Jonathan E. Pickering, President; Laura S. Haviland, Secretary; and myself, Treasurer.

As I shall be absent for a few weeks, soliciting funds for this work, please send all money intended for the Agricultural and Industrial Institute to WM. P. NIXON, editor *Inter-Ocean*, Chicago, Illinois, or JONATHAN E. PICKERING, Columbus, Kansas.

ELIZABETH L. COMSTOCK,  
Columbus, Kansas.

Besides the well known names which are thus connected with the enterprise, is that of Governor St. John, who gives it his public approval. Mr. L. M. Pickering, son of the President of the board, a practical farmer, and formerly in charge of the farm at the Sec and Fox agency, will be in charge of the agricultural department. The resident Sec-

tary and chief clerk of the Institute is Mr. S. W. Winn, a refugee from the South. He is mentioned by the "Columbian Courier" as "a thorough scholar and a gentleman, a practical business man and accountant." It is the design of the society to establish workshops in connection with the school, as soon as practicable, to give its members opportunity to learn the standard trades, such as blacksmithing, carpentering, &c. An enterprise so thoroughly after Hampton's own heart in its principles of helping men and women to help themselves has, of course, our most cordial God-speed. We are glad to have our Hampton students represented in so good a work for their people, and take pleasure in publishing the following letter from one of them who is a teacher there.

AGRICULTURAL AND INDUSTRIAL INSTITUTE,  
COLUMBUS, KAN., JUNE 1881.

Gen'l S. C. Armstrong,  
Dear Friend:

Many times have I thought of writing you, since coming West, but whenever I remembered the multiplicity of your duties, I would at once think of assisting. If I could, rather than hindering. Now that I will be considered no longer, you will hear from me again, which may be a little lengthy.

Since I have been out here, my work has been among the Refugees from the South. I have stopped working with the Kansas Freedmen's Relief Association before its dissolution, which was April 15th, and after a few days' rest, I came to this, the southern part of Kansas, with the intention of working out of doors during the summer, but before I began, the work which the accompanying circular explains, presented itself, and some of the workers, who had been connected with the Association, wanted that I should join them in the work, and so I went with them.

So much experience in this kind of work, that it would be useless to attempt an explanation. The only difference between the work here and at Hampton is that we begin building and farming upon the prairie, and you have improved land. At Hampton every thing in the line of building material is cheap and convenient, while with us everything of the kind is paid for by high prices and at great inconvenience. Despite all of this, there is a demand for work of this kind. Of the many Refugees (about 40,000) now in this State, but few of them know much about the manner of farming in the North and West. It is no less true, that few only of the women know anything of general housework, their work in the South having been the same as that of the men, working in the fields. Aside from there being a need of instruction in the art of common labor, there is a pressing need of educational advantages. They have come up here, bettering themselves in one particular, their lives are so when going to rest, they feel and dream not that they are being hunted and shot down by their oppressors, but the ignorance belonging to slavery follows them and tells of their experience.

But to write of past grievances is not my aim. Many predicted verily with regards to the Exodus (now about over) and with but a faint knowledge of it; from observation I can only say that a goodly number are doing well, while a minority is doing all it can. Whether the Exodus will prove a success, I think, yet to be determined, and by two things, namely: the general sentiment of the governing classes of white people in the South, towards the colored people remaining there, and the improvement made according to opportunities here afforded them. Should the latter be accomplished, it will be by the charity of Northern friends, who, if anxious that these people should improve, will express anxiety by donating to such work as will best fit them for usefulness to themselves and their country. People who visit the southern border of the southern States express much surprise at the condition of colored people they see, and seem to think that all are making good progress. To take my choice of work between a certain class of these people, and a number of native Africans, I would not turn around for the difference, so far as prospects of rapidity of instruction go. Well, these people are here, and it is no use of saying more. The thing to be done, as above said, is to push them up the hill the nearest way, which way is education, in every sense of the word, and while one portion do the work it requires, another portion of well-wishers to support the humblest kind prepared, I shall teach, free of charge, a night-school for the Refugees who are now at work upon the Institute farm and buildings.

Our beginning was a Bible school, organized two Sundays ago. We had no chapel with white walls, and furnished with nicely finished settees, or ornamental windows. With a few rough benches for settees, we assembled in the carpenter's shed, and there held the foundation upon which we hope to build in the future. We sang from two hymn-books the familiar hymn, "Pass me not, oh gentle Saviour," and as the melody was borne away by the wind of a threatening storm, the thought was of Him who guides the great and small.

I would like to trouble you so much as to send me some of the last reports of St. John, also the plans of your last buildings, if you

have any remaining. As this work is just beginning, it is thought that we may gain information from Hampton's latest work.

Yours Truly,  
Geo. W. Davis.

## FROM THE JAPANESE MINISTER OF EDUCATION.

At the close of the Centennial in 1876, Hampton Institute had the pleasure of a visit from Mr. Fujimaro Tanaka, chief Centennial Commissioner of Education of Japan, with two gentlemen of his suite. Mr. Tanaka being Senior Vice-Minister of Education in his own country, whose remarkable exhibit at the Centennial will be remembered by many, the object of his visit to Hampton was to inspect its special phase of educational work, in the interest of Japan, which at that time had, as he reported in an interesting address at the Institute, 30,000 schools, about 15,000 of them Normal schools, and out of a population of 33,000,000, had 5,000,000 children in school. Letters of friendship and inquiry have been several times received at Hampton since his return, from Mr. Tanaka and his Department. Our readers may be interested in one just received from the newly appointed Minister of Education.

"MONREUSEO TOKIO, NIPPON.  
10th day of 5th Month,  
14th year of Meiji.

Hon. S. C. ARMSTRONG, Principal of Hampton Normal and Agricultural Institute, Hampton Va. Sir:

Although I have not yet had the honor of seeing you, I beg leave to inform you that I have been appointed minister of education as successor of Mr. Eiyemon Tokuma, who has now received the appointment of the minister of agriculture and commerce. I am much gratified to hear that the friendly relation which you had kindly kept with my predecessor has aided much to the benefit for the cause of our education. I sincerely desire that I shall have the honor to be equally admitted to the share of your friendship as he had been before.

We best wishes for your happiness and prosperity.  
I have the honor to be, Sir,  
Your obedient servant,  
FUKUMOTO TAKAKURA,  
Minister of Education."

The following statements are taken from a letter from Dr. Thomas C. Meaden-hall, Professor in the University at Tokio, Japan, published in the *Ohio Educational Monthly*.

"The educational world at large has been justly astonished at the numerous changes and reforms that have been made in the educational systems of Japan within the last ten years. A National Department or Bureau of Education has been established. A careful and thorough investigation of the best systems of public instruction in Europe and America was made by Mr. Tanaka Fujimaro, Senior Vice-Minister of Education, and manager of the Educational Department, who spent several years in the personal inspection and examination of these systems. As far as possible, that could be made applicable to the conditions and wants of the country was taken from these systems to form the educational system of Japan.

A large Educational Museum has been erected and filled with specimens and collections of all the materials that have to do with primary education. I am certain that the like of it is not to be found in America, although its importance and value cannot be questioned.

The Imperial University at the capital, in the matter of library, equipment, and general resources, will not suffer by a comparison with many widely known institutions.

The latest report of the Department of Education, two years old, states that the number of children being educated in the public schools of Japan was over 2,000,000, and that one teacher is employed for each 40 pupils. Over 100 Elementary Normal Schools and 2 Normal Colleges have been established, the Elementary Normal Schools being already furnished nearly 10,000 teachers for the public schools.

The Normal School College is for the education of teachers for the middle and high schools, and there is a model school in connection with it. It is under the efficient management of Mr. Isawa and Mr. Takamini, two young men who have received a thorough preparation for their work in America. As regards extent of buildings, grounds, appliances for instruction, and the like, I am sorry to say the great State of Ohio has nothing to compare with it."

## FOURTH OF JULY AT HAMPTON INSTITUTE.

By a happy thought, the arrangements for observing the Fourth of July, at the Normal School this year, were turned over to the members of the Teachers' Institute, as representing the colored teachers of Virginia. The result was a novel and interesting celebration far ahead of some white ones. The terrible news of the day before, came near putting a stop to all rejoicings, but the revival of hope brought by every succeeding telegram, caused a revulsion of feeling that sought expression in thanksgiving, and the day was full of deep thought trembling joy.

The exercises, prepared and conducted entirely by the colored teachers, consisted of prayer, singing of national songs, recitations, reading of the Declaration of Independence, and an original oration and poem. The former was by Geo. E. Stevens, a graduate of Hampton, the latter by Mr. W. D. Davis, of Richmond Normal School. The oration, well written and delivered, was a review of the story of liberty in different nations, through Magna Charter and the Bill of Rights to the Declaration of Independence, and closed eloquently with a picture of its culmination in the Emancipation Proclamation and President Lincoln's declaration that the American Government is a government of the people, for the people, by the people. To write an ode of a hundred and fifteen lines in two days is something of an undertaking for any one. Mr. Davis succeeded in it remarkably well. With a closing reference to the sorrow and joy of the nation, and prayer for God's mercy, it was a poetic review of the story of the Revolution, and a quite touching claim for a share by his race in its memories and rewards; as in one verse which is all we have room for here, the most striking thought others were good.

"We have a place,  
In this our country's battle for the right,  
The black our race;  
For Attack was the first to fall in fight—  
His was our race."

In the evening, by invitation from Mrs. W. N. Armstrong, the Institute and School went across the creek to watch from the Point, the beautiful display of fire works at the Soldiers' Home and Fort.

The editor of the "Virginia Educational Journal" was much gratified on his visit to the Institute to find that twenty-two of its members are regular subscribers, and twenty-nine more receive it or see it regularly. We have always done what we could to circulate it among the Hampton graduates, and wish that every teacher in Virginia might take it. We regard it—and Prof. Warren agrees with us—as one of the very best Educational journals in this country.

We have received for review a number of interesting books—"Ploughed Under," with introduction by Bright Eyes, and "The Easiest Way" in housekeeping, by Helen Campbell, from Fords, Howard and Hulbert, New York; and "School Classics," from Clark and Maynard, New York—also the excellent July number of that valuable agricultural magazine the "Southern Planter and Farmer"—but have room this month for only our thanks and this passing notice. All are worth reading.

## A NEW PIMA STUDENT.

Mr. E. B. Townsend, special agent of the Indian Department, arrived at Hampton Institute July 20th, just from the Pima and Maricopa agencies, southern Arizona, bringing with him a young Pima lad who was very anxious to join his comrades at the school. His name is Juan Garfield. He is a very bright fellow of about seventeen, able already to read and write a little. He has no parents living. Mr. Townsend brought a good account from the agency, and messages from the students' friends, all of whom are well. He made many interesting statements which we must reserve for another number. He took back with him to Washington, to be sent home with his agent from there, a little Omaha boy, Sameel Framont, who came to Hampton with lady trouble, and is too ill to attend school. Mr. Townsend spent a day at the school, and takes back pictures, letters and messages from the boys to their parents.

Mr. Frederick Douglass visited on Tuesday, the estate of Edmund Lloyd in Maryland, whence he departed as a slave fifty-six years ago. He was received with the greatest courtesy and kindness by the great-grandsons of his former owner, and on entering the old hall, where he had often played as a slave-boy, he was invited to partake of the hospitalities of the house. Mr. Douglass was visibly affected by the great kindness and consideration shown him, and drank the health of the family. It became noised about among the colored people that Mr. Douglass had arrived, and on his return to the boat he was met by a number of the descendants of the old slaves with whom he had been acquainted when a boy. In conversation with them he revived many of the early incidents of his life. Mr. Edmund Lloyd and his two brothers accompanied Mr. Douglass back to the cutter, and after an expression of his gratitude to them, and a "God bless him," for their father, he departed.

The Hartford Almanac and Cook Book sent free. Hartford Normal Works, Providence, R. I.

The following Law of this State, prohibiting the sale of liquor to Normal School Students, has been in force since March 3rd, 1880. Chapter 135.

An act to prevent the sale of liquor to students of the Hampton Normal and Agricultural Institute.

- Approved March 3rd, 1880.
- I. Be it enacted by the General Assembly, That any person who shall hereafter sell directly or knowingly indirectly to any student of the Hampton Normal and Agricultural Institute, alcoholic or malt liquor, shall be guilty of a misdemeanor, and, upon conviction thereof, shall be fined not less than twenty nor more than fifty dollars.
  - II. It shall be the duty of the county court from which the party convicted under the first section of this act obtained his license, forthwith to revoke the same; and no other license to sell liquor shall be granted to such party within two years from the date of said conviction.
  - III. This act shall be in force from its passage.

## BOOTS AND SHOES!

M. McKim, invites attention of the public generally to his large and carefully selected stock of Boots and Shoes of the  
**Best City-made Work.**  
which I will sell at and below cost. All other goods in my store will be sold lower than they are, in consideration of the sale. Please give me a call and see for yourself. Ladies' and gentlemen's work made to order, and repairing neatly done.

MRS. M. McNEILL, HAMPTON, VA.

Outfit furnished free, with full instructions for conducting the most profitable business that anyone can engage in. The business is so easy to learn, and our instructions are so simple and plain, that any one can follow who is willing to work. No one can fail who is willing to work. Women are as successful as men. Boys and girls can earn large sums. Many have made at the business over one hundred dollars in a single week. Nothing like it ever known before. All who engage are surprised at the ease and rapidity with which they are able to make money. You can engage in this business during your spare time at great profit. You do not have to invest capital in it. It is the best. Those who need plenty money should write to us at once. All furnished free. Address: **Thom & Co., Augusta, Maine.**

## THE HYGIEA HOTEL,

OLD POINT COMFORT, VA.

Situated within one hundred yards of Fort Monroe;

At the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. mails, landing only 30 rods from the Hotel, which is substantially built and  
**COMFORTABLY FURNISHED;**  
Has hydraulic passenger elevator, gas and electric bells in all rooms; water-rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or public building in the country. And as a resort for the pleasure-seeker, invalid, or reading place for tourists on their way to Florida or the North, this House, with accommodations for about  
**SEVEN HUNDRED GUESTS**  
Presents inducements which certainly are not equalled elsewhere as a summer resort, or cold weather sanitarium. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleepers and searers the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the hotel windows, are most healthful soporifics at the Hygiea.

For further information, address by mail or telegraph,

H. PROEBUS, Proprietor.

## Hampton Normal and Agricultural Institute

INCORPORATED IN 1870.

S. C. ARMSTRONG, Principal; J. F. B. MARSHALL, Treasurer.

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.  
Terms of admission: a knowledge of reading and writing, and of short and long division.  
Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

## FORM OF REQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable &c., &c.

For further information address,  
S. C. ARMSTRONG, Principal,  
Hampton, Virginia.

## THE DEPOT.

VANISON'S NEW BUILDING, NEAR ZION CHURCH,  
Chapman Township, Hampton, Va.

"Outfit was free to those who wish to engage in the most pleasant and profitable business known. Everything new, capital not required. We will furnish you everything. \$10 a day and upwards is easily made without staying away from home over night. No risk whatever. Many new workers wanted at once. Many. Many are making fortunes at the business. Ladies make as much as men, and young boys and girls make great pay. No one who is willing to work fails to make more money every day than can be made in a week at any ordinary employment. Those who engage at once will find a short road to fortune."

Address: H. HALLET & CO., Portland, Maine.

## STAR CANE MILL.

Double the Capacity—Cheapest Mill Made—Warranted in Every Respect.

Manufactured by  
**J. A. FIELD, SON & CO.,**

Eighth and Howard Sts.,  
ST. LOUIS, Mo.

## BIG GIANT FEED MILLS.

Has OAST STEEL GRINDERS.

SIFTS THE MEAL.

The only Mill that will grind Corn with Husk on without extra expense. The only Mill grinding Corn and Cob successfully that will grind shelled corn fine enough for family use.

Yourselves by making money when a golden chance is offered, thereby always leaving poverty at your door. Those who work take advantage of the good chances for making money that are offered, generally become wealthy, while those who do not improve such chances remain in poverty. We want many men, women, boys and girls to work for us right in their own localities. The business will pay more than ten times ordinary wages. We furnish an expensive outfit and all that you need free. No one who engages fails to make money very rapidly. You can devote your whole time to the work, or only your spare moments. Full information and all that is needed sent free.

Address: **Strick & Co., Portland, Maine.**

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. X.

HAMPTON, VA., SEPTEMBER, 1881.

NO. 9.

## CORRESPONDENCE.

Maui, Lower Burma, May 21st, 1881.

Every one who travels in the east, hears about the laboring elephants of Siam and Malacca. Some of the stories told about them are marvellous. I have held myself in reserve on the subject, being on the whole rather skeptical.

As we steamed up the river yesterday morning, we saw the elephant houses, and the animals in them. After we arrived, we rode down to one of the timber yards. There were ten elephants on the place, but only five at work. So we set down on a pile of lumber and watched them, the King and I. An elephant house is built very high; if it was not so built, the elephant would, when angry, put out his trunk, pull down the roof and scatter the house about generally. A very strong post is fastened into the ground, and to that a chain which is fastened to one of the elephant's hind legs, is twisted.

Every elephant has a particular keeper. He will permit no other to manage him. The keeper with his family live near the elephant, who is really one of the family. The keeper's children play about with him, get under his body and take hold of his trunk. If he don't want them about, he pushes them away. There is a large wooden saddle on his back for the keeper, although on elephants which travel only the keeper sits astride the neck, just behind the ears.

In the lumber yards one elephant, does the work of twenty or thirty men. First there are the great logs to be sawed. A chain from his harness is fixed to them and he draws them to the mill, leaving them near the saw. Then he turns round, and puts his trunk under one end of the log, holding it down on his trunk with his trunk. He lifts the end of the log to its place on the platform, then he goes to the other end and lifts that to its place. But the log probably does not lie very straight. So he looks at it, and if the corner of his eye, stoops down, puts his trunk or trunk against it and pushes it into place. It would take twenty men to do this.

After the log is sawed up, he must take the slabs away as they lie flat on the ground or floor, he tips them up on edge with his trunk. But he is not allowed to take off one at a time. He must make up a bundle of these long slabs. He puts two or three together, side by side. If they do not lie together nicely, he carefully arranges them, and then raising his trunk he pushes his trunk under the pieces, holds them down with his trunk, and moves carefully off to the place where he is to pile them up. When he reaches that place, he raises his load up in the air and drops it on the top of the heap. When the boards are to be piled up, he takes a load to the proper place and puts it down. He is not allowed to leave them pell-mell. He must square off the pile. So he pushes the boards with his trunk, looks at them as a carpenter would, gets them all nicely into shape and starts for a fresh load.

Nearly every thing which a man can do, he does. The driver sits on his back and talks to him. He will pile up a lot of logs and separate them from each other by small pieces of board. I saw one elephant standing at the top of an inclined plane, on which logs are drawn from the water. A lot of timber was there to be put again into the water. He would walk round a log, pushing it with his trunk till it lay straight on the inclined plane. Then he went to the end of it, at the top of the incline, put his great foot against it, and shoved it down into the water. After he had got one log in, he took hold of the next, and soon pushed in over twenty of them.

As we stood watching them, one elephant was killed for a few moments. Something irritated his skin. He wanted to scratch himself, and at a little distance, he saw a stick about four feet long. He took it with his trunk, put his foot on it, and holding one end with his trunk, broke off a piece about a foot long. Taking this piece with his trunk (as if it were a hand), he reached round, scratched his body with it, and when he was through, cast it away.

Another elephant could not reach some flies which were under his belly, so he collected a little pile of dirt, twisted the end of his trunk so as to make a scoop of it, took up a pint of the dirt, threw it between his forelegs, and hit the spot where the insects were troubling him.

These animals are fed on fresh grass. A heap is thrown down in front of one of them, he takes up a lot of it and shakes it against

his leg, so as to sift out any dirt there may be in it, and then puts it in his mouth. But he loves bananas above all things. It is rather indigestible to eat an immense amount so happy over a little piece of fruit.

In training the elephant to become an industrious citizen, the old and educated beasts, act as "Professors of industrial pursuits." A young elephant is attached to an old one, walks round the yard with him, sees what he is doing and how he does it, and after a while tries to do it himself.

In this country no labor saving machinery is used. "While labor is cheap, at the same time it is not cheap absolutely. An American workman at \$2.00 a day is cheaper than one of these Indians at twenty cents a day. As the climate is not, people do not move about rapidly. The Burmese are an idle lot. While the country is marvellously rich and its production can be increased a hundred fold, the natives are shiftless, idle, and quite content to live from hand to mouth.

Aden, July 14th, 1881.

Aden, as every one knows or should know, is on the Eastern border of the Red Sea, and is besides, the Southern extremity of Arabia. Its only importance is in its commanding position, on the British high road to India, for its harbor is excellent, and vessels from all parts of the East call here to "coal." An English regiment, two batteries of artillery and a squad of cavalry protect the place, and hold it for the British nation. At eight o'clock this morning, we sighted the dim outlines of the place, and at ten we came to anchor, for our vessel carries the mail, and must stay here six hours. Aden is the termination of a peninsula. It is one great jagged mountain, with sharp peaks, and steep gullies. Here it rains only occasionally, perhaps once in three years, and then only for a half hour. There is not a blade of green grass, or a tree, or a vine, or living vegetation of any kind whatsoever to be seen either by the shore or on the hills. It is the abomination of desolation. Even the drinking water is condensed from the salt water. The sun is always in a clear sky, pour down the hottest rays. There is nothing to permit a tolerable existence but a pleasant night breeze.

As we came to anchor, the steamer was at once surrounded by small Arab boys who called "dog outa" or canoes. These veritable Arabs do a thriving business, diving from their canoes after bits of copper or silver which may be thrown from the deck of the vessel into the water; you throw a ten cent piece twenty feet from the ship into the water. Instantly a dozen canoes are emptied, and you see, with great splashing, two dozen boys, legs disappearing in the water. It is still for a moment. There is no sign of a human being where the money struck the water. The canoes are floating about empty. Soon a dozen heads appear, and some one hand is raised holding the coin. Another coin is thrown over, and the dozen heads again disappear, but the coin is caught by some one. It is curious business to the uninitiated traveler. Flat coin does not sink in a vertical line, but in every zig-zag motion. This takes time. The diver, the instant the coin strikes the water, dives down deeply, turns around, and looks up for the coin as it works its way down. Of course in muddy water it cannot be seen. I have caught him in this way, many a time while a boy in Honolulu harbor.

At one o'clock, the King of the Hawaiians landed. As we were leaving the ship one little Arab paddled after us very swiftly, shouting "money! money! hakeheheh!" The King threw a copper coin into the water. He refused to dive for it, for he wanted us to throw silver. So he paddled and shouted: "I addressed him. "Young Arab of the desert and the sea, you are very young, very naked, and very ambitious. You despise the day of small things. His Majesty has tendered you his humble coin, and you refuse it. Had you squinted yourself well in recovering it, silver would have been given you. It would have given you a Cabinet Minister, and travelled around the world with a King. Depart! young Arab, you have not taken life at the foot, and you are doomed to a miserable existence on dried fish, camel's milk, and dry peas." Though all of these little divers are perfectly black, they have red or yellowish red hair. Their paste is made of mud and lime, the hair is matted with it for a

week. Then the paste is washed out. The chemical reaction of the mud, the lime and the salt water turns the black color of the hair into this odd yellowish red; as they are perfectly black, the contrast is very amusing.

On reaching the shore, we wandered about the town at every point we were besieged by men who deal in ostrich feathers. Near here, and across the Red Sea, great quantities of these feathers are gathered every year and shipped to Europe and America. Sitting on the balcony of a hotel, we looked out upon a wide space near the shore upon which the Arabs were camping. A score of camels were quietly chewing their cud. Flocks of sheep which have no wool, were waiting for purchase. Came in line with hundreds of merchandise, or passengers moved off towards the distant plains. Groups of people were scattered over the ground. Some were sleeping, some were gambling. I happened to notice the American flag flying from the roof of a large building. It occurred to me that I might get some American news at the Consulate. I took an Aden coach, which was quite like the Hampton coach, and drove there. I found the Consul, Mr. James S. Williams, of Salem, Mass. It soon appeared that we had mutual friends in America. I asked him if he had any American papers, for I was sorely hungry for American news. He said, "I can find you several copies of the TRIBUNE, and the HERALD." While he was looking for them, I saw HARPERS MAGAZINE lying on the table. I casually opened it. The first picture I noticed I recognized at once. It was the Indian picture, "Look at me, I will give you the road." I turned over other pages. All of the pictures were familiar; I was not in Hampton when they were taken! I asked the Consul if he had read the article. He said, "Yes, I know about the school. It is very interesting." I said, "It comes from my home, my people. It is an 'article' for you, but a letter for me, because I have not heard from Hampton for months." Then he gave me the magazine. No sign in the East, no experiences among these many nations we have visited, interested me so much as this story about the Indians.

I returned to the balcony of the hotel, and there, under the shadows of the great, held, desolate mountain of this "distant Aden," with groups of Arabs idling about in front, with the camels peacefully sleeping on the road side, I read the story through. I forgot the Orient. I did not know that I was away from Hampton. Then the King, who had been driving about the old town, came back, and we will go to the ships. When we reached the dock, I went to the taffrail, and looked over the side at the diving boys. They were still there. I said to them, in a loud voice, "Oh, black and red headed young Arabs, it is peace with me to day, for I have heard from home. I make you a thanksgiving offering. Here are rupees, and half rupees, all shining piece into the clear-green water of the harbor. One moment, it was all red heads at the surface watching for the throw. The next it was all black legs in the air, diving for the money. So they made their harvest. I have no doubt that when the sun sets to-night, and these little Mohammedan faces towards sacred Mecca to say their prayers, they will, in some miserable jargon, thank the great Prophet for sending the *Sahib* who flung away coin like a king, and while he was with a king.

And now the Arabs have gone, the night is closing in fast. The anchor is coming to the cat heads, and the propeller is driving us out of this furnace heat. An Italian ship lies near us. She has just returned from the African coast. Fourteen of her crew were murdered by the natives, and she comes here for more.

June 15th.—We are moving up the Red Sea, and the city of Mocha lies ahead of us. I can see the minarets of the mosques in the morning light. Here is the source of the "Mocha" coffee. We do not stop, but push to Suez and the canal.

Among the very many interesting matters which catch the attention in India, are the wages of labor, and irrigation. I hardly think the African race in America need complain, if it will consider and compare its condition with that of the Hindu race of India.

The country is thickly populated, but not over populated. Agriculture is the chief business of the people, besides worshipping idols. The wages of an agricultural laborer are four annas a day, in some places. The tea and indigo planters pay no more than that, and with it a man must purchase his own food. Skilled

labor brings more. The great sugar countries of Demerara, Trinidad, Mauritius, take many laborers from India. The pay is six dollars and a half per month, with food. The planter agrees to carry them out and back free of cost, and furnish them with medical attendance. About 20,000 people go every year as such laborers, but they generally return after five years' service. Now when the American Negro compares the rate of wages in America with that of India, he can hardly complain. Besides the American Negro gets much more nearly every day, while the Hindoo gets it once or twice a year. I venture to say that the Hindoo, with his small earnings, is nearly as well off as the American Negro. His home is as good, and he looks as healthy. A Hindoo will readily support himself and his family upon an acre of ground. Here he can teach the Negro a lesson. In the middle of his patch he digs a well. If the rain falls him, he at once hoists water, and irrigates his land. So he is sure of his crop. Besides, he is able to raise three or four crops on the same land, every year. He uses little manure, because he cannot get it. Nearly all of the land has been under extensive cultivation for hundreds of years. The soil varies greatly in quality.

If a Hindoo could rent as much land as the American Negro can, he would consider himself rich. Ignorant as he is, he knows more about economical cultivation than the Negro. He would never attempt to "tend" ten acres of land, unless he had plenty of help. Nor is he inferior to the Negro. He shows great shrewdness in business transactions, and the better classes are quite a match for Europeans in trade. In many places, these Hindoo traders are crowding out the Englishmen. As I have said before in the WORKMAN, character commands respect, and there are many Hindoo gentlemen who have made such excellent reputations for themselves as merchants, that the English Government, despot as it is, has been quite willing to give them prominent places in administration.

The American Negro thinks he has a struggle for life on the poor soils of the Southern States. The Hindoo would tell him, he was wonderfully favored. Food is cheap in India. Yet these farmers are willing to pay ten dollars an acre as rent for land. The truth is that there is no limit to the amount of produce which may be taken from the land, any where, but the yield must depend upon intelligent labor and good brain work. In India there are about four hundred people living on each six hundred and fifty acres of land. In the Southern States the numbers on the same area is not over thirty. And yet there is plenty of room still in India. In some parts the inhabitants are few. Of course people like to gather in the rich valleys, where the yield is great. The more sterile soil is left. There is plenty of it, and India can support a hundred million more people than she has. British Burma is an extraordinarily rich country, but the people are few and idle, the Hindoos are gradually coming in, and in time, will furnish an immense population.

Every body has read about "caste" in India. It is a most troublesome affair; it divides up the people, and there can be no intercourse between them. A thousand years have made many curious distinctions among the people. Imagine a small town of a thousand people, divided up into a number of sets and religions, compelling them all to keep apart. If a Hindoo of high caste were cooking dinner, and one of a lower caste passed by so that his shadow fell on the utensils, the food, cooking apparatus and surroundings would be thrown away at once. Imagine our life at a hotel, in Calcutta; no Hindoo could wait on our table, because he cannot defile himself by touching meat. So a Mohammedan does that. But he will not bring a dish from the kitchen, it must be brought up by a man of another caste, who puts it on the table, and from that table, the Mohammedan waiter brings it to you. A Hindoo, speaking English, waited on me, in my room. I wished to send a note to the Government House. He would not take it. It had to be handed over to another man of another caste. My servant could not bring in a basin of water; he called a man of another caste to do it.

Phakas, or swinging fans are hung over the beds at night, on account of the heat. These are moved by men sitting in an adjoining room. But only men of a certain caste do this. These men are paid ten cents a night, and yet they will not vary their dress. You could not make them sweep out a room.

J. F. B. MAINTON, Jr.,  
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post Office at  
Hampton, Va.

The Southern Workman, devoted to  
the interests of Negro and Indian civiliza-  
tion, is edited and managed by the offi-  
cers of the Hampton Institute, and printed  
on the School Press by colored youth  
trained in the office. Subscriptions are a  
help to the School. It is sent on trial for  
four months for twenty-five cents. Job  
work, from all parts of the country, is so-  
licited, and will be done cheaply and well.  
Estimates will be sent on application.

Subscribers are reminded that, from  
July to October inclusive, this paper is re-  
duced to an eight page form, resuming in  
November the twelve page form.

## THE HAMPTON INSTITUTE.

Opens its session of 1891-92 on Saturday,  
October 1st, at which time all who wish  
to be admitted on examination should be  
present. Members of advanced classes  
should arrive that day to be in readiness  
for work the following Monday.

No negro youth who desires an educa-  
tion need feel of getting it, if he or she has  
the requisite qualities of health, good  
character, and fair bodily and mental ca-  
pacity.

The Institute offers to such, an opportu-  
nity of working ten hours a day the en-  
tire year, with two hours night study five  
evenings in the week, by which any stu-  
dent of this right kind, no matter  
how poor or ignorant, can, besides  
paying all expenses, save up from  
\$70 to \$80 cash, master the rudiments,  
and thus be able to enter the regular  
course the year following, with money  
enough to last two years. Fifty-six stu-  
dents were so employed last year, and a  
larger number can be provided for the com-  
ing session.

We have found no difficulty in filling  
up the school with pupils; the trouble is  
one of quality rather than of quantity.

We invite those who know of worthy  
colored youth of either sex, who are ma-  
ture, earnest, and capable of both work and  
study, to see that they are informed of the  
chances at Hampton, and we especially re-  
quest the public school officers of Virginia  
to bring such to our notice. Every year  
about ten per cent, of those admitted are  
dropped as "poor material," and there is  
always a proportion, (perhaps fifteen per  
cent more) of indifferent ones whose places  
should be filled by a better class.  
Admissions have averaged about 120 a  
year. One pupil who makes the most of  
his chances is worth more to his race than  
ten who do their best.

No labor is too severe, no care is too  
thorough, no cost is too great for those  
who come to their teachers in the spirit of  
true discipleship. Teaching such is  
a luxury; but they are all too rare in ev-  
ery school.

To direct an ignorant and aimless Negro  
youth to an enlightened and useful man-  
hood or womanhood is a service to this  
country.

The friends of the Negro in the South  
have peculiar opportunities for such work,  
and not infrequently have improved them,  
as we can testify. But they should do  
more. They can in this way, do much to  
select wise leaders for the colored race.  
Let them keep their eyes on the promising  
Negro youth about them, encourage, and,  
as they can, help them, and any conflict  
of races will be impossible.

## EDITORIAL CORRESPONDENCE.

LONDON, JULY 1st, 1881.

This city is immense. Riding through it in  
a cab for the first time, one is struck some-  
what thus:

1st. What a curious, jolly contrivance a cab  
is, so very much to the point; just what we  
need in our American cities. The driver  
sits behind and you see everything from your  
cozy seat.

2nd. One's own helplessness and insignifi-  
cance. I sought lodgings, and was soon pre-  
sently ensconced in Chancery street near Piccadilly,  
a pleasant central place. It is the height  
of the season; the city is crowded. All the  
world moves up and down these great thorough-  
fares.

With a shilling, "guide to London," I walked  
into St. James Park, and added by another  
shilling guide by way of an intelligent work-  
man who happened to share my shady seat, I  
dug myself out, as it were, from the confused  
labyrinthine mazes of houses and streets, fixed  
the leading points, formed a "base line," and in  
about one hour had quite a clear idea of  
London.

Oxford street, one of the great lines of travel,  
running right along with no corresponding  
change of direction, becomes New Oxford,  
then Holborn, then High Holborn, then Via-  
duct, Newgate, and Chancery street, respec-  
tively, arbitrarily changing its name without  
any possible excuse. So Piccadilly with a  
turn or two, becomes the Strand, Fleet street,  
Ludgate Street, and so on.

Oxford and Piccadilly streets are the great  
arteries of London life, running east to squa-  
re and west to square, business occupying the  
central portions. Here is the social and busi-  
ness centre of the world.

London is a large place, but it has a core,  
or heart, where the chief interest is concentra-  
ted, beyond which one does not care to go  
and as can be simplified.

There is not much for the sight-seer south  
of the Thames. The view is immense stretch to the  
north-west and east can almost be pointed out.  
But the east central, west-central and  
west-end are the British Lion himself. There's  
your work. Perhaps its centre is the region  
of the Houses of Parliament and Trafalgar  
Square, whence four enormous bronze lions,  
at the base of Lord Nelson's monument, are  
majestic if not aesthetic.

How like and unlike we are to the British!  
We talk the same language, but in lots of  
little ways betray our nationality. I was  
amused at their saying the "top" and "bottom"  
of the street, never mind how level; the next  
"turn" for corner, and I heard for the first  
time for the Pall Mall "circus," examining  
the signs, till I found that a circus is a  
round "square" at the intersection of the  
streets. People in the city are not very free  
in giving information; quite the reverse in  
the country. The policeman is your man for  
facts. They are clear, crisp and polite; men  
with good faces, whom one feels like trusting.

I soon felt the tremendous inertia of Lon-  
don; there is less go-ahead than with us but  
great steadiness and method; time is more  
than money: an Englishman tells you that  
here he has no time to be civil. He goes in a  
rush and growls if you start him out of them. The man told  
out to cabages won't pass the potatoes for  
anybody. Living in such masses, for so many  
centuries, forces them into grooves, and mod-  
erates the pace. They cannot stick out their  
elbows as we do; hurry and bustle would be  
of no use. I better appreciate the proverb  
which so easily disposes of the "third class."  
There seems to be more men than  
money, and the lives of many must grind  
along and many must be ground up. What's  
an individual in all this!

Vice is, I think, bolder here than in New  
York. In some quarters one's cab may be  
acted by nasty boys throwing their vile papers  
into one's face. I am struck with a certain  
shamelessness and boldness in a class of  
women; they are often seen drunk.

The streets are winding, and one may easily  
become confused. The parks are fine; Hyde  
Park especially. It is a great breathing space  
in the heart of London. A small part is rich-  
ly laid out in lawns and luxuriant flower beds,  
but most of it is an open field covered by  
roads which are lined by shade trees. It is  
roomy enough for extensive revolutions.

of troops, and is traversed in every di-  
rection, people do not "keep off the grass."  
This freedom, the groves, trees and flocks  
of sheep gives Hyde Park a refreshing coun-  
try look that I was surprised and pleased to  
find.

The horse back riding on Rotten Row, a  
wide avenue a mile in length, was almost an  
exhilarating to watch as to do. Endless cav-  
alcades of riders, three to six abreast, went  
galloping by, the ladies appearing to the last  
a tramping. Towards evening it was most  
spirited as they dashed swiftly along so fast  
and so thick that one could hardly count them.  
This action of a fine horse and his rider may  
thrill one, for the two are one; they are con-  
scious of and in perfect sympathy with each  
other.

The stately carriages of royalty and of the  
aristocracy driving near the Row were a  
tame sight.

I saw a thousand small boys take an evening  
bath or plunge (allowed from 7.30 to 8.30  
P. M.) in the "Serpentine," a winding lake  
in Hyde Park.

Go alone to Westminster Abbey, or walk  
slowly through it with a thoughtful friend,  
to receive its sweet and holy influence. It  
is better to give one's self up to the general  
effect of such a place than to struggle hope-  
lessly with its mass of detail. One may for-  
get the facts, but never the inspirations.

One is struck by the size of all the buildings,  
and in all monumental work, with the su-  
perior honor accorded to the heroes of war.  
Whatever our moralists or teachers may say,  
the civilized world has, by its action, placed  
the successful fighter highest.

A few of us had the privilege of meeting  
the late Dean Stanley in the Abbey by ap-  
pointment. He showed us a few things,  
talked very pleasantly, and on leaving our  
dinner to hear him preach, invited us to at-  
tend his services the following Sunday at  
Greenwich, where he was to address the thou-  
sand boys in the Naval Training School.

Visitors of course do in Londoners do not,  
go to the top of St. Paul's Church. Millions  
of creatures crawl below you. The collec-  
tive surface of boats of every kind on the  
river Thames seems greater than that of the  
city itself. The city is spread out like a map.

How many quiet quadrangles one looks  
down into, where trees grow, fountains play  
and grass is green, shut in from the crowd  
that surges all about them, in contrast  
with the levity shades within.

I can't imagine anything more mean-  
less than many of Turner's paintings, es-  
pecially his later works in the National  
Gallery of Paintings; they seemed like  
decalcs, but they are sold at tremendous prices,  
and are regarded as almost sacred. His pic-  
ture of the old line of battle ship "Tiger,"  
being towed by a steam tug, is in contrast  
with the levity shades within.

The Henley regatta on the Thames river was  
two days of boat racing. Guests from Oxford,  
Cambridge, London and Eton, and from Cor-  
nell University contested for the honors. The  
latter was unfortunate both by way of a col-  
lision and of final defeat.

I saw people of the second day's sport. Thou-  
sands of people thronged the river banks at  
the end of the course, as the struggling  
crews pulled past. Owing perhaps to the  
fact that there was a race every half hour,  
the excitement was little cheering, which  
I myself felt. Then the real struggle was  
lower down, for most races are decided  
sometime before the goal is reached.

Many scores of carriages were "parked" in  
long rows near the bank and heaps of baskets  
and hampers showed that from far and wide  
the common people and gentry had gathered  
for this great day of their year. The elderly  
and placid people and young children sat in  
and about their carriages or strolled; the love-  
lier ones were abstracted by devoted young  
men and floated, like Cleopatras in beautiful  
barges, paddled about in the pic-  
turesque flotilla of boats that covered the wa-  
ter, and made navigation a difficult matter.

The finest part of it was the scene as seen  
viewed from Henley Bridge. Perhaps ten  
thousand people were gathered, well clad,  
orderly, cheerful and chatty. In the back-  
ground were games and amusements. A row  
of cocoanuts, each one placed on a peg,  
challenged to whoever would knock  
them off with a stone of ball from some twenty  
feet off—a penny throw. Swings of various  
kind and games of chance sent streams of  
coppers into somebody's pocket. A rail to  
the house the boat raced by, then a scat-  
tering till the cannon again sounded the sig-  
nal.

Just before leaving Hampton I had met an  
English gentleman and his wife on the school  
ground. Learning my intention to travel,  
he gave me a card of introduction to his  
cousin, the Chief Librarian of the British Mu-  
seum. This was a pleasant surprise, for I  
had met him at the establishment. One's  
acquaintance with the British Museum is a  
great advantage, and the chief of the establish-  
ment is a man of great energy and ability.  
At every step are formed, and the recol-  
lection of such a place becomes almost a duty.  
There is a wonderful amount of material here  
for the historian.

huge figures seem conscious of themselves,

and strike the visitor with awe and reverence.

The inlet to the library is a library by it-  
self. The reading room is a vast circular  
hall over which springs a cupola or dome  
next to the largest in the world.

On Sunday, July 31, heard Dean Stanley  
preach to the thousand boys in the Naval  
Training School at Greenwich. They are the sons of seamen,  
and are fitted for seafaring and other life, be-  
ing taught trades. Every one is taught to  
make his own clothes. There is daily prac-  
tice on board a full rigged ship which is em-  
bedded in the concrete pavement of a large  
square, and sits there so gracefully as on the  
sea.

The sermon was plain, simple, an "effort"  
in no sense, and closed with an eloquent  
appeal to the boys to be manly. The Dean was  
no orator. His tone was quiet; there was  
little or no gesture. It was hard to realize  
what a mark that quiet, feeble looking man  
had made. Little did he then dream how  
soon the world would be filled with his praises.

The singing of the boys were excellent. They  
paid good attention, were a bright looking set,  
marched in and out like soldiers, and will  
make part of England's noble but stark of brave  
man who "never will be slaves."

After service our party went with the  
Dean through the quarters and shops and  
witnessed the dinner. Orders were given by  
the bugle, at the sound of which hundreds of  
boys would instantly rise or sit or stop with a  
knife held up through a darning of a spoonful  
of gravy poised in the air.

Often in America I had heard that England  
had given up the gathering of her veterans  
in asylums and divided the salaries of officers  
and other expenses of her soldiers' homes  
among the men, letting them find their own  
houses a better and more natural way of  
living. Having at Hampton some 700 ex-  
Federal soldiers on our next door neighbors,  
I was interested in the English treatment  
of the question.

It appears that the pensioners of the Eng-  
lish army are still together, principally at  
Chelsea, but that, about eight years ago, up-  
ward of a thousand naval pensioners were  
scattered, as above described. It  
seems unnatural and wrong to keep hundreds  
of men together as we do, under a sentimental  
rather than under a sane and steady ex-  
ercising regime. The men must deteriorate.

Every American goes to the Tower of Lon-  
don, for has he not read about it from his  
childhood?

The long row of mounted knights in armor  
before which one passes, the display of me-  
dieval weapons, the fatal block and the head-  
man's axe, and numberless other things  
create an impressive atmosphere. One feels  
as much as one sees. There are deep dunge-  
ons, mysterious stone stairways, the place  
where the bones of the murdered princes were  
found, and the prison where Sir Walter  
Raleigh was confined for twelve years. The  
tower is also an arsenal where half a million  
Martini rifles await the nation's exigencies.

Muskets, bayonets, swords, ramrods and the  
innumerable metallic pieces that make up a  
modern weapon, are ingeniously worked into  
shining shapes of flowers, grasses, lilies, stars,  
etc., of great variety and beauty. They glis-  
ter from overhead and on every side, but  
there is something grim in their steady stare.

Our guide was dressed in the costume of a  
nobleman of Henry the Eighth's time, and  
his decorations were evidently a veteran. See-  
ing "Lucknow" on a silver medal pinned to  
his breast, I inquired about the famous deliv-  
erance of the garrison of which he was one.

He declared that the story of Jessie the Scotch  
lassie, who is said to have heard, long before  
the rest, the distant baggage of Gen. Har-  
lock's advancing columns, was a very pretty  
one, but not true; that Havelock came from  
the side opposite the British, and there was  
plenty of firing and fighting long before a  
siege instrument could have been heard.

What will become of the inspiring incidents  
of history if they are to be treated in this way?

The veteran said that at a recent Lord  
Mayor's show it was desired to put twenty  
men in medieval armor. Out of the  
five hundred suits of armor in the  
Tower only five could be found that a  
modern man could wear because the modern  
man is so much fuller in the chest than the  
medieval man. Civilization tells on the lungs;  
the black and red races of our country are  
relatively weaker in lungs and smaller in the  
chest than the whites.

Sight-seeing is hard work, but the Bank of  
England must be seen for it is the financial  
centre of the world. Here is a machine that  
every day, weighs a hundred thousand gold  
pieces, detecting the slightest loss of weight,  
and automatically sending each coin to its  
proper place, as of full weight or deficient.

The printing of bank notes is a curious and  
interesting process, and the care of the reams of bills  
that go out and come in every day is a won-  
der.

This vast machine moves on quietly, im-  
presses one with its magnitude, and is a  
wonderful example of the strength of the  
human mind.

The beauty of London lawyers, are please  
d, places with an air of respect and of adven-  
ture.

ity. The quadrangles of the Inns of Court are especially precious with their fountains and flowers; contrasting with the throbbing metropolis in whose heart they lie.

The Guards are easy looking fellows; on duty they sit stately on horse before royal or other guests, as modestly as possible. Dined with a very pleasant company at Mr. W. E. Forster's, Secretary for Ireland. Dean Stanley and several members of Parliament with their wives, were there. The elderly ladies whom I have met, were brought up on the stiffest anti-slavery ideas, and are interested in the success of emancipation, in America.

The wrongs of the Irish seem much like those of our ex-slaves. The large majority of landlords, are, as slaveowners were, reasonable men who try to do their duty, but there was room, within the law, for injustice, and it has been to some extent practised, though not generally. So of slavery. But it is absolutely necessary at whatever cost of treasure and of blood, if in no other way, that the law of the land should equally protect every man.

The physical suffering of the Irish may not diminish,—that of our Negroes has not. Pain is a part of the development of the race, as it is in that of the individual. It is God's best tonic. He may send it for man's mistakes or for his benefit; but, except through the formalities of the law, man has no right to administer it. The wrongs of the day are not so much the abuses of power as the improper possession of it, making shapes possible. The spirit of the day is to level every man up or down to his rightful place.

Calling with my brother at Mr. Foster's office, by appointment, to get admission to the House of Commons, we saw the famous delegation on behalf of Irish laborers and heard their appeal to the Secretary. He said afterwards with a smile that only one of them was really a laboring man. There was much about it in the papers. The general idea seems to be that the Irish laborers turn must come next, that the landlord and tenant question must be settled first.

We sat for an hour in the House of Commons, which is the British Empire in a nutshell. This dominion, on which the sun never sets, is ruled by men who sit on plain benches and transact its business in a quiet way as if nobody's fate hung on their action.

Mr. Gladstone spoke on an important matter. Arrangements for the grand review of 50,000 Volunteers at Windsor were explained. The Irish land bill was taken up and discussed in a conversational manner.

The room was smaller and less impressive than I had expected to find it; there was a feeling that clear headed, able, honest men had charge of the nation's business.

Members talked in a plain rather halting or hesitating way. One would rise and say a little something mildly, and sit down, and so followed each other seeming to settle the fate of Ireland in mere colloquy. They do have stormier times once in a while when Irish members get roused. I saw only one aspect of the House.

The general effect of Windsor Castle is imposing. Its walls and towers are majestically and stretch away in a general curve compassing many acres. The Queen was there, so the state apartments were closed to visitors.

The Royal stables were shown, as usual, but are not especially striking. The horses had not an imperial look.

The Albert Memorial Chapel was visited and admired for its elaborate beauty and grace. The old church was interesting. There lay the marble effigy of young Napoleon. The plain rusty sword and common belt worn in his last desperate struggle hung by his side; and meant more than all the ornamental work about him.

I walked over to Eton school but saw only a few of the boys. Passed through two courts or quadrangles into a noble old dining hall for the "foundations" where a few pupils were enjoying their five o'clock free beer and bread. There was an atmosphere of seclusion and study about the place so common in English institutions and so rare in our own.

The strongest picture in the Dore gallery in London is, I think, that of Christ descending from the Temple to take up his cross. His bleeding brow, His forgiving face, His serene and noble mien were almost real. Such a picture grows on one.

I think it is a mistake to divide one's self among many pictures; it is better to fix on one, get all its meaning and force, make it your own: there is not room for another.

Nothing in England was pleasanter than my visit to Plawford Lodge, the country seat of Lord K.—This gentleman was, during our war, one of the few champions of the North-erside among the English aristocracy; and was, in many ways, useful in promoting important quarters, a better understanding of its merits. His loyalty to it was at one time no source of comfort to him and his family.

We were driven to a neighboring park, when, leaving the carriage, we strolled on under glorious elms and beech and oak

trees, catching between their lovely glimpses of landscape. Our host entertained us with interesting reminiscence and narration. We were shown an old tree near which was a stone slah commemorating the fact that here in 1796 Wilberforce first told William Pitt of his intention to move for the abolition of the slave trade.

An English country house, if Plawford Lodge be a fair specimen, is a charming place to visit. This estate is hundreds of years old. The lawns are magnificent, picturesque with the comfortable cattle that browse among the grand old trees. The oaks alone and in clusters, stand in state and dignity where they have stood for centuries. Stability and comfort and a simple elegance are the air of the place. It is quite an expedition to visit the gardens, hot houses, stables, and wander about the spacious house whose rambling architecture is most interesting.

One sees here the relations of upper and lower classes at their best. There is perfect consideration and politeness on the one side, and there is perfect loyalty and deference on the other.

The lowly are addressed with a charming kindness of manner and they respond most appropriately.

Lord K.—had a pleasant word even for his horses: indeed he kissed nearly every one as the noble fellows would put their noses over to him and whinny.

One day about a hundred and thirty orphan girls from a school of which Lady K.—is patroness were invited to their annual picnic on the grounds.

Playing on the lawn, grouped near or in the distance, swinging from great oak trees, their white figures flying through the air, while Lady K.—sat under a tree watching it all, her daughters mingling with the merry girls, longed for the picnic, it was a lovely sight. They gathered under a great tree and I told them a little about the red and black children of America.

The good Lady K.—said she had from a child been taught to feed for the African slave, and recited these lines as among the earliest she ever learned.

"I was not born a little slave  
To live in sin;  
And wish I were but in my grave,  
And all my labor done."

Lord K.—says he used to discuss the American war often with Lord Palmerston, who insisted that the North could not conquer; the former disputed this and would go and buy American securities at their lowest ebb—so show his faith.

Telling a well known American of this pleasant visit he said "we have no such old men in America."

Our mode of life makes this type of gentleman next to impossible. After two weeks in London I visited the continent for fifteen days, of which I may give some account in the next number, and returning to London visited Oxford.

A four hour ramble in such an interesting place tries the mind even more than the body.

A moderate fee opened the door of an unfurnished room. Each one has two, a bedroom and a parlor more or less handsomely fitted up. Their breakfast and lunch are brought to them by a "scout" but at six they dine together in various halls.

Addison's Walk is a retired, interesting place. The Lime Tree Walk is a beautiful pretty, for the branches intertwine overhead, but the loveliest spot for study I ever saw, is the garden of New College. Its lawn is perfect; beautifully laid out with flowers and shrubbery. Magnificent trees throw a grateful shade over the grass, and on one side is a part of the old city wall, over a thousand years old, in perfect preservation, dressed and festooned with vines that contrast with the rough old battlements to which they cling.

It may contain two acres of land. It seems to be made one from toil and care to study and meditation. Its silence is rich and inspiring; its beauty is fascinating. How entirely we in America lack such stimulus to thought and study. The more philo, the better, with us. College buildings are as bare outside of attraction as they can be made; dogs and cats and donkeys and cattle besides Tom, Dick and Harry free to every path that the meditative student may choose. I shall try to provide some such seclusion among flowers and shrubbery at Hampton.

I visited the various colleges and chapels. The cloistered quadrangle of Magdalen was very fine.

Had the good fortune the evening before to be allowed to listen to the playing of one of England's finest organists, in Magdalen Chapel. It was mostly impromptu; he sat with but one light, in the great consecrated space and filled it with delicious sounds. One seldom has such a feast.

Oxford has many grand trees, many lovely courts and shaded nooks and beautiful grounds. It is a power in English life and no one should fail to see it.

I "did" Edinburgh in three hours, getting an satisfactory view from the top of Nelson's Monument on Calton Hill. No wonder every

body admires this place. Didn't get into the castle or Holyrood palace, but never mind. The world is more picturesquely placed. "Arthur's Seat" looks calmly down upon the town while it is a calm view of the distant green and populous plain that stretches away in its support, the town of Leith.

The cathedral at York is very grand, but I had seen others and could not respond to it with my first freshness. Fortunately after noon service was being held. There is a sweetness in the solemnity of these cathedrals. One loves to linger in them alone and to come back again and again.

I finished England with a pilgrimage to Chester in whose cathedral I received my first and best impression of the old world five weeks before. It was good to be there alone, to collect oneself in that august place and presence, and pass in review scenes in life and in history; but especially to give up oneself to the spirit of it, and catch, and, if possible, forever keep the vague but strong and inspiring impression created by this superb relic of the piety and devotion of the earlier ages.

A pleasant (and somewhat hoped for) surprise in London was meeting my brother W. N. A., (Special Correspondent with the Southern Workman) on his way around the world as Minister of State in company with King Kalakaua, assisted by Col. Judd, his Majesty's Chamberlain. We had all been school mates together in by gone days in the distant kingdom of Hawaii. They were having a good time, overhauled by intentions did not only to rank but to the proverbial hostility of the Sandwich Islanders in years gone by, which had been extended to many English people. All along their journey in the East they had enjoyed a peculiar hearty return of courtesies of former days.

Lady Brassey whose charming chapter on Honolulu in the "Cruise of the Sunbeam" is familiar to many, with many others, was kindness itself.

Queen Victoria's private carriage took them to the opera, to the great Windsor review and our correspondent had the honor of meeting the Prince of Wales at three o'clock on one day. It was a little like living on sugar plums. He means to write a book about his travels but unhappily can't put in some of the best and richest things. His published letters of the last two months are specimen chapters.

We missionary boys sometimes laugh at the curious ways and places in which we are led or find ourselves. A wonderfully kind Providence has cared for us all.

In painful contrast with the above pleasant experience was that of hearing the sad news of the President's assassination.

A little party of us were sitting in Charing Cross railway station on a Sunday morning waiting for the train to take us to hear Dean Stanley preach at Greenwich, when a glance at a morning's paper showed us terribly with "President Garfield Assassinated" in big black type.

It was, I think, even more of a shock to those abroad than to those at home. What next was the painful surprise mingled with the knowledge that the great and deeply loved and honored the Motherhood of one's native land, for the bullet was fired at her.

I once heard him say of his college President, the great Mark Hopkins of Williams; "He is our Ulises; no man can bend his bow." Garfield is our Ulises.

Englishman spoke most anxiously and tenderly of him. Dean Stanley could hardly realize it. I never before realized the meaning of "Blood is thicker than water." Three thousand miles of Atlantic Ocean divide the two nations. Interests, business, customs and countless things may seem to alienate us but the pain of the one is the pain of the other.

When the American sailors sent by Commodore Tatnall with a message to the English Admiral, lent a hand, without orders, at the bow gun of the British flag ship during the bombardment of the Chinese forts at the mouth of the Peiho river, they showed the instinctive sympathy of the two Anglo-Saxon families.

England in the midst of her tremendous social and political dynamics paused and listened to hear if the "heart of Garfield" was still beating.

I was struck with the soft and gentle way in which all asked eagerly about the chances of his recovery.

But for Sundays before, the President had been at Hampton, addressed the students of both races, lunched with us and listened with demonstrative delight to the old Negro songs from the students who had gathered about him, and was especially pleased with a brilliant and passionate "Spiritual!" "In that Great Gettin' up Mornin' (the slaves, resurrection song.)"

On riding back to Fortress Monroe to go on board the "Dispatch" he said to me "I mean to make education a leading feature of my administration" and asked what the government could do for Hampton.

a. c. a.

In our last number we mentioned with regret the death at Honolulu of Mr. C. H. Greenway, formerly connected with Hampton Institute as book-keeper. A letter received by Gen. Marshall, Treasurer of the Normal School, from Rev. Blane Bond, the veteran missionary at Kohala, Island of Hilo, speaks in the highest terms of Mr. Greenway as having done excellent work there among the natives. Mr. Greenway was a gentleman of culture, and after a wide and varied experience of life had become superintendent of the boys' department in a native school in which English is taught at Kohala. He was greatly interested in his work, and Mr. Bond writes, was in a fair way of promotion in responsibility and salary when he was stricken down by malarial fever in the midst of his greatest usefulness.

In another column will be found a letter concerning the Agricultural and Industrial Institute of Kansas, from Mrs. Elizabeth L. Comstock, who has taken time in the midst of her arduous labors to send us the latest news of her noble enterprise for the refugees, for the benefit of the readers of the Workman. We published its circular and some account of its plan last month, with a letter from one of the Hampton graduates mentioned in Mrs. Comstock's last letter, Mr. G. W. Davis. We are glad to hear so directly of the progress of the excellent undertaking, and of the prospect of a visit from some of its benevolent leaders. We commend it to the confidence and cooperation of all colored people who love their race.

## 200,000 HOUSES WANTED.

Prof. Warren's sound remarks—reported in another column—upon the superior importance of home influence over school instruction, are not, of course, an argument against public schools, or meant as such, even for New England. But the school's work becomes of especial significance where there is no home influence behind it. This new race of freemen in the South is but just beginning to evolve the idea of home life, and if the two hundred thousand intelligent Christian homes the Prof. calls for, are established among them in this or any other state, they must spring, as they have begun to, from the schools; be founded by the young people these are sending out and by those whom they instruct and influence. This is what makes the work of the colored public school teacher of such grave importance. And this is why we urge these colored graduates, young men and young women, to feel themselves called first to this work for their people, and to devote themselves to it in the spirit of missionaries, and to equip themselves for it by training not of the head merely, but of the hands, and of the character. It is true enough, as has been said and as Prof. Warren repeats with emphasis, that for many years to come, their chief mission will be not as teachers merely but as civilizers. And it is a good thing for them to hear from a school master from the cradle of intellectual development in this country, that New England, strength and boast is not so much in New England schools as in New England homes.

## Burrah For Our Side.

Many people have lost their interest in politics and in amusements because they are so out of sorts and run down that they cannot enjoy anything. If such persons would only be wise enough to try that Celebrated remedy Kidney-Wort and experience its tonic and renovating effects they would soon be hurrahing with the loudest. In either dry or liquid form it is a perfect remedy for torpid liver, kidney or bowels.—*Exchange.*

11. **ANOTHER VISIT TO SITTING BULL'S INDIANS.**

Since my last writing we have had an acquisition of 1900 more Sioux to our camp making in all about 3,000 "wards of the nation" now under guard within a mile of Yates besides the original 4,000 that belong to the Standing Rock, D.

SUBJECT FOR AN ARTIST.

A RARE PRIZE.

At the dance of which I have just been speaking, there happened to be a banding of me a very old squaw whose shrill voice attracted her attention. She never failed singing her monotonous song in the same key and with emphasis after every figure of the dance. Going up to her and pointing to the grotesque figures painted on her face, I exclaimed with shameless truthfulness and effrontery "reach-tail-wee!" She eagerly acknowledged my flattery and drank it in greedily. Capt. C. came up just then, drew from his pocket a handful of silver, and handing it to me said,

FRIEND OF THE INDIAN CAUSE,

the next day the book was returned with  
thanks. T. B. H. BRAULING.  
*Loach Lake Reservation.*

It is impossible for a woman after a faithful course of treatment with Lydia E. Pinkham's Vegetable Compound, to continue to suffer with a weakness of the uterus. Enclose stamp to Mrs. Lydia E. Pinkham, 283 West Avenue, Lynn, Mass., for her pamphlets.

**Another Candidate.**

By a large majority the people of the United States have declared their faith in Kidney-Wort. **Wort** again remedy for all the diseases of the kidneys and liver, some, however, have disliked the trouble of preparing it from the reform. For such a new candidate appears the shape of Kidney-Wort in Liquid Form. It is very concentrated, is easily taken and equally efficient as the dry. Try it.—*Louisville Post.*

A gentleman told me that he and his wife only occupied a house. They keep fifteen servants, though living in a very quiet way. Mr. Braser, the great English railroad contractor, once said, that labor was about the same in price all over the world. If a Hindoo paid only ten cents a day, he does only the tenth part of the work done by an able man who earns a dollar in some other country. No man in India ever thinks of getting out of his caste. He was born in it, and will die in it. There is no chance for him. He is doomed from the beginning. He believes in his fate, his "kismet," and makes no struggle. He cannot cut out a path for himself. He has no luck.

And yet these Hindoos do some marvellous work in wax, gold, silver and copper. Native artists make excellent designs. Figures are worked out on silver-ware with only a sharp nail and a hammer. All surplus money is put into jewelry, because it can be sold again. Every woman has a large gold ring two or three inches in diameter, fastened into her nose, nearly like the ring in a bull's nose. When adversity comes, she can sell it. Two hundred million of people, with rings in the noses of the women, make a great demand for workmen in the precious metals.

W. N. A.

## THE WATER! THE WATER!

(Illustration Page 90.)

The Water! The Water!  
That gentle stream for me,  
That gushes from the old gray stone  
Beside the altar tree.  
The Water! The Water!  
That ever bubbling spring  
I loved and looked on when a child,  
In deepest wondering  
And asked it whence it came and went.  
And when its treasures would be spent.  
The Water! The Water!  
The dear and blessed thing  
That all day long fed the little flowers  
On its banks blossoming.  
The Water! The Water!  
That murmured in my ear  
Hymns of a saintlike purity  
That angels well might hear,  
And whisper in the gates of heaven  
How meek a pilgrim had been shirven.

The Water! The Water!  
My heart yet burns to thank  
How cool thy fountain sparkled forth  
For parched lips to drink.  
The Water! The Water!  
In mine own native glen—  
The gladstone tongue I have heard  
But ne'er shall hear again,  
Though fancy fills my ear for aye  
With sounds that live so far away!

Wm. Forthwell,  
Sedalia, 1797-1888TUSKEGEE NORMAL SCHOOL,  
ALABAMA.

The following interesting letter has been received from Mr. Booker T. Washington, class of '77, who went a few months ago to Alabama, to take the superintendence of a Normal school for colored teachers, about to be established by the state.

Tuskegee, Ala., July 14, 1881.

Dear friends:—I arrived here four weeks ago. Instead of finding my work in a low marshy country as I expected, I find Tuskegee a beautiful little town, with a high and healthy location. It is a town such as one rarely sees in the South. Its quiet, shady streets and tasteful and rich dwellings remind one of a New England village. After my arrival I had one week in which to prepare for the opening of the Normal School. I utilized this time in seeing the teachers and others who wished to enter the school, and in getting a general idea of my work and the people. Sunday I spoke in both churches to the people about to come and see me at my boarding place during this week. About thirty persons called and had their names enrolled, others called whose names, for various reasons, I could not enroll. With the young people many of their parents came. I was particularly impressed with the desire of the parents to educate their children, whatever might be the sacrifice.

On Friday I rode about fourteen miles into the country to visit the closing exercises of one of the teachers. From this trip I got some idea of the people in the country. Never was I more surprised. I could not enroll when I saw at one house, two boys thirteen or fourteen years old, perfectly made. They seemed not to mind their condition in the least. Passing on from house to house I saw many other children five and six years old in the same condition. It was very seldom that I saw children anything like decently dressed.

If they wore clothing it was only one garment, and this so black and greasy that it did not resemble cloth. As a rule, the colored people all through this section are very poor and ignorant, but the one encouraging thing about them is that they see their weakness and are desirous of improving. The teachers in this part of Alabama have had few advantages, many of them having never attended school themselves. They know nothing of the improved methods of teaching. They hail with gladness, the Normal School, and most of them will be among its students. If there is any place in the world where a good Normal School is needed, it is right here. What an influence for good, first on the teachers, and from them on the children and parents.

I opened school last week. At present I have over forty students—males and females, an increase in September and October. The school is taught, at present, in one of the colored churches, which they kindly let me have for that purpose. They kindly let me have a very well suited to school purposes, and we hope to be able to move to a more commodious place in a short time. The place referred to is on a beautiful and conveniently located farm of one hundred acres, which we have contracted to buy for \$300. The state pays for tuition. The farm I hope to pay for by my own exertions and the help of others here.

As a rule, the colored people in the South are not and will not be able for years to hoard their children in school ten or twelve dollars per month, hence my object is, as soon as possible, to get the school on a labor basis, so that at the same time learn the true dignity of labor. An institution for the education of colored youths can be but a partial success without a boarding department. In it they can be taught those correct habits which they fail to get at home. Without this part of the training they go out into the world with untutored intellects and their money and bodies neglected. After the land is paid for, we hope to get a boarding department on foot as soon as possible.

The good-will manifested towards the school by both white and colored is a great encouragement to me to push the work forward. I have had many kind words of encouragement from the whites, and have been well treated by them in every way. Even the few of the work, and one of the pastors here, fifty years old, is one of my students. I fear I am making my letter too long, I will write again soon.

Yours sincerely,  
B. T. WASHINGTON.

## THE KANSAS AGRICULTURAL AND INDUSTRIAL INSTITUTE.

LETTER FROM MRS. ELIZABETH L. COMSTOCK.

We published in our last number, an account of the new work for the exodus emigrants, which has been undertaken by their noble and indefatigable friend, Mrs. E. L. Comstock, and others of like mind; the "Training School for Refugees," in Columbus Kansas. Accompanying the account, was a letter from a former Hampton student, Geo. W. Davis, who, with one other, is teaching there. A letter has since been received at Hampton Institute, from Mrs. Comstock herself, in response to a request for a personal statement in regard to the work. Circulars came with it, but these we have already given in substance to our readers. The freedmen have not a truer, wiser, more self-denying friend living—as we believe most of them know—and they will be glad to hear directly from herself of her latest enterprise in their behalf.

Rolla, Lenawee Co., Mich.  
7th mo., 1881.

Dear Friend:—Owing to my absence from home, thy letter of the 7th inst., came to hand only yesterday. I was glad to welcome the handwriting of any one from your far famed Institute, which I greatly desire to see. Two of your young graduates I am acquainted with, and they do great credit to their teachers and care takers; I refer to George Washington Davis and Elizabeth Cabell, who are both in Kansas, helping on the good cause. It is our duty to exist, amid opposition and persecution, I may say our little band of faithful workers are stimulated and encouraged by your great success in your noble work. They emulate you in every way. They desire, as far as may be, to follow in the footsteps of your able and successful staff. The very eminent superintendent, Thaddeus S. Watkins, a most excellent man, is now in Hampton. I hope he will desire you to visit Hampton.

will do this coming autumn. The object of his visit will be to learn of you and get some counsel and the benefit of your experience in Hampton, to aid him in the efforts he is putting forth for this younger institution.

He is a gentleman highly esteemed, and belonging to one of our first families in Kansas, and there is no question in the estimation of his putting forth for this younger institution. He is backed by the Kansas yearly meeting of Friends, and Timber Hill's monthly meeting. I may say for information of those honest enquirers, who neither know us nor said paper, that those engaged in the "Agricultural and Industrial Institute", are honest, faithful, conscientious people, (Quakers or Friends) of the late K. F. R. A. for the Institute. Neither has there been any injustice, I believe, in the closing up of the K. F. R. A.

From the time that Clarkson, Wilberforce, Garrison, Sumner, Lovejoy and Lincoln commenced working for the colored race, to this present hour, the noble self-denying workers, have had to meet persecution. We must expect it, and learn to "rejoice in it." All the opposition, obloquy and continually heaped upon us in the past, has wonderfully helped our cause. Slanders have led to enquiry and investigation, and the result of the same has been greatly to our benefit.

I send by this mail some circulars, that will give you further information about the Institute in Cherokee Co. My faith is strong that it will be a success and be a blessing to the colored race to and Kansas.

The Lord bless your little band of workers! Thy friend in Christ love,  
ELIZABETH L. COMSTOCK.

## LETTER FROM A HAMPTON INDIAN STUDENT.

CHEYENNE AND ARAPAHO INDIAN AGENCY,  
DARLINGTON, I. T.

Editor of The Council Fire:

I thought I would write you a letter to tell you what the Cheyennes and Arapahoes are doing. Almost all the Cheyenne work and make a good profit.

I think of the young men will take up the white man's road, because they think it is the best road, and I hope after awhile all the Indians will be just the same as white people. Six years ago all the Cheyenne women had to work hard every day, chopping wood and carrying it on their backs to camp. Now they do not work so hard, because the men do much work.

I was a prisoner in Florida six years ago; I don't know anything I had been doing that they sent me there. I went from there to school at Hampton, Virginia, and there I learned the white man's road. We do just like white people. Then I came here to Indian Territory and went to work in the doctor's office and try to help Doctor Hodge. I give out medicine and write it down in my book to give to the doctor at the end of each month. I study every day in medicine and try hard to learn, and do not get tired; and all the Florida boys are holding on to the white man's road. They all work for the agent. I think THE COUNCIL FIRE is a good friend to the Indians and I like to read it. And this I know, the Cheyennes want to be friends to the white people always, and we are doing the best we know to do right.

Your friend,  
WM. LITTLE CHIEF.

## LETTER FROM DAKOTA.

We have received the following brief letters from Lieut. Brown, the newly appointed Commandant of the Hampton Institute Cadets, from Dakota, where he is visiting the Agencies to make arrangements for providing chances for work and proper care for the Indian students, who are to return to their homes in the coming fall.

Yankton Agency, D. T., July 20th, 1881.

Editor of Workman:

After a long, tedious ride of two nights and nearly two days from Chicago, arrived at the little way station of Springfield, D. T., and was only transferred to the pretty little town on the East bank of the Mission River, bearing the same pleasing name of Springfield. In the evening I had the pleasure of listening to a very charming discourse by Bishop Hare. The neat little church was well filled by the good people of the town, who listened attentively to the Bishop, and bore evidence of successful efforts of the most worthy missionary, put forth from time to time during the Interim of his labors at the different Indian Agencies along the Mission River.

It is an encouraging sign of the times, when the frontier folk are actively interested in religion.

Crossing Choto Creek Monday, we entered the Yankton Agency Reservation, and passed on our way to the Agency several very thrifty appearing, little "Ranches", or rude farms. Entering one, seeking a drink of water, we were surprised and pleased to observe the neat and thrifty appearance of the inside, evidencing a stage of advancement far beyond what I expected to find. Neatness of Agency, the neat log dwellings and little farms increased in number, and the evidences became more and more conclusive of the enterprise and successful efforts of the worthy missionaries, who have been laboring among these people for a number of years past.

To people unacquainted with the disposition, habits, and character of the wild plain Indians, the great and almost insurmountable difficulties met and overcome by these worthy people would not be as fully appreciated, probably, as by those who have had occasion to deal with the wild Sioux.

The greatest efforts necessary to wean them from their old life. Once started on the good road, the progress is thereafter more rapid, unless some old blunders and retrograde movements are allowed full play.

I am very respectfully,  
Your obedient servant,  
Geo. LER. BROWN.

Lieut., 11th Infantry.

FORT RANDALL, D. T.

July 21st, 1881.

Editor of Workman:

Accepting conveyance to Fort Thompson D. T., I employed the time at this Post very pleasantly, thanks to the courteous kindness of the good people of the garrison. The Post is a very pleasant one situated on a high plateau overlooking the Missouri River. The grounds are well laid out, the parade beautiful, the quarters commodious and comfortable. The garrison consists entirely of the 25th Infantry (colored) and though they complain a little of the severe cold weather last winter, they express themselves well pleased with their station and their duty in Dakota. On parade the troops present an excellent appearance and appear well on all occasions. A very large garden is cultivated by the troops, and the financial status of the company, as well as the material comfort of the men is not a little enhanced thereby. Though ordered here from Texas a year ago, the troops appear to have adapted themselves to their new surroundings and the colder climate of the North, displaying here the same cheerfulness in the performance of their duties as in the warmer climate, and I have heard no complaints from them in regard to the cold that would lead me to believe they were not perfectly able to adapt themselves to this climate. Nebraska and Dakota contains ample room for those in search of cheap land and free homes. Both are admirably adapted to stock raising and grain culture.

Colonel Andrews, the Post Commander, and Colonel of the 25th Infantry, is very much esteemed by his troops. "Should no boat arrive here to-day, I will be compelled to avail myself of the "Backboard" run by the Stage Company from this Post to East Pierre D. T. As the distance is over a hundred miles, and half of the journey is at night, I would be not a little comforted to see a steam boat arrive before the time comes for me to part with my kind friends here and continue my journey up the "Great Muddy."

Very respectfully,  
Your obedient servant,  
Geo. LER. BROWN.

## Horsford's Acid Phosphate

Consumption.

I have prescribed Horsford's Acid Phosphate in several cases of Phthisis, (consumption) with good results; among others that of seeming to aid the action of other remedies.

E. W. JONES, M. D.

## THE SACRED WHITE HORSE.

"At (Kobe) in Japan, I was delighted to see a Sacred White Horse kept in a stall at one of the temples. The Japanese came up one after another and uttered a short prayer before the horse, clapping their hands reverently together in the attitude of prayer. Close by an old man sold small measureful of boiled maize to be given as offerings. I bought a measure for the horse, which responded with alacrity for the horse of worship, but I could not help going through the other form as well in memory of ancient reverence for the white horse in my own country."—Notes by a Naturalist on the "Challenger."

## Horsford's Acid Phosphate

A Nerve Food.

I do certainly consider that in not only acts as a tonic to the nervous system, but as a food.

Springfield, Ill. R. S. LER. M. D.

# COLORED RACE REACH THE HIGHEST CULTURE—AND HOW?

## WHAT IS THE LINE OF GREATEST USE- FULNESS FOR THE COLORED MAN?

The closing term of the Teachers' Institute held at Hampton Normal School in July, for the colored teachers of this state, was devoted by its conductor, Prof. Warren, Supt. of the New Hampshire Normal School, to answering questions. Among those handled in, one was, in substance, "Can the colored race reach the highest culture?" Prof. Warren replied to this question quite at length, as follows:

"The year after the war I spent in North Carolina, and part of the year I taught an evening school for the colored people. Afterward I taught a year and a half in a school in which there was a hundred colored children, which there was considerable opportunity to judge as to the probable capability of the race for intellectual development, and I have always strictly maintained that it is capable of reaching the highest cultivation. Understand, I say that without saying that there is no such thing as race differences. Look at the Indian races for example. You see for yourselves in these Indians here—how quiet they are—how unobtrusive—no social as you are, or are, are not, take native even with each other in their own language. To be sure, they can make noise at the glen a lot of them I found in swimming at Shellbanks, were having—just like so many Yankee boys—or boys of any race. But you see for yourselves that they are peculiar in many respects. I don't know whether they are not inherent, fundamental race differences and peculiarities in every race, in the colored race, the white race, the Indian race; I don't think I am prepared to say. I don't know how far these differences and peculiarities may be the result of education—not book education, understand me, but the education of circumstances, of condition, what the relations with other races have been—climate, religious education, home education, school education. I'm inclined to think, however, in time we shall see that there are certain mental characteristics that are fundamentally different in different races.

But, as to the question, I certainly have no doubt that every race has qualifications for the highest cultivation possible to any. There is no reason to suppose that God ever put in this world a race without capacity for the fullest development. Note what I say—I cannot believe that God has ever handicapped any race. If I believe in the goodness of God, I can't believe that he ever put a race into this world incapable of coming into the full use of the world, the fullest capability to take care of itself. And that implies a capacity for the broadest, deepest, highest moral, intellectual and spiritual growth. I have had no reason to change the opinion formed long ago, that the black race is capable, like other races, of taking care of itself.

Now as far as the question of scholarship is concerned, it is difficult for you at this stage to take in just what that means. You had better send for Gen. Armstrong's last report, and study it well. It contains the best of intellectual philosophy. You must not content the ability to talk with mind-power. That includes the soul, everything that goes to make up man; habits of industry, self control, self restraint, willingness to work. The mere ability to read Latin and Greek, and know something of Astronomy and the higher mathematics, is a mighty small part of what goes to make up mind-power. The highest qualifications are the moral qualifications. Take New England, for instance. Every one concedes that New England has done most for the intellectual elevation of this nation.

What is the distinctive feature of New England civilization? The common schools? They are not of remarkably high grade; low compared with those of the West; of Illinois, Ohio, Michigan. How do you account then for the fact that so many strong-minded come out of them? They don't come out of the schools so much as out of the homes. If Virginia had a school on every square mile, with a teacher at a salary of \$300 a year, and a term of ten months, she would not be a great state till she had two hundred thousand Christian homes, each with religious, earnest, pure, industrious father and mother. The first necessity is good moral training. I used to teach in a little village of two thousand inhabitants, in New England, where ten thousand carriages were manufactured every year. If you were to walk out at ten o'clock in the morning, you might not meet a person on the street. At twelve it looked like the city of Boston—five hundred men would be in the streets—out again at one P. M. and you might hear a dog barking—Sabbath day, when the streets were all alive again. So on it was, through the whole year, and year after year. Every

one was regularly at work. No idlers. It was so, because for two hundred and fifty years the people have been at work, and they are going to be at work forever. I hope they are.

I want to emphasize this point. After the colored people have got all the schools they want, all the teachers, all the money, all the Normal schools; yes, and after the white people have got it too, the state is not going to be what the people want it to be, without something else too. The foundation of its greatness is moral strength. This is what helps a race or a state up; the power that keeps men from whiskey, that makes them willing to work, if necessary sixteen hours a day, to accomplish a good purpose, that gives self-restraint, that makes them obey the laws even when they don't like them; the religious habit that makes them attend church regularly, and practice what they hear in their home life; the power that brings the father home for the evenings, and leads the mother to make a pleasant home for her husband and children to come to, and keeps all coarse language out of the home. This is more than the ordinary public school work, but the public school comes in finely to help it out.

Gen. Armstrong is right. The greatest work to be done for the next thirty or forty years by the colored teachers of Virginia is this civilizing work, not only to teach but to elevate your race in every way. Many of you are doing it. Go on. Go among the people; read to them, talk to them; show them how to live better, how to cook a more nutritious dinner. When you hear a woman scolding her husband, tell her—after you know her well; you'll have to be wise for some time, tell her that is not the way to make her home pleasant. All this is more than mere ordinary public school work.

Don't you agree with me?

"To some extent."

Never mind to what extent. Do you agree that it is a very important part of your work?

"Oh yes."

It is just so with the work of the minister everywhere. His great work is not preaching Sunday by Sunday. It is his work outside of the pulpit. What work? Two calls a year all round? No, but knowing and caring for everybody in his parish, watching his opportunities, not merely to talk on religious subjects—in nine cases out of ten that alone would do no good—but to get an influence for good in every way. He sees a young man that he has led away by bad company. He gets him to go fishing with him, to call and see his family, leads him home.

There are a thousand ways every good clergyman will try to get an influence over the young men for good. I'd give a hundred times more for a man who carries all his parish in his heart, than one who thinks his duty done by producing once a week a brilliant essay.

If you ask me more, I can't discern the future. I can't tell what your permanent race peculiarities may be, or the result of them. I talk freely with you. I have heard—and you have—the colored race called dishonest. Two hundred and fifty years of slavery would not have done much to make them respect the rights of property. Many, many have got the idea of dishonesty, as they all have, and I have—into their minds, where he had belonged to them. But I live in a Southern hotel fourteen months, never locked my door and never lost anything. Old Aunt Jane, the cook, used to sit smoking down in the kitchen—a good old soul. I lent her five, ten, fifteen dollars at a time, it always came back. At the same time you ought to be keenly alive to the bad influences and tendencies which may cling to your people, and persistently and faithfully try to conquer them.

"WHAT IS THE LINE OF GREATEST USEFULNESS FOR THE COLORED MAN?"

You ask me, "In what is the line of your greatest usefulness in the South?" I don't know that I am prepared to state. In an important sense it is in what you like best. If you like carpentering best, you can do more good as a religious carpenter than as a teacher. While that is true, this is true. A man often learns to love a work that he did not like at first, if he sees that it is needed. I taught school, no, kept school for a while—left it and said, "I'd never enter a school house again. But the time came when I felt the necessity of trying it. I got another school—fell in love with the work and have loved it ever since. If, after carefully weighing it, you decide that inclination and duty both say you can safely follow a certain line of business, follow it, whether it is whitewashing or preaching.

If you ask what is the greatest need for your work, I don't see how there can be but one answer. It is for the work you before me are doing—it is our work as teachers. I leave out the question of preaching. Indeed I don't see how any teacher can help being also a preacher—not eternally talking, but helping in the church, teaching in the Sunday School. Many of you here are about half ministers. I know, and it is greatly to your credit. I do think that, at present, the demand in the South is infinitely greater for colored teachers than for colored lawyers or phys-

icians. To be a successful lawyer, to stand up against men who have been trained ever since they were five years old, who have inherited power from the best minds, requires preparation which the colored man is not yet likely to get. I have seen colored lawyers employed not because they were prepared—they were not prepared—they were hired not because they knew law, but because they would have an influence with the jury. I consider it very doubtful if there is a great demand for colored lawyers, or, for that matter, for white lawyers; young men study law often because it is an easy way into politics. I think as far as colored physicians are concerned, there is some demand or rather need—a great deal of sickness might be prevented among your people if there were educated physicians scattered among them."

Mr. Hamilton—"We need both, because ever since the war, we have been robbed by white lawyers. The colored people don't own nearly as much to-day as they would if they had had their own lawyers."

"That seems very true, but it is not as true as it seems. In the first place, there is no section of the country that will compare with the South for general insecurity of all titles. It was badly surveyed in the first place. I was in the land where I lived in North Carolina where I lived. The land had been granted over and over again. There is no such thing as being absolutely sure, some one might appear with an old deed of your property. It is unquestionably true that colored people have lost land in this way. So have innumerable white men. In the small town in North Carolina where I lived, there were twenty-one lawyers. What supported them? They were supported entirely through these lands cases. It was Asheville, North Carolina. But the same was true in Salisbury. What made Henry Clay successful in Kentucky? Land cases. So the colored people don't suffer more than the white."

Then again, you reason that every colored lawyer is going to be true to his race. What reason have you to think so? A lawyer would be honest just because he is colored. Are there no honest white men? My experience is, that in certain, large proportion of lawyers only care for their fees. Legal advice depends entirely on the person who gives it. I don't ever was in a place where I couldn't get good legal advice. One of the most honest lawyers I ever knew was an old, ex-confederate who wouldn't wear a rag of Yankee clothing—except his hat—but I would have come to him for any advice, because he was an honest lawyer."

"Yes, but we must have our own prominent men. If every generation puts it off, we never shall have them."

A man doesn't become prominent by talking, but by being big. If a race is going up to-day, it has better have a pretty wide base under it. If a colored man wants to be prominent and is big—has base—let him remember that nobody wants to keep him back. But remember, too, that it will take fifteen or twenty years to build. What does a white farmer do who wants to give his boy a professional education? He takes him at ten years of age—before that he has been chiefly in his mother's hands, and most dependent on whether she was a good mother—Then he gives him the best advantages of school and college uninterruptedly for fifteen years. He not only has an education but a big man takes him by the shoulders and puts him through—and then he is only beginning the hard road to success.

Miss Norris—"Have all successful white men had those advantages?"

No, not all. Some lack early training, yet succeed because they have genius; they have inherited it from their past. Yet they always feel the want of the early training. And they have to work tremendously hard and long for success. There was Abraham Lincoln. He started late—began law when he was twenty one—then worked like a track horse twenty years, and then only began to be heard of. I remember when he was beginning to be talked about.

Miss Norris—"How long will it be before we have prominent colored men?"

"In this generation, there are colored men bound to be leaders."

"In Alexandria I know there are white men who are considered prominent, and are making money, who have not been more than ten years at work."

Well, we all agree that all success depends on years and years of hard work. Remember that if you are determined to succeed, you must buckle down to thirty years hard work, and, for the lack of early opportunity, do it more hard work. Remember, too, that there are already nine times as many lawyers as are called for.

No profession on the other hand is so easily supplied as the profession of teaching. All that is needed to become a teacher is to be able to teach. The only thing an urging upon this is this: "Do think that, at present, the demand in the South is infinitely greater for colored people in teaching, as far as concerns this generation. It is the best work you can possibly do for your people."

"What sort of a lawyer was Patrick Henry?"

Patrick Henry was not a great lawyer, except as he could handle a jury. He had a wonderful command over men. He had almost no education, but he had real genius. Mr. Langford—"You must take into consideration as regards success in obtaining justice, it makes a great difference whether a man is colored or white. In my section—the western part of this state—we have suffered most from unjust juries and judges. A colored man is sent to prison very easily for almost nothing, when a white man would be let off who had done far worse."

I know that is true, I remember seeing a gang of convicts in North Carolina, one of whom had been given five years imprisonment for stealing a hoe. What do you say is the cause?

"A colored man has generally no money to defend himself. Prominent lawyers are not likely to take hold of a case without money. The jury are most always white men, and decide accordingly. Besides, every man in Virginia who is sent to the penitentiary is disfranchised."

Don't you think that is the real secret of it? Yes, I do. I'm certain we need colored lawyers. But when he has studied, a colored lawyer will have a hard time, because our people are not trained to respect those who deserve respect of our own race. So the colored lawyers will have to work harder than the white lawyers."

Will he have much business?

"No, he will not."

Will he be paid for what he does?

"Oh yes,—I don't mean to object to colored lawyers, but I do say they will have to work harder than white ones have to."

Will white people employ him?

"No. When a white man studies law, his friends give him cases."

Yet you say, if a colored man is bound to struggle through and make a lawyer—an honest lawyer of himself—God bless him—go ahead?

"Yes sir."

Stevens—"I only knew of two successful colored lawyers in Washington. Both are dead. Washington is a democratic city you know. One of them told me that the most prominent democrats give him a great deal of business. It was because he was capable. He had graduated in a Western college. He had his office like any lawyer, and made, he told me, from \$1,500 to \$2,000 a year. Of course he had a good deal of mental preparation, and showed ability. That's all I know as to how well a really prominent man can do."

I don't think we disagree. I have only brought you out on the subject, to show you the case clearly. I think we agree. I know the temptation to be a lawyer. I studied law myself for a year. But I know that I have no right to leave teaching and practice law. I shall die poor. I don't ask my sympathy. The satisfaction I get in helping people to be better men and women is worth more to me than any fame as a lawyer. I don't hesitate to say to any young man that asks me—as one of my pupils has by letter since I have been here—"Shall I, George D. study law or teach?" I don't hesitate to say, as I said to him, "George, if you want to teach because you want to make money—don't! You will teach till you are sixty years old and not be worth \$20,000. If you want a business, that will bring you kicks and cuffs, some appreciation, and a clear sense of duty done, stick to teaching. If you want a profession that will bring you respectation and wealth and will also be very likely to demoralize you, go to the law."

So I say to you—especially to you, for the demand for teachers is especial in your race. And I wouldn't have you lose sight of the fact that if you go into the profession you go under great disadvantages. But if, in spite of all, you must go, I must say, God speed.

The first currency ever issued by the United States Government having the signature of a colored man (B. K. Bruce) thereon, was received from the Bureau of Engraving and Printing at the Comptroller of the Currency's office, June 14, about ten o'clock, a. m. Soon thereafter Major J. F. Boone, the venerable New Englander who has charge of the shipping of currency to the two thousand and more of national banks of the country, caused four figures, in one sheet, to be taken, and then shown to the Register, B. K. Bruce. On holding up the sheet for the inspection of those in his office at the time, the Register feelingly remarked: "Who would have thought of this spectacle a score of years ago! This is an incident of interest worthy of a place upon the bright pages of the history of a public man's life."

## Horsford's Acid Phosphate

Palatable.

Horsford's Acid Phosphate is often acceptable to the stomach and palatable when all other medicines are objectionable.

MRS. LYDIA E. PINKHAM, OF LYNN, MASS.

LYDIA E. PINKHAM'S  
VEGETABLE COMPOUND.

In a Positive Cure

For all those Female Complaints and Weaknesses

It will cure entirely the worst form of Female

Cholera, all ovarian troubles, inflammation and

Ulcers, Pains and Displacements, and the consequent

General Debility, and is particularly adapted to the

Change of Life.

It will dissolve and expel tumors from the uterus in

an early stage of development. The tendency to can-

cerous humors there is checked very speedily by its use.

It removes flatulency, belching, burping, all craving

for stimulants, and relieves weakness of the stomach.

It cures Headaches, Nervous Prostration,

General Debility, Emaciation, Depression and Indi-

gestion.

That feeling of bearing down, coming pain, weight

and backache, is always permanently cured by its use.

It will at all times and under all circumstances act in

harmony with the laws that govern the female system.

For the cure of Kidney Complaints of either sex this

Compound is unsurpassed.

LYDIA E. PINKHAM'S VEGETABLE COM-

POUND is prepared at 221 and 223 Western Avenue,

Lynn, Mass. Price \$1.00 per bottle for 60 cents by mail.

In the form of pills, also in the form of lozenges, on

receipt of price, \$1.00 per box for either. Mrs. Pinkham

freely answers all letters of inquiry. Send for pamph-

let. Address as above. Mention this Paper.

Do not fail to send for LYDIA E. PINKHAM'S

LIVER PILLS. They cure constipation, biliousness,

and torpidity of the liver. 50 cents per box.

THE HYGIA HOTEL,  
OLD POINT COMFORT, VA.

Situated within one hundred yards of Fort Monroe;

At the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward be-  
tween the capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running  
from and to those cities touch at the pier, going and returning, with the U. S. mail, landing only a few rods from  
the Hotel, which is suitably built and

COMFORTABLY FURNISHED

Has hydraulic passenger elevator, gas and electric bells in all rooms, water-room or bath, including Hot Sea,  
and clouds on every floor, with the most perfect system of drainage of any Hotel or public building in the coun-  
try. And as a resort for the pleasure-seeker, invalid, or resting place for travelers on their way to Florida or the  
North, this House, with accommodations for about

SEVEN HUNDRED GUESTS

Presents inducements which certainly are not equaled elsewhere as a summer resort, or cold weather sanitarium.  
The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial  
waters of the South and cool summers of the North. For sleeplessness and nervousness the delicious tonic of  
the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bed-  
room windows, are most beautiful opportunities at the Hygia.

A GOOD HAUL.

## THE RISING GENERATION OF COLORED BOYS ABOUT TOWNS.

BY ORRA LARHORN.

A friend who has read the MS. of my letters to the Hampton paper, often making useful suggestions or criticisms, insists that I ought to write an article on the behavior of the young Negroes growing up among us, many of whom are outlaws, forming a dangerous element in the community. Our attention has been especially called to this subject since the introduction of street cars in Lynchburg, a novelty very convenient and agreeable to the citizens, for a time seemed quite to unsettle the minds of the colored boys of the place. When the cars first began to run here last fall during our agricultural fair, they were so thronged with colored people that the "white folks" had no chance to ride at all. It was hoped that when the young Africans grew accustomed to the cars, which many of them had never seen before, things would become more quiet, but I regret to say disturbances are still frequent on the cars, and are generally caused by the Negro boys, though sometimes white youths who have had better chances in life and therefore ought to set a better example, seem to rival their colored brethren in riotous and disorderly behavior. On Sunday afternoons the cars which pass our door hourly, are usually crowded with colored people, and too often some of the boys are drunk and so hysterical that it is unsafe for respectable women to enter among them.

On holidays, to which the colored people are greatly addicted, often stopping work on the busy seasons to the great inconvenience of the manufacturers, on the most frivolous excuses, to attend picnics, or go on what they certainly mislead "discretion" trips, riots are very common indeed. On Easter Monday the street cars were crowded all day, and there was much disorderly conduct, which almost culminated in a row near our house, in the afternoon. It seems that a Negro boy of about twenty years old, on one of the cars was drunk and behaved so rudely to some colored girls, that the car driver, a white man, who has police powers on the car line, ordered him to leave the car. A struggle ensued in which the boy was pushed out, the other Negro boys rushed out and stopped the car, threatening to stone the driver, break the windows, etc. The women screamed, the drivers, a very young man, was at the wheel, and rioters and there is no knowing what might have happened had not a white gentleman, who chanced to ride by, drawn a pistol and declared he would shoot into the crowd, if a stone was thrown at the car. This had a very composing effect on the rioters, who, after some parley, reentered the car and went on their way. It is gratifying to state that the boy who created the disturbance was fined \$10.00 by the city tax collector next morning. Affairs like this are of frequent occurrence, and usually originate with the lower class of Negroes. Of course, this is all very annoying to the other citizens of the community, and provokes much harsh criticism of the effects of freedom on the Africans. The more orderly and respectable colored people condemn such conduct in unmeasured terms, and I heard a worthy old Negro woman say not long since, with well emphasized emphasis: "There aint no young giggers here brought up right since this here freedom come in!" These disorderly occurrences and the comments sure to follow are very discouraging to the friends of the colored people, who, as time goes on, would fain see increasing evidence that the Negro race will prove its worthiness of emancipation and citizenship in the Republic.

An inquiry into the condition and way of life of the Negro boys who create these disturbances, and are apparently destined to furnish employment for the jailer and the hangman in later years, shows that nearly all of them are waifs, homeless creatures, growing up almost without the sweet and tender influences of family life. The city tax collector told me lately that in going his rounds through the town, it was lamentable to see the number of colored children, very many of them mulattoes, who were living without parental care, usually put in charge of some old Negro woman by the severed mother of the child, utterly deserted by its worthless father, often neglected and forgotten by both parents, sheltered for a time perhaps, and then turned drift to beg or steal a scanty living in the streets. It is from among the ill-starred infants who survive such a sorrowful babyhood that the recruits for this army of outlaws come. As they grow older few of them find their way to the schoolhouse, and a law of compulsory education is greatly needed among us to reach such children.

The tobacco factories usually furnish occupation for these boys, but it is of a very irregular description, and the increasing use of machinery by the manufacturers renders this yearly a more precarious dependence for the working class. Many of the hands, and especially these homeless boys, are as thriftless and improvident as possible. When working they spend their wages in the most reckless way, at candy shops and car-fare absorbing the money that should be spent for substantial food and

clothes. When the factories are closed they loaf about the streets ragged and hungry, a nuisance to the community.

I am always loath to say a harsh word about the colored people, who, all things considered, have done wonders in their years of freedom, and to this subject, as to all others, there are certainly two sides. One of the difficulties in the way of the young colored men is that white mechanics are not willing to teach them a trade, and will never take them as apprentices. The color prejudice is intensified by the competition of labor, and presents one of the greatest difficulties in the race problem. The young Negro who desires to learn a trade has to pick it up as best he can, and when he has managed to learn his art, in spite of all the difficulties in his way, he invariably works for lower wages than are paid to his white fellow workman. Another view of the subject is that the white people who have in so many ways advantages over the Negroes, and who justified slavery and the slave trade on the ground of giving civilization and Christianity to a savage and heathen people, do very little towards setting the colored people a good example and teaching them how to live right.

This city of some 16,000 souls nearly half of the population consists of Negroes, the great part of them sadly in need of religious instruction, and yet only one of the white churches of the city makes any organized efforts for their welfare. The ministers do not feel called upon to carry their message "to all nations" to the hovel of the African, though it may be under the shadow of their churches or parsonages, and a white congregation, which will not tolerate Negroes among them, except in the gallery, now build their churches with out galleries. Sunday is the day given up by the disorderly class of Negro boys to roaming about the suburbs in bands, drinking, playing gambling games, scuffling etc., and a few Sundays ago, while I was enjoying the services at a little chapel near us, I saw through the open window a party of ten or twelve well-dressed colored boys mauling by brute force their way to a low-drinking house near. The boys stopped to listen to the music which floated sweetly out to them on the balmy air, and I could but think it would be such a good thing for some of the church people who were scattered about in the half-empty building to go "into the highways and hedges" and if not compel at least invite these poor wanderers to come in. But alas! to such a thing would be, in our form of Christianity, to give mortal offense to the majority of the worshippers in our temples.

I hope the attention of our people is becoming awakened on this subject, and think the order of the Episcopal Council of 1881 in regard to the ministrations of the clergy among the colored in their parishes, a step in the right direction, which step is to have beneficial results.

Were not the sweet words "He maketh room for them," written for these children of an alien race, who sojourn among us, as well as for the other nations who seek an inheritance in this best land of liberty?

## A GOOD HAUL.

Our illustration for this month, might, with one or two exceptions, have been sketched here in our own harbor of Hampton Creek. For during the past few weeks hundreds of crabs, a big and small, have crowded the great water way of Hampton Roads, till it seems as if every variety of build and red known on the Atlantic Coast had sent a representation to visit our oyster beds and fishing banks.

But the faces and dress of the sailors in our picture, show that they are not Americans; they hail, one can see, from Old England, and would be, they and their cargo, fish in strange waters, were they transported to this side of the ocean. But the emotions excited by "a good haul" are probably much the same all the world over, and we can heartily wish the best of luck to our fishermen friends over the sea, as well as to those who, here at our doors, are preparing for the winter harvest so bountifully provided on our Virginia coast.

For the beautiful illustrations in our last two numbers, as for many others, we are greatly indebted to the cordial generosity of those constant contributors to popular education and enjoyment, Messrs. Harper Bros., of New York.

## Its Action is Sure and Safe.

The celebrated remedy Kidney-Wort can now be obtained in the usual dry vegetable form, or in liquid form. It is put in the latter way for the especial convenience of those who cannot readily prepare it. It will be found very concentrated and will act with equal efficiency in either case. Be sure and read the new advertisement for particulars.

## South and West.

## Horsford's Acid Phosphate

## A Refreshing Drink.

Horsford's Acid Phosphate forms an excellent substitute for lemon juice, and as such will furnish a refreshing drink for the sick.

Fair Haven, N. Y. A. L. HALL, M. D.

## A UNIVERSITY IN THE WOODS.

In the western corner of the state of New York is a lovely little lake, twenty miles long by four or five broad, surrounded by low hills and wooded shores, offering charming summer rest and recreation, while too far from the great cities and great lines of travel perhaps to become a fashionable resort. It is natural enough that our Methodist brethren, who have as keen an eye for beautiful and picturesque scenery as the Franciscan monks of the Middle Ages, should have secured one of the loveliest spots on the shores of Lake Chautauque, for their annual Sunday School Assembly. But from this sort of modified camping which has been evolved in eight years by the genius and energy of one man, the most remarkable and unique of summer schools, attended every year by thousands, many of whom devote themselves seriously to the regular six weeks course of study in various departments, while many more listen regularly to the daily and nightly lectures from the most eminent lecturers in the country, and all get the inspiration and uplift of the place. It is something to breathe such air for a month; fifty-six acres of forest have been thinned and cleared of undergrowth; broad avenues of light cut in different directions, lined with rustic cottages and tents, some of which through open doors and flys give pretty glimpses of more than camp comfort and elegance. A good hotel accommodates the transient, and the "transients" others find excellent board in the cottages, while the guests of the Assembly are comfortably lodged in the "Ark," a remarkable building with no floors but curving galleries, the windows of which are Chautauque, and even umbrellas are safe from thieves. The audience rooms are appropriate to the place. A natural ravine has been taken advantage of and rolled into a pretty amphitheatre, with a spacious elevated platform at the bottom, and gallery for a large orchestra or chorus behind it. The rising seats will easily accommodate six thousand; and the beautiful view is not unimpaired by the throng on special days. On such occasions, the "Chautauque salute" given to some honored orator—ten thousand white handkerchiefs fluttering at once, a pretty sight that must be inspiring to a speaker. The roof is lifted on tall posts high above the top row of seats, with no side boarding to keep out the fresh air of heaven from this most perfectly ventilated of great auditoriums. It is lighted at night sufficiently by electric lights. Besides this there are several other places of meeting, one of which, the Temple, was built expressly for the children of the Transients, and is used every morning for an hour of Bible instruction. Their Kindergarten and Sunday School are held here. The "Hall of Philosophy," a wooden building in the form of a Greek temple with Doric pillars, and without sides, is in the midst of a lovely grove. Here you sit in the freshness of the morning and listen to the wisdom of the early lecture or to the chorus of early Faith and interest in it is progressing every year. The party were greatly interested with what they saw of Hampton Institute. Of course they all wanted to become Hampton teachers—not enough perhaps however to endanger the prospects of their work at home. Prof. Perkins told a curious incident of visiting a colored school in Richmond ten years ago or more, the first public school in that city, and finding its teacher, a remarkable old colored man named Woolfolk (a Miss Woolfolk was among the Richmond teachers at the Institute lately held at Hampton.) This old colored man had, without any help from modern authorities on pedagogy, discovered the "word method" for himself. "Takes too long for ter larn many all dear letters. You read de words, don't read de letters. Dey wants to know a word when dey sees it. Larn a word jus' as quick as larn a letter."—and so he had proved by experience. After this, what colored teacher would teach the alphabet?

PURE ENGLISH.—A writer, in advising youth to abandon slang and acquire the habits of writing and speaking good English, says: "The longer you live, the more difficult the acquisition of good language will be; and if the golden age of youth, the proper time for the acquisition of language, has passed in its abuse, the unfortunate victim of neglected education is very probably doomed to talk slang for life. Money is not necessary to procure this education. Every person has it in his power. He has to use the language which he reads, instead of the slang which he hears; to form taste from the best speakers and writers of the country; to treasure up choice phrases in his memory, and habituate himself to their use, avoiding at the same time that pedantic precision and bombast which are rather a drawback to the aim of van ambition than the polish of an educated mind."

been already very generally adopted in England, and found to work wonders in making good readers and bringing the beautiful art of singing within reach of the masses. This method will be introduced at Hampton next winter, and we shall have more to say of it hereafter. The latest addition to the Chautauque departments is the Chautauque School of Theology, started by Dr. Vincent this summer; not a "new school" in a sectarian sense, but simply a course of reading in theology and its various interpretation, and in study of the Bible, prepared by eminent ministers of various denominations, for the benefit of young ministers especially. Chautauque is not only unsectarian in its development but unsectarian. Not the least interesting of its assemblies this summer have been the reunions of Army Chaplains of North and South, with the Sanitary and Christian Commissions. In two weeks of a pleasant visit here this summer, lectures and addresses were delivered by John B. Gough, Judge Tuckey, Dr. Haygood, President of Emory College, Ga., and author of that remarkable hook on the Southern question that every Northerner, and every Southerner too, should read, "Our Brother in Black"; Bishop Campbell of the African Methodist Episcopal church; Dr. Ward, of the N. Y. Independent, reputed the first Asymptologist in America; Mr. Gilbert, editor of the Chicago Advance; the Hon. Schuyler Colfax; the Rev. Edward Everett Hale, and General O. O. Howard.

This happy sketch gives but an imperfect picture of this charming and interesting place, which still developing may well be called a university in the woods; a university of a true American type, of the people and for the people, as a correspondent puts it, "for the masses and not for the swells," whose cloisters are woodland paths, whose cells are canvas tents, whose students, numbered by thousands, are of both sexes and all ages, whose faculty includes the first educators, scholars and orators of the land, whose influence will be felt from one end of the country to the other for the uplifting and blessing of the people.

Prof. Bicknell, editor of the New Englander, and a student of Prof. Caldwell, author of the well known volumes on Object Teaching, Miss Hodgson of Concord, Mr. Mowrie of Providence and Mr. Abbot of Maine with two other gentlemen stopped to see Hampton Institute on their way home from the National Educational Association meeting at Atlanta. They report a full and very interesting meeting with a delegation of a hundred from the North, all glad they went South this summer in spite of its "sunshine." They were invited last year by the Southern members, "to inspire the South," but they think they have got some inspiration from it as well. The fact is, the sunny South is waking up on the subject of education. Faith and interest in it is progressing every year. The party were greatly interested with what they saw of Hampton Institute. Of course they all wanted to become Hampton teachers—not enough perhaps however to endanger the prospects of their work at home. Prof. Perkins told a curious incident of visiting a colored school in Richmond ten years ago or more, the first public school in that city, and finding its teacher, a remarkable old colored man named Woolfolk (a Miss Woolfolk was among the Richmond teachers at the Institute lately held at Hampton.) This old colored man had, without any help from modern authorities on pedagogy, discovered the "word method" for himself. "Takes too long for ter larn many all dear letters. You read de words, don't read de letters. Dey wants to know a word when dey sees it. Larn a word jus' as quick as larn a letter."—and so he had proved by experience. After this, what colored teacher would teach the alphabet?

PURE ENGLISH.—A writer, in advising youth to abandon slang and acquire the habits of writing and speaking good English, says: "The longer you live, the more difficult the acquisition of good language will be; and if the golden age of youth, the proper time for the acquisition of language, has passed in its abuse, the unfortunate victim of neglected education is very probably doomed to talk slang for life. Money is not necessary to procure this education. Every person has it in his power. He has to use the language which he reads, instead of the slang which he hears; to form taste from the best speakers and writers of the country; to treasure up choice phrases in his memory, and habituate himself to their use, avoiding at the same time that pedantic precision and bombast which are rather a drawback to the aim of van ambition than the polish of an educated mind."

# Southern Workman.

**TWELVE PAGE MONTHLY.**  
(Reduced to eight pages from July to October,  
four months.)

S. C. ARMSTRONG, } Editors.  
H. W. LUDLOW, }

Mrs. M. F. ARMSTRONG, } Regular  
Mr. W. N. ARMSTRONG, } Contributors.  
Mrs. ORRA LANGHORNE, }

Terms: **ONE DOLLAR a year IN  
ADVANCE.**

Specimen copies sent upon application.  
To secure safety, it is important that money  
should be sent by checks, Post-office orders, or  
registered letters. Write plainly; give name  
in full, and name of Post-office, County, and  
State to which the papers are to be sent.

A limited number of advertisements inserted  
at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-column	2 75	7 50	13 50	23 00
1-2 "	5 00	13 50	23 00	40 00
1 "	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

For further information, address  
J. F. B. MARSHALL,  
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post Office at  
Hampton, Va.

The Southern Workman, devoted to  
the interests of Negro and Indian civil-  
ization, is edited and managed by the offi-  
cers of the Hampton Institute, and printed  
on the School Press by colored youth  
trained in the office. Subscriptions are a  
help to the School. It is sent on trial for  
four months for twenty-five cents. Job  
work, from all parts of the country, is so-  
licited, and will be done cheaply and well.  
Estimates will be sent on application.

Subscribers are reminded that, from  
July to October inclusive, this paper is re-  
duced to an eight page form, resuming in  
November the twelve page form.

## "OUR BEST HOPE IS IN GARFIELD."

Captain R. H. Pratt, U. S. A., in charge  
of the Indian School at Carlisle Barracks,  
Pa., in a recent letter to us said: "Our  
best hope is in Garfield."

He, with others is trying to atone for a  
"Century of dishonor," as the record of  
our last hundred years dealing with the  
Indians has been called.

Pinched and crippled for want of means,  
as are all in this work so far as they de-  
pend on the Government, they have wait-  
ed for a new influence to appear in author-  
ity that would amount to more than a  
good natured readiness to fight or feed  
Indians as circumstances might require.

There is no redemption for the red men  
in a sluggish Congress whose members  
have seemed to care more for re-election  
than for humanity or abstract justice.  
Adequate action from that quarter is pos-  
sible only as powerful outside influence  
shall be brought to bear upon it.

For this we had looked to our late  
President; not without reason, for he had  
personally visited Hampton, expressed a  
strong interest in and desire to go to Car-  
lisle, and had, by nature and experience, a  
deep appreciation of education. He was a  
born educator. All the helpless, illite-  
rate children in the land had a place in  
his great heart. He said at Hampton: "I  
mean to make education a leading feature  
of my administration."

His Inaugural Address was a pas-  
sionate appeal to the nation to avert  
"the disaster that may be brought upon  
us by ignorance and vice in citizens."  
His concern was deep for "the coming  
generation of voters who are the sole  
beirs of sovereign power. If that genera-  
tion comes to its inheritance blinded by

ignorance and corrupted by vice, the fall  
of the Republic will be certain and reme-  
diless." He pointed out from the cen-  
sus the "appalling figures which mark  
how dangerously high the tide of illitera-  
cy has risen among our voters and their  
children." He said, not the South only,  
but "the Nation itself is responsible, and  
its underspecial obligation to aid in remov-  
ing the illiteracy which it has added to its  
voting population."

"There is but one remedy. All the con-  
stitutional powers of the States and all the  
volunteer resources of the people should  
be summoned to meet the danger by the  
saving influences of universal education."

"Let the people find a new meaning in  
the Divine Oracle which declares that  
"a little child shall lead them," for our  
own children will soon control the desti-  
nies of the Republic."

In the light of this sound truth look at  
the course of our political leaders during  
the past twenty years! To gain votes  
and not avert impending evils has appear-  
ed to be their chief interest.

We may hear from the new President  
the usual platitudes about intelligence and  
morality as the foundation of all things  
but, after that, what? Let us hope for the  
best.

Will he make it his concern that the  
forty thousand wild Indian children of the  
plains have, as good an opportunity to go  
to school as to go to war? Will he work  
for the future of the country by striving  
to apply all resources within reach to less-  
ening a coming danger from the illiteracy  
revealed by the census? If he does, Gar-  
field's mantle will have fallen on worthy  
shoulders.

Not but that there are equally or more  
important matters. But capitalists will  
take care of our finances; manufacturers  
and producers will look to the tariff; polit-  
ical clubs and newspapers will keep ham-  
mering away at civil service reform; and  
the Southern question is settled.

The death of Lincoln sealed our victory  
and with it ended the fighting of armies.  
The death of Garfield seems to have ended  
the conflict of ideas that underlay and long  
on-lasted the war. The sympathy of the  
South for the wounded President, against  
whom they voted, signifies, we believe,  
a new harmony between the sections, and  
seals the complete unity of the country.  
Garfield, in his death, has in this done  
what, in many life times, he might have  
failed to do.

But who will see to "our little children  
who will soon control the destinies of the  
Republic?"

Are they not the real mourners over  
our dead President? Like the children  
in Mrs. Browning's poem, who never heard  
the words "Our Father," they do not know  
their misfortune; they will have no place in  
the imposing funeral procession.

We are on beds of roses. We will pause  
and be sad a while and then move on  
along the highway of increasing prosper-  
ity. They live like cattle; their future is  
a blank. What will be done for them?

Our readers will have seen in other pa-  
pers full accounts of the life of our late  
President. To publish them would be need-  
less. We ask attention to a powerful, im-  
pressive in his life, to regard which would be  
respectful to his memory as any ceremony,  
eulogy, or granite shaft; to carry out  
which would be nobly monumental.

We think no better expression of the  
nation's sorrow can be given in our pages,  
than comes to us in the following letter,  
written by a New England woman who

has herself known the grief and the glory  
of giving up for her country's sake, that  
which was dearer than her life.

The grandeur of the President's life,  
the martyrdom of his death, the fullness  
of his reward, can be recognized now  
by the nation for which he died, only as  
this loving woman's heart has recognized  
it, by earnest, heroic, unanimous effort to  
carry on and complete the work to which  
he had put his hand, to make our coun-  
try's name one for which no man need be  
ashamed to die.

## My Dear General:

The divinely heroic struggle is ended,  
and the greatest of Presidents has vanished  
from our eyes forever! God help the Repub-  
lic he loved so well and suffered such agonies  
to serve and save! He was, as you have said,  
"Our Ulysses; no other can bend his bow."  
All these weeks of anxiety, watching and  
prayer we have felt that God could not let  
him die. We are not reconciled; we never  
can be; we can only submit, and bowing our  
faces in the dust, cry the old heart-broken cry  
of the ages, "Lord, I believe, help thou mine  
unbelief."

Waking early this morning to the mourn-  
ful tolling of the bells, it seemed as if I  
just kissed down the eyelids of my own he-  
loved one, that I was again widowed. After  
a while I turned, as we all do, to the grand  
and sublime "Lord, Thou hast been our dwell-  
ing-place through all generations," and then  
I opened Emerson's "Fortune of the Repub-  
lic" at these prophetic words: "Our helm is  
given up to a better guidance than our own,  
the course of events is quite too strong for  
any helmsman, and our little wherry is taken  
in tow by the ship of the great Admiral which  
knows the way, and has the force to draw  
land and states and planets to their good."  
Are they not grand and comforting? Still the  
tears will flow and our hearts must ache and  
bleed and our fears belie our hopes. Perhaps  
the count never has helped the Republic so  
much by living as he can by his sublime mar-  
tyrdom. Already he is an ideal character,  
and will live in story and verse while men  
survive, to love and celebrate the virtues which  
elevate and adorn humanity.

You will remember that I forwarded you a  
cheque for one hundred dollars, in aid of the  
Hampton Institute, on the day which saw  
Garfield elected to the Presidency, as a thank-  
offering to the Ruler of the Universe. My joy  
in that event opened new interests in my sad-  
lowed life, and I clung to his idea with a deep  
personal affection, for I felt that he had not  
suffered so much in vain for the security of  
free institutions. To-day, with bowed head  
and hriming eyes, I forward you another  
cheque of one hundred dollars as a small trib-  
ute to his memory and in aid of the cause he  
had so much at heart and for which he made  
his last public address, only four weeks be-  
fore the deadly shot robbed us and enriched  
the Gods.

We re-print here this last address made  
in Bethesda Chapel to the Hampton  
School on Sunday, June 5th, 1881.

"As I drove through these grounds to-day,  
I was impressed with the thought that I was be-  
tween the representatives of the past and the  
future."

Crippled and bent with service and years,  
those veterans in the Soldiers' Home, represent  
the past. You represent the future,—the  
future of your race—a future made possible by  
the past, by these graves around us.

Two phases of the future strike me as I look  
over this assemblage. For I see another race  
here; a race from the far west. These two  
classes of people are approaching the great prob-  
lem of humanity, which is Labor, from differ-  
ent sides.

I would put that problem into four words:  
Labor must be free. And for those of you from  
the far west, I would omit the last word in or-  
der to enforce the first lesson. To you I would  
say: Labor must be free—for you, for all.—With-  
out it there can be no civilization. The white  
race has learned that truth. They came here as  
pioneers, felled the forests and swept away all  
obstacles before them by labor. Therefore to  
you I would say that without labor you can be  
nothing. The first text in your civilization is  
Labor must be free.

You of the African race have learned this  
text but you learned it under the lash. Slaves  
taught you that labor must be free. The mighty  
voice of war spoke out to you, and to us all that  
Labor must be forever free.

The basis of all civilization is that Labor  
must be free. The basis of every thing great in  
civilization, the glory of our civilization, is that  
Labor must be free!  
I am glad to see that General Armstrong is  
working out this problem on both sides—reach-  
ing one hand to the South; and one hand to the  
west,—with all this Continent of Anglo-Saxon  
civilization behind him; working it out in the  
only way it can ever be worked out; the way  
that will give us a country without sections; a  
people without a stain."

We, at Hampton, to whom that Sun-  
day is to be forever a marked day, re-  
member, as the President sat, after church,  
in the warm, sweet air, listening to the  
singing of the students, how deeply  
touched he was by the hymn "In dat  
great gittin' up mornin'." He seemed to  
feel with intensity what its meaning must  
have been to the people whom he had  
helped to free, and to-day from all parts  
of the South comes their tribute to his  
sacrifice. Is it too much to say that to  
them he will hereafter be one with Lin-  
coln who freed them, that their feeling is  
embodied in the words of one of their  
race, an old and feeble woman, who when  
met, the day after his death, on a coun-  
try road, replied to the greeting offered  
her, "Bress ye, chile, I see mighty poorly  
to-day, I see gwine ter Hampton fer ter  
git someh black fer ter drape de house.  
My President's dead!"

On the 27th of September, the Prin-  
cipal of the Hampton Institute expects to  
take a party of thirty Indian youth  
(brought here November 5th, 1878,  
by Captain R. H. Pratt, under the orders  
of Hon. Carl Schurz, Secretary of the In-  
terior,) to their homes in Dakota Terri-  
tory, as follows:

One girl and three boys to Crow Creek  
Agency.

Five boys to Lower Brule Agency.

Four boys and two girls to Yankton  
Agency.

Six boys and one girl to Fort Berthold  
Agency.

One girl and two boys to Standing  
Rock Agency.

Five boys to Cheyenne River Agency.

These are all of the war-like Sioux  
tribe, and average 17 years of age; they  
have had a three years course of  
mental, moral and industrial training;  
their time being about equally divided  
between labor and study. They have  
acquired a fair knowledge of our language,  
and their work time has been devoted  
to house-work, agriculture and the  
crafts.

The Commissioner of Indian affairs,  
Hon. Hiram Price, is interested himself  
to secure employment for them. The pol-  
icy of this department is, others things be-  
ing equal, to give Indians the preference  
in government positions. Only by  
steady work can they be saved from the  
bad influence about them; that from white  
men being more to be dreaded than that  
from their own race. Many of them have  
wretched homes to go to. They must go;  
it will be running a fearful gauntlet of  
temptations. Through hard work and the  
grace of God they may succeed. Some  
will doubtless relapse. Much depends on  
the Indian Agents, who are apt to be bet-  
ter politicians than humanitarians. We  
are however sure that some of them will  
do all in their power.

Missionaries and teachers at the Agen-  
cies are a great reliance; they will care-  
fully watch over the returning ones.

The result will be of deep interest. The  
experiment of Indian education at the east  
is to receive its final test. A report of  
the trip may be expected.

## EDITORIAL CORRESPONDENCE.

July 10th, Antwerp.  
"Surely this is the old world," one says,  
watching this quaint city as the boats  
steam up the river Scheldt. "Queer looking  
craft, and odd looking houses, but a staid,  
substantial place."

The glory of Antwerp is its cathedral,  
attended the Sunday morning service. The  
first surprise is the number of people who are  
walking about, even among and in front of  
the worshippers, but they do it in a quiet  
and respectful way.

Seeing here is quite as important as hearing.  
How much the people have to do in Catholic  
services. There is little to encourage naps by  
way of sleeping; there are frequent pe-  
riods of quiet.

I wish our Protestant teachers realized bet-  
ter the effect of silent prayer in a multitude;  
it is more telling than any ordinary utterance.  
The base of public worship is one's wander-

Thermamine to our readers as an absolute cure for Malaria. The best and most reliable substitute for quinine known. The manufacturer's name alone is a guarantee of its merit. Its efficacy is as wonderful as its cheapness. 25¢ per box. For particulars see advertisement.

# LETTERS FROM HAMPTON GRADUATES. CARPENTER, TEACHER AND MINISTER. HAMPTON WORK "THE MAKING OF ME." A POOR COUNTRY. WHITE COLLEGIANS. INTEREST IN COLORED CHILDREN. THE STRUGGLE UPWARD. A HOPEFUL COUN- TRY. A CLASSICAL STUDENT.

The following selections are made from letters written by Hampton graduates, on request of the Principal, to those who had contributed the scholarship, (\$70 a year) which paid for their schooling at the Normal School. Most of the writers have been teaching ever since they graduated, that is from one to eight years, and in the simple annals of their experience among their people and of their own early struggles upward, may be read much of the story of the progress of both races since this war.

## CARPENTER, TEACHER AND MINISTER.

The young man who writes as follows is one of Hampton's earlier graduates and has been among the most efficient.

"Va., May 4th, 1881.

Dear Friend: I remember very pleasantly the time when I was asked by Genl. Armstrong to write a letter to be sent to some friend in the North. It so happened that it was sent to you. At that time I did not know who you were, but now I have fully realized the General's object in having me write. I have been asked the second time to write, and this time I have an object myself; I wish to thank you for your generosity toward me, though I am a stranger to you. Your help to me has enabled me to help others.

## A TEACHER IN SPIRIT OF HIMSELF.

While at Hampton I had no idea of ever being a teacher, especially during the first and second years. But when I returned home my heart was melted down in sympathy for my people. I knew that God had opened a way for me and I felt under special obligations to Him for so doing. These thoughts have heavily upon my mind till I found myself in the school-room, not from choice, but from a sense of duty. I have had a great many children under my supervision since that time as a teacher, and I feel sure that a great many of my scholars have made real progress, and that their aspirations have been raised to make themselves good men and women. I have done nothing but teach for a livelihood, and to-day, with an experience of eight years in the school room, I feel it to be my highest duty to my people and to my God to do all that is in my power to help to enlighten my people that they may come to be better citizens and especially better Christians. I have not found teaching to be a very profitable business, and here many a time been reduced to straits for means, yet the consolation that always follows an honest effort to do one's duty has made me feel that I was richly paid. My work for my people has not been confined to the school-room but it has ever been my object and aim to help them whenever and wherever I could. I must say that the pleasantest part of my work has been that I have been able to say that I have had great success in this direction both temporal and spiritual. I believe that I have been the means of bringing some souls to Christ.

## DRIVEN INTO THE MINISTRY.

About a year ago I entered the ministry, and have been trying since that time to explain God's word to my people whenever an opportunity presented itself. A want of the right kind of books has prevented me from being as proficient as I wish to be, yet I have done the best I could, and am still trying to prepare myself to do better. I was driven into this from a sense of duty. I found so many inefficient men who often preached erroneous doctrines, that I felt almost bound for the sake of my Master, to try to correct at least some things. Again they come so short of settling forth the true principles of Christianity. The colored evangelists, organization men, are more particular about the kind of men they recognize as ministers.

## His OWN HOME BUILDER.

Four years after I left Hampton I married, and shall have been married four years in August. I found it quite hard to secure a home for my family and to provide for the necessary comforts, yet I have succeeded thus far. By hard work and close living I have paid for a lot, and with my own hands have built a very comfortable little house on it. I am content to continue trying to teach so long as I can live at it. The only thing that will drive me from the work of teaching will be small pay such as will not secure for me and my family the common comforts of life. I am happy to say that the colored people in this section of the country are making some progress in industry, in education, morals and

religion. They are also coming into possession of property, but they are not so much as it is in their power to do. I have written to you these lines that you might know whether or not the money spent on me had accomplished any thing. I hope that these words may carry to you consolation. "He that giveth to the poor lendeth to the Lord." With gratitude, I am  
Respectfully yours,  
L.

## INDUSTRIAL TRAINING APPRECIATED.

A young woman who is in every way one of Hampton's best representatives, writes: "My parents were slaves, and of course I was a slave too, but can't remember any of the hardships of slavery, only what my mother used to tell me. I am very thankful to our Heavenly Father that I was not old enough to know more."

My school life did not begin until the early days of childhood had passed. Then I was sent to a public school, where I learned to read and write. In 1876 the superintendent of the school sent me to Hampton one year as a State student. The next year I paid my own way partly by work while there, and the balance I made in work, while at H. is of great use to me among our people; and as the great trouble with them is to know when and how to work. The principles impressed at H. have been very useful to you for your scholarship."

She has taught ever since leaving Hampton, and hopes to make it her life work. Of her present post she writes, that it is

## A POOR COUNTRY FOR A POOR MAN TO LIVE IN.

The rent being so high he could never get a foothold. I can't name one colored man who owns a comfortable home here. The poor whites are in the same condition. The poor of both classes hire themselves to the rich for \$100. and \$110. a year. You may see from that what their condition is. Some few farm and make a little by having a cow, some a horse, and poultry. Intemperance is a great evil here among both white and colored. What little they do make, in part goes for strong drink, and sometimes the larger part too. I have quite a temperance organization here among the little ones. I believe they are the hope of the world. I can get only a few of the older ones to sign the pledge.

My people here are still superstitious and believe in seeing things, and in hearing the Lord speak to them, before they are converted. Many make a profession of religion and live very bad lives, but still they are followers of Christ, they say. Their morals are impure. There is only one society here. Do what you will in society. I am glad this is not the case with all of our people. At my home it is different. We can never rise as a race until there is a higher standard of morals with our people.

Yours gratefully,  
A."

## HELP FROM WHITE COLLEGIANS.

Another young woman, who has taught ever since her graduation, with much success, reports:

"Little or no opposition. The children take interest in their studies. The parents are very kind to me indeed, also the school officers. Most of the people own good comfortable white houses, though wages are low and work is hard to get. The men work principally on the public works in—as they can't secure work here."

The whites, as a general thing treat them kindly. There is a college for young men in this place, and they take quite an interest in the colored children. Several of them have charge of a Sabbath School in the colored church, which is largely attended every Sunday afternoon. I teach in the same school, and had there a great deal of interest manifested. I am particularly fond of this portion of my work, as there is so very much to be taught about the Heavenly Master and His wonderful works."

## THE STRUGGLE UPWARD.

A young man writes: "I was born a slave in 1850, so I was fifteen years old at the close of the war. By diligent effort I had acquired a little knowledge of reading and writing."

At this time ignorance and destitution were visible everywhere among us, and being sensible of our greatest necessity (education) my attention was at once turned to the improvement of my education; the question with me

was how was I to accomplish this. A colored school was organized and supported by the Friends of Philadelphia, but I had no means and my parents were poor, so of course I had to work hard for my support, and could not attend the day school, but in connection with the day school there was a night school also, which I attended as regularly as I could till the latter part of 1870. During this time I was swayed by great economy to save some money, with which I applied for and gained admission to the Richmond Institute, a theological institution for the education of colored preachers and teachers, supported by the Bapt. Home Mission Society. I continued here in school from Sept. 15th, 1870, till April, 1871, when I found that my means were about exhausted, and to replenish my purse I was obliged to leave school again. This was the beginning of the State public schools, and as teachers were in demand, I soon found employment as teacher in—County Va., where I am teaching now. I taught school here in the County from April, 1871, till the spring of 1874, and desiring to further improve my education, I wrote to my old friend and former teacher, desiring him to write to the Rev. Mr. E. C. Dixon, telling her what I so much desired. Upon the receipt of my letter she replied instructing me to go to Hampton the next fall, so the beginning of school found me safely at Hampton with friends and teachers, the memory of whom I still always cherish. I remained during the term, and at its close (June, 1874,) when we left for our homes, it was my intention of returning the next term, but seeing the great need of my services among my people, I was induced to engage in teaching again, and I am happy to say that my efforts with that of other teachers, so far, have been a success."

To all the young freedmen who can clearly recall the close of the war, the changes that have come to their people in all respects must indeed seem a wonderful story, though not all have had as cheerful an experience as the writer. His picture is certainly one of,

## A HOPEFUL COUNTRY.

"Eleven years ago there were only a few organized churches in the County, and the pulpits of those few were filled with ignorant preachers who indulged in various kinds of superstitions, but the churches have greatly increased in number, and are now governed by intelligent men. We have a Baptist Association, the object of which is the further advancement of religious principles. We have also a Sabbath School Union, which is composed of the Baptist Sabbath Schools of the County, and has for its object the promotion of the Sabbath School work. Both of the above organizations meet annually, and are doing noble work. Quite a change is perceptible in morals, and I am glad to say the state of indifference to others that characterized us in former years is fast subsiding, and in its place we can see a better spirit advancing, a spirit of love and sympathy for one another. Industry is generally encouraged by all; they seem to be awakened to the fact that the only way and honorable way to the enjoyment of peace and independence is a steady application to business; many have bought lands and are comfortably situated, some are engaged in mercantile business, a great many own horses, cattle, and have personal property of various kinds and are farming for themselves, but the majority are variously employed by the whites for wages which in some instances afford them ample support, and in others are scarcely enough to furnish the necessities of life. What has been said, no doubt truthfully, respecting the colored people's tendency (in other parts of the country) to spend their time in idleness, I am glad to say is not applicable to the people of this county. Idlers or those who have nothing to do, are met with very seldom, and when there are such persons they are stigmatized by all honest colored men who come in contact with them. The great evil (whiskey drinking) I am sorry to say prevails extensively, but not as much as in past years, which is owing to the strong opposition it meets from the Baptist Association and S. S. Union. Hoping that I may be able to do a great deal more in the way of instructing my race, and thereby encourage the dear friends who are spending their time and money in helping me."

With many prayers for you, I am  
Respectfully yours,  
C.

## A CLASSICAL STUDENT.

One of the few Hampton graduates who have not yet entered upon their work among their people, writes from a colored college in which he is pursuing a classical course.

"I have been since Oct. '78, a student of the St. Augustine Collegiate Inst. at Raleigh, N. C. I have read since I have been here Xenophon, An. Extracts from Plato, and Herodotus. In Latin I have read Harkness's 1st and

2nd Letin, and five books of Virgil's An. I find it an uphill pull, but that spirit that was drilled and forced into me at Hampton never fails to urge me on. The very height of my ambition is to go on a foreign mission. There truly is a great work for the colored youth to perform. The state of religion in the South is deplorable. The only remedy I see is a general diffusion of education among the masses, and this is the work that Hampton is leading off in. Hampton is as the great heart ever pulsating and driving its life blood (its graduates) through the remotest corners of the country. My prayer is, dear friend, not that you should assist me directly, but assist another poor boy as myself to gain an education. I would be truly glad to receive a letter from you.

I am, Obeyingly yours,  
H."

## LETTER FROM DAKOTA.

St. Paul, Minn., August 26th, 1881.

## EDITOR OF WORKMAN.

The Brule Sioux have heretofore borne enviable reputation for incorruptible clinging to old customs, and I was exceedingly disappointed in finding them imbued with a desire for improvement. The present Agent, Major Wm. H. Parkhurst, has taken hold of the Agency with a hearty desire to conduct it for the best interests of the service and in accordance with business principles. The Indians are beginning to break land and build houses. There is a general appearance of thrift that is highly encouraging. I am indebted to the kindly courtesy of Major Parkhurst for his hospitality and assistance during my stay at Lower Brule Agency.

The terminus of the Chicago, Milwaukee and St. Paul Railroad is just opposite the Agency and it will doubtless be a great annoyance unless the civil law is made effective in preventing crime by the punishment of offenders against the law.

The best interests of the Indians and the Indian service would be subserved by the establishment of a branch of the U. S. Court which would have exclusive jurisdiction over Indian reservations and which could hold sessions at the different Indian Agencies, say every six months.

Every community of human beings contains more or less wickedness, and Indian communities are no exception to the rule. Without law crime would rapidly increase, even among enlightened people. Many Indian reservations are practically without law.

At Crow Creek Agency the Indians are all scattering out over their reservation, taking separate claims, and are making great efforts to improve their condition—but there can be no doubt that their civilization is greatly retarded by the insecure and unsatisfactory title given them to the lands they are endeavoring to improve.

Unity and continuity of effort and absence of effective laws governing, protecting and punishing the Indians, together with the present system of giving rations to all, regardless of condition, are the great retarding influence which are now operating against the elevation of the Indians along the Missouri. The Indian will work, like the average white, black or yellow man, when compelled to. Moral suasion operates successfully when assisted by fear of punishment.

No Nation depends upon moral suasion alone to insure to the people the rights, relative of life, liberty and the pursuit of happiness.

The Indians are a part of the Nation. Not only of the Sioux Nation or other fictitious Nations, but the one which we are all proud to call ours.

The poor we have ever with us; but it is the duty of every community to lessen, if possible, the number of paupers within its limits, and this is most effectively done by educating the children and compelling the adults to do what work they can, and by punishing the idle and vicious.

Compulsion seems a hard, cruel word to many good people, but we are told that the Lord chastizes those whom He loves, and that conveys to me the impression that the all-wise and loving Creator considers it necessary to use an auxiliary force to maintain order for the purpose of compelling men to obey the law.

I had a very pleasant ride from Crow Creek Agency to Peoria Bottom, near Cheyenne, with the Rev. Thomas L. Riggs, of whom I have written before. The scenery between the two places named is very interesting and along the valleys of the Chappelle and Medicine Creeks is beautiful. The soil is very good—the first, second and third benches, and I am inclined to believe that the uplands would

## SOUNDS I LOVE.

BY A. C. HOADLEY.

Read at Hampton Institute by Mrs. E. N. L. Walton.

I need to love those gentle sounds  
That seemed but silence more intense,  
That burst within the Spirit's bonds  
Almost without the aid of sense.

The rustle when the wind was low  
Of leaves that hardly dared to stir,  
The flutter of the falling snow,  
The glancing snow buds eddying whir.

The genial kettle's soothing song,  
The hissing of a smoldering fire,  
The footsteps of a distant throng,  
The bell-tones of a far off spire.

I loved to lie on grassy knolls  
Beneath the shade of summer trees,  
To hearken to the hymn that rolls  
Toward Heaven upon the evening breeze.

I enjoyed o'er the rustic bridge  
To hear the brooklet's low refrain;  
I clomb the hay loft near the ridge,  
To listen to the pattering rain.

Last me down on a mossy stone  
A wide umbrella o'er me spread,  
To hear the sobbing night's low moan,  
Her tear-drops sprinkled round my head.

I loved the songs of early birds,  
The honest red-breast's joyous throat,  
The whippoorwill's complaining words,  
The wakaful cuckoo's pensive note.

The pigeon cooing 'mid the leaves,  
The thrush in daisy besquet hid;  
The swallow twittering round the eaves,  
And the chirp of the tattling katy-did.

The drowsy hush of the nodding eye,  
The low of the homeward wand'ring herd,  
The huzz of the darting dragon fly,  
And the hum of the glittering humming bird.

But most of all I loved to hark  
To the low sweet tones of the freddie ring  
When the hearth was as bright as the heaven  
And we listened to hear the cricket sing.

I loved all gentle sounds and low  
That seemed too faint for mortal ears,  
Almost I heard the spring grass grow,  
Almost the music of the spheres.

But now my ear has grown so dull,  
The world around me all so still,  
I pause and listen in the hall  
For any sound that void to fill.

I love all noises loud and shrill,  
I love all voices strong and clear,  
The raging surf, the clattering mill,  
Or any sound that I can hear.

I love the crashing thunder peal,  
I love the echoing cannon's boom,  
The ringing force, the jarring wheel,  
The shrieking file, the cackling loom.

I love the tones of eager men,  
The bold appeal, the loud harangue  
The torrent roaring down the glen,  
The clarion's scream, the cymbals' clang.

The jangling firebells' wide alarm,  
The moan of forests lone and drear,  
Each hath its own peculiar charm;  
I love all sounds that I can hear.

Yet there are sounds not fierce nor wild,  
And voices neither loud nor shrill  
Still heard as when I was a child;  
I love them for I hear them still.

I love, who does not love, the swell  
Of anthem from the hallowed choir,  
The solemn organ's breathed spell,  
The chiming of a tuneful spire.

The blessing of a grateful tongue,  
The praise of the good and great,  
The greetings of the fair and young,  
The music of a *te deum*.

And sounds I hear that wake the flow  
Of softening tears from pitying eyes;  
Went's timid plaint, the theory of woe,  
The orphan's tears, the mourner's sighs.

Though dull mine ear, one earnest prayer  
Shall sway me while my senses live;  
The deep, soft mutal cry "Forgive,"  
The one all needful cry "Forgive."

And there are sounds heard long ago  
Shall linger in my heart for aye;  
They follow whoso'er I go,  
They haunt me whereso'er I stay.

The voices of the loved and lost,  
The song that childhood's care beguiled,  
The tongues of youth's high Pentecost,  
The angry word unconcealed.

And there are sounds more faint than heard,  
My baby prattling on my knee;  
Ere's whispered prayer, morri's kindly word,  
Love's low reply, joy's laughter free.

The statutes of the perfect law  
Yat make my listening heart rejoice,  
And yat I hear with conscious awe  
The whispers of the still, small voice.

And though all earthly sounds were passed,  
If when my waning sands are run  
I listen trembling, at the last  
To hear the master say, "Well done,"

Then all the gathered clouds of sense  
From off the quickened ear shall roll,  
And angels' songs, with joy intense,  
Shall burst upon the waking soul.

## Teacher's Crib.

Mrs. E. N. L. Walton, of West Newton, Mass., who conducted the Senior's supplementary Normal course at Hampton Institute last June, has kindly sent us a brief review of her lectures, embodying the fundamental principles of teaching and some valuable suggestions as to methods of work.

Mrs. Walton, wife of Prof. Geo. Walton, agent of the Mass. Board of Education, is herself well known in New England as an experienced teacher and leader of teachers' "institutes." Those who had the advantage of her instruction will be glad to refresh their remembrance of it, and we are happy to give them and others the benefit of this recapitulation, before their own autumn school work begins. They will be pleased to read also in another column, the interesting poem "Sounds I Love," as effectively rendered by Mrs. Walton, as they will remember, at the dictionary entertainment she kindly contributed to their pleasure and the benefit of their school mission work.

## PRINCIPLES AND METHODS IN TEACHING.

To the Editor of the Southern Workman:

At your request I send you an outline of the work attempted at the Normal Institute held in Hampton from May 23rd to June 10th of this year.

It was the aim of the Conductor, first to impress upon the minds of the graduates who formed the Institute class a few teaching principles that should be followed in teaching. These were put upon the black-board in a conspicuous place and referred to daily, the members being directed to observe that they were adhered to in the models of teaching given upon the platform.

The following was the statement of PRINCIPLES TO BE OBSERVED IN TEACHING.

1. Whatever you teach, teach the thing itself, as far as possible, and not words about the thing.

2. Teach first the whole, then the parts. Lead the mind from the known to the unknown.

3. Give illustrations before definitions, ideas before names.

4. Never tell the child what he can find out for himself.

5. Appeal to the active powers of the mind, rather than the passive.

Throughout the Institute, the first period in the morning was devoted to an oral conversational exercise in Pedagogics, embracing the schoolhouse and its needs, the pupil, what should be expected and required of him, the requisites and duties of the teacher, and organization and general management of the school.

The remainder of the time was devoted to illustrating and enforcing the best and most approved methods of teaching: the elements of Reading, Geography, Arithmetic, and to some extent Writing, Spelling, and Composition.

The morning exercises were given by the Conductor, assisted by the regular training teacher of the school, Miss Hyde, who rendered most efficient service, and who also gave a valuable exercise nearly every afternoon.

In Reading, an attempt was made to show the best method.  
First.—Of teaching very little ones.  
Second.—Of conducting a class who had mastered the mechanical part as to call the words.

As far as time would allow, exercises in advanced reading were also given.

For the little ones, the object and word method was illustrated, first by the Conductor, and afterwards by members of the Institute, who in this and other exercises alternately noted the parts of teacher and pupil with commendable interest and skill, showing their attention and responses, that they were already quickened by a sense of the responsibilities they were soon to assume.

The object of reading being, in far as the reader is concerned, to gain ideas, it was enjoined upon all in the very first teaching of the very little child, to see that he grasped the idea a new word was intended to convey, before the new word was given; for instance, that he saw and talked about a cat, a leaf, a

dog, a jump, or a run, or at least pictures of the same, before the words cat, leaf, dog, running or jumping were put upon the board.

It was recommended that the words should be given in *Script* characters. It is as easy for the child to read "cat" as "cet," and much easier for him to write it, and the transition from the written to the printed forms is very easy and can be made without any extra trouble, as soon as the pupil needs to take the primer, or to read from the chart, (if the teacher is so fortunate as to have a good chart). The class were shown how to make reading charts for themselves and thus possess a valuable aid with little or no expense.

Teachers should see that their pupils not only recognize the forms of the words they see on the board or in their books, but that they have the *idea* the words are meant to convey. They should hold familiar talks about the subject of the piece, in which the child is encouraged to give his own thoughts, as well as those of the author, in his own language.

Habits of attention, memory and expression may be cultivated by occasionally reading, or telling a story or describing a scene and then requiring the pupils to give it in their own language, either orally or upon their slates.

The following arrangement of the consonant sounds was given, and it was shown how errors in articulation are often made, and how they can be cured by proper attention being given to the position of the organs of speech and movements of the tongue.

Some exercises were given to strengthen and discipline the articulatory member, as well as the lips, the jaw, the epiglottis and the larynx, most errors being made from sheer weakness of some muscles or from pure laziness.

LABIALS. DENTALS. PALATALS. VOTTERIALS.

	p	t	ch	k
Labials	b	d	j	g
Dentals	f	th	s	sh
Palatals	c	ca	z	ca
Votterials	m	n	y	ng

These letters above, which are in Roman type represent the *breath sounds* or *aspirates*; and those in Italic, the *voice sounds* or *subvocals*.

The following was the arrangement of the pure vowels.

	FULL.	STOPPED.
as in me	i as in pin	
" " may	e " " pen	
" " rare	a " " at	
" " far	u " " ask	
" " fur	u " " up	
" " or	o " " on	
" " home	o " " whole	
" " woo	o " " foot	

	COMPOUND.
i as in pine	
oi " oil	
ow " caw	

In my next, if you wish, I will give you an outline of the methods employed in teaching Arithmetic and Geography.

Yours truly,

E. N. L. WALTON.

Health and Humanity.

A former valued teacher of Hampton, and author of the Hampton Tract "Duty of Teachers," contributes to this column, the following excellent A B C of health rules, the ingenious verification of which has no doubt, been a pleasant task in the hours of her happy convalescence from long illness, and the due observance of which we recommend to all our readers.

"HEALTH IS BETTER THAN WEALTH."

Alphabetical Rules for keeping it.

Air your rooms, and your bed clothes, and clothes that you wear.

Be sure they are dry, clean and sweet with pure air—comfortable clothing gives pleasure and ease; dresses too tight bring on frightful disease.

Eat your food slowly while merry and glad; Food should be warm and sensibly clad; Get rested when tired—keep clean as you can; Hasten to bed you'll find a good plan.

In your room let the summer come all that it will; Just remember that children should not be kept still; Keep your nose always ready to smell a bed drain; Push out of any kind don't leave about.

Smoking and fresh air are better than pills; Taken with exercise they can many ills; Unless it is wholesome, well cooked and well chewed, Food will hurt you and do you no good.

Truly you will see the good that it can do; Waste it pure you may drink without question; Keep while you're eating—then it was a question; You must have some employment—walk out doors every day.

Lead and wisdom will help you these rules to obey; Boston, Mar. 1881.

E. W. COLLINGSWOOD.

I am now waiting for the Boat to leave for up River. The captain says "The Doctor is sick." I find that the term Doctor is applied to the hot water pump.

Bismark is a very busy little town; but road agents are too plenty to make traveling back and forth from the best-landing to the town, after dark, either pleasant or profitable.

I am very respectfully,

Your obedient servant,

Geo. LER. BROWN.

MRS. LYDIA E. PINKHAM, OF LYNN, MASS.

LYDIA E. PINKHAM'S  
VEGETABLE COMPOUND.

*From the Health of Lydia E. Pinkham*

**Is a Positive Cure**  
For all those Painful Complaints and Weaknesses  
common to our best female population.  
It will cure entirely the worst form of Female Com-  
plaints, all ovarian troubles, inflammation and Obstruc-  
tion, Piling and Displacements, and the consequent  
Spinal Weakness, and is particularly adapted to the  
Change of Life.

It will dissolve and expel tumors from the uterus in  
an early stage of development. The tendency to cancer  
tumors there is checked very speedily by its use.  
It removes fatness, fatiguery, destroys all craving  
for stimulants, and relieves weakness of the stomach,  
Headache, Dizziness, Nervous Prostration, General  
Debility, Sleeplessness, Depression and Indig-  
estion.

That feeling of bearing down, causing pain, weight  
and backache, is always permanently cured by its use.  
It will at all times and under all circumstances act in  
harmony with the laws that govern the female system.  
For the cure of Kidney Complaints of either sex this  
Compound is unsurpassed.

LYDIA E. PINKHAM'S VEGETABLE COM-  
POUND is prepared at 122 and 124 Western Avenue,  
Lynn, Mass. Price \$1.00 per bottle. It is best by mail  
in the form of pills, also in the form of lozenges, on  
receipt of price, \$1.00 per box for either. Mrs. Pinkham  
freely answers all letters of inquiry. Send for pamph-  
let. Address as above. Mention this Paper.

No family should be without LYDIA E. PINKHAM'S  
LIVER PILLS. They cure constipation, biliousness,  
and torpidity of the liver. 25 cents per box.  
Sole sold by all Druggists.

## THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

Situated within one hundred yards of Fort Monroe;

At the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward be-  
tween the capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running  
to and from these cities touch at the pier going and returning, with the U. S. mails, landing only 20 rods from  
the Hotel, which is constantly built and

COMFORTABLY FURNISHED.

Has hydraulic passenger elevator, gas and electric bells in all rooms, water-rooms for bath, including Hot and  
cold closets on every floor, with the most perfect system of drainage of any Hotel or public building in the coun-  
try. And as a resort for the pleasure-seeker, invalid, or resting place for travelers on their way to Florida or the  
North, the House, with accommodations for about

SEVEN HUNDRED GUESTS

Presenting inducements which certainly are not equaled elsewhere as a winter, or cold weather, sanitarium.  
The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial  
winters of the South and cold summers of the North. For sleepless and nervous the delicious tonic of  
the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bed-  
room windows, are most healthful soporifics at the Hygeia.

For further information, address by mail or telegraph.

H. PROHNS, Proprietor.

## KIDNEY-WORT

THE ONLY MEDICINE

IN EITHER LIQUID OR DRY FORM

That Acts in the same time on

THE LIVER, THE BOWELS,

AND THE KIDNEYS.

WHY ARE WE SICK?

Because we allow these great organs to

become clogged or torpid, and poisonous

humors are therefore forced into the blood

that should be expelled naturally.

KIDNEY-WORT

WILL SURELY CURE

KIDNEY DISEASES,

LIVER COMPLAINTS,

PILES, CONSTIPATION, URINARY

DISEASES, FEMALE WEAKNESSES,

AND NERVOUS DISORDERS,

by causing free action of these organs and

restoring their power to throw off disease.

Why suffer millions of pains and aches

Why torment with Piles, Constipation?

Why frigate over disordered Kidneys?

Why endure nervous or sick headache?

Use KIDNEY-WORT and rejoice in health.

It is put up in Dry Vegetable Form, in its

own case, in a package of which makes six weeks of

medicine. Also in Liquid Form, very conve-  
nient, for those that cannot readily swallow it.

It acts with equal efficiency in either form.

GET IT OF YOUR DRUGGIST. PRICE \$1.00

WILLIAMS, RICHARDSON & Co., Prop'rs.

(Will send the dry post-paid.) RICHMOND, VA.

## THE DEPOT.

Having opened a Store in connection with my  
business, I am on hand at all times to furnish

PURE PAINTS AND OILS,

PUTTY, GLASS, VARNISHES, ETC.

A good selection of

BRUSHES

of all kinds

Painters' Supplies & Artists' Materials.

AGENT FOR

# Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. X.

HAMPTON, VA., NOVEMBER, 1881.

NO. 11.

AMERICA'S THANKSGIVING.

# Southern Workman,

**TWELVE PAGE MONTHLY.**  
(Reduced to eight pages from July to October, four months.)

**S. C. ARMSTRONG, Editor.**  
**H. W. LUDLOW, Editor.**

**Mrs. M. F. ARMSTRONG, Regular Contributor.**  
**Mrs. W. N. ARMSTRONG, Regular Contributor.**  
**Mrs. ORRA LANGRISH, Regular Contributor.**

**TERMS: ONE DOLLAR a year IN ADVANCE.**

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-column.	2 75	7 50	13 50	23 00
1-2 "	1 50	4 50	8 00	14 00
1 "	0 75	2 25	4 00	7 00

Special notices 10 cents per line.

Entered as Second-class Matter in the Post Office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute, and printed on the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work, from all parts of the country, is solicited, and will be done cheaply and well. Estimates will be sent on application.

THE HAMPTON INSTITUTE begins the year with a large influx of students. It has opened without the presence of either its Principal or lady Principal, the latter still absent in Europe, her place temporarily supplied by one of the teachers. The Principal having left for Dakota a few days before the term began, with a party of thirty Indian students, to return them to their homes, and establish them at work there, and bring back as many more in their place. An account of his journey, and reports of the Indian graduates and the new comers will be found in other columns of this paper.

The school has filled more promptly than ever. The largest number enrolled at any time last year was 385, including 69 Indians. This year, that number was reached on the sixth day from the opening, though thirty of the Indians had gone home, and the new ones had not arrived. Last year at this time, the colored students numbered 174 boys and 80 girls.

At present the whole enrollment is as follows:—Colored boys, 211; Colored girls, 160; total, 371. Indian boys, 62; Indian girls, 28; total, 90. Boarding students, 432; day scholars, 29; grand total, 461. These figures include all the newly arrived Indian students, forty-four in number, 30 boys and 14 girls, all from Dakota Territory, who have been brought by the Principal and by Lieutenant Brown.

The Senior class numbers 69; the Middle class 68; the Junior class 160; the Preparatory class 15, (all girls); the Night class of work-students, 89 (last year at this time it was 24); and the Indian class, 74. There are 3 Indian young men in the Senior class; 1 in the Middle class; 2 Indian girls and 9 boys in the Junior class, and 1 young man in the class of work-students. Of the 160 new scholars in the Senior, Middle and Junior classes, 116 come from Virginia, 13 from North Carolina, the rest scattering from West Virginia, Maryland, South Carolina, Georgia, Louisiana, the District of Columbia, Indian Territory, Nebraska, New York, Pennsylvania and Connecticut.

Of the new scholars, 61 report themselves as coming through the agency of our graduate teachers, and 14 through that of under-graduates; one girl brought

9. Several of our graduate teachers came in person to bring their students.

The material of the school seems good—on the whole in advance of former years. So many more have applied than it is possible to accommodate, that, in the duty of selecting the best, examinations have been strict, and no Preparatory class has been formed except for a few girls; the boys going into the night classes.

The chief increase has been in the number of the girls and of the work-students. This is as it should be, and what was desired, but it has been so great that it has strained the enlarged facilities of the school to the utmost to provide work and quarters. At this time last year there were 38 colored girls, there are now 160; then 24 work-students, now 82. These work-students, working by day and studying at night through the whole year, winter and summer, earn enough often to carry them through all the rest of their course in the Institute, and get habits of industry and self-help to last them their life time. It is the best class in the school. It speaks well for the people that so many are anxious to acquire such opportunities.

The Stone Memorial building, which will contain the Printing office, Knitting, Tailoring, and Sewing rooms, is approaching completion, and will be ready for occupancy by the first of January, greatly to the relief of Virginia Hall. The Indian girls' building, which has had to wait for masons, is now pushing rapidly forward, though it can hardly be occupied before spring. Meanwhile, half the Indian girls with two of their teachers, are lodged in what has been a private dwelling house on the place.

The various industries of the school are all increasing in activity, except the knitting department which, owing to overstock of the market, has been reduced with the business of the Boston firm whose orders it fills.

The school farm employs 9 of the work students, and a detail of 60 to 70 from the regular school, each student working one and a half days per week.

Shellhanks, the school stock farm, employs 10 work-students. Its great need is for simple wooden barracks to contain also a dining and school room.

The Huntington Industrial Works employ 12 work-students, and a detail of 18 from the school. They are employed in the sawing, planing and moulding mill, wood working and running the engine, and in manufacturing wooden truck cases and can boxes for packers in this county.

27,000 of these cases have been made since April. The saw mill is manufacturing from eight to ten thousand feet of lumber a day. A colored student runs the engine; another is making a first rate sawyer.

The Farm shop—wheelwright and blacksmith—employs 2 colored work-students and a detail of 2 colored and 4 Indian boys from the school.

The Brick yard employs 11 students, all colored. Over 2,000,000 bricks have been made during the present season, mostly for the Stone Memorial and Indian girls' buildings.

The Indian Training shop has been transferred this year to larger and very airy and commodious quarters, in what was formerly occupied by Mr. Bryce's packing house. It is here, pro tem, till a new shop is built, or other permanent arrangement made. In the Indian shop 8 colored students are also learning trades, one of them a native African boy, a very bright little fellow. The trades taught here, thus far, the carpenter's, tinsmith's, shoemaker's, saddle and harness maker's, and painter's; the last two having just been started. There are both Indian and colored apprentices in all. Other trades will be added as they can be. Including the newly arrived Indian students, about 45 are at present employed in the training shop. Each trade is now under the charge of a practical mechanic, as in charge of a practical mechanic has been made in the shoe shop to enable the apprentices to work standing at their benches. The carpenters' work during vacation has been rekindling the Butler school house—with 70,000 shingles; putting in a wing to a private dwelling, general repairs, and making school tables, benches and beds—over a hundred of the

last made and repaired. The tanners are doing the tin work on the new buildings, and manufacturing all articles of tin and sheet iron for domestic use on the place; for example: 50 bread pans and 75 wash basins were made during vacation. The shoe shop is turning out 15 pairs a day—of men's shoes. The students of the regular classes work one and a half or two days in each week; those of the Indian class, five afternoons; those of the night class, every day.

The Engineer's department has doubled in forces this year. A new boiler house has been erected, containing two boilers and all the steam heating and cooking apparatus for Virginia Hall and the Indian Girls' building. This department employs 3 work-students, 10 from the regular school classes, working two days a week, and 7 outside hands. The students' direction, repairs, and manufacturing iron bedsteads for the school. In the first two weeks of October, 42 iron bedsteads were made. In four days from the time of an order for 25, they were finished and the boys sleeping on them. Three-quarters of the work on them was done by students; that is, all but some extra night work by the outside hands. The need of the Engineer's department is now a lathe for repairs in iron work. It would save much time and money.

The Girls' Sewing department, employs the same number of students as the farm; 9 work-students, and a detail of 60 girls from the school, working each two days in the week. The best workers among them are employed in the Tailoring department on the boys' uniforms.

The Boarding department and Laundry employ the rest of the girls in the various branches of house-work, which naturally increases with the growth of the school.

Ten resident graduates, and three more living in the town of Hampton, are employed at the Institute, two as teachers in the Butler school, two teaching in the night class of work students, one in the Indian class, two in industrial training of Indians, one in charge of the tailoring, one forewoman in the Sewing room, one type-setter, and three as clerks. One more is superintendent and manager of the Shellhanks farm and the work-students employed upon it; and his wife, also a graduate, is teacher of their night-class; making 15 graduate employees, some permanent, others changing from year to year.

The influence of these resident graduates in the school is good. Some of them teach in the Sunday school, and in the vacation have access to the library and reading room, and reading circles and evening classes have at different times been formed for their benefit.

The demand for graduates teachers is unusually large this fall. Over twenty more applications than we can fill, are on hand, coming chiefly from Virginia and North Carolina, and one from Tennessee.

The members of the last graduating class, with but few exceptions, are engaged in teaching.

The outlook for the school's work and its results were never more encouraging.

Mr. HARRISON, the special correspondent of the N. Y. Tribune, has made one of the most valuable contributions to the social science of the Negro question. He is a higher order of man than the news-men are usually employ. He has evidently not been taken into the editorial rooms of the paper and disciplined in the first duty of common journalism, that of gathering only facts which prop up editorial theories. Nor is he a man who would submit to dictation in the method of his investigation. His reports remind one of the journals of noted travelers who enter foreign countries without political or social prejudices, and recount what they see and hear. Now all this kind of information was impossible ten or even five years ago. Northern readers did not want to hear the truth so much as they wanted to hear evidence of what they accepted as the truth. Given the political complexion of a great Northern newspaper, and it was easy to determine in advance, the reports of its correspondents. Unity, even

in journalism, must be preserved, and it could not happen, in journalism, that the editor should make one statement and the correspondent another. (Growth and increasing breadth of public opinion now make it possible for men to tell, and men to listen to the truth. In this grand historical process covering the Southern country, we have always insisted that the "outrages," the political disturbances which so many good people considered an evidence of the hopeless anarchy of the South, were only phases of a growth, the sharp pangs of a new birth, the natural and necessary attendants of an abrupt social reorganization. It is coming true. People are getting into good temper North and South. There is no irreconcilable antagonism in the social and political condition. The questions are serious enough, but they are not raised on the color lines. There is nothing to fight about. The old men North and South, who inherited solemn hatreds of each other, are rapidly dying. The new generation of men, North and South, have no time to listen to "grievances." Men like Mr. Harrison, pains-taking, keen-witted, closely observant, tolerant, with a wide knowledge of men and things, will now be in demand.

These letters of Mr. Harrison's (Tribune Extra, No. 81.) show that there is no hazardous work at the South. Men are building better than they know. Before the war the Southerners were politicians, and the Northerners were fortune hunters. Now they are working on the same lines, irrespective of color. Men want to make money, and the prospect of making it out of politics is very dreary. Colored men think alike with the whites, and the most thrifty, the forward-looking have found that there is little to be had out of "office."

There are signs of a strong reaction in the South; signs that politics, instead of being the principal subject of talk in the court room, the bar room, and the parlor, will be a matter of secondary importance.

The statements made by Mr. Harrison show that the development of the South is normal. There is no superior or despotic power controlling it. The Federal Government made a bad business at first of reorganizing the Southern states, but finally keeping its hands off the social forces during the last few years, and in allowing the people to work out their own salvation, it has shown the advantages of free institutions, the capacity of the people to take care of themselves without a paternal Government. The sparsely settled condition of the country has been of great use in rapidly securing order out of the war debris. In thickly settled communities, social lines are more strictly and permanently drawn. Men don't need each other as they do where numbers are few. The solitary white farmer cannot afford some association with the solitary black farmer across the way.

Besides, the system of slavery, by educating the Negro to habits of labor, made him a formidable, and, therefore, respectable competitor of the white. The period of stagnation at the South is over. The currents are moving, and both races are floating down together, whether they know it or not. The facts showing all this are clearly developed by Mr. Harrison, and they are an important contribution to practical literature and social science. There are also signs already of a new class of thinkers at the South, who will and ought to command the confidence of the North. These are not ambitious for political situations, but are more interested in the philosophical side of the question, and they will soon be making most valuable contributions to our altogether too limited stock of knowledge regarding the population of our Southern country.

It had been the intention of the editors to resume in this number, the publication of the "Sketches of Mission Life," which were so favorably received last winter, but the press of matter in connection with the arrival of new Indians, has unavoidably crowded out, for this month, Mrs. Armstrong's interesting journal. It will appear, however, in the December number, after which date there will be no interruption in the publication of the three or four remaining "Sketches."

## EDITORIAL CORRESPONDENCE.

Gemini Pass, July 1903.

It was fun to get out of the lower world into the heart of the upper Alps; and the sensation in the desolation and solitude of their altitudes. There is nothing more striking than the depths into which one looks as he skirts the mountain sides in this splendid climb. There is a repose and majesty in the lofty peaks above, but it was to me exciting to look down and around, and to think of the great elemental forces that produced these tremendous rifts, splitting open mountains of solid rock on whose sides even still are the rough, ragged scars, a mile in length, as if the tearing had been done but yesterday.

The force of the Alps impressed me as much as their grandeur. They hardly have the majesty of the mountains of Hawaii, Mauna Kea, and Mauna Loa, which rise gradually, gradually, symmetrically, fifteen thousand feet from the ocean level, and surrounded by the infinite expanse of the sea, tranquility, a combination of earth and sky and ocean, which nothing can equal for impressions of vastness, grandeur and infinity; but there is a perpetual surprise of effects in the Alps; they are terrible at times, and seem to threaten one who dares to approach too near, and sometimes in anger fling into their awful depths the too daring traveler. They stand near each other yet separate; full of action, independent, defiant. The calm summit and peaceful slopes of the mountains of the Pacific ocean have about them a spirit of worship; they are God's great altars. The Swiss are like their mountains, individual, inviolable.

The soft Hawaiian race, responding to the lesson of its mountains, bestows on their children the most religious of the Polynesian, until—an unreplicated fact in human history—their nobler nature revolted from the monstrous restrictions and rites of their old religion, and the system—almost at the very moment that the white flag of a missionary ship appeared in the horizon, and they threw themselves as a nation into the arms of Christianity. They are dying for want of morality, but their mountains did not teach that, and the missionaries could not work miracles; dying to the music, like that of an Aeolian harp, that comes sweet and low from sea and land in soft breezes, inspiring the heart with kindly emotions and superstitious reverence, but in it there is no call to self-restraint or duty, for nature there creates no necessities. She only pleases—she hints, no danger of straggling through neglect; no struggle in the wild and perilous chase for game to live upon. The Alps are not sympathetic; they do not, like the tropical mountains, soothe to and soothe the race that lives upon them, but daily challenge its courage in a hundred arduous ways, and have created a people of wonderful hardihood and power.

From the summit of the Gemini Pass the view is panoramic, grand. Far down below lies a lovely quiet valley and the pretty village of Leukerbad. Across the valley is an array of mountains as if on dress parade—the Matterhorn commanding; Monte Rosa, Weissborn and Mount Collen have fine positions. They are all in white and they shine in the sunlight, contrasting with the rich green of the valley below. The practical view is interesting. These glaciers and masses of snow are a blessing to Europe. The mountains gather all the snows of winter, and under the summer's sun yield a gradual supply of water. The hotter the sun, the more parched the plain, the faster the melting and the fuller the flow of water that maintains the millions of human beings who live in the valleys of the Rhine, the Rhone and Danube rivers.

You see a frozen sea lifted over ten thousand feet into the air, sending its waters down in long winding streams to join its way an endless amount of comfort and happiness for man; draw up again by the sun in the form of an invisible mist, to descend as snow-falls upon the mountains, and be once more distributed over the surface of Europe and make its course to the ocean.

Especially going down the zigzag path that is cut into the perpendicular or overhanging cliffs of the Gemini Pass, and throughout Switzerland, one is constantly amazed at and exclaiming about the splendid engineering. One may be at first timid of the bold cuts and daring spans, but soon feels that brain and conscience as well as stone and mortar have been put into them, and trusts them.

The Gemini road is wonderful—it has no where to go—there are steep precipices before and behind and an average 3000 feet below, but somehow it finds its way through or around the impassable rock; a terrible chasm always beneath. It is well for only those of steady nerves to look over the slight parapet on the outer side of the road. It reminds one of the *pali* near Honolulu, on it is three times as high.

Napoleon is said to have built the first good road in Switzerland.

Into the delicious warm springs of Leuker-

bad at the foot of the pass! We floated for half an hour in luxurious waters; every moment was blissful after seven and a half hours of tramping with no relief but an occasional clasp at a horse's tail in the tollhouse ascent. In these famous baths people will lie in their flannel suits, eat, play cards, receive visitors and chat day in and day out; only their heads are seen.

Dinner was good, except the chicken.

We had done a good day's work; all we set out to do. But why not go on? It was only three o'clock P. M. It is wise to make a tremendous day's journey, not upon a plan or purpose to do so, for the idea of it alone fatigues, but to keep right on so long as one feels like it. So we took a wagon for the railroad down the Rhone valley 10 miles distant, and drove pleasantly through a picturesque region. How impressive the view from Leukerbad. Around it rise mountain peaks here and there to a height of nearly 5000 feet. They stand in a semi-circle like the sides of a vast cathedral. There is the appearance of design in the buttressed sides whose regular curve and swell correspond with the graceful spires of rock that rise far above into the air and seem to cut through the blue sky.

Going down the Rhone valley is like going up the Rhine river. What a view as one descends into the former!

A winding, level, lovely valley, threaded by a silver stream; on either side lofty mountains whose summits stand like guardians over it. Beyond in the distance, are more mountains.

We noticed that the houses were not scattered around but clustered together in villages; no doubt very dirty, but most picturesque in appearance as they lay on the mountain side.

What little bits of patches of grain, oats, and potatoes are planted! A large part of them could not have been over a quarter of an acre in extent. The subdivision of the land in the descent of it from father to son has led to what seems absurdly small holdings. This is peasant proprietorship with a vengeance. No wonder the people can't be conquered. Each man owns a part of his country, and the harder he works to get anything out of it the more he loves it.

We were for a while in the "high Alps" where cattle are pastured all summer; each one wears a bell. Their owners stay there making butter, the sales of which purchase their winter food; each one is allowed to pasture as many cattle as he can feed all winter.

The weather was hot through all our trip, and the Alpine life was refreshing. It is bottled, and goes off with a bang; but there is no leaven in it. I found no trace of a devil in all that region.

Night at Marigny, and next day a drive to Chamounix. This is a much described region and I shall not attempt it. Like Larches, Chamounix has too many hotels. It is only good to sleep in. It is surrounded by magnificent mountains, whose peaks tower up majestically. Here is seen the summit of Mt. Blanc, the highest point in Europe. With a mule between us, and a guide, we ascended the Brevent, and from its heights thousands of feet from the valley below, looked at Mt. Blanc. The Alps are peaks that, from Chamounix, had loomed up over us and rivalled it in height, diminished, seemingly, as we approached their level opposite, but all our climbing made no impression on Mt. Blanc, which steadily rose as we rose, until the real summit disclosed itself dramatically as the clouds parted like curtains, and its stately white crown appeared again: the blue at its great distance as ever.

We looked into dizzy depths below, and on vast masses of mountains on every side; for we were in the center of a great amphitheatre, high in the air, and had a Grand survey.

There was this trouble; one's mind couldn't take it all in; one has an annoying sense of incapacity at such times. The picture would not become one's own. Only by an effort, by a steady strain of the faculties can one impress on one's self a scene like that.

Down again into the valley just in time to escape a waiting. Next day parted from my recent and delightful companion, and mounted a diligence for Geneva; a pleasant ride beside an English boy attending school at Geneva to learn French, with a lot of other English fellows, he said, divide off according to nationality; the English and Americans together, and keep by themselves.

Thence to Paris in a compartment car with a jolly young Frenchman who couldn't speak over ten words of English. We exchanged views on scenery, the Alps, the country, the people, on the slenderest stock of French on my part, and had a famous time all the evening.

After the Alps, from Geneva to Paris, the country is uninteresting. Reached Paris just after the warm spell was over. Marched to the Arc de Triomphe, studied the city from its summit with the aid of a map; did the same from the top of the Vendôme Col-

umn and church of Notre Dame.

Did all south of the Seine one morning easily, including the Hotel Clugny, the Luxembourg, the Invalides, Invalides, tomb of Napoleon, and Notre Dame. Attended midday Sunday services afterwards at the Invalides, where the worn-out veterans of the Grand Army, armed with canes, appeared in mass, and made their responses to the prayers by an "order arms" accompanied by a roll on the small drums. The Republic don't care much for religion, and things were hurried through with.

The tomb of Napoleon, the historic paintings here at Versailles and elsewhere, are an education in the ideas of Napoleon and in the spirit of war that must powerfully affect the French people. Recent troubles may have knocked a good deal of martial nonsense out of them; some say they don't care for these pictures.

The array of war figures at the Invalides illustrating the exact physical stature, type, expression, complexion, military dress, and weapon of every race and tribe under the sun, was most interesting. I was delighted at meeting specimens of Polynesian races that seemed like old friends and I wished to shake hands with them.

Another equally interesting exhibit was of figures true to the life, of every type of man from prehistoric time till now, all in military dress; the most natural, for man, historically, is chiefly a fighter. I never saw a Greek or Roman before. These were wonderful objects of lessons a few of them in American colleges would be of great value.

Three visits to Notre Dame for its grandeur. One can gaze by the hour at the rose windows. There was a funeral of the little child of a poor woman before one of the chapels; a very tender sweet service. It touched every one who was near, and we stood reverentially by till the simple service was over. There seemed to be a great cathedral, where for ages people have come with their griefs. The music on Sunday was glorious. The organ peals rolled among the arches supporting the weird chant of the priest and his choir.

Saint Chapelle Chapel must be the loveliest thing of its kind in the world; it is all richly painted windows; one cannot forget its delicate colors and marvellous gables. Standing there seemed like being in a dream, so wonderful was its beauty.

Wondering twice through the Louvre was tiresome. I didn't in the least enjoy the old masterpieces—excepting one or two which opened up wonderfully on studying them. As among the Alps so among such an array of pictures, one's mind becomes paralyzed or dazed by the blaze of glory on every side.

It was interesting to study French ways. How they live out of doors! They are light hearted, gay, but a wonderfully efficient, executive people. They go in for fun as no others do or can, and yet they excel in carrying out gigantic enterprises. They get all the amusement possible, make all the money possible, and are devoted to the glory of their nation.

Paris may be seductive, but it takes I think a Parisian to fully enjoy it. I saw lots of bored Americans. I believe four-fifths of those who go to Paris are from homes sick, or do so, and yet they excel in carrying out gigantic enterprises. They get all the amusement possible, make all the money possible, and are devoted to the glory of their nation.

Paris may be seductive, but it takes I think a Parisian to fully enjoy it. I saw lots of bored Americans. I believe four-fifths of those who go to Paris are from homes sick, or do so, and yet they excel in carrying out gigantic enterprises. They get all the amusement possible, make all the money possible, and are devoted to the glory of their nation.

The pioneer said to cut his way westward. Now, the locomotive, the compressed energy of the nineteenth century, dashes far ahead of him, scaring away, with its terrible scream, the wild beasts whose howlings were the terror of the settler.

These parallel railroad lines that are belting the continent, flying over canons and cutting through mountains, show us the grandest march of civilization the world has ever witnessed.

Who of the party that drove that moonlight night from Chamberlain to Crow Creek will ever forget the vast expanse of prairie that spread away from the foot of the rolling hills, and the sinking of the sun below a horizon of land and sky, which, for its long, unbroken level line, was like the sea. The sentiment of the boundless landscape, without a sign of life except our lonely wagon, the lines of the sun set, the soft beauty of the after glow, affected us like fine orchestral music, and then the moon shone out, and seemed to be journeying from nowhere to nowhere.

Five hours of steady jogging brought us to a wild and broken country, where, as we descended rapidly a steep hill side, the wagon, through a mistake of the driver, overturned, and the two members of the Hampton Faculty, a student friend from New York, who had joined us in Chicago, two Indians and the driver, landed on their heads, followed by a lot of trunks and packages that had been stored away under the seats. Poor Zie-wie cried pitifully at first, with her head on the lap of the lady member of the Faculty, who herself was badly cut across the cheek, but we soon found that no one was seriously hurt, and, fortunately, we were only a short distance from the house of the well-to-do estimable Mr. Don't-Know-How. Zie-wie's father, who soon supplied a fresh wagon, and conducted his daughter, who had been absent three years, to her home. This meeting in the moonlight in front of the log house illustrated Indian character. The mother kissed her long absent child, but sisters and friends merely shook hands quietly, and there was no evidence of the deep feeling which undoubtedly existed.

Looking into Zie-wie's home, I saw one large room about 20 x 25 feet, with two double beds, a stove, a washstand, a few miscellaneous pieces of furniture, and a very dirty floor. Under the same roof was a store, with the sign in large letters "D. K. How." His is one of the best and most thrifty Indians, but the home was ugly, and it was hard to leave Zie-wie in a place where she would not even have the privacy which her newly learned modesty demanded. The next morning her father brought her to the mission school, to stay till she could make some changes in his house, and Zie-wie was gladly welcomed by Mrs. Duigan, who was just opening her boarding school for Indian boys and girls, and at once engaged her to aid in the work of the school, and assist in the care of the girls. Her arrival was most opportune, but her father looked sad, for Zie-wie had talked with him long the night before, and told him she could not bear the way in which she found her people living. The father told us, with a sigh, that Zie-wie had cried all night because she was civilized, and her sister had cried all night because she was not civilized. Don't-Know-How had long looked for his daughter's coming, to help him in his agency store, to keep accounts, etc., and she may do it yet. She is not a brilliant girl, but has force of character and good instincts, and is a case of many, who, if the way were open, could leave their people with good influences.

October 4th noon at a deserted stage ranch, the expected foot absent. Nothing to cook with; but we had a frying pan and some stores which we had brought, expecting to find facilities for cooking on the road. Indian boys made a fire in no time, we cut up our bacon with a jack-knife, made tea, and at the artist's suggestion, in tomato and oyster cans which we picked up in the vicinity, and having cared for our horses, sat with fried bacon to one hand and hard tack in the other and wanted nothing. Appetites sharpened by prairie air, transformed it into a supreme feast, which Delmonico could not have made more satisfactory.

We made another twenty-five miles that afternoon. To the left lay a magnificent grassy plain about four miles wide and six in length, surrounded by hills that suggested an amphitheatre for some great future event, some as yet undreamed of drama in real life. We drove at a slow pace, hour after hour, over excellent prairie roads, unimproved by man, though vast stretches of prairie and hills were visible. There is a solemn stillness, it is like the sea, the clouds array themselves in purple and red and gold, and as we look, we seem to be upon a road that has no end, a path to the horizon. From the distant hills the keen north wind whistled down, making my borrowed buffalo coat none too warm. Far away, Medicine Butte lifted its blue crown a little above the others, until the evening shadows dimmed the grand outlines, and sight found us at a second inhospitable

ranch—"Jones' Hotel." This house of entertainment upon the bank of the upper Missouri, being typical, deserves a description. It is 100 feet long by twenty-five feet wide, and six feet in height, built of logs plastered with mud, old and dilapidated, possessing a few dishes, a wash basin and towels, not much by way of bedding, and having, altogether the air of a being outside of civilization. All sorts of people are around, and it is most picturesque and amusing. We are jolly over our hard-tack, bacon, and coffee, and wonder how it is that we are away from here. Forty-eight miles that day.

Another half day's ride of twenty-five miles brings us to Pierre, on the Missouri, the terminus of the Chicago and North Western R. R. Hence over a rough road of 100 miles we are transported to Deadwood, in the Black Hills, all its supplies, a business which employs some 6,000 cattle and hundreds of teamsters, a tough and rude set, far less amenable to good influences than the wild Indians whom they despise.

Their "bull teams" are a peculiar institution, connecting rail road termini with the extreme limits of emigration. They crawl along in processions miles in length, hivoacking at dark, when the cattle are fed after the day's task.

After dining from a bill of fare including antelope steak, fried elk, etc., we jogged along thirty miles further, passed Fort Sully, crossed the Missouri opposite Fort Bennett, where another two miles brought us, to a wagon ride from Chamberlain of 120 miles, to Cheyenne River agency, where about two thousand Indians, under the care of Maj. Love, are encamped within a radius of thirty miles. Here is a set of long one-story white buildings, a sort of wooden camp in a wild country, no signs of civilization. Indian log huts, tepees and tents here and there. Rest was refreshing.

The Indian camp which we wanted to get were still twenty-five or thirty miles away. Chiefs were summoned, but only Little Bear came. One needs time to do anything with Indians. I wanted three days, when I had one, but finally started back with three capital young fellows.

Our boys were kept in good positions, and recruits for Hampton drummed up. Stormy weather threatened, for "kumby" roads in wet weather present a variety of mud and known in the East, and make horseback travel, often impracticable. For a while the situation was distressing. Stuck in the mud 1,600 miles from Hampton, and, no way out. However, the breaking of a lovely dry road assured us, and with three bright boys, we started on the luck track down the bank of the Missouri, for more Indians and home. One of our Indian detachments stole a horse, and the horse and rode off to escape shame. The rest are pure Indians.

October 6th. To-day we are crossing the upper Missouri 1,000 miles from its mouth, on a flat boat or scow. Two wagons and four horses aboard, with the three Indian boys just caught, and brought in spite of cold and storm, from Mackenzie Point, Little Bear's camp, twenty-five miles from the agency. A Dutchman for Captain and at the oars four bare legged Indians, who spent most of their time overboard, pushing us off the sand bars on which we were constantly running. How picturesque it all! Dreary hills, "bed lands," with river bottoms; loneliness on every side. The artist is continually struck with its resemblance to the Nile country, where he has spent two winters. The low river, the wide uncovered flats, the dark red distant hills, are all Egyptian. The plain with its brown grass is the Sahara. As the sun goes down, the solemnity grows, still one feels as if in some grand cathedral.

The water is muddy and the current strong, the river just being more than three hundred yards wide. The crew took our scow far up stream, then, jump on board and pull hard to get to the opposite shore before they were swept below the landing. Any one falling overboard will be sure to drown, as the sand in the water fills the clothing and pulls one under.

All along the road we admired the woods on the river banks, in their rich autumnal dress. Miles of golden pines stood up, interrupted by groups of brilliant red and green, and contrasted with the sombre hues of the background. Now and then we came to cattle ranches, low log huts, covered with clay, but comfortable in spite of their roughness. I must mention the good work done at St. John's Episcopal School at this agency, by Mr. and Mrs. Kinney, assisted by Miss Novotz. They have thirty bright Indian girls here, who are giving an excellent practical education in household industries, besides teaching them the English language and Christian truth. The material of the school is capital, but the work is sadly done. The influence of this agency have been in past years very troublesome. They killed a missionary some years ago, and threatened a massacre of the whites. These terrors are not, however, likely to be repeated.

The influence of missionaries in the various stations to which youths from Hampton re-

tura, is one of the strongest grounds of hope for the success of our efforts. In every case I asked them to look after and encourage our students in every way they could.

The agents' supply work, but the missionaries are all important. Because "the Kingdom of God is within you," because it is an outward thing, but a force rather than a material fact, though it works steadily towards that—it is under-rated and seldom appreciated. The missionary's work among the Indians as elsewhere, is a heaven that can be published, and ought to be pushed with far greater vigor. Agency work is broken by change; missionary work is steady, persistent and increasingly effective. Hampton and Carlisle are only supplementary to it, adding a few to the small number who are getting instruction, out of the forty thousand, who are waiting for it. One of the best results of my trip has been meeting these noble workers, getting into full sympathy with them, finding ourselves in heartiest accord, and thus opening the way for further effort. The work which they are doing is as good as can be, but they are often unable to control the children who may desert them or be carried off by parents. At Hampton and Carlisle we can hold them, as they get what can be got only by contact with civilization. It is not because mission work is, in kind, weak or inadequate that it is weak of supplementing it. It is only to increase the number of educated natives, and offer a few chosen youth wider advantages. Hampton prefers that two thirds of its Indians should be wild, well selected as to quality and disposition, but essentially raw material. Our few list are mostly pure blooded and untainted.

The day we left Cheyenne agency with the new boys, was the finest of all. The air of Dakota is glorious, and we enjoyed it thoroughly, as we drove along in our box wagon. Pierre Bottoms lay below us a wide, level plain, with the river winding through it, marked by the gorgeous fall foliage on its banks. Here is the home of Rev. T. L. Riggs, of the Presbyterian mission. He was absent, but a assistant was conducting a prayer meeting in the little church in the middle of the plain. (See Miss Collins), at once conducted us to the nearest log houses which the twenty-one Indian families who have taken home-stead lots here, have erected, (a remarkable illustration of good missionary work on the one hand, and of Indian capacity for civilization on the other.) The mother said she would like to send her girl and boy; she called the latter from his play in the field, and in a few moments emerged from the cabin with little Joe in fresh clothes—a bit of baggage—She had embraced him in doors, (not willing to show emotion,) and as we drove off, made, with others, a dignified salute.

The girl had to be sent for ten miles off, and followed us late. Pierre two hours later with her friend and half-brother Battisto Gale, and Wm. Larabee, who had listened to our conversation while working on the roof of a new log hut close by, and, Indian like, at once decided to seek an education. I had, however, learned that there was no blacksmith in this region, and suggested that they go to Hampton and learn the trade, and return to us. They went with equal and astonishing quickness.

Rev. T. L. Riggs' settlement in Pierre Bottoms is, I think, one of the best practical efforts made for Indian education and citizenship. It is a complete success, and might be expected from one of his energy and common sense. At Pierre once more. We crossed the river, hoping to induce a remarkably high Indian girl of excellent family, to join us. An Irish, grimy Frenchman, consented, the blunder was eager, but the handsome, half-blooded girl of fourteen, was shy and drenched with strange men. I think she will come later.

Started at 11 P. M. in a cold rain storm from Pierre for Jones' Ranch, reaching there at 4 A. M.; got coffee for all, and lay down on the floor till morning. One of our Indians could cook in a semi-civilized fashion, and did so. I washed the dishes belonging to the ranch, and passed them to the Secretary of the Art Students' League of New York, who wiped them artistically, and skillfully set eight plates to do duty for ten people. The principal feature of these meals is our appetite, which makes the feeblest culinary success a triumph.

Crow Creek Agency at night. Ninety-one men in thirty-two hours. But this was nothing to the experience of riding twenty consecutive hours in an open wagon, from Chamberlain to Yonkton Agency, to collect students from there.

Passed next night of Ft. Hale, Capt. Scholer, commanding, where there are two companies of Negro troops. The officers told me that they have all the qualities requisite for good soldiers. They are extremely neat, easily disciplined, and brave. Their lack is intelligence. There are no clerks or mechanics among them, while white soldiers always have

a percent. of artisans who are very useful. On the other hand, the colored soldiers are superior at general fatigue duty, and in these days soldiering is largely manual labor. I saw a lot of them working in a potato field, and learned that they do such duty much better than white men. These troops had been recently ordered up from Texas. The corporal who rode us across the Missouri, said he liked "this country better than Texas, because there it was "too long between drinks," water being so scarce. Another, less cheerful, said that in Dakota "it is seven months winter and five months mosquitoes." They had the credit in Texas, of fighting Indians with peculiar dash, having a certain contempt of them; Indians are said to prefer fighting whites.

By the kind hospitality of Dr. Bergin I was most pleasantly taken to Lower Brule Agency, thirty miles down the river, and there comfortably quartered with Rev. Mr. and Mrs. Waller, of the Episcopal Church. He is a full blooded, educated Indian. She is white, and both are devoted workers, going in among the people to persuade them to better things. They speak of the release of some who had been educated in the East without being taught to work.

At Marien Junction we were joined by the rest of one party, that is, Miss E—with her lady companion and eight Indians, five boys and three girls. The home journey was broken by no special incident, though it was interesting to watch the impressions made up on the Indians by the new condition in which they found themselves. A delay of one day in Washington gave us the opportunity to visit the Indian Department and the Capitol. In the former place our party were all introduced to the Secretary of the Interior and the Indian Commissioner. We took the boat down the Chesapeake that night, and after a stop of an hour or two at Yorktown, we reached an unexpected glimpse at the Centennial, as we reached Hampton about noon on Sunday, Oct. 10th, with our twenty-nine Indians (twenty-two boys and seven girls) all in good health and spirits. S. C. A.

The following extract from a letter from the venerable Bishop Payne, in whose veins, as he said at his first visit to this school, runs the blood of the three races, Anglo-Saxon, African and Indian, will be read with interest. Bishop Payne said, that he came here with some prejudices against the Normal School, but that they had all disappeared in the light of personal observation.

My mental enjoyments at the Anniversary, constitute my full pay for my visit to your noble and ennobling Institute. It is, in my humble opinion, doing a work for the Colored race on for the Indian that no other school in the land is doing.

I would to God each Southern State had a Hampton in its bosom, where such students as are being in progress at your School.

May God grant you in the future ten-fold greater success than he has in the past.

Fraternally,

PAYNE.

"The Industrial South" is the name of a good working weekly, the first number of which has an excellent list of contents. It is published at Richmond, by Messrs James Mc Donald and Robert P. Lee. We welcome this new ally, which comes into the field at a most opportune time.

## BIG INVENTION.

### 53 Map of Virginia for 25 Cents.

Lloyd, the famous map man, who made all the maps for General Grant and the Union armies, certifies that he published, has just invented a way of getting a relief-plate from steel, so as to print Lloyd's New Railroad County-Seat, and Distance Map of Virginia for 1891 on the most perfect of strong linen paper four feet long, and lightning press, all colored in counties handsomely, and ready for mailing to any part of the world, for 25 cents, or, with rollers to back the map, 50 cents. This map cost \$2,000 to make it, and shows a million places on it—all the railroads, every railroad station, the name and length of each railroad, and terminations. It is a perfect traveler's guide and mercantile shipping map. Every house in Virginia should have a copy. Send 25 cents to J. T. Lloyd, Washington city, and you will get a copy by return mail.

## Horsford's Acid Phosphate In Nervous Prostration.

I used Horsford's Acid Phosphate in a severe case of nervous prostration; it was pleased with the result. I shall prescribe it hereafter with a great deal of confidence.

A. G. BISSEL, M. D.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

The most exciting event of the month to the Indian students of Hampton, has been the departure of thirty of their number for their homes in the West. The last Sunday evening before Tuesday's start, they were given a farewell address by one of the young men—and one young woman—selected by themselves to represent each agency, and, on the part of the school, by some of its graduates who had been their teachers, with some words of counsel and encouragement from the Principal. With very little time for preparation, the Indians spoke in their own language, with an interpreter. Some read speeches which they had written, but others spoke extempore, in English, and did very well, though they had but very little time to prepare. The burden of their speeches was the same—regret—evidently heart felt—in leaving the school, and their comrades and teachers, thankfulness for the lessons they had learned, and the earnest intention to live up to them, and also their for the good of their people at home.

Geo. Bushotte said in his very well expressed and earnest extempore speech: "When I came here, I could read and write some in Dakota language, but I did not know a word of English. Now I think I can make any body understand whatever I want to say in English, and I have learned many good things. I hear that some people say the Indian boys and girls will go back to Indian life when they go home, forget all they learned. I think we shall not forget. I hope we will go home and work, and show everybody that we shall not go back. Perhaps some of us go back. I think not. For one, I have not to go back. I have to work. I shall not forget. I have always to remember what I have learned here." Josephine, though a little shamefaced, made a good little speech, expressing her intention to work among the women, and a laugh being raised in her audience by a naive and unassuming remark of her husband, "I ashamed," she quickly recovered, by saying earnestly, with gesture suited to the word, "You laugh at me, but you do not know what is in here—my heart." Her hearty and sympathetic applause by their colored comrades, and very kind words were spoken by the graduate teachers, who had assisted in their training—their Shells, the farm superintendent rousing a laugh by advising them to go to all the work of their life as they went at a certain bright patch last summer. The Indian students and their representatives and one said—"If I had had time to write I would have spoken. I had many words to say." Another: "When I go home I shall talk to my people like you have just spoken in his own language. He talked like a man."

On Monday evening, they assembled again to receive a little parting gift each of books, The Gospel Hymns, many of which they had learned to sing, and a copy of the Bible, or some other books within their reading power; a box containing note paper, envelopes, pens and penholder and automatic pencil, and one of "Prang's" chromos to hang up the wall at home, and carry the memories and influence of civilization into their difficult part of life. They were greatly pleased and grateful, and there were many "tearful" and "prayerful" scenes. The note paper back in the form of letters. Tuesday morning was spent in packing, but time was taken for one deeply interesting scene. All gathered with their teachers and their minister to see the last three of the whole thirty received by their own request into the church of Christ by baptism. They had all been thinking long of it, and far from being as occasion arranged for—horrified, for the day had resulted from their own desire, and that of all who had the care of them, that there should be no mistake or foreboding about it. We are hopeful of their purpose to "walk the new road" in the help of their Savior. Tuesday evening, the party started, under charge of the Principal and one of their teachers, whose account of their long homeward journey will be found in another column. A few of their most intimate friends, with their teachers, and one of their chaplains saw them off at Old Point, with pride in their many and womanly affection, and with affectionate regret and hope.

Soma of them may read this, as they say they are going to take the Southern Workman. We say to them: Remember that we think of you with love and hope. We shall not forget you. We shall look—and many many people will look, to see what the Hampton Indian graduates do. We believe they will do well. If they keep in the good way, that will be good for them, and for all their people.

## A TOUCHING SCENE.

A friend present at the baptism of an Indian young man at Hampton, on his dying bed, gives the following touching sketch of the impressive scene.

Savars came with the Arizona Indians in February. About the 18th of August he began to run down in health, and at the opening of the school he was too ill to return home. Tuesday, the eleventh of October, it was noticed he was fast falling. During the day he was attended by Mr. Gravett, the doctor of St. John's Church, Hampton, drives through the grounds, and for some time watched the door, expecting him to enter. Mr. Gravett having other engagements, was not able to come till almost seven in the evening. For some hours, Savars' mind had been wandering, and at intervals Antonio (the son of his chief) would speak to him in his native tongue, and, for a moment, would recall him to consciousness. When Mr. Gravett came he again spoke to him, telling him that he was. Savars seemed to make a final effort, and rallied, saying he was glad to see him, and at once adding "I went to go to church." It was soon ascertained that Mr. Gravett had spoken to him, in his frequent visits, of being baptized, and it was this he desired.

There was little time for consultation and less for ceremony. Mr. Gravett knew his state of mind, and decided to go forward. The scene was touching in its simplicity. Antonio stood and held a scout, now wanted to a shadow, with the death damp on his forehead, lay in his reclining chair, his dusky skin and jet black hair in strong relief against the pillows. Mr. Gravett gently explained to him the meaning of the ordinance. Antonio crunched on the floor at his feet, intensely eager that no idea or word from either side should be lost, and the friend who had done so much to alleviate these last days, supported him, lending the one touch of color and brightness to the otherwise sad and sombre scene.

A single lamp gave just light enough to cast heavy hemispherical shadows, and without a thought beyond the solemn realities of the moment, the actors were grouped in a picture that might well commend the best artistic effort. He lived till near midnight, speaking more than once with pleasure of what had been done. The funeral services were conducted in front of Virginia Hall by Rev. Mr. Frisell assisted by Rev. Mr. Gravett, and the body was followed to the school cemetery by the officers, teachers and students, escorted by the school Battalion under Capt. Romney. Just at sunset, the bugler stepped from the elevated crowd, and on the mound formed by the earth cell of the newly made grave, blew the farewell call, the long "Good Night."

## OUR DAKOTA LETTER.

Bismark, D. T. September 3rd, 1881.

## EDITOR OF WORKMAN.

After waiting three days at Bismark for the recovery of the sick "Doctor" we were gladdened by the sight of escaping steam, and the knowledge that in a few moments we were to be on our way up the River. The "Painted" Pacific R. R. crosses or intends to cross, the Missouri River just above Bismark, and several hundred men were at work cutting away the high bluff on the East bank, and filling up the jetties or dams, which are intended to narrow and deepen the channel of the river at this point. This work is effected by drawing piles and by filling in between them with willows and stone. As the banks are exceedingly liable to wash, this work must be well and thoroughly done, or the railroad may some day find their bridge all on one side of the river. The new and busy little town of Mandan lies nestling under the high bluff just opposite Bismark. Like many other little hamlets in the West, Mandan has "great expectations." The banks of the Missouri River above Bismark are rather more heavily wooded than lower down. About forty miles above Bismark we arrived at the "Painted Woods." These consist of a strip of oak and cotton wood timber stretching along the east bank of the Missouri River for several miles. This oak is of the bur species and is found scattered through the ravines of the country round about Berthold Agency, and as furnishing a supply of "tannic acid" would be found of value should it ever be found advisable to establish a Tannery at any of the Upper Agencies. This would be an industry that would employ quite a number of life hands. Here and there a family is found that would answer very well for brick, and near Berthold Agency I found large beds of coal of the lignite variety, and by the way, this would render the taking of the "clay" quite economical at this Agency. This miserable hole occupied by many of the Indians could be replaced by much cheaper and more economical brick structures, which would enable them to bring up their families in a cleanly and civilized manner. It is frequently said the Indians will not work; but they will fast enough, if it is made apparent to them that it will redound to their advantage to do so. It would be better to give the money appropriated for the support of the Indians to them as wages for work done and then allow

them the same privilege of buying out of the Indian Commissary as is given the white employees of the Agency, but there are many difficulties to be met with in the carrying out of any radical change. The Indians have become very suspicious and does not enter very quickly into any change in the manner of conducting his affairs. I have found however at all the Missouri River Agencies, unananimous feeling among the Indians in favor of civilization and education, yet too much should not be expected from the first generation; they can and ought to do something, but it is a great change from the free and easy way of the Indian hunter and soldier to that of quiet, plodding farming, which requires an amount of persevering effort that the average man is not capable of exerting. They can see and understand the advantage of industry, frugality and economy; but they have lived all their lives without exerting these qualities and it is an exceedingly difficult task for them to perform now.

Meeting friends at Fort Stevenson I was kindly entertained by them and sent on to Berthold Agency the following day. Stevenson is very pleasantly located on the east bank of the Missouri river, about eighty miles up the river from Bismark and about seventeen miles below Berthold Agency. There were two Companies of Infantry stationed here under the command of Capt. Rawls of the 7th Infantry. Arriving at Berthold Agency I was pleased to find the extent of the acreage under cultivation. There are in the neighborhood of twelve hundred Indians at the Agency, men, women, and children, and they cultivated about seven hundred and fifty acres of land, besides helping the Agent in the cultivation of a two hundred acre farm. The hay for the Agency animals was furnished this year by the Indians, but they all live clustered, huddled together in a little village at one end of the farm. Everything is raised here except fruit, and the crop looked very well. In the Indian, men, women and children were at work in the field gathering in the harvest we rode by, on our way to the village. In the evening, the medicine lodge of the Gros Ventres, Mandans and Bacs were all occupied, the monotonous tum-tum of the drum resounded through the camp. Visiting one of these medicine lodges with Dr. Hoffman of the Smithsonian, who was visiting the Agency for the purpose of picking up scientific information, we were regaled with a series of imitations, tricks, dances and songs, which in the dim, weird light of the brazier in the middle of the lodge, had a grotesque appearance, provocative of mirth, if it were not for the pity felt for the poor, superstitious weaklings who were deluding themselves with their foolish idolatries.

This wild scene, I was reminded of the magnitude of the task of civilizing and Christianizing this people. Industries, better homes, patience and continued effort must be brought to bear on the old and uneducated and child-reared and trained up to useful manhood and womanhood. At Standing Rock Agency there is school accommodation for about (90) ninety children, and there are between one and two thousand running about the camps, growing up in paganism. I think it is too bad that this can not be remedied in some way, and I am convinced that until it is thoroughly met and solved, the work of Christianization will be very slow in breaking over the hereditary superstitions of the Indians. The buildings at Berthold Agency are mainly of logs, though a few of the old time lodges many yet be seen. All the Indians are anxious to see the Hampton pupils back, and expressed a great desire to see them working about the Agencies in such positions as they are fitted to fill, and also in the school. "What is the use of sending our children away if they are not allowed to work at such things as they have learned to do?" This question was asked me frequently, and I assured them that the Government was also anxious to have the pupils employed at living wages in all positions they might be found competent to fill, and they appeared greatly pleased to hear this "good word," as they put it.

Yours faithfully,

Geo. LER. BROWN.

## THE SUN DANCE.

## EDITOR "SOUTHERN WORKMAN."

The Sun Dance is a religious ceremony of great importance among the Indians, and I wondered why the authorities of the Interior Department had prohibited it, until I witnessed its barbarity, and learned that its most repulsive features were the direct result of questionable practices among the shagrens of the camp.

There had been a great deal of sickness and mortality among the prisoners at Ft. Yates, and the Medicine man exhausted their spells and incantations without effect.

In vain the Post Bergason made his daily rounds and left directions for the relief of the suffering.

The medicines were either thrown to the dogs, or swallowed without regard to time or quantity. In vain were sanitary regulations insisted upon; so disastrous were they of the white man's practice; and in some instances, suspicious of his intentions.

The old doctrine of the spirit of evil warring against humanity and only to be appeased by the voluntary humiliation and torture of the strong and brave, is strongly asserted and religiously held by the Sioux.

So the ordeal of the Sun Dance was whispered about for a week or two; at first timidly, because the Indians under control of the Agency have been forbidden to engage in this dance. Morning Antelope, the orator of the Sioux, came to Head Quarters with a strong plea. His people, especially the children were dying in great numbers, and their hearts were bad. They must invoke the Great Spirit and drive away the Evil One. He was given to understand that his people would not be interfered with so long as they violated none of their obligations as prisoners of war. Accordingly the preparations for the Sun Dance went forward rapidly.

The medicine pole, a cotton wood tree about 40 feet high, was cut down and borne on the shoulders of men, to the centre of the camp, escorted by a large procession of braves riding on ponies. There it was finally placed, and decorated with red and yellow bits of calico, a bunch or two of sticks and herbs, (medicine) and a cord of sinew, from which were suspended silhouettes of a buffalo and an Indian, very well cut from raw hide, and painted black. The significance of these emblems I could not find out.

The squaws were detailed in large numbers to cut and bring in bouquets of cedar and willow of which the men built a pavilion round the medicine pole. In the mean time, during these preparations, the braves who were to take part in the dance, were undergoing their preparation for the dance, two days they remained in seclusion, neither eating nor drinking. I have been told they do not sleep during that time, but am not certain that watching is also a part of the preliminary discipline.

The pavilion was completed about noon, and the "tom-tom" sounded. Immediately a procession was formed by the dancers, and starting from the tipi where the dance was held, they marched slowly across the prairie about half a mile, and made the circuit of the pavilion, outside, chanting, or moaning rather, in a most weird tone.

They were headed by Low Dog, the leader of the dance. He bore a buffalo's head on a cushion before him, and on arriving at the station in the pavilion assigned to the dancers, he placed his burden with great care upon the ground, and drew round it a small cord, fastening it to stakes; thus forming a sort of charmed circle round the sacred emblem, if emblem it be.

The dancers were all nude to the waist, and painted a ghastly yellow. Their long hair was well combed, and hung loose round the shoulders. They were bright plaid shawls or blankets, fastened at the waist by leather belts studded with brass nails. The shawls formed skirts like the dresses of the squaws, which reached to the ankles, and were said to typify the humiliation of the braves. Many of them wore a ribbon round the waist, from which were suspended a tassel ornament representing the sun. Each man carried in his hand a curious whistle made of the bone of an eagle's wing, and decorated with a bunch of fine downy feathers. Besides the whistle, they carried also a bunch of sage-brush, which they held up close to their faces as they marched to the Medicine pole. It was quite an impressive sight as they moved slowly along, with heads bent, chanting their weird monotonous song.

There were nearly one hundred young braves or warriors to take part in the dance. While they were marching, the spectators, who had crowded in and around the pavilion, were regaling themselves with such "dainty" dishes, as the squaws usually serve at their great feasts; dog-soup, cakes of hard bread fried in bacon fat, and coffee.

The dancers were led out in groups, four or five together, and placed in position in the centre of the ring, with their faces towards the sun. The tom-tom was sounded with great energy, and the groups of dancers blew a long shrill blast upon the whistles, and throwing back their heads so as to gaze directly at the sun, the moon-dance, they began the motion of the dance. This is a kind of jump or gentle shake of the body, always rhythmic and in perfect time with the beating of the tom-tom. During the three hours that we remained within the pavilion, the dance was kept up ceaselessly by every group of dancers; the motion never changing or stopping for a moment, except at certain intervals, when with preconceived movement, the hands were all thrust out towards the sun, and the long shrill blast blown. This invocation ended, they counted blowing faintly with little whistles which were kept always in the mouth, and resumed the motion of the dance. Occasionally one would

raise his bunch of sage brush to his face for a moment or two, and perhaps bite off a piece. It is said to refresh them greatly when the mouth and throat become dry from the constant blowing of the whistles. The thermometer registered 112 at the shade at 7. Yet the day the dance began, and it was supposed to be at least 140 at the Indian camp, where there was no shade except under the pavilion where the spectators sat. About sunset of the first day the enthusiasm seemed to reach its climax. The medicine men then led two or three of the dancers to the Medicine pole to undergo the tortures of mutilation, and thereby show their bravery and appease the Evil Spirit.

The braves would stand or sit at the foot of the pole, as they were more or less able to endure the fatigue, and the Medicine men began their disgusting task with an eridict roll.

The only instrument I saw used were a large butcher's knife and a thorn or wooden pin. With the knife they would scratch the back and shoulders, and by lifting the skin with the thorn and running the knife under the flesh, would cause the blood to flow quite freely. Not only the back and shoulders but the arms as far as the elbow, and the entire breast, were in some instances cut as to present a ghastly sight.

Others inserted a wooden pin under the skin about half an inch deep, one on each breast, and to these pins were fastened bars, which were attached to the top of the pole and tightened. In this position the victim hung and danced, till he tore himself loose from the pole; or, if his strength failed, as was sometimes the case, he was cut down and borne to a mat of sage brush till he was sufficiently revived to resume the dance. The mutilation continued from dusk till the night grew dark, which in this climate and latitude is much later than at the East. During the month of June and July, when the evenings are cloudless, it is light enough at ten o'clock to read a newspaper. I suppose it was quite ten o'clock when our party left the scene, and the camp fires were just being lighted. The dance continued uninterruptedly all night, and at ten the mutilations were resumed, and continued till the close of the dance at sunset of that day. On the second morning, I noticed two young men who seemed to be undergoing double torture. They were fastened with lariats to four stakes, two pulling from the breast and two from the back, so that every motion of the body in dancing must tear the flesh either from the breast or back. They danced for several hours, but only succeeded in tearing themselves partly loose, when one of them, nearly fainting with pain, was cut down by his attendant and borne to a mat under the shade. The other was still dancing at noon, but was afterwards cut down. I learned that they were brothers of two young men who had deserted the dance the night, and these had come to take their place.

During the dance and the mutilation it was a rare thing to see any of the braves give signs of pain. Notwithstanding the intense heat, the previous fast of twenty-four hours, and the unceasing motion of the dance, but few gave any token of exhaustion. It seemed to be their pride to bear the ordeal with stolid indifference. Occasionally I noticed some of them dozing and placing the hands upon the knees for a moment or two, and on a change of posture, resting their weary limbs.

During the dance the snows brought in the papooses to have their ears pierced. I saw a young, neat looking squaw with her husband lead in a pony with a papoose about eight or ten months old, on its back. The little thing was removed from its pretty bedded covering and laid on the ground before a medicine man. He drew out his large knife and proceeded quite leisurely to sharpen it, with an evident relish for his task. Then while the parents held the poor terrified child down, he thrust the knife through the upper part of the ear, cutting a slit fully half an inch long, and a still larger cut was made in the lower part of each ear, and large brass rings with human shells inserted in each gaudy wound. The screams of the child were drowned by the shrill singing of the squaw who stood in groups round the scene. The pony was then presented the Medicine man as his fee.

The giving and receiving of gifts is a prominent feature of the Sun Dance. And the men who perform the mutilations upon the braves are often greatly enriched by their trade.

Towards the close of the day, an image of cotton-wood boughs was set up and decorated with buffalo skins and a scalp lock, bows and arrows, and bits of bright colored calico. When the mutilations were accomplished, quite a number of men on ponies charged upon the image with spears. They would ride up close to it, and making a dash, carry off the scalp-lock and yell and singing. It would be replaced by another, and it would renew the attack in the same way. I was required of several interpreters the meaning of this performance, and received different accounts from each. One said, very com-

monly, it represented the Evil Spirit that brought disease and death, and they were driving it off; another that it was a Beelzebub, a deadly enemy of the Sioux, and they were making a charge on it as they were warfare. I incline to the opinion of the latter, for I saw songs and chants seem always to celebrate their adventures of war or of the chase. I have never heard a song interpreted as that of any kind of religious sentiment whatever.

J. B. A.

## HAMPTON'S INDIAN GRADUATES.

Thirty Sioux Indians who have spent three years at the Hampton Institute have been returned to their homes in Dakota, and placed in regular employment there, as follows. Every boy carried home tools of his trade—some over \$25 worth—earned by his own labor at Hampton.

## AT CHEYENNE RIVER AGENCY.

Louis Aygenougha and Leroy Shutsashin, age 17 and 10, as farm hands on the Government Agency farm, at \$15 a month. They will assist in general work. Harry Brown, age 17, as assistant teacher in the Government school. Henry Fishermen, age 20, as carpenter and tin-smith, at \$25 a month. Joseph Wulin as helper in office work, at \$20 a month.

Capt. Pratt's report on the students brought to Hampton, three years ago, remarks: "Harry Brown is the son of White Horse, who is second to the good Chief, Little No Fear among the Minneconjou Sioux. Henry Fishermen is the son of the first Indian at the Agency to adopt the white man's dress and ways."

## AT CROW CREEK AGENCY.

Zie-wie, a girl, age 18, as assistant in care of girls and laundry work in the Government school. Edwin Ashley, age 21, as assistant teacher. Andrew Fox, age 19, as helper in office work, and Paman, age 23, as carpenter; the latter at \$20 a month. Of these, the same set of three years ago, stated: "Zie-wie is the daughter of one of the best Indians at the Agency. She was brought to me at the last moment by her father who had been very anxious that a young son should go, but he being altogether too small, could not at last to send his daughter. I found both very much in earnest about it." Mr. D. K. How, who he prefers to sign himself, Memy will remember the striking contrast between two photographs of this girl, one taken when she arrived at Hampton and the other one year afterward. The Report stated: "Edwin Ashley is the adopted son of one of the best Indians at the Agency—had been in the mission school one year, wrote and read nicely in the Dakota language. Paman and Andrew Fox are neighbors of Wizi, one of the principal and most progressive chiefs of the band. The latter had been in the mission school. Wizi is the chief who told his people that if only one of their young men should return to them able to teach them civilization, they should thank it with bull to send them to school."

## AT LOWER BRULE AGENCY.

George Bushotter, age 18, is employed as painter and to teach in the Government school; Henry Rencenteur, age 21, as blacksmith; James Weckasak, age 20, Joseph Wulin, age 19, and Lerezo Rencenteur, age 19, as carpenters; all these at \$15 a month. Of these boys, the report stated that three of them had had some schooling in Dakota. Two of them knew a little English. They were selected by their missionary, (Rev. L. C. Waller, himself an educated Indian, thoroughly acquainted with and deeply interested for his people.

## AT TASON AGENCY.

Carrie Anderson, age 13, is engaged to do housework in the family of Dr. Smith, agency physician; Lizzie Spider, age 17, to do housework in the family of Rev. J. P. Williamson, mission; and Yellowbird, age 21, at St. Paul's school (of the Episcopal Mission). As a drill-master, &c. Edwin Bishop, age 17, as school-maker in St. Paul's School. David Simmons, age 16, engaged to teach, and is engaged on trial in Mr. Williamson's school. Oscar Brown, a boy in delicate health, but better than last year, is cared for, and helping in general work in St. Paul's School.

Some of them, according to the Report of three years ago, had had some schooling, chiefly in Dakota. Edward Bishop is son of Running Bull, who was first lieutenant of Sibley's column.

Under the Black Hills treaty of '68, all the Sioux receive from Government, rations, etc., worth \$70 a year each, except those of the Yankton agency, who get only a few dollars worth. As there was only a few dollars left from \$40 to \$50 each, out of the \$25,000 annuity awarded the Yankton Sioux band, by the terms of their treaty.

The students from Standing Rock and Fort Berthold Agencies were placed by Lieut. G. L. Brown as follows:

## AT STANDING ROCK AGENCY.

Jahn Pietsa, age 21, as laborer in charge of Agency stables, at \$1 per day. John had never been at school before coming to Hampton.

Rosa Pietsa, his sister, age 18, of whom the same can be said, is offered employment in the family of the Agent or of Capt. Van Horn, wages \$3 per month at first—or as assistant teacher in the Agency school at remuneration to be fixed by Commissioner.

Unkumpo—Carrie Flying—age 19, as assistant agency carpenter, at \$1 per day. This young man is nephew of a former chief, Wild Goose, and came to Hampton straight from the Indian camp, having had no schooling whatsoever.

The two young men take their meals and have sleeping rooms at the agency, preferring not to go back to the Indian camp.

## AT FORT BERTHOLD AGENCY.

Kuruch—Sioux Boy—age 10, is employed at his trade of chum-making and harness mending, for the Agency, wages \$1 per day. Ahuk—White Wolf—age 23, is employed as assistant agency carpenter; wages \$1 per day.

Laughing Face, age 21, as assistant herder and farmer at agency; wages \$1 per day. Tom Smith, age 17, brother of the interpreter, as assistant herder and farmer, and assistant engineer; wages \$1 per day.

Ar-hatchish, age 16, and Ka what, age 15, are employed at light farm work at boy's wages for the present, of fifty cents a day. Ka what is brother of White Breast, who was for two years at Hampton. Ar-hatchish is a Minneconjou Sioux, and with pride, Pretti's report of three years ago, as a progressive man, who, with his wife, made a great success to give up their boy. They were following the agency officials and with pride.

Josephine Malnoire, age 21, Gros Ventre, has charge of the children of Rev. Mr. Fall, and assists in teaching.

The Fort Berthold boys have three rooms at the Agency: one for kitchen and dining room, the other two for sleeping rooms, and employ a half breed woman, relative of one of them, to cook and wash for them. These rooms they were allowed to furnish and occupy immediately on their arrival, on their own request, not wishing to live in the camp. Kuruch, the spokesman for the boys, in the presence of many Indian friends and relatives and the agency officials, stated that his Indian ways were bad, savage; that they lived in a dirty bad way, and he and the other boys were not going to live like the Indians, but were going to work and wear the white man's clothes that they could work; that they could keep clean, and buy new clothes when the ones they now had were worn out; that he intended to save his money, and some day buy cattle and build him a nice house with floors in it and windows and bedsteads and things like white man's things. This seemed to be the sentiment of all the boys, and the fact that they took hold at once and went to work, would seem to indicate that it was founded in desire to do better—to continue in well doing.

## THE NEW COMERS.

Twenty-nine Indian boys and girls arrived at Hampton Institute, October 10th, under charge of the Principal, from the agencies on the upper Mission in Dakota.

Seven are from Cheyenne River agency, as follows:

(In Dakota, the vowels have the Italian sound, and e is hard ch.)

Shuakaka—White Dog—age 18, nephew of "Little No-Fear," Chief of Minneconjou Sioux. No-Fear is a strong character, very loyal to the Government, and has done much to introduce civilized ideas among his people. He has already had a son, and a nephew educated at Hampton. He wears white man's clothes, and engages in manual labor. White Dog's father died of wounds received in the United States service as scout.

To-shuakaka (as is written in Dakota)—Good Horse—age 16, of full blood, nephew of Little No-Fear, and a cousin of Harry Brown, just returned from Hampton, the latter a son of White Horse, a prominent and influential Sioux, who farms and raises considerable stock.

(Minicopa)—Fight-For—age 10, of full blood, a brother of chief Little No-Fear, and son of Harry Brown, a carpenter.

William Larabee, age 18, and Maggie Larabee, age 10, of full blood, children of Alexander Larabee, a Frenchman, and an Indian mother.

Joe Marsh, age 12, half blood, an adopted son of the Larabees. Calling at their home to take off, by previous appointment, little Joe, the mother said she wished Maggie to go. As there was no blacksmith in that region, I suggested to William, who was engaged close by in building a house, that he might learn the trade at Hampton. In a moment,

he replied "I'll go." During the short talk, Miss Collins, Rev. Mr. Riggs's missionary assistant, interpreting, a young Indian who was on the roof assisting the men covering on the new building, listened, and when, an hour later, the new recruits followed us into the town of Pierre, Baptista Oahn came with them. It is astonishing how quickly Indians decide and act, and how easily an hour or a day later they entirely reverse their decisions. They are the most uncertain and variable people, as to their minds. Baptista is 16 years of age, of half blood, son of a Frenchman. These last four belong to one of the twenty-one families of Indians at Pierre Bottom, whom Rev. T. S. Riggs, Presbyterian missionary, has induced to separate from their tribal relations—two of them were chiefs. After five years' hard work, he induced Government to grant them titles to the homesteads which they have chosen on these wooded banks of the Missouri. They are still rationed, but will soon become self supporting. All occupy plain log houses, surrounded with tool sheds and other out buildings, and each has a huge stack of hay piled up for winter use.

Mr. Riggs's own cottage and little white church stand in the midst of the plain. He and his assistant preach to and teach these and about five thousand other Indians in this and neighboring camps, visiting them in their houses, encouraging civilized ways. His effort is one of the finest things in the history of Indian progress, and proves the possibility of Indian civilization.

From Crow Creek Agency, even, as follows: Paschea—Skeleton Head—age 16, of full blood, an orphan, son of Yellow Thigh, a warrior, and a nephew of Shapping, a noted brave. Wauwau—Little Eagle—age 16, son of Small Warrior, one of White Ghost's band. Cetan (pronounced Chyatan)—Hawk—age 21, son of Little Shield, a soldier of chief White Ghost.

John Archibald, age 16, one quarter Indian blood; his father, a French farmer, his mother half French. He speaks English quite well. This only word he can read is "dog," which he likes to put in lower corners of his Susan Carpenter, age 18, of full blood, daughter of Skunk Robe, a warrior of Dog Back's band.

Skeleta—Red Bird—age 14, of full blood, daughter of Kill Many, chief soldier of White Ghost's band, also a nephew of noble presence, and very much of a man.

Rebecca, age 12, of full blood, daughter of Blue Hawk, a warrior of the same band. From Lower Brule Agency, nine, as follows: Ohtika—Bear—age 16, of full blood, son of Long Feather. Sasaul, age 20, of full blood, son of Medicine Bull, an able, intelligent, influential man. Wauwau—Arrow-Necklace—age 20, of full blood, an orphan; a cousin and devoted friend of Samul, and son of Thunder Fire, a warrior. He is a big, blanketed, long haired, well looking fellow, who failed to pass a satisfactory medical examination, one lung being suspicious, but was determined to go for his friend's sake, and would not be intimidated by warning of hard work at Hampton. Offered to work his own way, and came along. Matina—Bear—age 17, of full blood, son of Medicine Crow, a warrior in Long Men's band.

Tyowickto—Kill in a House—age 17, of pure blood, son of Bear-like-him, a prominent warrior in Useful Men's band. Calkotaka—Big Left Hand—age 20, of full blood, son of a Bear, a warrior of Useful Men's band.

Tanyanwakwa—Good Hunter—also named Peter Bruno, age 18, of half blood, his father an American, of Tobacco Month's band. From Yankton Agency eight, as follows: Saul, (Hoyokotaka—Different Horn) son of Tanyanwakwa, age 30, of full blood, an orphan; one of Bishop Ham's catechists, sent by the Bishop to Hampton for one year to improve his English and see civilization.

The three following were selected from the brightest in St. Paul's school, Mr. Dawes, teacher, under Bishop Harco's care. Joseph Bates, three quarters white, age 10, son of Benjamin Bates of Yankton, S. D.

Thomas Tuttle, (Wakun-yangin)—Standing

High—age 16, of pure blood, son of a Frenchman, and a nephew of noble presence, and very much of a man. Rebecca, age 12, of full blood, daughter of Blue Hawk, a warrior of the same band. From Lower Brule Agency, nine, as follows: Ohtika—Bear—age 16, of full blood, son of Long Feather. Sasaul, age 20, of full blood, son of Medicine Bull, an able, intelligent, influential man. Wauwau—Arrow-Necklace—age 20, of full blood, an orphan; a cousin and devoted friend of Samul, and son of Thunder Fire, a warrior. He is a big, blanketed, long haired, well looking fellow, who failed to pass a satisfactory medical examination, one lung being suspicious, but was determined to go for his friend's sake, and would not be intimidated by warning of hard work at Hampton. Offered to work his own way, and came along. Matina—Bear—age 17, of full blood, son of Medicine Crow, a warrior in Long Men's band. Tyowickto—Kill in a House—age 17, of pure blood, son of Bear-like-him, a prominent warrior in Useful Men's band. Calkotaka—Big Left Hand—age 20, of full blood, son of a Bear, a warrior of Useful Men's band. Tanyanwakwa—Good Hunter—also named Peter Bruno, age 18, of half blood, his father an American, of Tobacco Month's band. From Yankton Agency eight, as follows: Saul, (Hoyokotaka—Different Horn) son of Tanyanwakwa, age 30, of full blood, an orphan; one of Bishop Ham's catechists, sent by the Bishop to Hampton for one year to improve his English and see civilization. The three following were selected from the brightest in St. Paul's school, Mr. Dawes, teacher, under Bishop Harco's care. Joseph Bates, three quarters white, age 10, son of Benjamin Bates of Yankton, S. D. Thomas Tuttle, (Wakun-yangin)—Standing

*Holy*—age 10, of full blood, son of Nakpa-wajina—*One Ear*.

David Stricker—*Twa wakaa-kil-wakana—To-Holy Lightning*—age 10, of full blood; son of Tunkano-holmi—*Whirling Rock*—of the Yankton Eight band.

The above three were selected under Bishop Harb's care.

William Beas, age 15, half breed, son of Mahpiya-to—*Blue Sky*—from Rev. J. P. Williamson's school.

Mary Ischell Conger (*Wa-kant-ke-ya-win*)—*Tender Heart*—three quarters white, age 10; daughter of Cass Conger; from Rev. J. P. Williamson's school.

Zellie Rulo, three quarters white, age 10, daughter of Charles Rulo; speaks English. Elizabeth Keeler (*Wasiehuin*)—English—half white, age 12, daughter of Alexander Keeler.

Health has been carefully registered in the selection of these youth.

Sixteen Indian youth under charge of Lieut. G. L. Brown, U. S. A. arrived at Hampton, on the 25th, from Dakota. These represent three different tribes: Sioux, Gros Ventre, and Mandan. Lieut. Brown gives the following report:

Six from Fort Berthold Agency, as follows: Mary Walker—half blood—*Gros Ventre*, age 12; a very bright little girl—sister of Sarah Walker, for three years a pupil at Hampton; daughter of Wm. Walker, an American of mixed blood—a decent, hard working man—Wm is at present trying to "prove up" a homestead. He is working for his children—these and one little boy; mother a full blood. Speaks a very little English. Has not been at school any to speak of.

Sue Nagle—half blood Mandan, age 12, small of her age, but bright, and showed aptitude to come to school. Her father is John Nagle, a German, who lives in the Indian camp, making some effort to support his family in a better manner than the average so called. Been to school a little irregularly. Speaks a few words of English.

Cottage—*Crooking Wing*—a full blood Mandan, age 14, large and strong of age, an exceptionally bright, industrious boy, can talk two or three Indian languages. In worked all during harvest this season, filling a man's place.

His father, Elkfeather was a soldier, chief of considerable note, killed in battle with the Sioux. School a short time last winter.

Delana—*Small white Rabbit*—full blood Mandan, age 15, a strong and healthy boy, son of Plenty Fox, a soldier Chief.

Lashute and White Duck—full blood Gros Ventre and Mandan, age 14, son of "Walks into the Ground," a brave.

Cokaga—*Many birds*—full blood Mandan, age 13; son of Old Wolf, head chief of the Mandans—an exceptionally strong, bright boy. None of the above have been to school or speak English.

Ten are from Standing Rock Agency, as follows: Cean-sa-pa—*Black Hawk*, half breed Black feet Sioux, age 14. Mother of Black Hawk, a Sioux woman, father, colored; both dead; a bright, good boy. Speaks English pretty well. Has been to school irregularly for 3 or 4 years. Can read and write Dakota.

Louis Agard—half blood Black feet Sioux, age 17, son of a Frenchman. Has been to school a little. Talks English very well. Cannot read or write much, of any in Dakota.

Takkee—*White Dove*, a girl, full blood, U. S. Indian policeman at the agency, a very trust-worthy and efficient man. Has been to school some. Can read and write Dakota, and understands a little English.

Helmaks-Arlye—*Yellow Elk*—a full blood Yankton Sioux, age 14, son of Good Wood, a U. S. policeman, spoken of by Agency officials as an excellent one. Has been to school irregularly. Can read and write in Dakota, and speak a little English.

All the above are represented by the Agency physician to be exceptionally healthy, having been selected from three times the number.

Takkee—*White Dove*, a girl, full blood, U. S. Indian policeman at the agency, a very trust-worthy and efficient man. Has been to school some. Can read and write Dakota, and understands a little English.

Helmaks-Arlye—*Yellow Elk*—a full blood Yankton Sioux, age 14, son of Good Wood, a U. S. policeman, spoken of by Agency officials as an excellent one. Has been to school irregularly. Can read and write in Dakota, and speak a little English.

All the above are represented by the Agency physician to be exceptionally healthy, having been selected from three times the number.

Takkee—*White Dove*, a girl, full blood, U. S. Indian policeman at the agency, a very trust-worthy and efficient man. Has been to school some. Can read and write Dakota, and understands a little English.

Helmaks-Arlye—*Yellow Elk*—a full blood Yankton Sioux, age 14, son of Good Wood, a U. S. policeman, spoken of by Agency officials as an excellent one. Has been to school irregularly. Can read and write in Dakota, and speak a little English.

All the above are represented by the Agency physician to be exceptionally healthy, having been selected from three times the number.

Takkee—*White Dove*, a girl, full blood, U. S. Indian policeman at the agency, a very trust-worthy and efficient man. Has been to school some. Can read and write Dakota, and understands a little English.

Sioux, age 10; an exceptionally bright, intelligent boy, son of Henry A. Archambault, a Frenchman. He can read, write and speak English fairly well.

Noge-Wanichi—*Jennie No Bars*—a half-breed Yankton Sioux girl, age 15, father dead; a bright, intelligent girl, who has had some schooling, and can read, write and speak English fairly.

The report of the medical examination of all the new comers made by the resident physician of Hampton Institute on their arrival, will be published in substance in our next number.

## ENGLAND TO AMERICA.

JAMES ABRAM GARBFIELD.

BORN, NOVEMBER 19, 1837;  
DIED, PRESIDENT OF THE UNITED STATES, SEPTEMBER 19, 1881.

Sioux were best, if band in hand, like friends, sex-sundered Peoples met; But words must wing from land to land The utterance of the heart's regret, Though harsh on ears that Sorrow thralls Even sympathy's low accent falls.

Salt leaguers that part us check no whit, What knows not bounds of time or space, The homestead feeling that must burn World-scattered kin in speech and race. None like ourselves may well bemoan Columbus's sorrow; 'tis our own.

A sorrow of the nobler sort, Which love and pride make pure and fair; A grief that is not misery's sport, A pain that bows not to despair; Beginning not in courtly woe, To end in peasantry and cheer.

The Great Republic's foremost son Struck fully, falls; but they who mourn Brave life cut short, good work half done. Yet trust that from beyond Death's bourne That blameless memory's gifts may be Peace, Concord, Civic Purity.

Scarce knows of us till struck for death, He stirred us by his valiant fight With mortal pain. With hated breath We waited tidings more and night. The hope that's nursed by sorrow dears, Though shaken often, will not tire.

And now our salient type, in truth, A more than ceremonial pain. We send, Court, Cottage, Age, and Youth, From open hearth, across the main, Our sympathy—it never awakes dead! To Wife he loved, to Land he served!

—London Punch.

(For the Southern Workman.)

## LIBERIA AS I SAW IT.

BY AKMEL E. WHITE.

Having heard so much that was not true about the Republic of Liberia, I once felt as I guess most people feel who have not seen it, that Liberia is not what it ought to be, and that the same is more than the country. I still hold this feeling, even after I had been in Africa two years. I was very near the boundary line of Liberia, yet I had heard very little more about the country than I did before going to Africa. This made me doubt the welfare of the Republic the more. About this time Mr. Gomer of the Shaiingay Mission wrote me a note asking me to accompany him to Liberia, and as I was very anxious to see a country governed by colored men, I accepted Mr. Gomer's offer. The 5th of March, '79, was named for the day when we should start. We were to take the Coast Steamer at Sierra Leone, which was to sail the 6th but did not sail till the day after, (7th). We started from Freetown Saturday morning, and landed at Graad Bassa Monday morning. We were kindly taken from the Steamer by Mr. Clinton, a Liberian, in his small boat, (as there is no wharf for the steamers), and were landed across the Great Bar which gives name to that part of Liberia. After we had gotten on shore, and walked about three hundred yards, we reached the town of Buchanan. We were kindly received by all the people we met, and no one of note was allowed to pass our boarding-house without being called in and introduced to his brothers, the colored missionaries from over the sea. All of them seemed glad to see us, and claimed us to be their own relations, only separated from them by the Atlantic ocean.

We were shown around the town, and were taken to the leading men who could not call on us at our boarding place on account of business.

The condition of the country was, as it were, thrown open to us in good, clean cut English. And as we went and saw the true condition of the people and country, I was

convinced that I had a very wrong idea of Liberia in other people. One can always tell kindness that is given for a good name and not meant, because there is always a stiffness to it which will stick out, it will not bow hard the giver tries to hide it. In these people showed more real kindness than any people I ever met. A common word with them is, you are at home, or make yourself at home, for you are welcome. And with these words, we were looked at the speakers we could see the expression on their faces which told us truly they were welcome. In walking around with these people and hearing their common sense talk expressed in good English, I forgot for a time that I was in Africa, and I felt sorry about the wrong idea I had had about the place and people. But my strongest feeling was that I was glad I was a colored man, and was owned by these people to be one of them, though on a different side of the Atlantic. I may say here that that was the first time I had ever felt proud of my pure Negro blood; but not the last. Our stay in Bassa was not as I wished, as we wanted to see more of the country. So we left for Monrovia the Capital, with many of the people's "God bless you's" on us.

After sailing about a day and a half we landed at Monrovia, where we were kindly received by Mr. Monrovia is a town of 13,000 inhabitants, and is situated on Cape Mesurado, near the mouth of the Monrovia River. It stands several feet above the level of the sea, on the story bluff of the Cape.

The houses are very large, most of them are made of bricks, and are two and three stories high. The people live on the second and third floor, as the first floor is damp during the rainy season, which makes it unsafe to live in. This part of the houses is most cases is used for the stores. We were again shown around the town and taken to all the places of interest, including the coffee farms.

We went up the St. Paul River to some of the new settlements, and found the people hard at work and doing well. Most of them are farmers, and are hard at it, raising coffee, peas, nuts, ginger and arrow root. Some of them raise rice and sweet potatoes, but those who farm for the market raise only coffee, peas, nuts, arrow root, and ginger.

We were then during the coffee picking season, and it was a beautiful sight to look upon the coffee farms, and see the little coffee trees laden with the red pods of coffee, reminding one of a fine cherry orchard when the cherries are ripe. All the people seemed busy at work, picking, cleaning, and packing coffee. We went to many of these farms and found that everybody who tried could make a living. We only saw two men from the United States who wanted to return to make their home again, and truly I think (as I told one of them) that Liberia would be blessed if they were to leave. They were holders up of the corners of the streets.

The people have a fine country, and are trying to make it something. They have done well in the few years they have been trying, with the odds of the country they live in against them.

One of the best marks of the progress of the people is the number of churches and the attendance at church and Sunday school. The ministers don't think they have done their duty when they have preached two sermons on Sundays to the older people, but are seen in the Sunday schools, either to give a lecture or to take a class of old people. One of the best sermons I heard while there was preached by Rev. J. C. Pittman, to the children. He took as his text, "and a child in this way he should go," and it was a fine sermon. He preached to the children simply and plainly, and truly I think that both young and old were benefited by it. Taking these two things, church and school, one might see that Liberia cannot be at a standstill; progress may be slow, still she moves. If I had seen the true condition of the people, I was convinced that Liberia is the black man's home.

As we were returning, we met on board the steamer, Dr. Blyden, and had his company from Monrovia to Freetown. On the way, we talked over the past, present, and future condition of the black man, and Dr. Blyden seemed to think that the black man's worst days were past, and his best days were not far in the future. The doctor's way of expressing himself was enough to make one think he knew what he was saying, whether he did or not. So, since my visit to the Negro Republic, I have changed my mind about the place, and think every colored man and every white man who has had any thing to do with the Colonization Society, should feel proud of that black Republic across the sea.

## Horsford's Acid Phosphate

A Summer Drink.

Put a teaspoonful of Acid Phosphate in a glass of water, sugar to taste, and you have a delicious drink, that is more healthful than any made from lemons or limes, and is a deal more gratifying to the thirsty recipient.

## A SONG OF SEVEN NATIONS.

The German school ship *Nympha*, which we have greeted once or twice before in former years, anchoring again in Hampton Roads last summer, an invitation was extended to its officers, from Hampton Institute, to bring the boys on shore to visit the Normal School and hold a sort of impromptu *Sangerfest* with the Hampton students. Their genial commander, Capt. Schroeder, accepted the invitation with his Chaplain, Rev. Mr. Goedel, Surgeon Wilkens, and several of the *Nympha*'s officers, with about a hundred of their young sailors; fine looking fellows, picked from the respectable working classes of all parts of Germany, and trained, like our own schoolship boys, for intelligent service in their country's navy, but under more rigorous conditions, being pledged to serve three years for each one of their schooling—twelve years in all.

Fair haired, fair skinned, blue eyed, ruddy and brawny, true sons of the sea-kings, as they sat massed on the raised seats at the end of Virginia Hall, they made a fine contrast with the dark faced races opposite them.

In the audience, between, sat the honored chief of our American navy, Admiral Porter, and his wife, on an opportune visit to the school, and Capt. Luce, of the flag-ship, who has been most wisely placed by Secretary Hunt in full charge of our own five school-ships, and that whole branch of naval training which has done so much to establish and is so pre-eminently fitted to direct. Another pleasant circumstance of this *International episode* was the presence of Mr. Garrett, a cotton manufacturer of Manchester, England, and his wife, on their first visit to America. Major Randolph and some other officers from Fort Monroe, and a few visitors from the Hygein Hotel, were also present.

After the two schools had entertained each other and the audience for an hour with responsive melodies, German glees and English sailor songs, and plantation shouts, the Principal of the Normal School rose, and congratulating the audience on the presence of one distinguished in our history, and who has done so much to make our history, introduced Admiral Porter. As the Admiral bowed, the whole Hampton School burst forth with "My Country 'tis of thee." The English couple started, looked at each other inquiringly, and then joined in, as true and loyal Britons should, with a ringing "God save the Queen." But the German boys had a prior claim to the rousing strain, as they have to so many others, and the grand chorus filled the hall in three different versions and two different languages, sung by representative of four of the great divisions of the earth, and seven different nations: Germans, English, Native Africans, Cubans, American Indians, and citizens of the United States, two of Sandwich Island birth. When it died away, the Principal, congratulating the gallant commander on his fine young charge, and welcoming them to the school, introduced Capt. Schroeder. Again the school burst forth with a greeting as appropriate as they could make it, in the thrilling "Watch on the Rhine" which they sang to that grand, world embracing hymn, "Jesus shall reign where'er the sun." Of course the Germans caught it up in their own style, and carried all away on the full tide of their patriotic lungs. For a parting outburst, the school gave them "John Brown's Body." But the irrepressible Deutschers, recognized the familiar ring of an air of Vaterland, and the Glory, glory, Halleujah, lacked no voice of the international chorus.

The inspiration of this unique song-fest will not, we venture to say, be forgotten by any who participated in it, and the best wishes of all will follow the *Nympha* and her gallant officers and crew in their wandering.

## Horsford's Acid Phosphate

Imparts an additional zest to a glass of soda water. Ask your druggist to put a teaspoonful in your next glass.

## Health and Humanity.

HAMPTON TRACTS  
FOR THE PEOPLE.FOOD AND SOME OF ITS PRINCIPLES  
With some Methods in Cooking.

BY HELEN CAMPBELL.

Superintendent of Cooking-Schools at Raleigh, North Carolina, and Staunton, Virginia.  
Entered the Hampton Tracts in the year 1881, by Helen Campbell, in the office of the Librarian of Congress at Washington.

That Food or Cooking have any particular principles, or that it is worth while to find out what they are, is likely to be the first disputed point, and if this be admitted, the question next in order is why show so much interest suddenly in a matter they have been peacefully let alone for generation after generation, by every one but professed cooks and epicures? To answer this is part of my office to-day, though the subject of Food is too broad as one to be condensed into one, or ten, extracts upon it. All I can do is to present the topic to you in as compact a form as possible, trusting that sufficient interest will be excited to make you all searchers on your own account.

So far as this country is concerned, probably only the hard times could have brought about the actual founding of a Cooking School. But long before its operation became an established fact, the attention of philanthropists had been called to the necessity of finding some means by which the scanty food supply of the poor should be made more abundant, at least more palatable and nourishing. The thin, pale-faced children, who came into the Mission Schools of New York and other large cities, were found to live in great part on cheap pies and cakes, with baker's bread, and a little meat at times, but to have no thought that the money spent in these, could be so applied as to furnish a nourishing meal.

In one of the first Mission schools in New York city, it was decided to try the experiment of teaching them a few simple dishes, and the success was so great as well as unexpected, that all that has since been done was to engage larger quarters, formulate a system, and experiment until just the right course was found.

A year had not passed before the thing justified itself to all eyes, and now, not only the poor but the middle class and the rich, show an interest which from that day to this has crowded both the New York and Boston Cooking Schools with pupils during the six months session, and multiplied calls for courses elsewhere, until the Superintendents of both can by no means meet the demands made upon them. All over the country the interest is growing. Cooking clubs have been formed here and there. Dietetics are studied as never before. In short, cooking has become the fashion, and there are few quarters where it is not now recognized that no woman has the right to remain in ignorance of the nature and laws of Food, and the best methods of its preparation.

The movement in the South has met with more success than its more sanguine holders believed possible. When, in the summer of 1879, the walls of a new building were seen rising on the grounds of a school for girls in Raleigh, North Carolina, great doubts were entertained as to the builder's sanity.

"That thing will never go down in the South," said some.

"It will go down and never come up again," answered others, while both sides affirmed that all women being natural house-keepers, and abundantly able to teach their daughters at home, it was simply nonsense to make such teaching part of a school course, or two were heard to remark that in spite of this fact, for some mysterious reason, the fruits of home instruction were not always evident, and that there were cases where a young house-keeper had been discovered, that tears were the only thing that she knew exactly how to put into them.

Even then, suffering under the miseries inflicted by untrained and migratory servants and her own incapacity to deal with them, the young wife still felt the instinctive prejudice against personal labor, and while always willing to whip up a spinach or spend a morning frosting a cake, considered meat and vegetables as articles not to come into a lady's hands.

Physiology and Chemistry had been part of her school course, but that either had practical application to every day life, never entered her mind.

For most of us the same remark holds good. Not until failing health and strength give warning of something wrong in daily living, are we likely, unless a most unusual training has been ours, to think very much of the nature or effects of food. Dinners and suppers and breakfasts are served up and we eat

them, with small thought that brains must enter into the ordering of these meals. Live thought and its result in live work can come only from varied food perfectly prepared. Men is very much what we eat, and inorganic food means inevitably crude or unwholesome thought.

To impress this so thoroughly upon every young girl who entered the class that it should affect her whole future system of living, has been one aim of the Southern cooking-school, and in spite of misunderstanding and natural prejudice and girlish light-headedness, something of this has been accomplished. Positive, practical work has been done. With the ending of the school year in June, 1881, some thirty returned home with the first intelligent idea of food and of what forms of food their wonderful human body demands, that had never entered their minds. With her own hands each one had made bread and rolls, white and brown—baked steaks—made coffee and tea, cooked potatoes in many ways, with the addition of as many other operations in cooking as the size of the class would allow the individual. It has been proved that such work can be carried on without interfering with the regular school course, and the cooking days have been hailed as recreation rather than work. The course included not only practical work, but the writing each week a short paper on some topic connected with food, usually the story of some ingredient used. Monthly examinations have fixed these points as no other methods can, and necessarily, domestic sciences and the hygiene of daily life have been involved.

A class for ladies, beginning with a few curious and uncertain members, doubled its numbers in a month, and from all sides came in the students, and the new system holds a firm foundation for all uncertain feet, and that even in a short course of lessons it is possible to learn principles that will reconstruct all one's method of living.

The course at the North Carolina Institute for the Deaf and Dumb, began with the gravest doubts as to its success or practicability. Ten of the most advanced pupils were chosen, and doubtless the experiment seemed half a dozen lessons demonstrated that there was a new industry for the Deaf and Dumb. Several who went through the course have found employment as cooks with excellent wages, and as many were from the class of poor whites, almost helpless as any means, of livelihood, it has opened up a new chance in life for these helpless and shut-in souls.

Through all this it must be understood, that neither a nor any other mortal, can give the whole art of cooking in eight or even eighty lessons. Only practice and constant practice can fix them firmly in your mind, and only will it work out any system as best suits her own needs. Judgment, skill in meeting emergencies, knowledge of possibilities in combination, must all come from practice. Each day of each month each year will hold its own hints, and much of what at first seems mere helter-skelter knowledge, will fall into lines and reduce itself to fixed formulas. So, to the great army of housekeepers who sigh in the better foreign words of the old song: "A man's work is from sun to sun, but a woman's work is never done." I say—"It is all true. Breakfast and dinner and supper come round with settling regularity, and when they do surprise. Fixed law rules the one. It remains for you to establish an approximation to such law in your own homes and lives, and what women has done, woman can do.

So much of introduction, and now as to another phase of this same Food question.

No country in the world has such a food supply as ours, and it is safe to say that no civilized country, unless it be England, so misuses and abuses that supply. In the remote West, pork and corn-bread are served up three times a day and three hundred and sixty-five times a year, though game is all about, and any patch of ground would give vegetables and sweet herbs enough to reconstruct the whole system. New England, while affording a more extended bill of fare, has a heavy account to render, in the matter of misused and abused food supply. Summer and winter—morning, noon and night, the average New England farmer demands his triage of pie and his doughnuts and pickles. The craving for the constituents of these things was and is legitimate enough, as you will soon see, each one being demanded by the needs of the body yet each one requiring utterly different ending to draw out its ability to build up a body. In the South, with the poorer class especially, "hog and hominy" are the chief diet, and on even more Southern than Western tastes, the epithet might be, "Died of a Frying-pan."

There are many objections made to learning cookery thoroughly and practically, the necessity for taking sets of fragments and left-over portions, being considered not only troublesome but stinky. So many say—"How disgustingly mean to be spying about, saving a crust here and a bone there! It is impossible to stoop to anything of the sort." So the crutts and the bones and much more

than the crutts and the bones go to the pigs, or are tossed out to the waste-heap, and the wonder grows, why housekeeping costs so much money—and why the bills indicate that the food for a couple, has eaten enough to support a dozen. The income of five or ten thousand a year can weather such administration, but how about the income of only a fifth or tenth of that amount? The new book, the picture, the new dress, the little excursion, have all gone into that waste-heap. But if Mrs. A. spending ten thousand a year, instead upon economy, Mrs. B. spending one thousand, will, if common sense has not taught her, think it worth while to follow Mrs. A's fashion.

I do not preach economy because I want millionaires to live on bone-broth or dine on cold meat, but because it is not until the millionaires see it that not one crumb of waste in the food supply is tolerated or allowed, that people below them will think it worth while to save.

French cookery is usually supposed to be not only fully troublesome but expensive also, but the apparently costly dish is really often made from the cheapest materials. The piece of tough beef, fried in scorching fat till nearly black and served up to us in this sizzling and offensive gravy—a mass as palatable and digestible as an old boot-heel would be converted by French skill into a made dish, or *entree*. All required, would be slow and careful stewing, and the addition of certain vegetables and sweet herbs, and this would be a larger amount and a far more savory result than the first process.

Before we can well consider the nature of food, it is necessary that we should understand something of the process of digestion. Since understood, there is no operation of natural law in the human body, so utterly wonderful. By an effort of the will you can check respiration a moment or more, but no power of one's own can for an instant affect the mysterious action, by which food becomes a part of the body itself. We must understand too, exactly what is meant when in speaking of foods, we call some, *fresh formers*, and others *ready-made*. These are the two great divisions under one head and the other of which all food must come.

A large part of the change in all starchy foods, wheat or corn-bread coming under this head, wrought before they reach the stomach, the saliva having some strange power by which the starchy part is turned into sugar.

Of the various juices then, which come into action in digesting a meal or a mouthful we have:

1st, the saliva; secreted from the glands of the mouth; an alkali.

2nd, the gastric juice, secreted in the thin lining of the stomach; an acid, powerful enough to dissolve all the fibre and substance of flesh food.

3rd, the pancreatic juice, secreted by the pancreas, which you know in animals as the sweetbread. This juice has some curious influence upon fats, which remain unchanged by either saliva, or the gastric juice, but which, when touched by the pancreatic juice, dissolve and become what the chemists call an emulsion, that is a liquid holding all the little dissolved particles in it, and making them ready to be absorbed into the blood like the other food.

4th, the bile, which nobody as yet, thoroughly understands. We know its action, but hardly why it acts. It is a necessity however, for if the supply be cut off by disease, an animal grows thin, and soon dies.

5th, the intestinal juice, which is a little like saliva, and is the last of the digestive juices. You see then, that a meal in its passage downward, is first diluted and increased in bulk, by a watery fluid, which prepares all the starchy part for absorption. Then comes a still more profuse fluid, dissolving all the meaty part. Then the bile is attended to, by the action of the pancreatic juice, and at the same time the bile pours upon it, doing its own work in its own mysterious way, and last of all, last any process should have been imperfect, the long canal sends out a juice that has some of the properties of all.

Each day then sends out:

Of saliva,	32 pints.
Of gastric juice,	12 pints.
Of bile,	32 pints.
Of pancreatic juice,	12 pints.
Of intestinal juice,	4 pints.

Now do not fancy that this is wasted or lost. Very far from it, for the whole process seems to be a second circulation as it were, and while the blood is moving in its wonderful passage through veins and arteries, another circulation as wonderful—an endless chain, going on all the time, and along its life, is also taking place. But without food, the first would become impossible, and the quality of food and its proper digestion means good or bad blood, as the case may be. So we follow our monthly food, and see how this action takes place.

When the different juices have all done their work, the chyme, which is food as it passes from the stomach into the duodenum or passage to the lower stomach or bowels, becomes a milky substance called *chyle*. This

moves slowly, pushed by many muscles along the bowel, which squeezes much of it into little glands or bags at the back of the bowels. These are called the *mesenteric glands*, and as each one receives its share of *chyle*, a wonderful thing happens. About half of it is changed into small, round bodies called *corpuscles*, and these corpuscles float with the rest of the milky fluid, through pipes, which take it to a sort of bag just in front of the spine. To this bag is fastened another pipe, called the *thoracic duct*, which goes up the spine, and up this the small bodies travel till they come to the neck, and a spot where two veins meet. A door in one opens, and the change is complete. The small bodies are raw food no more, but blood, travelling fast as it can, to a place where it may be purified and begin its endless round in the best condition. Far venous blood is still impure and dirty blood. Before it can be really alive, it must pass through the veins to the right side of the heart; flow through into the upper chamber; then through another door or valve into the lower, where it is pumped out into the lungs. If these lungs are full of pure air, as they should be, each corpuscle is filled with oxygen that it goes dancing and bounding on its way. That is what health means: perfect food made into perfect blood, and giving that sense of strength and exhilaration we none of us know half as much about as we should. We get it sometimes; on mountain tops—in clear autumn days, when the air is like wine; but God meant it to be our daily portion, and this very knowledge of food and cookery, is to bring it about.

If a lung is imperfect—supplied only with foul air as among the very poor, or diseased, as in consumption, food does not nourish, and you now know why. The purest air and the purest water cannot be the largest proportion of oxygen, and it is this that vitalizes the food, and through the food the blood. To nourish this body then demands many elements, by which chemists and physiologists have worked together until every constituent of the body is known and classified, as well as every corresponding element in food. We take the body first.

Flesh and blood are composed of water, fat, fibrin, albumen, gelatine, and the compounds of lime, phosphorus, soda, &c.

Bone contains gelatine, gelatine, fat, and the salts of lime, magnesia, soda, &c., in combination with phosphorus and the largest proportion of oxygen, and it is this that vitalizes the food, and through the food the blood.

## CHRISTMAS CAROL.

Cheerily, cheerily sing we all,  
On Christmas eve the shadows fall,  
On Christmas morn the sunlight breaks,  
And all the world to gladness wakes.  
The leaves are dead,  
The birds are fled,  
The little brooks' tongues are tied with cold;  
But bells are ringing  
And children sing  
For safe is our dear Shepherd's fold.

Heavily hang is our Christmas tree,  
'Tis burdened well for you and me,  
The hemlock branches piled with snow  
In native woods bend not so low.  
God give us all;  
The ravens call;  
He heareth them, so let us begin.  
Ha hoers away  
When children pray,  
For He himself a child hath been.

Help us dear Lord, lest we selfish be;  
All hearts are not so glad as we,  
Remember then thy poor tonight,  
And flood their darkness with Thy light.  
The hungry feed,  
The wender lead,  
The sorrowing soul, the captive free,  
And think we pray,  
On this glad day,  
Of those who have no Christmas tree.

From *Tonic Sol-Fa Music Reader*.

## SKETCHES OF MISSION LIFE.

BY MRS. C. C. ARMSTRONG.

The annual gathering of the missionaries from the various Islands, at Honolulu, was held this year in an edifice, built by natives under the superintendence of Mr. Bingham, whose zeal and energy were always remarkable. Here, we, with the rest, received our annual mail, brought in a whale ship round Cape Horn, and nothing could exceed the joy of getting tidings from home and friends. One letter, never to be forgotten by us, came from the A. B. C. F. M., expressing their entire satisfaction with our course in giving up the Marquesas mission. Although no doubt existed in our own minds as to the wisdom of what we had done, it was a great relief to have the approbation of the Board, and to feel that their sanction put us beyond criticism.

The question of the distribution of the missionaries at the different stations was of course the prominent one before the General Meeting. Mr. Richards, in a most touching manner, told of the condition he had found us in, and remonstrated against putting any family into such a position. It was a waste of money as well as of life. The secular agent was extremely economical, as it was right he should be, but he knew nothing of the difficulties and dangers of living at a remote station without necessary comforts. The conclusion arrived at was, that as the mission could not afford to build a comfortable house for us at Makawao, that station for the present must be given up, and we were transferred to Wailuku, some twelve miles distant. This was to be our headquarters, but Mr. Armstrong was still to have charge not only of Makawao, but also of the adjoining districts, with, in all, a population of some twenty-five thousand natives. A new house was put up for us at Wailuku, of adobe, with thatched roof and mat floor, and though it consisted of but one room (40 ft. by 25) and was finished very roughly, it was a great improvement on our former residence.

My husband entered upon his work as usual with zeal and courage. Schools, Church and people were diligently cared for, and it soon became evident that new buildings would be required. As the rainy season came on, our house proved to be almost as leaky as the one we left at Makawao, so that it was decided to begin at once a stone church and new dwelling-house. Mr. Armstrong had of course to direct the natives, though his own knowledge was limited, and to assist him, he employed two or three coarse white men, who had somehow drifted into this out-of-the-way place. These men I had to board, which was no very pleasant duty, for the smoke and heat of my workhouse, and the awkwardness and thievery of my cooks were almost intolerable. I managed however to keep up a

weekly Bible class with the women, and assisted more or less in the schools.

The natives learned very slowly, for they had no liking for work. Laziness was often called sickness, and medicine would be taken with a relish, if they could thereby avoid any particularly disagreeable piece of work. A long and tedious process of breaking and mending, working and resting, grumbling about pay, stealing, chattering, with innumerable perplexities for the pastor, and at last the wells were up. The thatching of the roof was closely watched, for we could get no shingles, and we had learned to value a tight covering for our heads. My health gave way again from overwork, but we succeeded in getting a tolerably good native woman to help us, and after long waiting the joyful day came when we could move into our own house. To be under a close roof, to have windows, plastered partitions, board floors, and a kitchen under the same roof, was a great luxury. We hoped that we had found a permanent home, in a promising field of labor, and when our furniture arrived from Tahiti, though not so improved by time and many changes, we received it gladly, feeling that we were once more settling up our household gods. Our box of books had been pretty thoroughly soaked in salt water, but they were books still, and with a few of my water-color sketches, and in "Koa" wood, gave our rooms quite a cheerful aspect.

How pleasant our new home looked to us, how much it was appreciated, after those years of weary wandering and exposure, I can hardly tell. Kind friends at home had learned of our needs, and now there was no more suffering from want of sufficient clothing. We lived in comparative comfort, and could see that gradually the example of our domestic life was beginning to have some refining and civilizing as well as religious influence on the natives. Their long, noisy calls were unending, but they admired our pictures, asked unending questions about them, wanted to be taught how to make them, etc., so that we endured their presence in our house, as one means of getting at them.

### MY GARDEN.

Though health and strength had diminished, my love of nature had not left me, and one of my first undertakings after we were fairly settled, was to try with native help, to make a garden. It seemed to me that it would be a great thing if I could make these poor creatures love the beautiful works of God. The chief had told us to enclose a small land as we pleased, so we had taken in about three acres. The soil was dry, but water plenty. We had a little stream running through our kitchen, which was no small convenience, and over this same stream we built a grass bath house, and from it watered our plants. The variety of vegetables and flowers was limited at first, but gradually increased, and though everything that we raised cost a good deal of labor, it was excellent training for the natives, who valued the results of work in proportion as they loved idleness.

After three or four years, the once dry and barren desert blossomed as the rose, and as the years went by, beautiful shade trees and shrubs adorned the place. One little spot we planted with grass for a play ground for the children, and this we enclosed with green sticks from the valley, planted close to each other, which quickly sprouted, forming a pretty hedge. Attempts at imitation were frequently observed round the native houses, but as the occupants owned nothing and were liable at any time to be sent off by some whim of the chief, there was nothing to encourage such efforts.

### FOREIGN RESIDENTS.

One of the great obstacles to our work here and I suppose to all similar work in similar places, was the presence of white men of low moral habits. These men were usually intemperate, vicious, often really criminal in their lives, and always of importance in native eyes because their skins were white. They frequently bore assumed names, and the young native girls whom they took as wives, had little to expect at their hands, except brutality, and often desertion. The Hawaiian native women, had of course been degraded for years, but Christianity had broken the tabu, and in many cases these women were the superiors of the white brutes who destroyed their only chance of becoming pure wives and mothers. Civilization lowered to the level of the heathen, and mingling with it, it was worse than heathenism itself, and it was this with

which our poor native pupils had to contend. Frequently we were applied to by natives to settle quarrels between them and their white neighbors, and in this way became witnesses of the most degrading scenes.

In years to come the Islands became peopled with half white children, whose fathers were of different nationalities, and of all grades of society, from the highest to the lowest, the existence of most of whom was proof of the demoralizing influence which prevailed for years in Island life.

### THE EXCEPTION.

We found one gratifying exception to the facts I have stated in the person of a sailor, a man of limited education, but good heart, who, with his pretty, native wife, Omalie, lived near us in the most pleasant little house. They were both, I believe, true Christians, devoted to each other, and kind and sympathizing friends to us. I was often ill, and Omalie was always ready and willing to help in my weekly meetings. She had a retentive memory, and was apt and clear in scriptural illustrations.

William, her husband, was among the first to take and grow the sugar cane, which he did quite successfully, supplying his family abundantly with such comforts as could be obtained. In precept and example, he was a real missionary to the natives, and though he suffered much in the last moments of his life, his death was triumphant. Omalie was ever after sorrowful, but never lost her faith in Christ. Years after, when she was old and feeble, I went with her to William's grave, surrounded by flowers and lofty trees, and for the last time helped her put the silent house in order.

### SUCCESS.

This station, Wailuku, proved to be a most interesting one. Mr. Armstrong, after numerous expeditions to the mountains for timber, succeeded in completing his stone-churches, one here, and one at our former station, Makawao. They had doors, a few small windows, and mat floors. A pew was built near the pulpit for the mission family, for either the children must all go or I must stay at home. It was often a wearisome day for me, for the children were not apt to be very exemplary, and the family often attracted more attention than the sermon. But the example of taking them to church was needed, and was, indeed, a sermon in its kind, a help to civilization and Christianity. It was necessary to observe the strictest economy in all things, and this necessarily retarded progress, but the school houses were built in the surrounding districts, and a change was perceptible.

As it was found that cotton grew well here, a teacher was sent out from New England, a middle-aged woman, who occupied part of our new house, and endeavored to train the natives in hand-spinning and weaving. The experiment however, proved a failure, for foreign goods came in so rapidly, and were so much superior to anything the natives could make, that there was no object in endeavoring to instruct them, and the self-sacrificing teacher finally gave up the attempt.

My husband was, during a great deal of the time, preaching and visiting missions, and I had plenty to do, with my never-ending stream of natives, to whose souls and bodies, both, I was expected to attend. Besides the care of my own children, I had to attend to the weekly meetings, to look after the large school, to administer medicines, teach awkward hands to do various kinds of work, and endeavor in all ways to make the influence of family life a power for good among the heathen. It was indeed "practical preaching."

### VISIT TO HONOLULU.

As the time for General Meeting came round, we decided to take the children and go up to Honolulu in one of the miserable little native schooners, though we dreaded the voyage, and all the inevitable hardships. As usual, we were very sick, and arrived, weak and weary, at Honolulu, to settle ourselves for a few weeks in a small grass house, set apart for us by the agent. Our first meal was taken with one of our mission families, and then we began housekeeping on supplies brought with us.

Our house contained but one room, for dining room, sitting and bed room; and here, two weeks after our arrival my fifth child was born. I had only an ignorant native woman to assist me, and as I lay helpless, had to di-

rect her in everything. The grass house was very hot, and I became ill unto death. But for my children I should have died, but there was always the thought, "who will care for them," and so, gradually, as if in answer to prayer, my sick, aching body was made well again, though weak and weary still. A few more weeks and I was able to return to Wailuku, and take up the work there once more. Natives slowly improved, there were signs of progress, here and there, and so the months went on, until at the end of five years a change came.

### LEAVING WAILUKU.

In the year 1840, I was unable to go up to the General Meeting, and my husband went alone, to return after an absence of three weeks, with the news that Mr. Bingham and his family, on account of ill health, were to leave for the States, to be absent probably two years. The post was an important one, and the mission was so desolate that Mr. Armstrong should fill it during Mr. Bingham's absence.

Both my husband and I were very unwilling to give up our promising field of labor, even for two years, and the question was very earnestly discussed. It was urged upon us that there was no one else to fill the largest and most important post in Oahu, that our absence was to be only temporary, and our place to be well filled, so our conclusion was to go.

The parting was a sad one, for Wailuku had come to seem homelike to us; two children had been born there, Richard Baxter and Samuel Chapman, and there were many ties to be broken, between us and our people. The extracts which I make from my husband's diary, show how keenly he felt it, and how uncertain he was as to his return.

"Wailuku, July 25, 1840

Severe is the trial of parting, with a people whom I had adopted as my fellow-travelers to the grave, with whom I have spent five years of toil, solicitude and anxiety in the midst of whom I have seen more of the glory of God's grace than in all my life before. To many of them, my heart tells me in its agony, that it is built in the dearest Christian friendship, particularly the beloved children. May the good and great Shepherd keep them all, through his own power, unto eternal life.

"July 27th, a day of confusion, fatigue and weeping. We knew not until now, the mutual attachment that has been formed between us and our dear people. Our yard has been filled all day with weeping visitors and friends. I cannot but here record my gratitude to the Master whom I serve, for all the goodness he has caused to pass before me during the past five years.

"When I came here there were only ten or twelve church members, now there are seven hundred. Be Thou their Shepherd, Guardian and Guide. Unto Thee I commit the sheep and the lambs; knowing they are safe in Thy care."

A SINGLE bitter word may disquiet an entire family for a whole day. One early glance casts a gloom over the household, while a smile, like a gleam of sunshine, may light up the darkest and weariest hours. Like insect-peddled flowers which spring up along our path, full of freshness, fragrance, and beauty, do kind words, and gentle acts, and sweet dispositions, make glad the house where peace and blessings dwell. No matter how humble the abode, if it be thus garnished with grace and sweetened with kindness and smiles, the heart will turn lovingly towards it from all the tumult of the world; it will be the dearest spot beneath the circuit of the sun. And the influences of home perpetuate themselves. The gentle grace of the mother lives in the daughter long after her head is allowed in the dust of death, and the father kindly finds his echo in the nobility and courtesy of sons, who come to wear his mantle and fill his place; while on the other hand, from an unhappy, misgoverned, and disordered home, go forth persons who shall make homes miserable, and perpetuate the sourness and sadness, the contentions and strifes and railings, which have made their own early lives so wretched and distressed. And what is here said of home life is only less true of school life.

# Southern Workman,

**TWELVE PAGE MONTHLY.**  
(Reduced to eight pages from July to October,  
four months.)

J. F. B. MARSHALL,  
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post Office at  
Hampton, Va.

The Southern Workman, devoted to  
the interests of Negro and Indian civil-  
ization, is edited and managed by the offi-  
cers of the Hampton Institute, and printed  
on the School Press by colored youth  
trained in the office. Subscriptions are a  
help to the School. It is sent on trial for  
four months for twenty-five cents. Job  
work, from all parts of the country, is so  
liberal, and will be done cheaply and well.  
Estimates will be sent on application.

There is a feature of the school work  
at Hampton to which attention has never  
been specially drawn, but which, neverthe-  
less has a special value of its own.

That is the work which women have  
done here for women.

It is probable that in this country, no  
undertaking, either charitable or educa-  
tional, has received heartier co-operation  
from women, than has Hampton; indeed  
it is hardly too much to say that it owes  
its steady, healthy growth, largely to their  
faith, generosity and intelligent devotion.  
Evidently none but those most intimately  
connected with the school can know how  
large a share of its success is due to the  
women who have given to it and worked  
for it, but the time has come when what  
they have done can be approximately  
measured, and hope for the future be based  
upon the accomplished facts of the past.

This year marks an era in the growth  
of the school, for the term opened with a  
roll call of 160 girls as against 90 in the  
previous year, while the completion of the  
"Stone" Building, for women's industrial  
work, (the gift of Mrs. Valeria Stone) and  
the lodge for Indian girls, enables the In-  
stitution to offer such opportunities as  
have never before been within the reach  
of the class from which its students are  
drawn.

The sudden increase in the number of  
girls is most hopeful, because while, in  
the past, the male students have been  
largely in the majority, the influence of  
the female graduates has been fully as im-  
portant, and probably, in some respects,  
farther reaching. In their work as teach-  
ers they stand on an equality with men,  
receiving the same pay and taking the  
same position. Applications for teachers  
are usually irrespective of sex, but it is  
not uncommon to find that women are  
preferred, (being often directly asked for)  
partly perhaps because they have no po-  
litical power, but also because they are  
more self-sacrificing and less aggressive.

While everything in the past of the col-  
ored women of the South has tended to  
keep them inferior to the men, so that our  
girl students are presumably handicapped  
at the outset, it is constantly a matter of  
surprise to find them not only holding  
their own, but showing a power, a persis-

tence, a capacity for growth, which is be-  
yond the expectation of even the optimis-  
tism among their friends. Instances after  
instance can be cited from among the  
young women who have graduated from  
the school in the last ten years, where the  
record as teachers or as wives and mothers  
has been creditable. To any one who  
knows what their temptations are, and  
how few are their incentives to right liv-  
ing, this means success in its most prac-  
tical and permanent form.

Of course, it will be understood that  
these statements apply only to the colored  
students; work for Indian women not  
yet having arrived at a point where re-  
sults can be calculated, our hope be-  
ing only that in the one case as in the other,  
facts may prove kinder than theories.

Surely it must be a blessed thought to  
those women, living a dead, who, with  
strong and gentle hands, have helped to  
lift the crushing burden with which the  
past has weighted down the colored wo-  
men of the South, that the result of  
their labors has come so soon. To many  
of them it has been given to see face  
to face, to know with a sure knowledge,  
the brave, honest, pure-minded girls who  
are the crown of Hampton's work, the  
girls who have taken the light of consist-  
ent Christian lives into the dark places  
where so many of their people dwell. To  
others, to whom such opportunity has not  
come, we can offer only the record of our  
graduates' work, but its witness is more  
than satisfactory. There is a straight-for-  
ward devotion, a certain rectitude of char-  
acter among the best women graduates  
of Hampton, which practically gives the  
lie to their past, and while it is true to say  
that in the education of women lies the  
best hope for the future, it is, we trust,  
very evident, that money and work are  
not wasted when they produce such wo-  
men as these.

## THE COLOR LINE NORTH.

A young man who graduated from Ham-  
pton in '78, has been struggling ever since  
with a great deal of determination, pluck  
and perseverance, to get an education as  
physician, to practise in the South among  
his own people. He has worked his own  
way slowly, studying first in the office of  
a physician in central New York, then in  
the Medical College of Syracuse, winning  
respect and friendship and a good report  
wherever he has been. His object is one  
which might be expected to meet general  
approval and encouragement, especially in  
the profession. Sensible and honest col-  
ored physicians to take the place of the  
conjure doctors in the South would do a  
great work for their people, and certainly  
not one to excite jealousy or offer any in-  
dicements but unselfish ones. No one  
can appreciate this so well as physicians,  
and in view of these considerations, this  
young man's statement of the treatment  
he has received at the hands of one medi-  
cal college in the enlightened North is  
rather surprising. The interest of his let-  
ter is added to by the fact that his ob-  
jectionable complexion has made him more  
than once mistaken for a white man.

University of Buffalo, Medical Dept.,  
October 20th, 1881.

GEN. ARMSTRONG,  
Dear Friend: From a paper I sent you  
you can see that the color line is as strictly  
drawn in parts of the North as in the South.  
I have had very poor health all summer,  
and been unable to earn as much as previously.  
This was due to over work and study last win-  
ter, which, owing to my condition, I could not  
avoid. I therefore made application to the  
University Medical College of New York city,  
for the benefit of a scholarship (there being  
several there) forwarding with it letters of  
recommendation from several of the best and  
most prominent men of Western New York,  
including Clergymen, Physicians and county  
officials of Lyons and Syracuse. Stating who  
I was and all about me. I received an an-  
swer from the Dean telling me to come on,  
and stating terms. On my arrival, he refused  
to allow me to enter because I was colored,  
saying he had no idea I was colored, that he  
had overlooked the word. I offered to pay  
full tuition (knowing I could borrow the  
money) and submit to any examination in  
English or Medicine. But he said from my  
Diploma and letters he was perfectly satisfied  
as to my qualifications and character, but I  
was colored, and must go somewhere else.  
This was after he had kept me waiting four

days to see if the faculty would confirm his  
decision. I felt that it was a great injustice  
after my writing him all about who I was, and  
every one of the letters stating the same.

As it was too late to re-enter Syracuse Uni-  
versity, I came here. A gentleman for whom  
I had worked, for two summers very kindly  
offered to lend me money enough to meet my  
expenses this year. I offered securities, but  
he would not accept, saying that the note  
with my name was sufficient. Not wanting  
him to lose anything in case I should die,  
I took out a life insurance policy, making it  
payable to him, so if I live or die he will not  
lose anything by his kindness.

I am getting on nicely here, and like it very  
well.

I have a very good situation offered me as  
assistant Physician as soon as I get through,  
where I shall have good opportunity and can  
gain large experience.

As soon as I get all my debts paid, includ-  
ing the one at Hampton, I shall go South, to  
practise among my own people, but I don't  
want to open an office and sit down to wait  
for business with a debt on me. I had rather  
work as Hospital assistant for a definite salary,  
if it is small, and see my way clear.

Yours obdly,  
C. N. DONSETT.

To contrast the young colored man thus  
unselfishly ambitious to devote himself  
to his race, with the great educational  
institution in the North refusing him the  
chance on account of his color (?), does not  
show the great educational institution in the  
South, where men, women and children  
talk more politics in a week than we hear  
at the North in a month. To our read-  
ing room come some forty exchanges,  
and other papers and magazines. They  
represent every section, and shade of opin-  
ion; for example, the Tribune, Post and  
Boston Advertiser, the Richmond State,  
New Orleans Picayune, Louisiana (col-  
ored), and other colored papers.

This is the only fair and sensible way  
we think, better than to send them out  
in ignorance to be the dupes of the first  
stump speaker with a long tongue. Besides  
this, the news of the day, domestic and  
foreign, is read to the whole school every  
morning and they are questioned on it.  
This is part of an education. As our cor-  
respondent says, there is a great mass of  
general information in the weekly Trib-  
une, and the fact that there are also politi-  
cians will make it the more attractive to the  
reader. We must give him what he is in-  
terested in to introduce him to new inter-  
ests. Who ever acquired a taste for read-  
ing, from a school reader? But our stu-  
dents have got somewhat used to general  
reading at Hampton, and when they are  
away they "cry for it."

## HOW TO GET RID OF THE RUBBISH.

A good paper or magazine is a mis-  
sionary of civilization. Is there a much more  
depressing sight than a dusty congrega-  
tion of such missionaries hopelessly accu-  
mulating year after year in closets and  
garret, hoarded with an uneasy sense of  
responsibility of doing something with  
them some day, and an uncomfortable  
conviction that nothing will be done any  
day till desperate posterity commits  
them suddenly to the flames?

Look first on that picture and then on  
this.

A young colored graduate teacher labor-  
ing all day in his log school house in some  
backwoods settlement of the South, and  
then sitting down in his cabin loft bed-  
room to write to his former teacher: "I  
wish I had something to read myself. I  
have no educated person to talk with and  
I haven't seen a paper since I have been  
here. Nobody takes one and I cannot af-  
ford yet to take one myself. I don't know  
what is going on in the world. When I  
think of the reading room at Hampton, I  
am homesick."

Appeals like this come yearly to us  
from every quarter, from teachers and  
from some who cannot teach, having their  
homes to take care of. One writes recent-  
ly: "Will you please send me some old  
magazines and papers to read? I would  
like to read something good and instructive.  
I am very lonely Sundays when I  
cannot go to church, and long for some-  
thing to read." Another asks, "Please  
send me a Southern Workman, or some  
paper to read." Another: "If you have  
any maps, charts, or reading matter, please  
help me." Another: "If you could send  
me a few copies of pleasant, instructive  
papers suitable to read to my scholars, I  
should feel very thankful."

Is there any way of starting some of  
those dusty missionaries for this field,  
and more before they get dusty?

If any one likes the suggestion of tak-  
ing the lights from under their husbands,  
we shall be very happy to furnish the  
candlesticks. If any are willing to send  
papers or magazines to our graduates af-  
ter reading them, and will let us know  
what they are, we will send them the ad-

dress of certain ones to whom they will  
be a great blessing. This will save the  
double postage of sending them  
first here, and will put the senders into  
direct communication with their benefi-  
ciaries, which some of our friends have  
heretofore found pleasant and interesting.

Weekly papers and monthly magazines  
are better than dailies, to send. When  
desired we will supply the wrappers di-  
rected and stamped for them. We distrib-  
ute from fifty to sixty papers and mag-  
azines every week from our own reading  
room, but have not nearly enough to go  
round among our graduates, now number-  
ing over four hundred. Some take a pa-  
per themselves.

A correspondent who wishes to be name-  
less, whose bright and interesting letter we  
subjoin, kindly offers his Weekly Tribune.  
He will see from the above how welcome  
it will be, first to our reading room and  
then far beyond it.

His point as to the best course for a  
student and teacher as to politics, is well  
taken. Necessity or expediency or com-  
mon sense may keep the colored graduate  
teacher out of politics—very few Ham-  
pton graduates have gone into them—but  
withholding, the Tribune would not keep  
him from hearing them discussed in the  
South, where men, women and children  
talk more politics in a week than we hear  
at the North in a month. To our read-  
ing room come some forty exchanges,  
and other papers and magazines. They  
represent every section, and shade of opin-  
ion; for example, the Tribune, Post and  
Boston Advertiser, the Richmond State,  
New Orleans Picayune, Louisiana (col-  
ored), and other colored papers.

This is the only fair and sensible way  
we think, better than to send them out  
in ignorance to be the dupes of the first  
stump speaker with a long tongue. Besides  
this, the news of the day, domestic and  
foreign, is read to the whole school every  
morning and they are questioned on it.  
This is part of an education. As our cor-  
respondent says, there is a great mass of  
general information in the weekly Trib-  
une, and the fact that there are also politi-  
cians will make it the more attractive to the  
reader. We must give him what he is in-  
terested in to introduce him to new inter-  
ests. Who ever acquired a taste for read-  
ing, from a school reader? But our stu-  
dents have got somewhat used to general  
reading at Hampton, and when they are  
away they "cry for it."

Oct. 18, 1881.

EDITOR OF SOUTHERN WORKMAN.

I am a regular subscriber to the Tribune.  
Occasionally I find passages which I cut out,  
otherwise it becomes waste paper after I have  
read it. My object in writing, is to inquire  
whether it would be well to mail these papers  
to Hampton for the students to read, and if  
so, to what address.

My doubt arises from the fact that the Tri-  
bune is a political paper, and opposed to the  
ruling party in the South, and politics are con-  
stantly associated with a great mass of gen-  
eral information. On this score I suppose that  
the Tribune represents the general views of  
the students, but I believe that the best thing  
for them and for their race, is for them to de-  
vote their whole attention to their studies, in  
order to raise themselves and their race in the  
scale of humanity, and to keep politics out of  
their thoughts until they shall have completed  
their studies.

I have seen the colored people of the South  
under three phases. When I first went South  
in the winter of 1868-9, they appeared to be  
frightened like sheep without their shepherd.  
They did not know whether they were free or  
not. Next, they became sure that they were  
free, and became impatient, like boys at the  
"horrible age," when they think themselves  
more important than they ever were before or  
will be hereafter. Next, they found that they  
must work for their living, and a fair propor-  
tion of them have become industrious, good  
citizens. Very Respectfully,

P. S.—When conversing with a native  
Southerner, on the St. John's River, Florida,  
he said: "Anyone who believes that Niggers  
will not lie or steal, knows nothing about  
them."—Stop a little and give them their due.  
—Yes, give the Devil his due and he will  
have the whole of them.—Stop a little. The  
steamboat leaves on our dock barrels of provi-  
sions and of ale, &c., and they are there ex-  
posed over night. You would not dare do that in  
my neighborhood, and it would not be negroes  
who would take them. Robbers could with-  
ease come into my room at night. I would  
not dare to be so careless at home. I regard  
this as a very honest neighborhood on all im-  
portant points, although eggs and chickens

may not be safe, and at that score they were [sometimes] educated to pilfer, by their owners allowing them to do so with impunity."

There is one thing to be thought of. If the good reading does not go South, the bad will. The veil of ignorance has been a shield as well as a cloud. One immense advantage which the missionary teachers of the South have had over the public school teacher North is, that they have not had to contend with any taste for or knowledge of low, sensational papers or novels. The only readers had been trained by missionaries, and were full of an earnest purpose. It is still so to a very great extent, but it cannot be hoped to continue so—unless the present opportunity is made the very most of. The veil lifts for the knowledge of both good and evil, and the evil forces are very prompt and bold. Only last summer a young under graduate of Hampton was found selling on commission to the students openly and ignorantly—a quantity of trash and worse than trash, fortunately discovered in time for suppression. This most pernicious of the books had been added gratuitously to his order by the firm whose agent he had become. Shall it be heaven's light or hell's?

#### CONCERNING INDIANS.

Extracts from a paper read by S. C. Armstrong at the Anniversary Meeting of the American Missionary Association held in Worcester, Mass., Nov. 3, 1901.

The red man has, for generations, been pushed to the wall. He is sure of nothing if he is to judge the future by the past, and that he does. We have a system of dealing with Indians that is good so far as it goes. We have planned well, at least kindly, but have executed miserably. In the past two centuries, the chattels of the South made more relative progress than our wards in the West.

The Indian question is this—education (in its broadest sense) or extermination. But at least one white man must fall for every Indian who is shot, and it takes as much money to kill one red man as it would to train a hundred of their children in civilized ways. To educate is at least economy.

The Indian Bureau reports that the number of self-supporting Indians cannot be precisely stated, but gives the following as a fair estimate.

Wholly or almost entirely self-supporting, 105,939. Partially self-supporting, 44,110. Wholly dependent on Government rations, 50,882. These figures do not include the five civilized tribes in the Indian Territory, numbering 59,187. The number of those wholly dependent is likely to increase.

Fifty thousand Indians receive every day of the year, a pound and a half of fresh beef with flour and coffee and sugar and tobacco to match, and a fair outfit for all purposes of decent living and good farming.

An agency warehouse is a huge store filled with utensils of every kind, from which the ex-warrior draws gratuitously, at the agent's discretion. There is no treatment like this in any other country on the globe. A stupendous wholesale charity to a warlike people, of whom a large portion are thus hired to keep the peace.

When first fed they are modest and satisfied; gradually they get importunate, and finally become most grievous beggars. There is an unevenness of treatment in this matter based on the varying difficulties of settlement; the strong and wicked Sioux getting the most in return for their good behavior. The quiet and thrifty Fort Berthold Indians, and others complain of their meagre allowance.

The first condition of successful dealing with such a people is complete subjection. Absolute control was at the bottom of Captain Pratt's wonderful success with "the worst stock in the Indian Territory," at Fort Marion, Florida.

Want of control of the children at the agencies is nearly fatal to their schooling there. When tired of or disaffected with school they stay at home, and that's the end of it.

The Black Hills treaty of 1868, which provides that the Sioux shall be fed till they shall become self-supporting, pro-

vides quite effectually that they shall not become so. With other men, labor and reward go together, with suffering as the alternative; with these Sioux and others, idleness is assured comfort, and labor has a prospective penalty. A quick witted class sees this and opposes industry.

Yet I have seen and heard of agencies where, notwithstanding these gratuities, there had been steady improvement in houses, crops and herds. Good management on the one hand and the good sense of the better class of Indians on the other, have, at certain points, led to remarkable results; but a forward move along the whole line of Indian population is not to be looked for till they shall have the same motives to industry that other men have, and that all men need.

Agencies, reservations and rations are and long will be a necessity, lessening only as, by wise use of public bounty, and by proper legislation and care, the Indians shall approach self-support and citizenship. The persistently indolent should not remain as they are now, unless the nation has pledged itself, by solemn treaty, to feed forever the savage who refuses to work.

The system of allowances might be made a tremendous leverage to lift up the Indians on the principle of helping those who help themselves.

His stomach is his weak point. It is his pride to bear bodily pain, and he glories in the agonies of the Sun Dance, but prolonged low diet has no charms for him. At Cheyenne river, Yankton, and at Devil's Lake, former agents have kept schools full and successfully stimulated the Indians to industry by letting truants and idlers go hungry. At Devil's Lake an equivalent for rations in labor was required, with remarkable results.

First class men and no others can settle the Indian question. The want of them is the bottom fact in our Indian troubles. Government pays the market price for good beef and sugar and tobacco, but will not pay for good men.

There is only one answer to the question "Can a superior man afford to be an Indian agent?" No! There are excellent Indian agents, thanks to their nobler impulses, but Government should buy and not beg what it is bound to get. Salaries are from \$900 to \$2,200, depending principally upon the number of Indians under the agent's care. Hence, the more liberally he feeds, the more the roving hands of the plains seek his care and swell his income. To press self-support upon them may scatter them and lessen his salary.

Congress will appropriate hundreds of thousands of dollars to feed Indians, millions to fight them, but will not give the nominal additional sum necessary to induce men who can make a living in any other way, to become Indian agents.

A good measure would be the assignment to duty, as Indian agents, of a few of the best qualified army officers. While I do not believe that the army should have the Indians, there is unquestionably in it a class of men of broad philanthropy, of wisdom, and experience nowhere else to be found. They have been tried and not found wanting. A score of such men would do more to settle the Indian question than twenty battalions. Of the sixty-six Indian agents, why should not one-fourth, at least, be tried army officers?

We fight Indians, as we feed them, because we must. We economize as soon as we dare! We make management and education as cheap as possible; the two things that will save them are put down to the lowest point.

We tell the Indian to take the white man's road, and refuse to open it.

He needs ideas; he is capable of citizenship, but is unfit to hold lands or manage property till he can read and write, and know something of our language.

A Bureau of Education with a competent head, is a great need of our Indian administration. This matter had been urgently pressed upon President Garfield, from whom action had been expected.

There is no need of revolution in the Indian department, but of reinforcement, authority, means, in order that men and ideas may do the work for the red man that is waiting to be done, and is de-

layed by the sluggishness and indifference of Congress.

Of the forty thousand wild children of the plains who are looking to the nation for education, not over eight thousand are enrolled at school. The average is far less. We are rich and paying all our debts but those to the illiterate of the land whose ignorance is not their fault. The little children will one day lead. Honor and interest alike demand a care for their welfare.

It is a question, not of Indian capacity, but of effort and money, whether all the shoes, harness, saddles, furniture, tinware, wagons, etc., needed by the Indian department, now purchased in enormous quantities in the East, shall be made in agency shops by Indian apprentices.

The point of sending children to Carlisle and Hampton should not be (as it now is) that they may learn trades, so much as to see and comprehend civilization—a temporary sojourn for their people, that all interested in them declare to be most desirable.

At Crow Creek Agency, Dakota, which I recently visited, 60,000 of the 506,000 acres of reservation land had been taken up by 235 out of 325 neighboring families, of whom 208 had broken ground, cultivating an average of five acres apiece. Their title is a certificate from the Secretary of the Interior, and can be made valid only by an act of Congress.

A bill to that effect, making the land inalienable for a period of twenty-five years, (to save it from the consequences of Indian folly and the white man's rapacity) was introduced at the last session, but failed to pass. This illustrates what competent, energetic men can do.

Settling Indians on homesteads, encouraging mechanic arts, agriculture, and especially cattle raising, (for which this race is peculiarly adapted, and has, at the beginning, in its fitness for it, an advantage over white men), turns more than anything else on the wisdom, skill and permanence of the agent.

It should be said that there has been, for the past ten years, a steady improvement in the morale of the agencies, the ideas and habits of Indians, and in the character and efficiency of Government employes.

The chief who once said "We can't eat schools and teachers, and don't want them," and afterwards sent his son to Hampton, illustrates the change in Indian thought that is steadily going on. Progressive Indians have suffered persecution to abandon the dance, put away wild costume and rub the paint off his face, has cost many an Indian suffering and loss. The "white man's way" is not even now, fashionable or comfortable; ridicule being one penalty which, to an Indian, is hard to bear.

Religious work at the agencies has not, as a rule, been appreciated by the neighboring or by visiting whites, and is far from having in the East the recognition and support that is its due.

Religion in a savage is a principle which works against terrible odds, both inwardly and outwardly. The still, small voice speaks in the midst of howling passions. One who is trying to be better, may make ridiculous failures. Not "what has he done?" but, "will he try again?" is the test of his faith. "Missionary failure" is echoed around the world by a class of men from Christian countries, whose conduct, more than the depravity of the savage, has caused a degree of failure.

Let the Government govern; let Christians Christianize, if that is what is wanted. Government had better give up its Agency school to philanthropic control; and the Christian societies relinquish whatever appointing power they have. It is not in their line any more than moral training is the "forte" of a Government official, and has not been, on the whole, a success. Each should work its own ground, mutually co-operating. The benevolent people of the country should have a point of contact with the Indians that shall be indispensable both to their elevation and that intelligent public sentiment respecting them which is at the foundation of all sound legislation. We prefer, at Hampton, to have charity

bear a share of this burden of Indian education.

There is no finer work in the line of Christian civilization than that for Indians at Yankton, Sisseton, Santee, Fort Berthold, Kokomish, Cheyenne river agencies, and at Fairbault and Peoria Bottom; and these are only points along a line of effort.

I can bear personal witness to the success of St. John's Episcopal school (under Bishop Hare's care) at Cheyenne river, among a once most inhospitable, turbulent set; where thirty bright girls are being taught the art of living as well as skill could be done anywhere in New England.

There is not a brighter spot on the Missouri river than the settlement of twenty-one Indian families on homesteads of their own, at Peoria Bottom, who, through the efforts of the Rev. Thomas L. Riggs, have settled on this lovely plain, built log houses and out-houses, and piled up stacks of hay for winter use. This illustrates the best kind of missionary work, which is as broad as human life, and is to be expected, not from men whom the East can spare, but whom the East cannot spare. Weak missionaries are as bad as weak agents. The Indian question is more one of men than of money, or of acts of Congress, or of anything else.

The quiet missionary work done for the red race during the past forty years, is the seed sowing of which the race and the nation will reap a harvest of good results. The Indian is a worshipper; "the blue sky and high bluffs are his church edifice—the medicine man being his minister." With selfishness and vindictiveness running through their religion, it contains a recognition of one God, a Spirit, which may be readily expanded by Christian teaching into an adequate conception of the true God. No heathen in the world offer so little to obstruct and so much to encourage the work of the missionary.

Four years' experience at Hampton, has shown them to be remarkably open to truth, and not to be, in any marked degree, revengeful. They are like other people; their special weakness being physical.

Christians of America have a duty to the Indian that they have not done. Their work in the West should be at least doubled.

United efforts by the great religious societies would do much for the welfare of this race, through persistent pressure upon Congress for a proper legal status. The veteran worker, Rev. John P. Williamson, spoke to me with much emphasis on the necessity of law among them. For stealing or murder there is now no law. The agent may settle the difficulty, but there is nothing legal about it.

In citizenship is the salvation of the Indian; wardship tends to emasculate him; the effect of the ballot would be to make a man of him, as it did of the Negro.

To be brought out of his present condition into fitness to vote is a work of the utmost delicacy and difficulty, but it can be done.

They are not dying out; at any rate the 50,000 Sioux are not.

Twenty-eight (28) Sioux Indian youth who have spent three years at Hampton, have just been returned to their Dakota homes. Of the young men, six are farmers and assist in general work, getting from fifteen to twenty dollars per month, two are employed in offices at the same wages; six are teachers, getting twenty dollars a month; two are blacksmiths, two are shoemakers, and seven are carpenters, getting a dollar a day apiece. All have rations besides.

Two of the girls are doing housework, one is teaching and another hopes to. They are distributed, four to six together, in Yankton, Lower Brule, Crow Creek, Cheyenne river, Standing Rock, and Fort Berthold agencies. All refused to go to camp life, and have been provided by the Government agents with separate buildings, which they have cleaned and fitted up as best they could. The Indian department has seconded their efforts very heartily, and there are good grounds for hoping that they will be steady, already they have worked among their people, urged "the good way" upon them, and seem determined to show what education can do for an Indian.

The next twelve months will decide their success; their course will be watched with interest as a test of the methods at Carlisle and Hampton schools, and, indeed, of the Indian's ability to make good use of an education.

It is hard to find places at home for girls and keep them from bad influences. Boys are comparatively independent, but Indian mothers and grandmothers (who are a much greater power in Indian life than I had supposed), are apt to think how many ponies their girl will bring. Indian progress depends not a little upon the public sentiment. If left to Government it will be a failure. The people have a work to do.

The Government is as good as the people will let it be; to scold about the Indian policy is idle and useless. There is need of combined effort that shall press upon our legislators their duty to the red race, and a systematic, persistent work for them at their own homes. This demands a degree of personal sacrifice and of personal service that is far from realized.

#### OUTTING DOWN THEIR PAY.

Information is received from the Fort Berthold Agency, Dakota, to which six of the Hampton Indian boys have returned, that the rate of pay recommended by the agent for the work of the four oldest young men has been cut down one half, by Government, from \$30 to \$15 a month, the same as that paid the two youngest boys. The Commissioner regarding this amount, in addition to the usual rations, sufficient compensation at first for the services of returned pupils from the several Indian training schools.

The young men are much discouraged in consequence, and it is to be hoped that Government will make the advance upon the first compensation as early as may be, and in proportion to the quality of their work, especially in consideration of the fact that the rations issued to different bands vary very much, according to their treaties, and that those at Fort Berthold are little more than half what is given at the agencies next below on the river, and really not enough for their support. The four young men at Fort Berthold are all good, steady workmen at their trades, able and anxious to do a man's work. It is of the first importance that this critical point of the whole effort—the students' first return home—should be supported wisely and thoroughly.

We are glad to hear that the boys have been doing well, and that, incited by their appearance and example, a number of others have started for the Santa Mission school, while others desire, and are ready to go. The two youngest Hampton boys, Ara-hotch-kish and Kawat, are themselves attending school at the agency, at their own request. Chief Son of the Star, head chief of the Rees, died on the 9th ult. He will be remembered by those who saw the Indian visitors at Hampton a year and a half ago, as a chief of noble bearing, and greatly interested in the children of his tribe and their education.

#### A LITTLE MITE'S MITE.

A kind friend sends us the following pleasant letter:

NEW BRITAIN, CT., June 2d, 1881.  
Gen. Armstrong.

Dear Sir:  
Inclosed please find two dollars, which is veritably a penny contribution from my little girl, five years old. She is greatly interested in the building for Indian girls, and confidently believes that this microscopic gift will enable you to finish it.

Yours very truly,  
A.

The widow's mite has doubtless helped the finishing of many good works, and will help many more. And this little heart's tribute of faith may well put the "topmost stone" on the building for her shy wild sisters from the plains.

#### STATE NORMAL SCHOOL.

Tuskegee, Ala., Oct. 31d, 1881.

EDITOR SOUTHERN WORKMAN:

I take this method of expressing the thanks of this school to the Smith American Organ Company of Boston, for the donation of one of their superior cabinet organs. It is a valuable addition to our school.

R. T. WASHINGTON, Principal.

#### BETHSADA CHAPEL.

Whose interesting history was given in the Workman of May last, and which has now an added interest as being the place where our beloved President Garfield delivered his last public address, is now being enlarged to meet the growth of the school, by the addition of the western transept, which was originally fitted up as a parsonage and has, until recently, been used as such.

This chapel was built during the war for the benefit of the sick and wounded soldiers in the large hospital which was established in the grounds now occupied by the Normal School and Soldier's Home. In this hospital, which was named "Camp Hamilton," there were at one time over fifteen thousand disabled soldiers under treatment. The lot for the U. S. National Cemetery was purchased, and the title to the land before it was transferred to the trustees of the Normal School. The Chapel is within the Cemetery walls, and the ground on which it stands belongs to the U. S. Around the Chapel are the six thousand and white marble grave-stones which mark the last resting place of the veterans whose names are on the rolls of the Normal School. Each transept was originally separated from the body of the Chapel by a partition. One was occupied, as already stated, as a Parsonage; the other as a Library, which, during the war, was well stocked with books contributed by the friends of the soldiers. The fine granite shaft which stands in the centre of the Cemetery was erected by these contributions, amounting to thirty thousand dollars, collected mainly by the efforts of Miss D. L. Dix, the well known philanthropist.

After the war closed, the Chapel was used for some time by the white families in the vicinity and from the town. When the churches were rebuilt in Hampton, the Chapel was deserted, the books were scattered and lost, and the building was rapidly going to decay, when it came into the possession of the School. It has since been kept in as good repair as the resources at command would allow, and teachers and students have worked zealously to raise the means to keep it in good condition. In 1877 the east transept was added to the seating capacity of the church, the School having outgrown the accommodation of the central hall. This addition gave 165 additional seats. The cost of this addition with other necessary repairs was about \$300, which was raised by contributions of the teachers and their friends, and by public entertainments by the former. The continued growth of the school requiring more room, the west wing has also been added, and thirty-three pews, each seating five persons, have been made at the Indian training school—thus adding 165 seats to the Chapel which now seats about six hundred. The cost of this new and probably final alteration is in some way to be provided for. With the exception of a few Hampton families, the number of which would be increased if there were room for more, the congregation is composed wholly of the students, officers and teachers of the Normal School and their families. It is unfortunally, Rev. Richard T. Denison, formerly of Tewksbury, Mass., who resigned a few years ago from ill health, but whose residence is on the Normal School grounds, and who still preaches occasionally, was the first Pastor of the School church. He was succeeded by Rev. John H. Denison formerly settled at New Britain, Conn., who was a classmate of General Armstrong, at Williams College, and whose wife is a daughter of Mark Hopkins, D. D., its former President. He also resigned on account of ill health. The present pastor, Rev. H. B. Frisell, formerly the colleague of Rev. C. S. Robinson, D. D., of New York, succeeded Mr. Denison in Oct., 1880.

As the chapel stands on ground belonging to the United States, and as its removal would be its destruction, its occupation by the School is a privilege depending on the pleasure of the Government authorities, and its existence has been twice placed in imminent peril. On one occasion the officer in charge of National Cemeteries had ordered its removal, and it was only saved by the opportune visit of the Secretary of War, who, recognizing the historical interest of the present location, countermanded the order. The second order was countermanded by President Hayes, who had several times visited the School, and was interested in its welfare. His interposition, which again saved the Chapel from destruction, was among the last of his official acts, the order being dated Feb. 24, 1881. On the memorable visit of President Garfield, who was one of the first board of trustees of the School, and always felt an interest in its work, he attended service in the Chapel and made there the admirable address to the students which was his last public speech, which may be found in the Workman of July last. Only a few days before he was shot, the writer received from him the proof of his address corrected by his own hand.

#### LIFE AMONG THE PIMAS.

The chaplain of the Normal School allows us to publish the following interesting letter he received from Rev. C. H. Cook, missionary to the Pimas, in reply to one giving the particulars of the death of one of their young men, a student at Hampton. The human nature in these poor "Red Skins," according to their "gifts," with some of the hardships and terrors of life on the frontier, and the mistakes and misunderstandings which often unnecessarily occasion the latter, are graphically described.

Pima Agency, Casa Grande P. O.

Arizona, Oct. 31st, 1881.

Rev. H. B. FRISSELL,  
Hampton, Va.

Dear Brother:

Both of your letters have come to hand; the one of Oct. 15th arrived Saturday evening, week before last. We had received the news of Savarp's death a few days before, and as usual among the Pimas there was an assembly of the relatives and great lamentation, especially among the women, the mother continually asking for the body of her offspring (mat) saying she would never be comforted until she received the body of her child. I had sent them word that I would come Sunday morning and talk to them; I was therefore very glad when I received your letter late Saturday evening, giving us some assurance that deceased did not die without a hope. I met the friends and relatives Sunday morning, preached to them of Jesus and the resurrection, to which they eagerly listened for more than an hour. I also explained your letter to them and exhorted them to strive to meet their relative in the better world.

They invited me to come again, which I did yesterday morning. They appear to be satisfied now with the Lord's dealings with them.

We had a somewhat exciting time near by, a week ago to-day; the Agent had received word that a large party of Pimas were armed, would come to "clean him out." He sent the ladies and the children during the night to Casa Grande, some fifteen miles from here, our nearest R. R. station, and got his guns, employees and police ready for an emergency. My wife and children remained with me. About 400 Indians came unarmed to hold a council, two coming from a horse-bunt, accidentally leading a rifle and a pistol; they were forcibly disarmed, which came near leading to serious results. About one-half of the tribe seem to be dissatisfied with the present Agent for his severity in punishing them for light offences.

Antonio, head-chief, your Antonio's father, and others, show more interest of late in religious matters, and we pray and hope, that many ere long will come to the knowledge of the truth. The friends of Savarp are thankful to you and the others for the kind interest shown him in his sickness. If it were not so far, I would say come over and see us, spend a little while with us; though some of the whites of Arizona might sneer at you, the Indians would listen to you, and hear you respectfully.

We are having cool nights now; the days are still very warm. The long hot summer and hot nights are a little debilitating. Just think, for four months no butter, no fresh meat, except a few chickens, no potatoes, no milk, few other vegetables except canned goods and dried fruit. The waters, however, are delightful, and we generally recuperate when the cool weather commences.

Trusting that you will remember us and the work among the Pimas, in your prayers,

I remain yours truly,

C. H. COOK.  
P. S. Since writing the above, Antonio has brought me word that the parents of Savarp are fully resigned and content now.

#### ASKING FOR HIS CHURCH "LETTER."

The Chaplain also furnishes us the following little note, received from one of the returned Dakota boys, which shows a desire to stand by his colors in his new home. Neither he nor any of those who have left us are forgotten in our thoughts and prayers.

Yankton Agency, D. T.

My Dear Friend:  
Please I want you to give me a church letter to the Presbyterian church of Yankton Agency.

John P. Williamson is a missionary.

My Dear Sir,

I will write to a little letter but I think you forget me but I am not forget you all time. I am remember you all time. I have come back in my home. I will tell you what I am doing in my home now. I am make a shoe all time in the St. Paul's school. That is all I can say now. I shake hand with you now.  
I am EDWIN BISHOP.

The School was favored with a visit Nov. 10th, from Prof. James Bryce, member of the British Parliament and Professor of Civil Law in the University of Oxford, who has been traveling in the United States, and has been as far West as Washington Territory. Prof. Bryce made an admirable address to our students, which was listened to with great interest. He spoke in glowing terms of the grand work being done by the American missionaries in the East, and says that the era of civilization and progress which is now opening there, may date from the establishment of Robert College and like institutions, under the auspices of American missionaries. Prof. Bryce is now delivering a course of lectures before the students of Johns Hopkins University, after which he goes to Boston to deliver a course before the Lowell Institute.

MIXED RACES.—by Prof. J. P. Sampson. Normal School Press. Price: Cloth, 75 cts., Paper, 50 cts.

This is not a treatise on miscegenation, as its name and the fact that it is written by a colored man might suggest, but a collection in pamphlet form, of the author's lectures on phenology, as illustrated in the variously blended races of America. He modestly acknowledges his indebtedness in several instances to "ideas expressed in a better way than he could possibly have expressed them," and claims originality only in his classification of the phenological "organs," and in some of his conclusions, among which is the superiority of "spontaneity" or the tendency to original development over heredity and environment, in race progress, on which theory he bases a very hopeful forecast of the future of the colored race, and believes has not degenerated from the Egyptian or any other civilized race, but has all its good things, and plenty of them, before it.

The book is in pamphlet form, but pleasantly gotten up, with broad margins, and leaded lines, charts and illustrations. Printed on the Hampton Normal School press. Set up and worked by colored, native African and Indian students, it is itself an illustration of the true union of the races in useful work and mutual helpfulness.

The sudden breaking of an important casting in our press occasioned a serious delay in our last month's issue, which has somewhat crowded this number also. A new casting had to be made, but now all is right again, and we begin the new year with a good start on time.

For our first page illustration of a "possum" hunt, we are indebted to Messrs Harper Bros. "Brer Possum" is done for—his next appearance will be as a welcome ornament of the cabin, Christmas feast.

The attention of the readers of the Workman is called to the advertisement, in another column, of that widely known weekly Magazine, "LITTLE'S LIVING AGE," which enters, with New Year, upon its one hundred and fifty-second volume. It has been published for nearly forty years, and during that long period has been prized by its numerous readers as a thorough compendium of the best thought and literary work of the time. As periodicals become more numerous, this one becomes more valuable, as it continues to be the most thorough and satisfactory compilation of the best periodical literature of the world. Its importance to American readers is evident; in fact it is well-nigh indispensable to those who would keep informed in the best literature of the day, and its success has therefore been uninterrupted. Its prospects are well worth attention in selecting one's periodical for the new year, and its clubbing rates with other periodicals are worthy of notice.—LEWIS & CO., Boston, Mass., are the publishers.

#### Horsford's Acid Phosphate An Invaluable Tonic.

Horsford's Acid Phosphate is an invaluable tonic in any case where any acid tonic is indicated.  
Greenefield, Ills. J. L. PRATT, M. D.

**LETTERS FROM HAMPTON GRADUATES.**  
**COLORED PEOPLE NORTH. A PROGRESSIVE BEAVER. HELPING THEMSELVES. A NIGHT CLASS AND SUNDAY SCHOOL. A SCHOOL OF CHILDREN, MOTHERS AND GRANDMOTHERS. A PAYING COUNTY. RUNNING THE GAUNTLET AT WASHINGTON. A CONGRESSMAN'S SON. MARRIED GRADUATES.**

**COLORED PEOPLE NORTH.**  
 From a limited experience in the North, after a long one South, a thoughtful graduate teacher concludes with surprise that in spite of slavery, the Southern Negro is ahead, and wonders why. To the extent in which this is true, it is evident that the North has not too much reason for self-complacency in not being her brother's keeper.

Oct 10th, 1881.

Dear Sir: Yours of the eighth inst. was duly received, and in reply I take pleasure in giving you a description of my work and place. One would suppose that the colored people here are more advanced than those farther south. —abolished her slaves in 1838, and yet these colored people, with a start of 56 years, (notwithstanding it was a poor start), are not up to our southern colored people. This looks strange indeed, but it is true. They have had superior opportunities, and have them now. Many of the parents of my pupils went to school in their young days, yet they are no help to the children whatever.

They seem to have no energy, no desire to rise above the very lowest degree of usefulness. There are perhaps 300 colored people in end-around — and you might find half a dozen strictly respectable families. The rum shops are — well patronized, so much so that it consumes the greater part of their hard earnings. I have always heard it said that my people were great church goers, but those here must be an exception to the rule. The school which I have charge of has always had a very poor reputation, and I am placed in the awkward position of bringing it up. I have succeeded thus far and have reason to be encouraged for the future. I shall, in a very few weeks, have a very good school-house, as there is one being built for me. I shall perhaps be able to move in it in five weeks. Books and everything are furnished. The children have nothing to do but come to school, and yet the attendance is no better than it is in Va. I have "Moore's Reading Chart," but not the Primer. I should like very much to have a dozen. We have Maps, Writing-charts and one Multiplication chart. No globe at all. This is mean very much. I trust that I may be the means of inspiring some of these youths to excel their parents at least.

I am very, very glad to make your acquaintance.

With much respect,  
 I am, dear sir, obt. yours. L.

**A PROGRESSIVE BEAVER.**  
 The young woman who writes the following pleasant letter, is certainly a "beaver" in industry, though not in conservatism.

Va. Oct. 10th, 1881.

Kind Friend: Your kind favor was received a few days ago, for the contents of which, accept many thanks. It came just in the hour of need. I cannot express my gratitude to you, and I would have acknowledged it before now, but very soon after I got your letter the card came, saying that you had started a barrel, so I thought I would thank you for both at once; as I have so little time for writing. The barrel and box have just been delivered, and as we opened them our hearts were filled with joy to think of the many happy hearts which you have made. We take the greatest delight in distributing the things to the poor little needy children who are many in number, and if you could only see their actions on receiving them you would feel amply paid. I kept a shawl and sack for myself, as I was sick in need of them. Mr. — went out this evening to take some crackers to a poor sick man, and left me to write.

I am getting along very well with my school, but it works me pretty hard. My enrollment is now 87, and there are still more to come. I would apply for an assistant, but my school-room is too small. I tried it one year and found out that I could do better alone unless I had another room, and the school board claims to be unable to furnish me one. I could not get through if it were not for the conveniences which you have given me. My

Superintendent was to see me a few days ago; says our schools (Mr. — said mine) are the only ones under his charge that have any charts, maps or anything of the kind; and the most of his teachers, white and colored, are like the beaver in building his dam, they teach just as people did 25 years ago, so he says it is quite a treat to visit my school and see the new methods of presenting the different studies. I am more devoted to my work this term than ever, and I get on so much better in consequence of the instruction I received at the institute. By God's help and through your kindness we have made a good start for another year's work. I hope to sow many precious seeds that shall spring up and do good unto the honor and glory of God. I will write again soon.

Very gratefully yours, J.

**HELPING THEMSELVES.**

The energy shown by the colored people in many country settlements, in putting their own shoulders to the wheel to secure school-houses and teachers for their children, is remarkable and most encouraging. A young woman who had done conscientious and excellent work since her graduation, writes of her present school as follows:

Va. 10, 12, 1881.

Dear Friend: My school opened Monday, 10th, with 26 little bright faces; yesterday I had 31, and expect more and more, as the school term is quite full. The school Board has given land, on which to build a new school-house. They are willing to employ one carpenter, if the pattern will assist, which they have promised to do. They speak of going to work at once. We hope ere the weather gets cold to be in a good house. The gentleman with whom I board has promised to set up my room, so I hope there will be comfort with all.

I have not seen any of the girls since we parted. My class Sunday, so I hear. The weather here is quite cool this week. The color chart and books were thankfully received by us all. The chart will be a great help to us. I am going to try and use the same books, this winter, as I used last spring. The trees look very pretty now, but will soon change their "costs" for winter. We have some very handsome Autumn leaves here. The chestnut trees are beginning to shair with us, their abundant store. It is now time for school.

Yours gratefully, A.

**A NIGHT CLASS AND SUNDAY SCHOOL.**

A young woman graduate writes to a kind friend an interesting account of her efforts to do good outside the school-room as well as inside.

Va. Sept. 16th, 1881.

Mr. B: — Yours of the 13th reached me to-day. I have sent to Burkeville to see if there is any freight for me. I've no doubt but they will be enjoyed, both by myself and children also, as well as the sick. I received the package of papers also the chart primers. They were the first of the kind ever seen in this neighborhood, and both old and young want to study them. The lady with whom I board keeps two hands to help work the farm, and they cannot go to school, but I got them both to promise me they would get a lesson every eight in one of those primers, and recite to me. Neither of them know their letters and both are over 16 years old; one recited last night for the first time; he seemed to think that he was so large that I would laugh at his ignorance, but he soon got over that and worked well for some time. I have 100 pupils now, and some very bright little boys and girls too. I have some rewards of merits left over from last term, which you sent me, and I have promised them in each class to the most diligent and well behaved, and the most of them are working hard for them. I find that my globe is very serviceable, and interesting too, to the children. They have not had much school room furniture before, and I hope their progress will be all the more rapid hereafter. The children seem very fond of me, and such things for me every day. Since the chiquenias have come, they would bring me every day and bring me. I opened Sabbath School last Sunday with about fifty pupils and had company. The children don't care much for Sabbath School, but I want to try and have one. They don't have service every Sunday, and it at least keeps the children from bad company. And now I must stop and hear my little night-schoolers.

With many thanks for your kindness, I remain,  
 Your grateful friend, M.

**A SCHOOL OF CHILDREN, MOTHERS, AND GRANDMOTHERS.**

It was far more common just after the war than it is now, to see the parents and grandparents holding the primer with their children, and mothers learning their alphabet with their babies in their arms. The young woman who gives the graphic account of such a school is just about starting for Alabama to take charge of the public school in Tuskegee, where Mr. B. T. Washington and Miss Davidson are already engaged in Superintending a Normal and Industrial School. The three will form a little centre of Hampton associations and influences, pleasant and profitable for themselves and others.

Va. Aug. 15th, 1881.

Dear Friend: I take great pleasure in writing to you for the first time. I am very well, and I hope this will find you the same, and getting rested from your year's work. I have taught nine months this year, and have just opened a term of two months pay school. It is very warm to teach, yet I feel I am doing a great good. There was never a school here until I opened one last March; the children and their parents are worse off than when they were slaves, freedom only excepted. Why I say this is, they tell me when they were slaves their masters kept them in clothes and kept their cabins in quite good order. Now I come and find some of them without one decent garment, and living in log huts I can't stand up in. In some of these dwellings chairs are unknown, their substitutes being low benches or stools.

Last spring I kept three months public school. It was something new to them, and the whites being opposed to it I made my work very hard, yet I labored on until I gained the favor of the colored and a few whites. When I came to leave that I might attend the Institute they all seemed to regret my leaving and set about how they could get me back, so they raised a small amount and asked me to come and teach a pay school for them.

I opened my school July 28th, allowing all ages and sizes to attend, as they used all helped to raise the money. So among my students I have from grandmas to an infant 8 months old. The mother brings her baby and a quilt that it may lie down when she recites. Occasionally it gets its spells and a passerby might think from the noise, I kept a nursery instead of a school. Sometimes I have to draft a nurse until the mother gets through with her lessons.

Among the younger children you would be surprised to see such minds, and how very readily they take in every good thing offered, and how they strive to do and act as the teacher.

I have a Sunday School for them in which I have to be a teacher. I read the Bible to them and then give most of them a lesson from my Monroe's chart. They have but few Bibles and singing books, so they like to have me teach from the chart.

I will close, hoping to hear from you soon.

Yours with much love, M.

**A PAYING COUNTY.**

There is a great difference in the state of the school treasury in different counties of the state. Our graduate teachers have shown patience, pluck and missionary spirit, often working and waiting, but of course those districts which pay most promptly can most easily secure good teachers. The state of things is improving in this respect. A young woman writes cheerfully:

Co. Va. Sept. 22, 1881.

Gen. S. C. Armstrong: Dear Sir: — I am now teaching school in the above named Co. I opened school here on the 6th inst. I have only 19 pupils as yet, on roll. The people are slow starting the children, I am 25 miles from Richmond. I have a very nice school house just built this year. I have a mile to walk from my boarding place to it. The term will be seven months, pay \$25 per mo. Here I am sure of getting paid; not promised to be paid, but not get the money for nearly a year, as I was in the other Co. in which I taught.

The Trustees and people generally, are very pleasant. I am quite far up in the woods. Thomas Bolling teaches about 12 miles above here in the same Co.

A gentleman, a graduate from the Richmond Institute, teaches 5 miles from me, and a lady from there teaches 3 miles from him.

There is a nice little church not far from me, and the Sabbath School and services are more intelligently conducted than in any country place I ever visited. The people generally are doing well. They own a great deal of land, seem industrious and quite intelligent.

I shall send a young man down there the last of this month, who desires to work a year, attend night school, and prepare to go in school and graduate.

I think he will do well, and hope you will help him all you can, by giving him work.

Yours gratefully, C.

**RUNNING THE GAUNTLET IN WASHINGTON.**

A young man who, in spite of being a Congressman's son and for several years in Government employ, has run the gauntlet of temptation successfully thus far, writes thus gratefully of some of the influences that have sustained him.

OFFICE OF THE AUDITOR OF THE TREASURY  
 FOR THE POST OFFICE DEPARTMENT.  
 Washington, Nov. 20th, 1881.

Mrs. E. C. Dixon,  
 Hampton, Va.

Dear Friend: Your postal just received, and read with pleasure.

In reply to the same, I have to state that I am still employed in this Department. I never taught school (day) and only taught two months last summer as a substitute, in our Mission Sunday School in this city.

I am now Secretary of the S. S. of which I am a member, and have held this position over three years. I take an interest in all Temperance movements, as I am one who does not indulge in drinking, chewing, smoking of any of the infamous habits.

My kindest regards to Gen'l J. F. B. Marshall, and tell him I owe a good deal of my success in shunning these habits to him; that I remember well his impressive lecture to me, before leaving to come to Washington.

I am at present doing very well, and I am in good health. Remember me to Gen'l Armstrong, and to all who remember me.

I am proud of being one of the Hampton boys. I am sorry to have left before fitting myself to bring a *Sheepskin* with me.

Yours truly, H.

**MARRIED GRADUATES.**

We are always glad to hear of the happy marriage of any of our graduates. Another home established, one more centre of civilizing influence, good example and domestic cheer. When the happy pair are both Hampton graduates, school-mates, classmates, it may be, as in the case of one at least of those mentioned in the following letters, the event is, of course, of special interest to us, and we should think it would be to them — but loving goes by liking, and if the young people are pleased and their choice stands the test of time and the experiences of every-day life, no one need ask for more.

October 8th, 1881.

Mrs. — Dear Friend: I was in Lynchburg in August last, to the State Convention, and there met with a great many of the Hampton graduates. Some I knew, and some I had forgotten. It was very pleasant indeed to meet with them.

I have married since I left Hampton; been married three years, and have as good and kind a little woman as you ever saw. Sister M. — and her husband are teaching in this County, also Janey — and her husband; all are doing well.

Another writes from Maryland:

It will no doubt be a surprise to learn of the marriage of Jerome Bacon. He has returned to this post accompanied by his wife. It is their intention to settle and try to obtain a start in life, which I feel they can accomplish by a judicious expenditure of his earnings.

Cooper is still at his post at Whaleyville, in good health, and doing nicely.

Horsford's Acid Phosphate

In Nervous Debility.

I have used Horsford's Acid Phosphate in nervous debility, with most satisfactory results.

Portland, Me. S. E. SYLVESTER, M. D.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

A pleasant incident of the month has been a visit from the Rev. Joseph Cook, missionary and superintendent of St. Paul's school, at the Episcopal mission in Yankton, Dakota. All were glad to see him, bringing as he did the latest news from their home friends, and our lately returned students. He gave a good report of the condition and the prospects also of the boys. The girls have more difficult problem to meet, with less obvious inducements to do well, and greater pressure of temptation. Thus far, however, they had not yielded to the common fate of an Indian girl, of being sold to the hove who would bid the most money. As one of the strongest writes pathetically:

"Hard out here to be Christian woman."

## THE GIRLS' EARNINGS.

With the Indian girls as with the boys, the plan has been adopted of giving them, after they have been here a year, the handling of a certain amount of money as wages for their work. It has been a most useful education. Some, more careful than others of their clothes, have been able to provide for the proportion of these which they are expected to use their money for, to save up a little. Those who worked last summer at school in Massachusetts, have each earned a sum of ten dollars, and have taken great pleasure in choosing and buying it and making it themselves "for Thanksgiving," showing very good taste in the selection, generally of dark pretty flannels. Every afternoon they have sewing school for an hour. It is a busy scene; tongues fly as well as fingers, but considerable work is accomplished.

## THE SENIORS.

Those who are now entering their third year at Hampton, with the most advanced of the new comers, might be called the regular Junior class of the school, but for the overcrowding of this already, and the fact that their English is not quite fluent enough to keep pace with its progress. But they feel the dignity of their new position as the old scholars, and the Senior Indian class, and are anxious to make the most of their last year at Hampton. They show a very marked improvement in order, and interest in their less-orel teaching to several new text books in language lessons and history, and "supplementary reading." The "old students" have felt the "set up" of the advent of the new ones, and take pleasure in "showing them the road."

## THE NEW COMERS.

A good report in general comes from those in charge of the new comers. They are said to have an unusually bright and steady set. This pleasant experience is no doubt owing in part to knowing better how to understand and manage them, with the increased facilities and room, which the new Academic Hall affords. The girls from Standing Rock have been especially reported as showing evidence of good, womanly training. It is to be that of a Roman Catholic sister at the agency, who is unfortunately there no longer. With exception of one pair of friends, each new comer has been assigned to a room with an old student either Indian or white. This has been a very taken kind interest in instructing them in the care of their rooms and themselves when it was necessary—many of them however having been well taught before. Like most of their predecessors, they show such marked taste and ability in keeping their rooms neat that one is tempted to believe that order is a natural instinct of humanity as well as heaven's first law. The new comers have evidently been much impressed also and influenced by seeing and talking with their friends who returned home from Hampton last September, in such different guise from that in which they left home. This is seen also in their treatment of the girls, and in the girls' own carriage. The shawls are not so often drawn over the head like an Indian blanket, and the voices are not so afraid of their own echoes. This one exception to the rule of placing a new comer with an old student, is in the case of a girl who can speak a little English, and asked for a little girl as room mate because she had promised her mother to watch over and care for her.

## A LESSON ON HATS OFF.

A rather amusing lesson was given to her class by one of the teachers, the boys standing with their hats on, till she passed down the line, saying a pleasant good morning to each, and showing them how to raise their hats in response. The lesson was enjoyed with a good deal of amusement, and has been quite well remembered.

One of the new boys needs his instruction in phonetic spelling for his teacher's benefit one day.

In calling a boy, she pronounced the name, Tvor-ki-an.—Look in the lodge—not quite to the satisfaction of one of her auditors, who exclaimed "Not right, not right, look!"—and rushing to the board he wrote it, saying "Listen

and spelled it syllable by syllable, by conund, passing on each for her to imitate him. They are learning English rapidly for beginners—writing as many as ten new words at a time from memory. But where they do not understand or remember a meaning, they say "Not yet"—in a most hopeful tone. A little Arizona boy having just learned the word *sefly*; aired it immediately to the edification and surprise of a teller whose duty was making a little more noise than necessary in passing through the hall to his class.

## THE GIRLS' COTTAGE.

The overflowing state of Virginia Hall made it necessary to colonize about a dozen of the Indian girls with two of their teachers, only of whom is fortunate in having her mother or with her, in an unoccupied dwelling home on the place. This arrangement has proved a very happy one. The girls have a taste of something like a quiet home life. They have been given charge of the teachers' rooms and halls as well as their own rooms, and are very proud of the trust. Their own rooms are scrupulously kept, and now they have been given a sitting room in the light, above ground basement, each girl contributing a chair and some little decoration from her own room to make it attractive. They have been on the whole very happy. There has been of course a little home sickness, and one made quite a mistake in her reckoning. Coming to her teacher, she asked eagerly if the three weeks they were to stay were not about out. Her surprise on finding that the allotted time was not three weeks but three years, can be imagined. An evening of merry games is a great consolation, and they take as much fun in Blind man's bluff, Hunt the henkerchief, and "Pecking the chickens," as if they were not "little savages" as they sometimes call themselves in sport. This is a joke which promises to become traditional. It originated last year in some trifling altercation between an Indian and a colored student. The former coming to a teacher, for a definition of the epithet, seemed struck with the humor of the misnomer, and ever since it is a standing joke. One of the most advanced, whom one would hardly suspect perpe of Indian blood, will hand in an exercise in beautiful cursive writing, "This is by a savage Sioux."

## THE "SHOES OF SOPHISTICATION."

One of the boys brought a pitiful complaint to the doctor or nurse that one of his feet was "very sick." Expecting at least a sprain, she was much amused to discover that an unbearable affliction was caused by a very small specimen of what happy civilized communities call a corn. This explanation was as satisfactory consolation to the victim. Civilization seemed a failure if that was its penalty—and one is almost tempted to agree with him.

"Ah! too soon those feet must hide, In the prison walls of pride."

Shoemakers have certainly something to learn from moccasin makers.

## THE ARIZONAS.

The Arizonas—Pimas, Maricopas and Apaches—now forming the middle Indian class, are doing well in all respects. They have always been on the whole a very docile and earnest set. Dr. Sheldon Jackson would be pleased to know how well they remember and often they speak of him and his wife who brought them with such kind care on their trying journey from Arizona to Hampton. The two little girls are reported by their matron as wonderfully conscientious and steady "little women." "When I said to her last summer," says the matron, "Good bye—be a good girl!"—she said earnestly—"Mrs. S. might be a good girl to Hampton my father he sit here—my mother she sit there—my father he do so (reaching forward and taking her hand) he say—Molish go—be good girl there—no bad talk." She is all he wished her to be, this poor "savage" father, who, perhaps as Leath-erstocking would say "lived up to his gifts."

## THE MEDICAL REPORT.

Subjoined is a synopsis furnished by the resident physician at the school, from her detailed report of her medical examination of the new comers made directly upon their arrival, and in some cases repeated for full certainty in a week or ten days. It gives occasion for the protest we have made before against sending under a clean health bill children with already marked organic disease, in some case of long standing. It is unfair both to the children and to the effort.

We are glad to learn on the other hand, that with these exceptions the new comers, especially the best half of them, appear to be a remarkably robust and hopeful set.

GEN'L S. C. ARMSTRONG,

DEAR SIR,

My physical examination of the forty-five Indian students received at this institute during the month of October, results as follows: Of thirty-one Indian boys, nine present traces of pulmonary disease. Three of

this number are seriously affected. One has had repeated hemorrhages.

The average condition of the remaining twenty-two is satisfactory. Nearly all are robust and well developed, though a scrofulous diathesis is in some cases noticeable. Of fourteen Indian girls, five are below the average standard of health.

A tendency to pulmonary weakness is seen in them, but no localized disease exists. The remaining nine are in excellent health.

The general appearance of all, both boys and girls, is better than on their first examination one month ago.

M. M. WALDRON, M. D.

## LETTERS FROM THE RETURNED STUDENTS.

Some pleasant letters have been received from the boys and girls who returned to their homes last September, of which the following are good specimens. Ought they not to have the encouragement they so pathetically ask for!

Fort Yates Agency,

Dakota Territory, October 12, 1881.

My Dear Friend:

Now I came back home last week and I am very glad to see all my people and they all glad to see me. I came home the fourth of October, but we don't work yet. I guess to-morrow I work at the Agency very hard to at Fort Yates then at Hampton.

The Indians came to me last night and talked to me, but they nothing to say. They talk when they get something to eat and I talk to them about the good way. Then they say why don't you ask the government, he give you some cows or wagons, and they say if you don't ask him, he give you nothing, and I said, well if they have President there then I talk to him, but they have not, and I told them the President is dead.

I saw Louis Ballhead when I came back home, and I ask her what you learn here and she say nothing, and she said I like to go to school in Hampton. I told her Miss—very sorry once she heard you wear an Indian dress.

Then she say nothing.

Please write to me as soon as you get this short letter, don't forget your truly friend.

Please give my love to all Indian girls and boys.

From your truly friend,

J. D. FLEETS.

I shake hands with you in my heart.

FORT BERTHOUD, D. T.

My ever dear Miss E—

I thought I would write to you a few lines that you know I am getting more very pleasant indeed dear Miss E—I want to keep to be a good girl and to help those Indian getting long. Makes me feel so bad. I want keep try help all I can. Those white people who live with Indian never help Indian never give any work, nothing to do.

I teach Indian children now. I study my books too. I stay Mr. C. L. Hall house. I never go my father house.

When I see Indian house makes me feel so bad. Oh dear me what I shall do with those Indian. I am going try hard to help to them.

I hope God will help me. Mr. Hall I hope he will kind to me. Lieut. George LeRoy Brown know about here, he told me take care self. He put me Mr. Hall house. I stay in his house. I help teacher, how doing Miss E.

If I stay my father house I will have very hard time because people do not know any thing about God word, don't care about him—I love him myself. I hope he will care of me. If I am not going east again I shall forget soon that I am not going again—keep learn more when I am strong I like have come back again. I think that best way. I told Mr. Brown—say to me, that true Josephine, he will see about it. I want keep try help them, I want show how good live and know bible say.

There—do not know great words.

Good bye. I send my love to yourself.

JOSEPHINE MALNOCHIE.

## YORKTOWN CENTENNIAL MONUMENT.

The Centennial Monument to be erected at Yorktown, of which we give a correct illustration, will signalize an event of great national importance. It was designed by a Commission of Artists provided by an act of Congress, passed June 7, 1880, and appointed by the Secretary of War in letters dated July 29, 1880. It consisted of R. M. Hunt, of New York; John Quincy Adams Ward, of New York; and Henry Van Brunt, of Boston. The Commission says:

"From a point of view of sentiment, this monument is intended to convey, in architectural language, the idea, set forth in the dedicatory inscription, that, by the victory at Yorktown, the independence of the United States of America was achieved, or brought to final accomplishment.

"The four sides of the base contain: First, an inscription dedicating the monument as a memorial of the victory; Second, an inscription presenting a succinct narrative of the siege, prepared in accordance with the origi-

nal archives in the Department of State; Third, the treaty of alliance with the King of France; and Fourth, the treaty of peace with the King of England. In the pediments over these four sides respectively are presented, carved in relief: First, emblems of nationality; Second, emblems of war; Third, emblem of the alliance; and Fourth, emblems of peace.

The inscriptions on the base of the Monument are to be as follows:

—NORTH—  
Erected  
In pursuance of  
A Resolution of Congress, approved October 27  
1791, and one approved July 7, 1880,  
To commemorate the victory  
by which  
The Independence of the United States of  
America was achieved.  
—SOUTH—  
At Yorktown, on October 19, 1781,  
After a siege of six tedious days,  
By 5,500 Americans, 7,000 French Infantry of  
the line,  
3,500 Militia, under command of Gen. Thomas  
Mifflin, and 36 French Ships of Line,  
Earl Cornwallis,  
Commander of the British forces at Yorktown  
and Gloucester,  
Surrendered the Army,  
7,331 officers and men, six seasons, 344 cannon,  
and 84 standards.  
To his excellency, George Washington,  
Commander-in-Chief of the combined forces  
of America and France,  
To his excellency the Comte de Rochambeau,  
Commanding the Auxiliary troops of his  
Christian Majesty in America,  
And to his excellency the Comte de Grasse,  
Commanding-in-Chief the Naval Army of  
France in the Chesapeake.  
—WEST—  
The Treaty,  
Concluded February 6, 1778,  
Between the United States of America  
and Louis XVI., King of France,  
Declares  
The essential and direct end  
Of the present Defensive Alliance,  
Is to maintain effectively  
The Liberty, Sovereignty and Independence,  
Absolute and Unlimited,  
Of the said United States.  
As well in matters of Government as of Commerce.  
—EAST—  
The Provisional Articles of Peace,  
Concluded November 30, 1783,  
And the Definitive Treaty of Peace,  
Concluded September 3, 1793,  
Between the United States of America  
and George III.,  
King of Great Britain and Ireland,  
His Britanic Majesty acknowledges the said  
United States, viz.,  
New Hampshire, Massachusetts Bay,  
Rhode Island, and Providence Plantations,  
Connecticut, New York, New Jersey,  
Pennsylvania, Delaware, Maryland, Virginia,  
North Carolina, South Carolina and Georgia,  
To be  
Free and Sovereign and Independent States.  
The total height from the bottom of the  
base, resting on the surface of the ground, to  
the top of the figure, will be 95 feet 6 inches.  
The bottom of the base covers a surface area  
of 945.55 feet. The height of the thirteen  
figures is 8 feet. The diameter of the shaft  
at the bottom, 5 feet 5 inches, and at the top  
5 feet.—Baltimorean.

## HAMPTON'S INDIAN GRADUATES.

The story of the Indian students returned to their homes from Hampton Institute and others brought back by the Principal was given in a letter from him in our last number. At Chicago the party separated, and the Fort Berthold and Standing Rock students were taken home by Lt. Geo. L. Brown, and the new ones collected, arriving at Hampton about a week after the first party. The following letter from Lt. Brown, now Captain Commandant at Hampton Institute, gives his account of the trip.

These returning Indian students are not, in the strict sense, graduates, of course; some of them might well go on to be, if it were not better to send them home at the time promised their friends, and before the tie is more completely severed between them. After a year or more of work, proving themselves worthy, it may be that some may return to Hampton, if that seems best when the time comes. Three Indian young men who know English well enough to enter the regular junior class of the school will graduate with the present Senior class, and twelve others and two girls, are in the Middle and junior classes.

Hampton Virginia, October 29th, 1881.

## EDITOR OF WORKMAN:

The last day of last month, in compliance with instructions received from General Armstrong, I took charge of the Indian Students, who were returning to their homes at Berthold and Standing Rock Agencies, D. T. Leaving Chicago in the evening, we arrived at St. Paul about two A. M. the next day. No train leaving St. Paul over the N. P. R. R. on Saturday, we were compelled to wait until Sunday evening. I gave the young men permission to go about the City as they chose Sunday. In the day we attended the Presbyterian Church; the time passed very pleasantly, and I had no cause of complaint except the delay. Monday we sped through the great wheat farms of Dakota, with their stem separators in full blast. Farina put the threshing bag in Dakota and caused considerable loss. Nearing the borders of civilization, we met many hardy settlers, who look upon Indian civilization with a great deal of doubt. "I have seen that sort of thing tried before, and it is less than six weeks after they returned to their homes, they were wearing a blanket and breech cloth." "They are looking first-rate now, but it won't last." And similar remarks were made in the hearing of the Indians, and I was anxious to ascertain what the effect of these adverse opinions, so freely expressed, would have upon them. Arriving at Bismark Oct. 3rd, we were fortunate in finding the Steamer Nellie Peck at the landing, and after supper I took them all down. They passed the evening singing their Hampton songs and talking over their school experiences, for they were to separate in the morning, the Standing Rock delegation going down and the Berthold delegation going up the river. In the morning they parted with many expressions of good wishes and regrets. The Nellie did not start up the River until Wednesday; but, barring bars, we moved along up the river very smoothly after we did get under way. The scenery along the Missouri is less monotonous at this season than earlier, as the many colored autumn leaves relieve the bleak grey and brown bluffs. The day before our arrival at Berthold Agency, Karunach and the others came to me, and he, as spokesman for the party, said: "We don't want to live in Indian Camp. Too dirty. Nothing to do. Don't like to live. Want to have a good town, where we can keep clean, and then we work and earn money. Maybe go back to Indian Camp, clothes get dirty and worn out, no money to buy new ones, Indians laugh at us, and then by and by we think better of all like Indians. No we don't like Indian Camp." I told them that I would see the Indian Agent upon our arrival at the Agency and see what could be done for them in the way of rooms, &c.

We arrived at Berthold early Friday morning, and as we came in sight of the Indian camp, some one came up to Karunach, who was on the side of the boat opposite to the Agent, and told him that we were in sight of his home. "I don't care, I see too much Indian camp, I glad to see my people; but don't like see camp. See too much of it." As the boat neared the landing, Indians of all ages trooped out of the camp, and when the boat touched the landing the crowd was almost impassable; but seeing Major Kaufman driving up, I struggled through and told him about Karunach's request. He told me that he had three rooms in a vacant building at the Agency that they might have, and that he would be glad to discuss with me the feasibility of his employing them at work at the Agency. This information I conveyed at once to the young men, who were chattering hands with relations and friends, and they at once obtained a wagon to haul themselves and their baggage down to the Agency. In the afternoon they went down to the camp and visited their friends. Saturday they had completed domestic arrangements.

Had one room for a kitchen and dining room, and two bed-rooms, and had employed an Indian woman to cook and wash for them. Having thoroughly canvassed the ground with the Major, he decided on employing Karunach and Ahnukah at their several trades, i. e., shoemaking and wheelwright, respectively, and Tom Smith and Longley Peck as employees on the farm and Agency, at the rate of \$1 per day, and the younger pupils Kawah and Ah-hotch-ke as farm laborers at 30 cts per day. These are very good living wages, and there is no reason why they ought not to do well. When told by the Agent that they would be allowed to buy out of the Agency store house and at the end of the quarter have the amount due the Government deducted from their pay, Karunach said to me, "We don't want to buy a thing. We will live on the rations and what we can get in the way of vegetables from our people, and then at the end of the three months we will have all our money coming to us. Then we will know how much we are able to save. I want to buy some cattle, and by-and-by build a good lodge." To this sentiment they all assented, and I felt very hopeful for them. They seemed to be plucky and determined to succeed.

Saturday evening, Sarah Walker's father came rushing into the Trader's store and called me one side. "Lieutenant will you go and see what you can do with my old woman? I told her that I wanted to send Sarah's sister Mary to Hampton, and she drove me out of the lodge." I took Tom Smith and went out to the quiet, comical looking mud dwelling they called home; knocked at the door, found it locked. Tom and I called to them to let us in, and finding the door was fastened, we stepped up to the fire in the centre of the lodge and entered into conversation with the Grandmother. (The mother was hidden away in the shadows, somewhere.) I uttered an exclamation in favor of Indian women, claiming that it was a shame that the men alone should smoke and the women work. Presently the mother emerged from somewhere in the shadows, and we listened with interest to the story of her wrongs, and were repaid by her offering to send her daughter. I found on my return to the store the head chief of the Mandans who inquired, if I obtained all the children I wanted. I told him I would take one more, and he said his boy, Many Birds, wanted to go. "All right, if he passes the Doctor I will take him." "But he is over the river." "Well, go and get him." "He has gone up to the Little Mission River." "Well, I will not leave here 'till to-morrow afternoon, and you will have time to overtake and bring your boy back here." Before ten the next day, the boy was on hand, and a bright, rugged, intelligent boy he has proven himself to be. The Indians were all very much pleased with the improvement made by his children who had been at Hampton, and many more than the quota required could have been obtained from Berthold. Though extremely loth to part with their children for what seems to them to be so long a time, they appear to realize the necessity of their children learning the ways and industries of the whites, so as to be able to join in the development of the country. The insecure and unsatisfactory tenure of their title to land and their interests against their interest in individual cultivation, and at most of the agencies Indians are cult cultivating fields in common.

Having collected the quota of children required, I started for Bismark on the afternoon of the 9th instant, arriving at Fort Stevenson about 8 P. M. Here I found accommodation for the children, and was very pleasantly entertained by my old friend and classmate, Lieut. J. T. Van Orsdale, of the 7th U. S. Infantry. The Commandant of the Post, Maj. Brotherton, was also very kind, sending us down in the Post ambulance to meet the Steamer Nebraska on the afternoon of the 11th instant. Arriving at Bismark on the 12th, I found a telegram from Major James McLaughlin, U. S. Indian Agent at Standing Rock Agency, informing me that he could not meet the delegations from his Agency to meet me at Bismark, and considered it necessary for me to go on the Agency and see the Indians again about sending their children to Hampton, as he had difficulty in obtaining a quota. The Major arrived at Bismark in the evening, and I went back with him the following evening—having secured the service of Mr. Henry Kaufman, son of Major Kaufman, Agent at Berthold, to take charge of the Berthold delegation during my absence at Standing Rock. This kindly courtesy of Mr. Kaufman was of great benefit to me, as I was relieved of all anxiety about the children while in his care, he having been actively engaged in the Indian service at Berthold for the past two years, and being a young gentleman of excellent ability and good judgment. During our overland ride to Standing Rock, Major McLaughlin entertained me very pleasantly with a description of his work at Devil's Lake, D. T. I am greatly indebted to the Major for most kind and hospitable treatment while at his Agency, and for his hearty co-operation with me in the performance of my duties in relation to the selection of Indian youth for Hampton. On arrival at

the Agency I found that on account of a combination of causes, the Indians were not favorably disposed toward sending children to Hampton. Some families who had promised in August last to send children, had left the Agency, others were either transferred, on a visit, or on the buffalo hunt, organized just prior to my arrival. I wanted ten and found three ready to go, who could pass the Doctor's examination. Maj. McLaughlin aided me in every way in his power, and by Monday morning I was ready to start with eight children. These we loaded into one wagon. The Major and I occupied his buggy, the Doctor and clerk another and the cavalcade started out from the Agency early Monday morning, on the road to Bismark. About three miles from the agency, we stopped at an Indian camp, had a talk with some of the Indians and obtained two more volunteers, who were at once submitted to the Doctor and being passed by him were taken into the wagon, and perching with the Major and Doctor, we returned to the Agency, we drove over the Cannon Ball river, where we stopped for the night. The next day we arrived at Bismark, having been kindly furnished with transportation from Fort Lincoln by Major Kirk, Depot Q. M. at Bismark, D. T.

The next morning, October 19th, we left Bismark on the morning of the 21st instant, where we found quarters and amusement in the Exhibition Building until train time. Leaving Chicago in the evening, we arrived at Washington, 23d inst., Sunday morning, and lay over until Monday evening. Monday I took the children to see the Hon. Secretary of Interior and Commissioner of Indian Affairs, and showed them the public buildings, and had their photos taken. In the evening we left Washington on the Lady of the Lake, and arrived at Hampton Tuesday morning.

Our trip from Bismark was uneventful, though fraught with great interest to the children, who were in a constant state of wonderment. The Lieut. C. L. Hall, of Berthold Agency and his co-laborer, Mrs. Pike, were on the boat with us going up the river, were very kind, and did much to make our stay pleasant at Berthold. From Bismark we went to Mr. Shaw and his genial clerks, Mr. Ives and Johnny Wilkinson, for kind hospitality and aid in selection of youth at Berthold Agency. I am much pleased to be able to report kind and courteous treatment by Agency officials, and that there appears to be a deep interest in education and civilization all the Dakota Agencies.

The sixteen youth selected from Standing Rock and Berthold Agencies, were pronounced exceptionally sound and healthy by the Agency physician, and were notably bright and intelligent.

The following is a list of their names:

## GIRLS.

Francis White Cow.  
Foley Walking Medicine.  
Rose, The Fourth.  
Jenny No Ears.  
Josephine Mc Carthy.  
Susy Nagle.  
Mary Walker.

## BOYS.

Louis Agard.  
Joseph Archambeault.  
Frank Black Hawk.  
Thomas Good Wood.  
John Looks into the Lodge.  
Small White Pole Cat.  
White Back.  
Cracking Wing.

Many were rejected by the Doctor on account of physical unfitness. There is no difficulty about intelligence, but it is the exception to find a perfectly sound Indian, physically.

Yours faithfully,  
GEORGE LEE BROWN.

## ON THE YELLOWSTONE.

Our long talked of trip to the town of Glendire, has at last been accomplished, and with enlivened interest so far as pleasure seeking goes.

The weather was charming; just cold enough to be bracing and to make our campfires enjoyable after night-fall. Glendire is about 215 miles west of Bismark, on the N. P. R. R. On the 4th of July last, there was not a word or single on the present site of the town; now it has quite a number of stores, a Post Office, a weekly paper, about six or eight hundred inhabitants, mostly R. R. hands, and a "saloon" for about every ten men.

A few troops have been stationed there during the summer, for the protection of the R. R. property and the new settlers, among whom I found some old acquaintances from Hampton.

Capt. Quinby, of the 11th U. S. Infantry,

Mrs. Q. Mrs. and Miss English, and Miss M. Celler, also Capt. and Mrs. Greene, of the 17th, made up the proportion of Virginians in this far off city of the future.

Leaving Mandan, which is a town of some pretension on the Missouri opposite Bismark, our journey westward was without especial interest except an occasional glimpse at a few antelope browsing on the green hillsides, or here and there a fine bit of scenery, until we came in sight of the celebrated "bad lands" of Dakota and Montana. We traveled through these lands a distance of about thirty miles, a dreary waste, resembling nothing I can think of but a great mass of ruins. Scarcely a blade of grass or foot of soil to be seen for miles around. Nothing but immense beds of coral and what looked like burnt clay of a dull red color. Huge masses of this "scoria" as it is called, are piled up in every direction, in all sorts of fantastic shapes.

Sometimes in the far distance one could fancy giant shapes of men or horses, some times spirals, minarets, towers and towers; often bastions or citadels—but always over all there brooded the most desolate silence. No living thing—neither bird nor beast, did we see in our whole journey of more than thirty miles. Several days later, we drove a distance of five miles with a six mile team over a part of this "wonder land" and found some curious life in the way, petrifactions. One of our party found a bird's nest with three eggs in it—very round and very distinctly marked, hardened into stone. I picked up a number of petrified animals and various other shells—some of them iridescent and very beautiful. These quite pretty moss-agates we found near the river bank.

It is hard to form any correct theory of the processes of nature here. Examining the masses of scoria one would say at once, it must have been fire that wrought this scene of desolation. Looking at the petrifications we should say it was water. Doubtless both elements combined to work a mighty change. Our objective point in this five miles drive, was the Engineer's camp above Glendire. We were invited to visit and inspect the river improvements at that place, and to see Capt. Durage who is in charge of the work there.

The Captain, a Franco-Prussian, met us at an impassable point in the bad lands, and conducted us safely (on foot) to his camp, right on the river bank, where he gave us a very cordial welcome and the promise of more substantial fare than mere words, after we had seen the river improvements. Some of us had no need of further adventure to whet our appetites, and we clamored for dinner first, and river improvements afterwards, but the Captain, with the most suave and polite obsequy insisted that we should cross the river first, to make sure of a good relish for camp fare. We were eleven in number, four ladies and seven gentlemen, and quite a noisy party I assure you. The boat ride over the clear waters of the Yellowstone was enjoyable, and a stroll of half a mile up the beach brought us to the dam in process of construction. The river is wide here, and quite shallow. Numerous islands or bars make it very difficult of navigation, and the improvement consists of dams thrown across the shallow streams so as to turn the water into one channel. Mats of willow or cotton-wood, closely packed, are sunk between rows of piles driven into the sand, and form a very effective dam, cutting off the waste water and reclaiming the main channel.

We walked a distance of two miles along the river shore and on the dam, stopping about every five minutes to pick up fossils or moss-agates or petrifications, and once to rest on a pile of green willow mats that stood invitingly in our way.

Such a magnificent day! The sunshine seemed perfect. Surely the air of Montana is purer and the sunlight brighter than on any other spot of earth. But eleven hungry mouths did not waste much time "gushing" about the beauties of nature. We retraced our steps and embarked for the camp, and soon the secret of the Captain's obsequy was made plain.

In our absence, the Captain's quarters had been transformed into large pavilion, where the board was spread in most luxurious style. Mock turtle soup, buffalo steaks, veal, ham and eggs, and Yellowstone, (the latter veritable "yellow-stones," Boston baked beans, and mince pies, pumpkin pies, custard, cakes, doughnuts and *coffee* for dessert. Camp fare indeed! It was worth while coaxing an appetite for such a repeat spread out in the wilderness. And then the charming naivete of our host, in making excuses for his bachelor style of entertainment. The hours flew by as we chatted over our viands, and if all good things have their compensating ills, Montana sunlight is no exception. A few clouds gathered about the west when we re-crossed the river, but no one suspected evil on so fair a day. We were sipping our coffee quite leisurely, when suddenly there came a blast of wind sweeping through the pavilion, carrying everything

before it. The cook, with wise forethought, had nailed the table-cloth down; else our dinner had been a total wreck. As it was, coffee cups, goblets, and pitchers of cream, were carried quite off, and the pies and cakes plentifully shared. In less than five minutes the 'blizzard' had come and gone, and all was serene!

There is a legend at Glendrie, that who once drinks of the waters of the Yellowstone never afterwards can tell the truth. So strange are the natural characteristics of the country, it is easy to account for the legend.

Our homeward drive was somewhat perilous, for while we were sipping our coffee, the sun did not wait for us, and to cross the bad lands in the gloaming is not a thing to be desired. Fortunately our driver knew every foot of the road, and our mules were trustworthy. Great chasms, yawning caves, and steep precipices lie on either side of our road. Here and there large masses of earth and "scoria" seemed to stretch right in our way, but a sudden turn of the road brought us round them, and so we moved slowly along, amid the gloom and profound silence which seemed to have brooded there for ages. Nothing could exceed the gloom of this twilight in the bad lands. No living thing, but here and there, grey ghostly shapes of mastodons or giant elephants seemed to fashion themselves in the honeycombed masses of barren clay and scoria.

But even the desolation of such a scene could not dampen the spirit of our party, whose mirth seemed irresistible.

We had taken our gallant host captive, and were carrying him to our home camp. Like frightened children in the dark, we kept up our laughter and songs till all dangers were past, and, when safely seated around our camp-fire again, each one had his own account to give of the day's adventures.

Two days after, we turned our faces homeward, and on the evening of the day when men from the North and the South, from the Union and ex-Confederate States, met on the Normal School grounds to pay their tribute of respect to our dead President, we witnessed an equally striking scene.

As we drew near the Agency at the close of our long journey, we found a large party of the late hostile Indians seated on the wet cold ground, in a drizzling rain, beating the ground with their sticks and wailing in the most dreary and hideous tones. They had sat there all day wailing their funeral dirges, in front of the Agency building, which was heavily draped in black, lamenting in their own peculiar way, the death of the Great Father.

They were decorated and dressed for dancing, and had come up from the camp four miles below to have a big dance, but our new agent, Mr. McLaughlin, announced the death of the President, and told them they could not dance till after the burial. They put aside the tom tom and bent the ground instead.

Fort Yates, D. T., Oct. 7, 1881.

We are happy to publish the following pleasant tribute to the "Hampton Student" singers, from a well known and highly respected colored citizen of Boston, written at the time they were going through the North, singing up the walls of Virginia Hill.

#### SINGING OF THE HAMPTON STUDENTS.

BY ELIJAH W. SMITH.

Like the sound of friendly greeting  
When the night is dark and drear,  
Like the vesper-bell at even  
Fell their voices on our ear;  
And we fancied, as we listened  
To the cadence sweet and low,  
We could see our race rising  
From its misery and woe.

Music, sweetest of the angels,  
Which her power n race to move,  
And her harp strings round him twining  
Lifts the now enfranchised slave;  
Hark, the strains that wailed his sadness  
Through the long and gloomy days,  
All the harmonies are blending  
In triumphant songs of praise.

From the willows of affliction  
They their harps have taken down,  
And the brown knee bowed in bondage,  
Now wear freedom's jewelled crown;  
Groping come they from the darkness,  
From the gloom of slavery's night,  
Hear the tuneful voice appealing,  
"Give, O give us of your light."

Glorious anthers of salvation;  
These it was that bore them up  
When the burden was upon them,  
While they drank of slavery's cup;

Songs of hope and adoration,  
Songs of faith in Israel's God,  
While they wore the yoke with patience,  
While they humbly kissed the rod.

So we listened, soul enraptured,  
While they told the captive's wrong,  
And we saw the bowed head rising,  
And the faltering heart grow strong;  
Saw them watching for the token,  
Precious as the Patriarch's bow,  
And we knew with faith they waited,  
For the "Chariot swinging low."

And our spirits rose within us,  
As the melody did ring  
Through the lofty dome and arches,  
And we heard our people sing:  
Felt as when we read the story,  
How, in pomp of regal state,  
Hannibal his dusky legions  
Led to Rome's imperial gate.

Fancy's eyes portrayed the peasant  
That tumultuous sweep along,  
Mingling with the clash of weapons,  
Washington and martial song;  
And our hearts recalled the promise,  
That, washed free from slavery's brand,  
Earth's proud nations would be grasping  
Ethiopia's outstretched hand.

And may not their plaintive music,  
With its breathings, sweet and low,  
Melt the icy walls around us  
As the sunlight melts the snow?  
Oh, may not their voices blending  
In the song they sang of yore,  
Be the magic key to open  
Education's golden door?

#### LEARNING TO SAVE AND TO GIVE.

To teach children habits of thrift and economy without making them miserly, is sometimes a difficult problem for parents or educators. If there is one kind of a miser more unpleasant and pitiable than another, it is a young miser. Training in generosity on the other hand is apt to be something of a farce, the giving being only of what has been given for the purpose by parents or friends.

The friend who writes the following kind letter, seems to have discovered a pleasant and natural method of teaching his children at the same time both to save and to give, with some other useful lessons besides.

#### GENERAL ARMSTRONG:

Dear Sir: I send you enclosed my check on First National Bank of Fiskville, for seventy dollars, (\$70.00) to be appropriated for the education of an Indian boy.

It may be interesting to the boy to know that this money was raised by two little boys, Willie, 10 years old and Charlie, 8 years old, who have become much interested in the Hampton school, since my visit there last May.

They have a bank, called the "Hampton School Fund," and in it they deposit one-half of the money they earn. The other half they put away for their own education.

When not in school they work by the hour in the garden, and also have a little garden where they raise vegetables for market.

They also solicit funds from their friends, and in this way they hope to raise the amount every year.

It would be gratifying and encouraging to the boys, if they could hear from the Indian boy, who is to be the recipient of their gift, and I trust this little act may be of mutual benefit to the receiver and the givers.

God bless you in your work.

Believe me,

Sincerely yours,

M. D.

#### TUSKEGEE STATE NORMAL SCHOOL.

The State colored Normal School at Tuskegee, Alabama, which was opened a few weeks ago, under the management of two Normal School graduates, Mr. Booker T. Washington, of the class of 1877, who was last year teacher of Indians at this school, and Miss Olivia Davidson graduate of the class of '79, and instructor of the State Normal School at Framingham, Massachusetts, assisted by Mr. John Cardwell, of the class of 1875, is having a prosperous beginning. The State appropriates two thousand dollars for the salaries of Mr. Washington and his two assistants, but makes no provision for school buildings, or the necessary books and apparatus. Mr. Washington found that the students who wished to attend the School were not able to pay their expenses of board, etc., unless they could have the opportunity of earning the whole, or a part of them, as is done at the Hampton School. He, therefore, with the advice of friends, purchased an eligibly situated farm on the outskirts of the town, containing a hundred acres with a farmhouse, which he thought would answer for a school building, until some better provision could be made. The price of the farm was five hundred dollars,

two hundred of which was to be paid in cash, which was loaned him for the purpose. The vacation students of the Hampton School showed their interest in Mr. Washington's enterprise, by raising, through entertainments and otherwise, nearly one hundred dollars towards paying for the farm. A friend of the Hampton School at the North who had been favorably impressed by his observation of Mr. Washington's work with the Indians, and recently given two hundred dollars towards the payment of the farm purchase, and a lady who has also been a very liberal friend to Hampton has contributed another hundred. The farm is held in trust by the School Trustees, but not as the property of the State. Mr. Washington finds his school much larger than he anticipated, and the farm is insufficient for their accommodation. His school now numbers about eighty students, and is held in a colored church in the town, while the farmhouse is occupied by a preparatory school, which is taught by Miss Margaret Soranus, another Hampton graduate. The farm is well adapted for profitable cultivation, and will be the means of enabling students of the Normal School to earn a large share of their expenses, as soon as they can obtain the proper outfit. At present, although the farm is paid for, the school has neither carts, animals nor implements, nor has it any apparatus for its school-rooms. Although the colored people of Tuskegee and vicinity, as well as the whites, are interested in the school, and doing what they can to help it, they will need the aid of Northern friends, who are interested in the work of educating the colored race, to put their school in good working order. We trust they will have the help they so much need, and which we believe will be well bestowed. As an outgrowth of the progress of this enterprise will be watched with peculiar interest, by our teachers and students.

#### SUOCESS.

BY H. W. LONFELLOW.

"Every man must patiently bide his time. He must wait. More particularly in lands, like his native land, where the pulse of life is so quick, and the temptations so many, and the work so useful. Our national character wants the dignity of repose. We seem to live in the midst of a battle,—there is such a din,—such a hurrying to and fro. In the streets too, a crowded city it is difficult to walk slowly. You feel the rushing of the crowd, and rush with it onward. In the press of our life it is difficult to be calm. In this stress of wind and tide, the professions seem to lose their anchors, and are swept out into the main. The voices of the Past say, 'Come! But the voices of the Past say, 'Wait! With calm and solemn footsteps the rising tide beats against the rushing torrent of stream, and pushes back the hurrying waters. With no less calm and solemn footsteps, nor less certainly, does a great mind bear up against public opinion, and push back its hurrying stream. Therefore should every man wait;—should bide his time. Not in listless idleness,—not in useless pastime,—not in glibulous dejection; but in constant, steady, cheerful endeavor, always willing and faithful, and accomplishing his task, when the occasion comes, he may be equal to the occasion. And if it never comes, what matters it? What matters it to the world whether I, or another man did such a deed, or wrote such a book, so be it the deed and book were well done? It is the part of an indiscreet and troublesome ambition, to care too much about fame,—about what the world says of us. To be always looking into the faces of others for approval;—to be always anxious for the effect of what we do and say; to be always shouting to hear the echo of our own voices. Believe me, the talent of success is nothing more than doing what you can do well; and doing well whatever you do,—without a thought of fame. If it comes at all, it will come because it is deserved, not because it is sought after. And, moreover, there will be no misgivings,—no disappointment,—no hasty, feverish, exhausting excitement,—"Hyperion."

#### TO CONSUMPTIVES.

Consumption, that scourge of humanity, is the great dread of the human family, in all civilized countries. I feel confident that I am in possession of the only sure, infallible Remedy—now known to the profession—for the positive and speedy cure of that dread disease, and its unnumbered concomitants, viz., Catarrh, Asthma, Bronchitis, Nervous Debility, &c. I may be called an old fogey. I believe in medicine, and the great secret of cure of that dread disease, is in the use of the Compound Symplics of the Old and New World, has taught me the value of proper medication, both local and constitutional, in the cure of this great enemy of our race. I have found it. But I am digressing. I started out to say to those suffering with Consumption or any of the above maladies, that by addressing me, they shall be put in possession of this great boon, without charge and shall have the benefit of my experience in thou-

sands of cases successfully treated. Full particulars, directions for preparation and use, and all necessary advice and instructions for successful treatment at your own home will be received by the return of a card, free of charge, by addressing with stamp or stamped self-addressed envelope,

DR. M. B. BELL,  
101 N. CALVERT ST., BALTIMORE, MD.

THE GREATEST LIVING AUTHORS, such as Prof. Max Muller, Sir R. W. E. Gladstone, Jas. A. Froude, Prof. Butler, H. A. Prentiss, etc., are the great writers of the day. The Living Age is a weekly magazine giving more than 1000 pages of the best of the world's literature.

#### Littell's Living Age.

The Living Age has been published for nearly forty years, and has met with continuous commendation and success. In 1881 it will furnish to its readers the productions of the most eminent authors of the time, and many others, embracing the choicest British and Foreign literature.

Unapproached by any other Periodical in the world, of the most valuable Literary and Scientific matter of the day, from the pens of the greatest English, Scottish, Irish, and American, and Editors, and the most interesting and valuable of the day.

THE LIVING AGE is a weekly magazine giving more than 1000 pages of the best of the world's literature. It contains the best of the world's literature, and is a valuable addition to every American reader's library. It is a weekly magazine giving more than 1000 pages of the best of the world's literature.

#### ABSTRACT LIVING WRITERS.

"No other periodical can compare with THE LIVING AGE in interest and value. A veritable treasure-house of the best work of the most celebrated writers in literature, science, politics and art."—Boston Traveller.

"It supplies a better, more complete, and more valuable source of information and investigation, and gives a greater amount of variety of reading, than any other publication."—Boston Journal.

"It contains not only the best solid literature, but also the best serial stories of the day. Its pages are sufficient to keep any reader's mind in the most interesting and valuable of the best of our contemporary literature."—Boston Journal.

"The latest essays and reviews of the day are to be found here. We know of no investment of eight dollars in the world of literature that will yield equal returns."—The Philadelphia Record.

"It is indispensable in every household where any attempt is made to keep up with the current thought of the day. It is a thorough compilation of what is best in the literature of the day, whether relating to history, biography, fiction, science, literature, or any other branch of knowledge."—Boston Traveller.

"It is a weekly publication, is comparatively speaking, the cheapest magazine published. Its contents can be had, the means of a sound literary culture."—New York Tribune.

"An indispensable visitor."—New York Observer.

"The oldest and best."—Courier Journal, Louisville.

"As much a necessity as ever to the student."—Chicago.

"The best and cheapest periodical in America."—Essex County Chronicle, Toronto.

"Publishes weekly at \$3.00 a year, free of postage."—New York Tribune.

"For 1882, running from January 1st, this magazine will be sent free of charge to all who send the receipt of their subscription, will be sent gratis."

"Possessed of the Living Age, the student or scholar, the man of letters, the man of science, or the man of business, will find it a most valuable and interesting addition to his library."—Boston Traveller.

"For \$3.00 THE LIVING AGE and any one of the American Monthly (or Harper's Weekly or Barnum's) will be sent for a year, postage free; or, for \$5.00 THE LIVING AGE and the St. Nicholas or Lippincott's Monthly.

Address, LITTELL & CO., Boston.

MRS. S. F. EATON, formerly of Boston, but for several years at Fort Monroe, can accommodate

FORTY OR FIFTY GUESTS for the winter. Terms: \$10.00 per week. For further information address,

MRS. S. F. EATON, Fort Monroe, Va.

[We can cordially recommend Mrs. Eaton's boarding house.]

SEEDS AND PLANTS

For 1882 sent free on application.

PETER HENDERSON & CO., 35 Cortlandt St., New York.

# IN THE SHENANDOAH VALLEY. OUR COLORED FAMILIES.

BY ORRA LAMORINE.

Early last summer I visited, for the first time in many years, the home of my childhood, in the beautiful Shenandoah Valley. The occasion of my visit was the arrival of a new baby in my sister's household, and I was pleased to recognize in the nurse who was taking charge of the infant and its mamma, an old acquaintance. This was "Aunt Em," who was in my childhood the well-trained maid of one of the best housekeepers in our village. At present "Aunt Em" is a very important character in the place, being in great demand in family emergencies, such as births, weddings and funerals, and it took a weight of anxiety off my mind, when I entered my sister's darkened chamber, and felt rather than saw the ministering presence of the kind and skilful nurse. As her patient improved and no longer needed constant care, Aunt Em's busy fingers sought occupation in any other department where she could be useful. "What can I do for you now, honey?" she would say, in the cheerful, affectionate manner so grateful to the invalid, and no matter what the response would be, Aunt Em was ready for the task. Now it was "Aunt Em want you mend my dress" from one of the little girls who missed mamma's busy fingers; now, "Aunt Em, please make us some of those nice cakes your old mistress used always to have, you know these new-laid one cooks can't do things like the old-time people," from some members of the family who still hankered after the flesh-pots of the old dispensation. It was pleasant to hear Aunt Em speak of her old mistress.

"She was always good to me, and I loved her dearly," she would say, "she taught me all I know, and after the young ladies grew up and married, I was like a child to her. After the house was cleaned up I always took my work, and sat down by her, and we spent many pleasant years together. When she died, I was just as much as a part of her, and her bright face, and her soft voice," and one of the ladies of the household one morning at the breakfast table. "I do not see what she was waiting for," and the vote being taken it was decided that "Mrs. Guelph" would be lucky to have such an attendant as "Aunt Em."

In every southern community are to be found such characters now, usually filling the vocation of monthly nurses, cake-bakers on great occasions, attendants on invalids, for whom it may be necessary to consult some physician at a distance, etc., etc. Formerly an old white woman was the mysterious character, whose inseparable basket was supposed to convey many bibles to their destination in southern towns, but now in all the communities of my acquaintance, this place is filled by the older class of colored women. Usually it is the ex-slave of some aristocratic family who had been the nurse of more than one generation, often the confidential friend of two or three, who become in these latter days, the common property of the neighborhood, a most important personage in her vocation. Sometimes the reputation of such a nurse extends far and wide, and she is sent for to introduce a new-comer into society at some point quite out of her bailiwick. Thus, while at my sister's, I heard that "sunt Liza," another famous nurse in the village, had gone to Annapolis, Maryland, to attend a young mother, whose early life had been spent in Virginia, and who could not possibly do without the good old mammy she had known from childhood. In one of my trips to the Valley, I noticed in the car, between Charlottesville, and Staunton, a very nicely dressed, elderly mulatto woman, and entering into conversation with her, found that she had once been a slave in a Virginia family, and with much pride that her practice extended over two or three states, and she was then returning from Washington, where she had been for some weeks nursing a Virginia lady. While we were talking, a white lady came into the car, and recognizing my new acquaintance spoke to her very cordially as Mrs. Davis, and they were soon busily discussing mutual friends.

I found my sisters deeply interested in a colored boy whose mother had been employed as cook in the family for some years, and who had been the playmate of my little nephews and mother had both died within a year, and he lay, bedridden, with an incurable disease. The little home, purchased by the joint efforts of the worthy family, had been rented to a colored woman, who had undertaken to care for the dying boy. Every attention was paid the poor fellow by his white friends, some of whom visited him daily, and when he expressed a desire to write his will, my brother-in-law left his office, and went to Johnny's bedside to carry out his request. The property

was not quite paid for, and that and other debts contracted during the long illness of the boy and his old father, had to be satisfied. The furniture was to be given to the woman who had nursed him and her son, "they have been very good to me," he said. "What will you do with it?" said his friend, waiting patiently for further directions. "I would like to have a tombstone. Can't I have a little white tombstone with my name on it?" said the dying boy, looking up into the lawyer's face.

"—Yes," said he. "You can. I will see that your desires are carried out." "The house will have to be sold," said the boy, "and after all the debts are paid, I reckon there will be a little money left, and I want you to give that to Miss Annie to use for the poor people in the town—She goes among them, and knows what they want, and I would like her to have what is left when the debts are paid, to give to them." The gentle little fellow passed away very peacefully, and the funeral was attended by friends of both races, the white minister of the church to which "Miss Annie" belonged assisting, the colored preacher in the services. Both ministers had kindly attended the sick boy in his long and weary illness.

Among the young colored people, of whom I enquired a great deal of intelligence from his earliest years, as well as a most amiable disposition. I learned from Johnny's friend, "Miss Annie," who is well posted in regard to the affairs of the colored people, that this young man, who had in his childhood belonged to every kind of beaten gentleman, had been for some years past living in a very good station in Baltimore. In the fall of his visit to his family, all thirty and well-to-do people, living on their own property, he found his master in sadly reduced circumstances and rapidly declining health. The young man, as one day to pay his master a farewell visit, as he expected to return to his place in the city by the next train, and finding his old friend much more feeble than usual, he said to him, "Master you look so poorly, I will put off going away until tomorrow, and go hunting this mornin' before, that I can't get you a bird. Perhaps you would feel better if you could have some game." The next day the sick gentleman, much surprised, seized the sick gentleman, and a few moments later the burden of age and care was removed and the weary one was at rest.

The young colored man remained until after the funeral, tenderly aiding the bereaved family in the last offices of kindness to the dead, and when he came to bid his master's daughter good-bye, he told her what she had never known before, that her father had assisted his mother to pay for her house, soon after the emancipation of the slaves, and that he should repay to her the sum of money furnished by his master. From time to time he has sent him the latest instruments of the debt, and promises to pay it all.

On the Baltimore and Ohio train to Staunton, I noticed a somewhat debilitated looking young black woman, who seemed to be eagerly looking out for land marks on the way. In answer to my enquiries as to her travels, she said she was just returning from a six months sojourn in a mining district in Iowa. She had been sick all the time, the weather had been fearfully cold, the snow had lain several feet deep on the ground for months, she had felt strange and did not like "out there," the young man said, "I will put off going home until tomorrow, and go hunting this mornin' before, that I can't get you a bird. Perhaps you would feel better if you could have some game." The next day the sick gentleman, much surprised, seized the sick gentleman, and a few moments later the burden of age and care was removed and the weary one was at rest.

jects, and joyfully embraced some friends who had come to meet her. I hardly expect her to remember my presence in the pleasant excitement of reaching home. She turned back at the door of the car to bid me a smiling adieu, politely hoping that the rest of my journey would be pleasant and safe.

## RE-UNION OF THE ARMY OF THE CUMBERLAND.

BY H. H. HORNBY, C. S. A.

The various northern armies have the custom of meeting at some point once each year, generally upon the anniversary of some great meeting of the President, to hold its reunion which has been held since the Ohio river.

As soon as it was known, the ex-Confederates, to the number of a thousand or more, issued a most cordial invitation to them, saying that all should be done that could be, to make the visit pleasant, and nobly did they keep their promise. From almost every Northern state, and many of the Southern, old soldiers gathered there, and though saddened by the death of the President, the meeting was of a most interesting character, and that sad event though casting a deep gloom over all, did much to soften the hearts of the brave men, who years before had looked at each other over musket and cannon, with eyes of deadliest hate, and foot to foot, fought the war out to the bitter end. Now, under the shadow of this great sorrow, "eyes all unused to weep" were filled with tears, as they had grasped the sword were clasped in friendly greeting, and feet which had made many weary and toilsome marches, now kept step to solemn music in memory of him who had passed away.

Before the war, Chattanooga was a town of about 2500 inhabitants, without any manufactures except one small tannery, and one small rolling mill. The vast military camps of the army of the Cumberland, which had been built up there, had been built up there, and that sad event though casting a deep gloom over all, did much to soften the hearts of the brave men, who years before had looked at each other over musket and cannon, with eyes of deadliest hate, and foot to foot, fought the war out to the bitter end. Now, under the shadow of this great sorrow, "eyes all unused to weep" were filled with tears, as they had grasped the sword were clasped in friendly greeting, and feet which had made many weary and toilsome marches, now kept step to solemn music in memory of him who had passed away.

Before the war, Chattanooga was a town of about 2500 inhabitants, without any manufactures except one small tannery, and one small rolling mill. The vast military camps of the army of the Cumberland, which had been built up there, had been built up there, and that sad event though casting a deep gloom over all, did much to soften the hearts of the brave men, who years before had looked at each other over musket and cannon, with eyes of deadliest hate, and foot to foot, fought the war out to the bitter end. Now, under the shadow of this great sorrow, "eyes all unused to weep" were filled with tears, as they had grasped the sword were clasped in friendly greeting, and feet which had made many weary and toilsome marches, now kept step to solemn music in memory of him who had passed away.

The first day of the meeting was devoted to business of the society. On the second day, while the remains of the late President lay in state in the rotunda of the Capitol at Washington, a procession was formed in one of the principal streets of Chattanooga, headed by the band of the U. S. Army. Following that were the members of the society of the army of the Cumberland, about 1400 in number, escorted by a military company of the city. Then followed over one thousand ex-Confederates, each wearing a badge of white ribbon, while along the streets, and in the rear of the procession was a crowd of not less than 12,000 people. On Cameron Hill, an elevation northwest of the city, a large flagstaff had been erected, and a stand, decorated with red, white and blue, and on its front the motto: "One country, one constitution, one destiny," had been built for the occasion.

Slowly the huge procession closed up to the allotted position, and then, with a burst of three hearty cheers for the ex-Confederates as they filed into the places given by the Marshals, who had been selected from both sides, bearing a huge flag heavily draped in black, eight ex-officers, four Unionists and four Confederates, advanced to the staff, and, adjuting the billiards, hoisted it to its place, saying "The Star Spangled Banner." As its heavy folds swung out on the breeze, cheer after cheer rent the air, but when, after "Hail Columbia," the band struck up "Yankee Doodle," followed by "Dixie," the "Yankee Doodle" and the old "Rebel yell," blended in one grand shout that could be heard for miles, and which, punctuated by the regular artillery, woke the echoes of old Look-out, and the hills across the river. When these had died away the Reg was slowly dropped to half-mast, and the band played "Nearer, my God, to Thee," hundreds of voices, as we afterward learned, that it was sung at Washington. Then turning to face the stand, we listened to an address of welcome delivered by Major Key, brother of Ex P. M. General Key. It was a grand effort, verging on the sublime, and hearty "amen" could be

heard from all parts of the assembly, when he pledged his old comrades to support the Government, in these words: "We were honest in the belief that we were right and you wrong. We submitted the question to the arbitrament of the sword. This decision was against us. We are now glad that it was so, and standing here today, under the shadow of this great sorrow that so affects us all, (for he was our President as well as yours) at the foot of yonder grand old oak, which is the sight of fields of battle once redlined by the blood of brave men, by the memory of the 17,000 noble dead lying in yonder cemetery, by the blue sky above us, by all our common memories of a common country, we pledge the men who fought you, in all the future, to a firm support of the Government, and maintenance of the laws." He was responded to by Maj. Gen. Keller of Ohio, in a very feeling and eloquent speech, and the formal exercises of the day were over.

All through the afternoon and evening, knots of men could be seen in the hotels and places of public resort, and wherever seen one could be certain that men of both armies were in the group, and that battles were "being fought over again" in a friendly spirit. I never saw a more quiet, orderly gathering. For two days and a half, I was in the city, in a crowd of from 12,000 to 15,000 people, and did not hear a harsh or unbecoming word, a quarrel, or see (till just as I stepped on the car to leave) a drunken man.

Among those present at our meeting were some colored men who had been soldiers, and I met some of my old company (colored) whom I had not seen since our muster here in Nashville in March, 1862. All of those from whom I could hear as well as those whom I saw, seemed to be doing well, with homes of their own, and work at remunerative rates. I said to one: "Again, I would not take any discipline for a long way towards making one a man, and I can tell, nine times out of ten, as soon as I see a colored man and hear him talk, whether he has been in the army or not. If he has, he is almost sure to be head and shoulders above those who have not." This man, who, when he entered the army did not know a letter, or anything of a trade, and was a great resister, a good house, money in his pocket, and a name good for more, and others are about as well situated. The whole outlook for both races is most encouraging, the promise for the future full of hope.

**SELF-CONTROL.**—If there is one habit which, above all others, is deserving of cultivation, it is that of self-control. In fact, it includes so much that is of value and importance in life, that it may almost be said that the man who has it, is the man who has won in proportion to its power does the man obtain his material and the woman her womanly highest parts of our nature, and to bring all the lower parts into subjection, or rather to draw them all upwards, towards the best that we know, is the one central power which supplies vitality to all the rest. How to develop this in the child may well absorb the wisdom and enthusiasm of every teacher. Yet it is no mysterious or complicated path that leads to its attainment. The habit of self-control is but the accumulation of continued acts of self-denial for a worthy object; it is but the repeated authority of the reason over the impulses of the judgment over the inclinations of the sense of duty over the desires. He who has acquired "this habit," who can govern himself intelligently, without a painful effort, and without any fear of revolt from his appetites and passions, has within him the source of all real power and of all true happiness. The force and energy which he has put forth by day, and hour by hour, is not exhausted, nor even diminished; on the contrary, it has increased by use, and has become stronger and keener by exercise; and although it has already completed its work in the past, it is still his well-ried, true, and powerful weapon for future conflicts in higher regions.—Philadelphia Ledger.

The talent of success is nothing more than doing what you can do well without thought of fame.

The meaning of economy has been foolishly narrowed to be almost synonymous with stinginess.

It is easy to pick holes in other people's work, but far more profitable to do better work yourself.

**Horsford's Acid Phosphate**  
A Cooling Drink.

A teaspoonful of Acid Phosphate mingled with a glass of water, properly sweetened, serves to quench the thirst in a more satisfying manner than the juice of lemons or limes.

## FROM "THE BUILDING OF THE SHIP."

BY H. W. LONGFELLOW.

"Build me straight, O worthy Master!  
Stanch and strong, O goodly vessel,  
That shall laugh at all disaster,  
And with wave and whirlwind wrestle!"

The merchant's word  
Delighted the Master heard;  
For his heart was in his work, and the heart  
Giveth grace unto every Art.

A quiet smile played round his lips,  
As the eddies and dromas of the tide  
Play round the bows of ships,  
That stealthily at anchor ride:  
And with a voice that was full of gloe,  
He answered, "Erelong we will launch  
A vessel as goodly, and strong, and stench,  
As ever weathered a wintry sea!"

Beside the Master, when he spoke,  
A youth, against an anchor leaning,  
Listened, to catch his slightest meaning.  
Only the long waves, as they broke  
In ripples on the pebbly beach,  
Interrupted the old man's speech.

"Thus," said he, "will we build this ship!  
Lay square the blocks upon the ship,  
And follow with this plan of mine.  
Choose the timbers with greatest care;  
Of all that is unsound beware;  
For only what is sound and strong  
To this vessel shall belong.  
Celars of Main and Georgia pine  
Here together shall combine.  
A goodly frame, and a goodly fame,  
And the Union be her name!"

For the day that gives her to the sea  
Shall give my daughter unto thee!"  
All is finished and at length  
Has come the bridal day  
Of beauty and of strength.  
To-day the vessel shall be launched!  
With fleecy clouds the sky is blanch'd,  
And o'er the bay,  
Slowly, in all his splendors digat,  
The great sun rises to behold the sight.

The ocean old,  
Centuries old,  
Strong as youth, and as uncontrolled,  
Paces restless to and fro,  
Up and down the sands of gold.  
His heaving heart is not at rest;  
And far and wide,  
With ceaseless flow,  
His beard of snow  
Heaves with the heaving of his breast.  
He waits impatient for his bride.  
There she stands,  
With her foot upon the sands,  
Decked with flags and streamers gay,  
In honor of her marriage day.  
Her snow-white sails flutter, blending,  
Round her like a veil descending,  
Ready to he  
The bride of the gray old sea.

On the deck another bride  
Is standing by her lover's side.  
Shadows from the flags and shrouds,  
Like the shadows cast by clouds  
Broken by many a sunny fleck,  
Fall around them on the deck.

The prayer is said,  
The service read,  
The joyous bridegroom bows his head;  
And in tears the good old Master  
Shakes the brown head of his son,  
Kisses his daughter's glowing cheek  
In silence, for he cannot speak,  
And ever faster  
Down his own the tears begin to run.

Then the Master,  
With a gesture of command,  
Waved his hand;  
And at the word,  
Loud and sudden there was heard,  
All around them and below,  
The sound of hammers, hown on blow,  
Knocking away the shores and spurs.  
And see she stirs!  
She starts,—she moves,—she seems to feel  
The thrill of life along her keel,  
And, spurning with her foot the ground,  
With one exulting, joyous bound,  
She leaps into the ocean's arms!

And lo! from the assembled crowd  
There rose a shout, prolonged and loud,  
That to the ocean seemed to say,  
"Take her, O bridegroom, old and gray,  
Take her with thy protecting arms,  
With all her youth and all her charms!"

How beautiful she is! How fair  
She lies within these arms, that press  
Her form with many a soft caress  
Of tenderness and watchful care!  
Sail forth into the sea, O ship!  
Through wind and wave, right onward steer!  
The mottled eyes the trembling lip,  
Are not the signs of doubt or fear.

Sail forth into the sea of life,  
O gentle, loving, trusting wife,  
And safe from all adversity  
Upon the bosom of that sea

Thy comings and thy goings be!  
For gentleness and love and trust  
Prevail o'er angry waves and gust:  
And in the wreck of noble lives  
Something immortal still survives!

Thou, too, sail on, O Ship of State!  
Sail on, O Union, strong and great!  
Humbly with all its fears,  
With all the hopes of future years,  
Is hanging breathless on thy fate!  
We know what Master laid thy keel,  
What Workmen wrought thy ribs of steel,  
Who made each mast, and sail, and rope,  
What anvils rang, what hammers beat,  
In what a forge and what a heat  
Were shaped the anchors of thy hope!  
Fear not each sudden sound and shock,  
'Tis but the wave and not the rock;  
'Tis but the flapping of the sail,  
And not a rent made by the gale!  
In spite of rock and tempest's roar,  
In spite of false lights on the shore,  
Sail on, nor fear to breast the sea!  
Our hearts, our hopes, are all with thee,  
Our hearts, our hopes, our prayers, our tears,  
Our faith triumphant o'er our fears,  
Are all with thee,—are all with thee!

## Agriculture.

## KEEP UP THE WARFARE.

In an article on the EXTREMIZATION OF WEEDS, *The Massachusetts Ploughman* urges keeping up the warfare till the end of the season, and as an illustration of the importance of this persistence, cites a curious fact which most practical gardeners and farmers must have observed:

"Time spent in destroying weeds in autumn is well spent. The moment cultivation ceases, a fresh crop of nearly all kinds of weeds will appear, and, with seeming intelligence, they do not stop to grow large before blossoming, as they do if they come up early in spring and grow un molested, but they begin to blossom when very small, and in an incredibly short time mature their seeds, and thus prepare the germs for a numerous crop another year. While these small weeds may not materially injure the crop of the present year, they propagate their race and cause the farmer a great amount of labor next year; far more than would be the labor to continue the fight until fall, and thus prevent any seeds ripening for any future crop."

## KINDLY TREATMENT OF ANIMALS.

NORMAN can be more foolish than the attempt to catch either a horse, cow, pig, sheep, or dog by running after it. How many futile attempts to catch a horse have been made in pursuance of the above method. How many times has the horse, just as the hired man was about to walk up to its head and at the point of catching it, made a sudden wheel and shown the brightness of its shoes. At this juncture we have seen a little boy, who had never struck the horse with a whip, but who had given the animal many an apple in days gone by, stroking him and playing with him—at the time we have seen even this little fellow take the horse quietly by the foretop, and together they would go to any desired point. Or perhaps a lady makes her appearance, in whom the horse recognizes a friend, and she frequently regaled him with a lump of sugar. He does not even wait for the lady to come to him; for he goes to her, and the simple lump of sugar will enable his mistress to lead the noble horse to his stall, a task which all the chasing and yelling of the hired man has failed to accomplish. The intelligent animal is attracted neither by the personal appearance nor the tone of voice of the rough fellow who strives to rule by force alone.

Another individual attempts by running and yelling to catch his cow or ewe. Why do these naturally gentle animals run away from him? Because they remember full well that on former occasions, when he has succeeded in catching them, a series of blows from some heavy cudgel has been their reward. Is there not some better way of securing the good-will of our herds and in managing them as we wish? There is a hollow place on the head of every cow, just behind the junction of the horns, which is commonly full of dust, short hair, and the like, causing the animal an itching sensation. It is a source of extreme pleasure to the cow to have the spot scratched, and (since, from its location, the animal herself cannot reach it), hence, she frequently approaches her owner either in the stable or in the pasture, an era of good feeling may at once be established if due attention be paid to scratching this hollow spot. If at your first approach, the cow is a little shy, offer her from one hand a nubbun of corn, while with the other hand you gently scratch the particular spot in her head, mentioned above. In a very short time, whenever you go to their pasture, the whole herd will come to you, to have their heads scratched, and you will soon be satisfied that it is as easy to have them follow you as to resort to driving and loud noise.—*American Revueur.*

## Teacher's Table.

## HOW TO TEACH ARITHMETIC.

Mrs. E. N. L. Walton, who conducted the Senior Normal Training Class, at Hampton Institute last June, kindly furnishes the following account of one branch of her valuable instruction:

As most schools are not provided with special apparatus for illustrating the branches to be taught, it was thought best, in the exercises, to use only such as teachers could provide for themselves, with little or no expense. And, indeed, such apparatus is often the best, and has one advantage, at least. It can be freely used and easily replaced.

In the teaching of numbers, for instance, it is not necessary to have a set of uniform blocks or cards to count with, just because a Normal teacher happens to use cards. Blocks, shells, pebbles, flowers, sticks, stones, straws, almost anything will do, if you have enough so that each pupil can have something to illustrate with, as he tells about the new numbers he can make, or the different combinations he can form out of any numbers already given.

A child should be used to handling objects and to show by their use all about each smaller number, before he is taught about the next larger number, till he reaches the number ten, certainly, which, with small children, will often take a year or more.

The members were recommended to teach their pupils to recognize the smaller numbers at sight, and by grouping, to determine larger numbers accurately and quickly. A curious illustration was given to show the lack of facility in grouping and reckoning numbers, which is noticeable everywhere. Six different numbers were asked to count the number of people in the room. Out of the six, but one gave the right number, and some were more or more out of the way, though the whole number in the room at the time was less than sixty. As an exercise for sighting numbers, cards with large colored dots, arranged in various ways upon them, were used.

By splints arranged singly, and in groups of tens, the first steps in addition and subtraction were illustrated, making plain to the eye the necessary reductions which have been wrongly called "carrying and borrowing."

Bits of the same material, ordered up to thousands were shown by an arrangement of beans, by which arrangement a pupil could easily select a given number made up of units of three or four orders, and he was taught how best to represent on the board the number he held in his hand, thus preventing any mixing up in mind of numbers and the figures which represent the numbers.

By pasted-on models—home-made—the different dry and liquid measures were taught, and the pupils led to find by actual trial, how many smaller measure-fulls it took to fill a larger measure.

Home made scales were used which cost ten cents, just the price of the little round pens used to hold the weights and articles weighed; (old tin pail covers or tomato can covers would have answered as well except in looking unlovely), and the weights themselves were bags of shot.

Measures of distance were given, the inch and foot on stout manilla paper; the foot, yard and rod, on a piece of typewritten paper marked off by bits of ribbon. These the pupils were required to use; they were also taught to use for a natural measure, always at hand, the length of their own steps. Fractions were taught by division of apples, and the terms used illustrated to the eye; also the operation of reduction to higher and lower terms—addition, subtraction, etc., were shown by apples, splints, paper, and lines on the black board.

In teaching the elements of arithmetic, as in teaching everything else, the members were enjoined to make haste slowly, and to teach as far as possible by appealing to the active powers of the child. The child should aim to find out for himself, not simply to memorize what is told him.

E. N. L. W.

## Horsford's Acid Phosphate

## In Nervous Prostration.

It is the best tonic I know of in debility and nervous prostration, with sleeplessness, caused by mental overwork or prolonged lactation.

A. E. CAROTIERS, M. D.

San Antonio, Tex.

## Pleasant Addition to Pharmacy.

Sedlitz's Sedlitz Powders are put up in elegant wooden boxes, instead of the usual white and blue papers, and are therefore portable, convenient, and retain their freshness many months. They are warranted made of pure material of first quality, giving great purity, full weight and uniformity, and forming an after-veining aperient drink, as refreshing and pleasant as a glass of lemonade.

## Health and Humanity.

## PREVENTION OF CRUELTY TO CHILDREN.

Some of the most blessed signs of the times, and at the same time some of the strongest contrasts of light and shade in our present stage of civilization, are seen in the multiplication of societies for the protection of the weak and helpless.

"Man's inhumanity to man makes countless thousands mourn." Still more innumerable are the innocent dumb animals which are the victims of his brutality and indifference. Bad side by side with these dark aspects of degraded human nature shine out the noble, tender charities that spend their thousands freely to throw the strong arm of the law around the sufferers, and educate public sentiment, in spite of itself, into notice of their suffering, and response to its appeal. One of the noblest of these charities is the Society for the Prevention of Cruelty to Animals, founded by that great hearted man, Henry Bergh. Another is the Society for the Prevention of Cruelty to Children. If there is one object which more than any other would appeal to the tenderness of every human heart, one would think it is a little child. But as the report of the Massachusetts Society shows: "Children need protection from neglect and starvation, from severe beatings inflicted by drunken or angry parents and guardians, who sometimes compel them to associate with abandoned persons of both sexes. They often are overworked, underfed, and scantily clothed by those to whom they have been consigned. They are often bound out, given, let, or sold to acrobats, variety artists, singers, organ-grinders, dancers, jugglers, circus-riders, peddlers, beggars, showmen, and others who employ them in ways that are injurious to health and dangerous to limb and life, and who force them by cruelty to adopt injurious and unwholesome practices, and subject them to hardships and exposures which they are quite unable to endure."

"The statistics are too harrowing to read, of the almost incredible varieties of wrong inflicted by irresponsible power upon helpless children." Among the least terrible are the "cases constantly occurring where children of drunken parents are sadly neglected, infants left in charge of girls but ten years of age, the mother being in prison and the father almost constantly intoxicated." The report truly says: "Children thus neglected are likely to become criminals, and the community to be hardened with their support."

"To rescue these boys and girls, and secure them good homes, or to place them under good influences, is not only a blessing to them, but also in making them better citizens." This Christ-like work of rescue is the work of these Societies. An idea of how much they accomplish may be gauged from the records of this one of them, the Massachusetts Society, incorporated in 1878, and supported entirely by private donations and memberships.

"The whole number of cases investigated since the organization in May, 1881, is about fifteen hundred, embracing nearly three thousand children."

In March and April, 1881, there were considered 209 cases, including 463 children. These cover cruelty, neglect, and abandonment. Of these, 144 had interrupted their 127 temperate mothers, 24 had stepfathers, 19 had stepmothers, 33 had no father, 33 no mother, 18 were illegitimate, 4 had parents in prison, 27 were taken from their parents and sent to Marcella Street Home as neglected children, 49 were sent to other homes or places secured for them, 32 transferred to friends or relatives, 11 sent to hospitals, 11 cases of guardianship. This gives but a slight idea of the time and labor expended on these cases." It is well said that "Duty, self-interest, and humanity combine to encourage this movement."

## A SELF-MADE MAN.

About ten years ago, there was ploughing upon the hillsides in Hunterdon County, New Jersey, a poor barefooted boy. He was one of a large family and stood but a small show for a share of this world's joys. He was forced to leave the paternal roof and seek his own support. He had the true American pluck and story manfully to make his mark to the world. How well he has succeeded will be understood when we state that he has become to-day one of the largest and most influential manufacturers in this country. Alone he employs among the many examples of the self-made man of our times. His name is the Hon. Daniel P. Beatty, Mayor of Washington, New Jersey, and he has become a household word throughout the length and breadth of this land. His unusual enterprise has been prodigious—his success phenomenal. He manufactures for the people from his home in Hillsdale, New Jersey, and his factory at Washington, New Jersey, upwards of one thousand different organs every month. His output exceeds in size any similar factory upon the globe and he is rapidly becoming one of the ablest producers of the race, for he has abolished middlemen and all extortionate profits, and by reason of a vast trade he produces instruments very economically and sells them at a small margin above actual cost. The Organ and Piano shown in an advertisement in this issue is of his recent invention and is meeting with a wonderful sale. It should be noted as one of the best of its kind, and as a Mayor Beatty has an immense trade, and has to manufacture a large number of organs to fill his orders. Beatty has been three times Mayor of his own city, which is proof positive that he is honored and respected as a citizen.

## THE HYGEIA HOTEL,

AS ENLARGED AND IMPROVED.

### OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Cape of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mails, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Oil hydraulic passenger elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; water, room for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equaled elsewhere as a summer resort or cold weather sanatorium. His during the cold weather over 15,000 square feet of the spacious veranda (of which there are over 35,000 square feet encircling the house on all sides) enclosed in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. *Malaria fevers being absolutely unknown.* The record of the Meteorological Observatory for the past ten years show an average temperature of 60 deg., 60 deg., 74 deg., 70 deg., in summer, 70 deg., 62 deg., 40 in autumn; 45 deg., 44 deg., 42 deg., in winter, and 48 deg., 52 deg., 63 deg., for spring. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most beautiful soporifics of the Hygeia.

stipation, Piles, Biliousness,

Headache, Heartburn, &c.

Druggists, or by mail, 75c. per

box. DUNDAS DICK & CO., 112 White

Street, New York.

### DOCUTA Capsulets.

The safest and most

reliable. Cures for all

diseases of the Urinary Organs.

Cures in eight days. No other

medicine can do this. The best medicine is

the cheapest. Beware of dangerous imitations.

All Druggists, or by mail, 75c. and \$1.00

per box. Write for Circular. DUNDAS

DICK & CO., 112 White Street, New York.

### PILES

Instantly relieved by the use

of MACQUEEN MATICO

ointment, and CURED

after several

applications of it.

Druggists, or mailed on receipt of

by DUNDAS DICK & CO., 112

White Street, New York.

## BAPTISM AT A COLORED CHURCH IN THE COUNTRY.

BY ORNA LAKSHOME.

Hearing that a baptism was to take place at Mt. Pisgah, I went, in company with a good neighbor and her son, on a bright October morning, to witness the ceremony.

All along the road, we were constantly meeting groups of smiling, comfortably dressed colored people, wending their way to the sanctuary, which is four or five miles from the city. We learned from some of them that the programme of the day was for the candidates for immersion to assemble at the church about 10 o'clock, and, after the opening services, to adjourn to the stream close by, where the baptism would take place.

The church, a substantial frame building on a brick foundation, stands in the midst of a thick oak grove, the land for the site and about two hundred dollars in money having been given by Samuel Miller, a wealthy citizen, who left the bulk of his large fortune to establish two orphan asylums in this section of the state. Mt. Pisgah has now a membership of 180, but the congregation numbers several times as many, and the church, probably a great undertaking for the colored people, when it was built, is now much too small for the crowds who regularly attend the services.

When we reached the church it was already quite full, and the exercises had begun, and we were advised not to stop at all but to proceed at once to "the branch," where crowds of Negroes were gathering, as we might otherwise be not able to secure places to witness the baptizing. So we hurried on to the little stream at the foot of the long, rough hill, down which we walked, feeling the rocks.

The creek looked very placid, flowing gently between fringes of swamp willows, the green banks being lined with orderly spectators in holiday garb. Some were young, like Zeechens, some old, like the old man, who, like his plan, and climbed a tree to make sure of seeing what was going on. Near the spot where we were advised to take our position, quite a number of white people had assembled, some from the neighborhood, others from town, attracted by the fine weather to attend the rural services. The chairs from our ambulance gave good seats on the brink of the stream, and we sat a long time, watching the elders of the church in their preparations for the ceremony. Owing to the excessive drought, the water was very low, and an effort had been made to dam the stream, by building an embankment of sand and branches of trees and bushes at hand, a work which the deacons continued until the candidates arrived.

Colored people were collecting all this time from every direction, singly or in groups, on foot, on horseback or in wagons. I was surprised at the number who rode stately horses, and presume most of the steeds were borrowed for the occasion from the gentleman farmers of the district, by their tenants or laborers. Somehow the colored people rarely possess horses; legend has it that there is a natural affinity between a Negro and a mule, and at any rate the Africans of this section seem always to set their affections on mules, or the mule oxen common here. So many of the latter are used in some counties by the Negro wood-burners who supply town folk with fuel, that it has been said "that when the Yankees set the Negroes free, they turned round and enslaved the little bums." The worshippers at Mt. Pisgah were all well dressed, most of them in the plain stout clothing which prevails among the country people, many of whom still practice the ancient arts of hand spinning and weaving. Here and there I noticed a young girl dressed in fashionable style, these dainties being probably from the city, or perhaps in service in some stylish family in the neighborhood, who had come into possession of their mistress's cast-off garments by purchase or inheritance. I observed one young person, conspicuous by her fanciful attire of white bunting elaborately trimmed with black silk, tightly laced, wearing high heeled shoes with a jaunty hat on the back of her head, showing in short all the follies of the fine lady of our day. This maiden evidently passed for a belle among sable swains, and walked all the way from the "branch" to the church holding the hand of the happy African whom she had selected for her consort.

A stout, comfortable looking old woman who stood near me, explained what was going on to our party, and when I expressed interest in the services, saying I had never before witnessed a baptism, she regarded me with astonishment, not unmingled with contempt, as she exclaimed, "Well, what is out been all dis time?" When I made some remark to the lady who went with me, to the effect that I should be afraid of taking cold in entering the water at this season, my stout friend looked at me with evident disapproval, and asserted positively that no one had ever taken cold in being baptized, adding severely, "You must have faith in God if you get Jesus in yo heart, you aint afraid of nothing." The sound of distant singing was now heard, and a buzz among the crowd, which by this

time numbered hundreds, announced that the candidates for baptism were coming. Looking in the direction of the church, we saw a long procession approaching through the grove, and the wild sweet notes of a hymn floated towards us on the breeze, backed up by the crowds around. "Try-in-ti-me, m-e, A-try-in-ti-me, Jesus saves, a-try-in-ti-me. I'm a gwine to be bap-tize-n-try-in-ti-me-try-in-ti-me."

There seemed an endless string of almost unintelligible words, with who of recurring choruses, now dying away—now swelling loud and clear. The air was indifferently sweet, floated softly away, now arose sonorous about us, suddenly, silence fell upon the multitude, and the preacher, a tall, spare mulatto man, in the prime of life, of muscular frame, bare-headed, and arrayed in a long black robe belted around him, advanced to the edge of the water, holding an open book in one hand, and a staff in the other. Just behind him ranged the candidates, a motley group of men and women, most of them in holiday dress, all having handkerchiefs bound about their heads. Near the minister, stood a small and very delicate looking colored man, who had an air of importance about him, and when the preacher said, "brother Dickson will pray," brother Dickson promptly began a long rambling prayer. His voice, at first very low and soft, almost inaudible, gradually rose into a sort of shrill, excited cry, the speaker becoming excitedly carried away with the agitation he felt. His petitions embraced many themes, and a young white man near as was very inquisitive at what he deemed the speaker to be doing, when brother Dickson began a blessing upon "all present, the colored and the white," adding, "and if there gets a flying from Heaven to Hell, they'll get it on you." As I had not "come to seem," I did not fear being intercepted by the flying angels, and was not at all disturbed at brother Dickson's insinuations.

When the prayer was ended, apparently by the utter exhaustion of the speaker, the minister, in a clear, strong voice, read two lines of the hymn, "There is a fountain filled with blood," which was sung by those around him, and then walked quietly into the water, feeling its depth with his staff, and wending his way to a suitable position, as calmly as if he knew his stand, he gave the signal to the candidates, and a young man, supported on either side by one of the elders of the church, entered the stream, and after some floundering reached the minister, who at once placed a firm hand upon each shoulder, and said in a loud voice, "My brother, upon profession of your faith in Christ I baptize you in the name of the Father, the Son, and the Holy Ghost."

As he spoke, he gave the brother a backward plunge, which, to be successfully accomplished, must require considerable practice and dexterity. The brother thus submerged, rose quickly with vigorous waves flowing from his nose and mouth, and was apparently too much disconcerted to express his feelings at once, in the manner expected of him. A deacon promptly took him in charge, and escorted him back to the place where he had entered the water. Before he reached the bank, the newly baptized brother had begun to clap his hands and utter loud cries of "Thank God, Thank Jesus, Oh Lord, I got Jesus!" As he approached dry land, he grew rapturous, swinging his arms wildly about him, and crying "Thank God! Do elders better look out, they might get a tickle, an' if they does I can't help it. Thank God, Oh! The Jesus!"

His friends on the bank received him with opened arms, pulling him up, clapping his hands, echoing his cries, and the whole party finally disappeared in the direction of a sort of tent among the bushes, formed of red curtains and intended as a dressing-room for the men, an old log cabin close by answering the same purpose for the women. The next candidate was called for and the form of baptism repeated until all had received "the rite, the preacher going steadily on with his work, and maintaining remarkable composure throughout, gravely directing the deacons when any confusion threatened, and in the interval between the baptisms, reciting two lines of a hymn to be sung by the assembly. I noticed that he began his prayers every time, and the crowds around him sang them with or without a chorus, as time served. All the male candidates were baptized first, most of them going through the ceremony quietly, without much noise or excitement. Then the women began to take their turn, and after the manner of the female persuasion, were much more demonstrative, some of them shrieking and screaming, others jumping and struggling in the water, so that the elders had much trouble to convey them to the shore. One girl screamed out that she "had seen the devil," several others said that they "saw God and Jesus." The stream was so shallow, that it soon became muddy, and the minister was several times compelled to change his place. Great importance is attached by those who advocate immersion, to

going "under the water," and a discussion arose among the elders in regard to some of the men, who had been dipped in the stream without being entirely covered by it, and it was only ended by an order to bring them back to be re-baptized. It seemed rather a severe ordeal, when the unlucky brothers had already changed their wet garments for dry ones, but there was no appeal from the commands of the minister, and in a short time the deacons produced the half-baptized candidates, and the ceremony was repeated. This time it was so thoroughly done that none could gainsay it.

When it was ascertained that all the candidates had been thoroughly baptized, the minister, who had preserved a perfectly unruffled demeanor all this time, folded his hands, and in a very solemn manner began a prayer, which it is to be hoped was heard at the throne of grace, but was entirely drowned in the confusion of the crowds about us, who now began to take their steps towards the church. We were borne on with the rest, and looking back from the hill-side we saw the minister still standing calmly in the middle of the stream, praying earnestly with solemn voice and uplifted arms.

In spite of some ludicrous incidents, such as one of the candidates, who was unduly concerned about his wearing apparel, passing a pair of dusty boots over the minister's head just as he was stepping into the water; and the gyrations and ejaculations of some of the converts, the people were so evidently sincere in what they were doing, that the occasion was exceedingly impressive.

In witnessing the ceremony, one could but recall that scene long centuries ago, when, upon the banks of distant Jordan, the Herald of the Messiah assembled a worldly multitude about him to institute this mysterious rite of the new religion which was to embrace in its influence, "all nations and tongues and people." Whether we may accept it necessary, with our climate and customs, to practice immersion, or not, the ceremony undoubtedly appeals strongly to the imagination of the exalted Negroes, and the Methodists, who in the white churches of the south adhere to sprinkling, find themselves unable to make any headway with the African race, in the rural districts, unless they too submerge their converts, which is the custom among them here. As for the ignorant colored people, who attach a superstitious reverence to the act of immersion, and the rite seems to have much the same impact with them that the priest's absolution bears for us to utter. A large wagon, drawn up close under the open windows, however, afforded us comfortable seats, where we could see and hear all that was going on.

Many of the congregation were eating lunch, and others were talking quietly, and a pleasant air of good humor and sociability pervaded the assembly. In the grove around the church, parties were talking and laughing, while others were constantly arriving, so that quite as large a congregation was outside of the church as that within the walls. I had asked for an introduction to the minister, and when he came, from "the creek" arrayed in clerical garb, an elder brought him up and introduced him. I found the colored preacher a sensible man, of moderate education, who seemed to me calculated to have a short congregation, he entered the church where the congregation were already singing, and the regular services began.

One of my companions had asked for the subject of the sermon, but the minister had assured him, it seemed to me with some satisfaction, that he never selected his subject before hand, but always waited Divine guidance in the matter. This is a common idea with the rural clergy, and doubtless inspires much greater respect for their unsophisticated auditors, than a written discourse would do. It was communion day, and the minister alluded to the subject, while reading some verses from the Bible, impressing upon his hearers in very clear language the importance of spiritual preparation before partaking of the Holy Sacrament.

Brother Dickson was again called on to pray, and made another very long rambling, copiously worded prayer, working himself up to great excitement, trembling in every limb, and working sympathetically emotion in the audience, many persons responding with groans, cries, sobs, ejaculations, clapping their hands, away from their bodies, and some, who were not so, stopped, singing began, and this was followed by a sermon from the pastor, in very orthodox fashion, somewhat marred by grammatical errors, such as "the reign of the heart had to be did, before walking Jordan, walking Jordan had to be did before approaching the Lord's table." On the whole we thought the discourse sensible and instructive. A shower threatened, and we were obliged

to leave before the close of the service, which, on such occasions, are usually kept up all day. I must not omit to say, that the minister invited us cordially into the church, promising to secure us a seat, and after we had declined his offer, as we did not wish to disturb the congregation, the elders came out and urged us to enter, hospitably declaring that they would make room for us. The occasion was a very pleasant one, and I felt much encouraged by seeing the earnestness and fervor of the church people, whom I believe to be, in spite of much ignorance and many extravagances, sincere and humble worshippers, holding fast "the faith, once delivered to the saints," and according to their light, faithful disciples of the Master.

## NEARING HOME.

The most anxious time in all a stormy voyage, both to those who battle with the waves, and those who lie awake at home and hear the winds howl, is the time of nearing home. The longed for land is just ahead, with home and loved ones waiting to welcome, but the homeless waves of mid ocean may be safer than the rock bound coast. The pilot stands firmly at the wheel, while the keen-eyed lookout strives to pierce the mists and blinding spray, and the sounding line is cast again and again into the dark billows. To our friends of the New York Christian Weekly, we are indebted for the picture of such a home coming.

"See fog drifting overhead,  
And we're lessening line and lead,  
Sailors feeling for the land."

The Novomber gales on the Atlantic have been especially violent this season, even for that stormy month and ocean, and even the great ocean steamships had rough encounters with them. The account given by the N. Y. Evening Post of those experienced by the mail ship Gallia of that fortunate vessel, one which has never, we believe, lost a steamer, will be of special interest to the friends and former pupils of the lady principal of Hampton, who, with another of its former teachers, was a passenger on that vessel.

The Cunard ship Gallia arrived at her dock this morning, Nov. 26, five days behind time, after one of the stormiest passages of which any record exists. Captain Haimes, of the Gallia, said that she remembered no such passage, one storm beginning before another left off. "From the moment we left Queenstown until this morning we have had nothing but storm after storm, none of them of extraordinary violence, but combined they were too much for good nature. Once or twice little storms do us harm, for passengers are a little discomfited, which they cannot tell, their friends say the 'waves ran up like mountains,' but before we had been out three days the passengers all voted that they had gained a sufficient stock of experience to furnish them with storm stories for the rest of their days. The storm kept on in that way straight along. I cannot tell you which were our worst days because they were not characterized by fierce head gales and high seas. The ship behaved beautifully, and not a screw got loose in the machinery so far as I know. It is a pleasant thing to say, that in the worst passage that I remember the Gallia rode through it as if it was nothing at all, and reached port ahead of all other ships, starting at the same time with us. It is a great comfort to know that though we are five days behind time the other boats are still later."

One of the passengers, who confessed that he had been nervous, said that the last days had seemed to be the worst, because after a large ship has battled bravely for many days against severe storms, timid persons begin to fear some damage or strain to the machinery, and a vessel as big as the Gallia might have a hard time of it if obliged to stop and allow the winds and waves to buffet her about.

"The storm of last Friday night, a week ago to-night," said this gentleman, "was the worst, to my mind, and the dinner table, we were covered that night thus at any time during the voyage. It was a bold sailor who had the heart or the stomach to eat a good dinner last Friday. Most of us feel now that a month of such weather would do no harm to the sailors, although at the same time we are glad to get on dry land. I went on deck on Friday night to see the waves, and shall never forget the effect of the dark, heavy, black water capped with white lines of foam which seemed to rise up in our path threatening to engulf us. For days at a time no one could stand on deck without holding to the rail, and though most of the ladies felt like heroes, just now and will say that they felt no fear, I doubt whether they would like another such experience."

# Southern Workman.

TWELVE PAGES MONTHLY.  
(Reduced to eight pages from July to October,  
four months.)

S. C. ARMSTRONG, Editors.  
H. W. LUDLOW,

Mrs. M. F. ARMSTRONG, Regular  
Mr. W. N. ARMSTRONG, Contributors.  
Mrs. OTRA LANOBONE,

Terms: ONE DOLLAR a year IN  
ADVANCE.

Specimen copies sent upon application.  
To secure safety, it is important that money  
should be sent by check, post office orders, or  
registered letters. Write plainly; give name  
in full, and name of Post-office, County, and  
State to which the paper is to be sent.  
A limited number of advertisements inserted  
at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 yr.
1 square.	1 00	2 75	5 00	9 00
1-column	75	2 00	3 50	6 00

1	25	60	1 00	2 00

Special notices 10 cents per line.  
For further information, address  
J. F. B. MARSHALL,  
Business Manager, Hampton, Va.  
Entered as Second-class Matter in the Post Office at  
Hampton, Va.

The Southern Workman, devoted to  
the interests of Negro and Indian civiliza-  
tion, is edited and managed by the  
officers of the Hampton Institute, and printed  
on the School Press by colored youth  
trained in the office. Subscriptions are a  
help to the School. It is sent on trial for  
four months for twenty-five cents. Job  
work, from all parts of the country, is so  
welcomed, and will be done cheaply and well.  
Estimates will be sent on application.

THE SOUTHERN WORKMAN begins its  
eleventh year very cheerfully, believing in  
its mission, and encouraged by its pro-  
gress and the favor of its friends. It pub-  
lishes now a monthly edition of from 3500  
to 4000 copies. Its regular subscription  
list is 2299. It has a regular free list of  
about 650, including 50 copies for its ex-  
change list, on which are many of the lead-  
ing papers of the North and South, and  
130 copies sent to Virginia school officers  
and public men; the rest to contributors  
to the school. Of the remainder, 63 are  
used in the Senior reading classes of the  
Normal School, and several on its Read-  
ing Room table; about 100 are given to  
the teachers for distribution, 50 are kept  
for office files, and as many are retained  
as samples in the Printing office. The bal-  
ance are distributed from the office  
through the month. The greater part on  
the subscription list, and of the whole edi-  
tion, go to the North. The paper circu-  
lates among the graduates, and outside of  
them in the South. The colored people  
generally, however, do not subscribe to any  
paper; do not read newspapers, and prob-  
ably really support none. A small politi-  
cal daily would naturally often be pre-  
ferred to a more instructive weekly or month-  
ly, with politics left out. Still the Work-  
man has faith in its field, and reason to  
believe that it has done good both for and  
among those to whose interests it is de-  
voted. While it is of course the organ of  
Hampton Institute, it is, we believe and  
intend, much more than that, and we de-  
sire to have it read and judged apart from  
that ground, on its own merits. Its larger  
reason for being is to help in the work  
of introducing South and North to each  
other, and interesting both in the two races.  
Towards whom the whole nation has so  
great responsibility, and in whose future  
so vital an interest.

The letters of our graduate teachers,  
published from month to month—simple  
annals, but realistic and often graphic  
pictures of the work, and needs of their  
races and the relations and condition of  
both races—and the notes of the progress  
of one branch of the "recent, only serious,  
determined and consistent effort promi-

ing success," as President Arthur calls it,  
for the solution of the Indian problem,  
have received frequent recognition as a  
valuable contribution to the literature and  
the progress of the important work they  
represent. For the rest, we will leave our  
friends to speak for us, taking pleasure in  
giving one of them the last word through a  
kind letter recently received from the  
heart of the Pacific. A number of our  
Northern subscribers pay not only for  
their own paper but to send other copies  
South or North, to colored readers or  
those they wish to interest in the Work-  
man and its work. For the sake of both,  
we ask our other friends to consider  
whether the example is not worth follow-  
ing.

Mrs. Coan, wife of the venerable mission-  
ary to the Sandwich Islands, a character-  
istic letter from whom will be found in  
other column, sends the following with its  
beautiful enclosure which was not long in  
fulfilling its mission.

EMERALD BOWER, HILLO, HAWAII,  
Nov. 17th, 1891.

My dear friends:— I have made a little col-  
lection of our lovely ferns in the hope that you  
might find a purchaser of the same and that  
the proceeds could go towards subscriptions  
for the Southern Workman. It was no little  
compliment when I assured you at that pleasant  
gathering in Honolulu, at Judge McCully's, that  
the Southern Workman is one of the papers in  
which I take the deepest interest: the experi-  
ence of your graduates in their hand to hand  
struggle with life, the entertaining corres-  
pondence, the editorials, all interest me ex-  
ceedingly, while the letters from the Indians  
and incidents relating to them are as good as  
a story. I wish that every subscriber to the  
paper would do its utmost to increase its cir-  
culation. If this venture were a success, and you  
would like me next year to send another col-  
lection. I shall be happy to do so. In grateful  
acknowledgment of the good derived from  
the Workman,

LYDIA B. COAN.

The Chesapeake and Ohio railway is  
now completed to Newport's News, on  
Hampton Roads and will be opened for  
general traffic, probably in December.  
Lines of steamships to New York and to  
Europe are being arranged. Four large  
piers, one the largest in the United States,  
are being constructed. A grain elevator  
with a capacity for twelve hundred thou-  
sand bushels will soon be erected. The  
Virginia Land Company has laid out the  
city of Newport's News, and is building  
two hotels. It is expected that large  
quantities of cotton, tobacco and grain will  
come to this point from the South and  
West.

The banks of the James river are not  
now so thickly populated or as prosperous  
as they were within thirty years from the  
first settlement of Jamestown. The land  
has been exhausted; a steamboat ride  
up the river is interesting but melancholy,  
from the many signs of decayed elegance.  
There are, however, points of exceptional  
thrill and progress.

Newport's News has for centuries been  
as desolate as St. Helena. Its command-  
ing position and splendid view, like many  
others in the South, have been in the pos-  
session of non-progressive men, and the  
swamps in the rear have made it malarious.

The marsh has been thoroughly drain-  
ed, the land bought by capitalists, and  
to this long neglected spot at the  
month of the noble James, where there is  
anchorage for vessels of any number and  
size, there being thirty feet of water at  
the end of the wharves, will be brought  
for shipment, by a far reaching net-work  
of railroads, of which the Chesapeake  
and Ohio is the main stream, vast quan-  
ties of produce of which not the least will  
be coal from Virginia.

Hampton Roads, in one corner of  
which Newport's News is situated, is one  
of the largest, finest harbors in the world.  
Its grand capabilities will be more and  
more appreciated and employed.

To the genius and creative energy of  
Mr. C. P. Huntington, who pushed the  
Central Pacific Railroad across the almost  
impassable gorges of the Sierras, is due  
this reconstruction of the resources of East-  
ern Virginia, and organization of an

enormous enterprise for gathering the  
cotton, tobacco and coal of the South  
and the grain of the West at the most  
available point of deep water on the At-  
lantic coast, where it will be distributed  
throughout the civilized world.

Hampton is but six miles distant from  
Newport's News, and already feels its  
stimulus; a wave of prosperity has reached  
this region, benefiting all classes. The  
dense Negro population is getting its  
share; their cottages dot the peninsula.  
Perhaps here will be the fairest phase  
of Negro civilization in the land; the  
climate is favorable, the life is essentially  
a country one, few of the evils of a city  
being felt, the blacks are in a large ma-  
jority. Here is their little Republic.

Let us see what they will do. The Ham-  
pton Institute lifts its half dozen spires  
and towers high enough to be seen for  
many miles around, offering to the rising  
generation all the opportunities they need.  
Near this spot the first English civiliza-  
tion was planted upon this continent, the  
first slaves were landed, the first blow  
struck for freedom by making the Negro  
"contraband of war," the first school for  
freedmen opened, and naval warfare was  
revolutionized in a few hours by the bat-  
tle between the Monitor and Merrimack.

Sumner was the pivot of the gun that  
opened the war, Fort Monroe the pivot of  
the gun that closed it. Grant's army did not  
conquer till it swung round from Wash-  
ington and made its base of operations  
here. Historically, statistically, morally,  
this region is central, significant, prophetic.

An interesting future seems before it  
as growing fast; the rivalry will be whole-  
some. Ideas and enterprise have had a  
new birth on these shores.

"The new South" is a favorite but  
somewhat threadbare theme. The signs  
of it are everywhere. Its former builders  
rejected the true corner stone of prosper-  
ity, the dignity of labor. It is to become  
the head stone of the corner.

The educators of the South must help  
to put it in place. The Hampton Insti-  
tute makes this idea fundamental. We  
think we are fortunate to be called to such  
work. The victorious North is rich and  
has the evils and dangers pertaining to  
high prosperity; hard to meet, needing  
much thankless toil.

The defeated South is poor, prostrate  
and humbled, but is finding the strength  
that lies in weakness; suffering is doing  
its perfect work; simplicity is blooming  
in the midst of her ruined, proud places;  
a new civilization is coming which will be  
worth all the terrible agony that it cost;  
there was no other way for it to come.

The North sent South an army which  
did its duty nobly, and quietly returned  
to its work at home. It sent a lot of  
carpet-baggers, a necessary evil, to build  
a political bridge from an old to a new  
system. Experts, though not very moral,  
they did their work quite well, but are no  
longer wanted.

It sent South a force of teachers, some  
thousand in all, mostly plain women,  
who, with some pain and difficulty plant-  
ed in the long fallow Negro mind, ideas  
that, though relatively scant, sustained their  
hope, directed their purpose, and have had  
more to do than people dream with the  
success of emancipation. This work has  
gone on with a steady crescendo; the  
teachers being replaced ten to one by Ne-  
gro pupils whom they taught to take their  
places, and now a few hundred well chosen  
men and women from the North, at cer-  
tain central, well equipped institutions in  
the South, are creating the teachers  
and future leaders of the colored race.

The short and terrible dynamics of war  
called out untold treasures and sacrifices  
from every quarter; the higher dynamics  
of peace have appealed to comparatively  
few who are, however, faithful, and will  
push this work which will never end.

There never was any duty more in the  
line of Providential purpose, or more  
immediately important, or on broader  
ground, or more binding on every patriot,  
than that for the lifting up of those who  
suffered from America's slavery; those  
were not only the Negroes, but a class of  
whites almost as great and equally un-  
fortunate.

THE COLOR LINE in Virginia is broken.  
The Realjusters, with Negro allies, have  
carried the state by a majority of ten  
thousand, and yet a few counties, over-  
whelmingly black, gave the Funders or  
Conservatives a majority. The victors  
will claim the spoils; the division will be  
a difficult matter. Already there is  
some feeling about it. This coalition is  
a new phase of Southern affairs, and its  
working will be watched with interest.

It puts the Negro in a position of re-  
sponsibility, and will be an education for  
him. We regard as nonsensical any  
alarm about his making social advances,  
but we feel solicitude respecting his use  
of political power; not that he has a great  
deal, for the colored politician is not much  
in the foreground, but the Negro vote  
has turned the scales, routed a party that  
has been in power for over ten years, and  
has a present and prospective weight far  
greater than in the past.

Heretofore the blacks have voted solid-  
ly for the Republican party; they have  
done so in some places, literally "under  
fire." They have suffered much for their  
fidelity, for fidelity to those who brought  
them out of slavery into freedom has  
been their one idea. But things have  
changed; gratitude weakens in time;  
prejudice is dying out; better ideas  
have steadily gained ground. In these  
prosperous times, the colored laborer  
is in demand, for railroads are spread-  
ing, industries are springing up on every  
side, and it is hard for the farmers to get  
or keep hands. The Negro workman has  
it a good deal his own way; he can read-  
ily get good wages, and is used to shifting  
about. Few realize to what extent the  
blacks are mobilized; what enormous  
sums of money they pay for railroad  
travel; how easily they can go where  
inclination or advantage call. They have  
been getting land; thousands of small  
farms are passing every year into their  
hands; they are more and more indepen-  
dent, self-reliant, unmoored, free to act  
and ready to consider their immediate  
personal interest, rather than to look to  
the past for a motive. The spirit of in-  
dependence is still tremendous, but it  
does not control them as it used to.

Disintegration of the Negro vote has  
set in and will gradually become complete.

What will be its rallying points? One  
will be education, to which they always  
will be loyal. Their good disposition, previous  
political experience, and not inconsiderable  
common sense, will prevent their inventing  
any worse schemes than the lower class  
of white politicians. Indeed, they are, on  
the whole, much better than that class.

The country will not suffer from their  
evil designs, but it is in serious danger from  
their pliability in the hands of designing  
men. There are colored politicians who  
can be trusted; they cannot all be "tag-  
ged" by rich corporations or led away  
by appeals to prejudice or passion. There  
is an element of conservatism among  
them, from which much may be hoped.

Yet, in their condition as a whole, how  
can they be depended on for an enlight-  
ened policy? So long as they are unenlight-  
ened, so long as effect shall follow cause,  
so long will sound general legislation be  
imperfect.

The influence of a million irresponsible  
voters will be felt in the states and  
throughout the nation. The greatest  
danger will be to the public credit.

A weak sense of individual responsibil-  
ity for debt, easily leads to loose ideas  
about the state and the national debt;  
such ideas have already taken root, and  
no one knows how far they will go, or  
what is the possible evolution of party  
policy out of conditions so favorable to  
ideas of repudiation.

Our people have not troubled them-  
selves about the mental or moral condi-  
tion of the nation's wards, and the fruits  
of their neglect will be seen in the future.

Many individuals throughout the  
country have made the condition of the  
ex-slaves a deep concern, for which their  
efforts and sacrifices are as truly patriotic  
as any service in the war could have been;  
a rebuke to those who held the national  
purse strings, who have wasted hundreds  
of millions of dollars in giving pensions  
beyond what sympathy for, and justice to,  
war soldiers, would fairly call for.

Rivers and harbors will this year, as usual, swallow up millions more than they properly should. Some five millions perhaps must go to fighting Indians, while the Commissioner's request for \$100,000, for current expenses of Indian education, may be cut down, as last year, to \$30,000, and bogus or excessive claims for pensions will in twelve months swallow up enough to school every Negro and Indian child in the land for ten years. Have we any statesmen? Not that they could have prevented this state of things, but where is their protest, their outcry over such waste and such parsimony.

#### THE PRESIDENT'S MESSAGE.

##### ON EDUCATION AND THE INDIAN QUESTION.

The new President's Message has long been made public, and we need not bring its many points before our readers. It is in line with the judicious and manly course which, from his tragic accession to office, has done so much to allay the anxiety naturally attending it, and gained for him the sympathy and respect of the people.

His own views, freely and ably urged on various subjects, will win the more attention for their general harmony with those of his lamented predecessor.

The President has laid out enough work to crown his administration with glory. The question is how much of it all will be done by Congress. The questions of finance and our foreign relations and internal improvements, the Panama canal, and Presidential disability, will no doubt be acted upon, and even the Mormon question and civil service reform fenced with a little more, but will not "but not effort" for the righteous solution of the Indian question continue to be "at once serious, determined, consistent and promising success"? And what practical form will he given to the earnest utterances of Message after Message of three successive Presidents upon the danger "which; President Garfield declared, "lurks and hides in the sources and fountains of power in every State." The danger "which no standard can measure," arising from ignorance in the voter and the coming generation of voters? On this subject, President Arthur says:

"Although our system of government does not contemplate that the nation should provide or support a system for the education of our people, no measures calculated to promote the general intelligence and virtue upon which the perpetuity of our institutions so greatly depends, have ever been regarded with indifference by Congress or the Executive. A large portion of the public domain has been from time to time devoted to the promotion of education. There is now a special reason why, by setting apart the proceeds of its sales of public lands or by some other course, the government should aid the work of education. Many who now exercise the right of suffrage are unable to read the ballot which they cast. Upon many who had just emerged from a condition of slavery were suddenly devolved the responsibilities of citizenship in that portion of the country most impoverished by war. I have been pleased to learn from the report of the Commissioners of Education, that there has been lately a commendable increase of interest and effort for their education, but all that can be done by local legislation and private generosity should be supplemented by such aid as can be constitutionally afforded by the national government. I would suggest that if any fund be dedicated to this purpose, it may be wisely distributed in the different States according to the ratio of illiteracy, as by this means those locations which are most in need of such assistance will reap its special benefit."

The growth of Southern public sentiment and effort in favor of general education, for both white and black, has been one of the most remarkable developments of the years since the fifteenth Amendment passed, and perhaps is itself the greatest justification of that heroic measure. The South is doing enough to deserve help in what it cannot do. Most of the Southern States have established free schools for both races, yet the last report of the Board of Commissioners of the Peabody fund shows that, while the large part of the colored voters (to say nothing of poor whites) are confessedly uneducated by education for an intelligent exercise of the right of suffrage, there are

now two millions of children of both races in the South, without the means of instruction. As the Mayor of Charleston pleads in his interesting Report on Education in that city:

"Where millions of citizens are growing up in gross ignorance, it is obvious that neither individual charity nor the resources of an impoverished State will be sufficient to meet the emergency. Nothing short of the wealth and power of the Federal Government will suffice to overcome the evil."

The Union was not divided. What threatens either North or South, threatens the Nation, and it will do well to remember the warnings of Garfield, and the earlier words of Madison: "A popular government without popular information or the means of acquiring it, is but a prologue to a farce or a tragedy,—perhaps both."

For Indian civilization, President Arthur repeats chiefly the recommendations which have been apparently growing in public favor, and have received as he says "to a certain extent the consideration of Congress": the extension to Indians of the protection of the responsibilities of law; the gradual allotment of lands in severalty; and:

"Third—I advise liberal appropriation for the support of Indian schools, because of my confident belief that that course is consistent with the wisest economy. Among the most uncultivated Indian tribes there is reported to be a general urgent desire on the part of the chiefs and older members for the education of their children. It is unfortunate in view of this fact, that during the past year the means which have been at the command of the Interior Department for the purpose of Indian instruction have proved to be utterly inadequate. The success of the schools which are in operation at Hampton, Carlisle, and Forest Grove, should not only encourage a more generous provision for the support of these institutions, but should prompt the establishment of others of a similar character. They are doubtless much more potent for good than the day schools upon the reservations, as the pupils are altogether separated from the surroundings of savage life and brought into constant contact with civilization."

This is the third or fourth time the importance of these schools has been urged upon public attention in Presidents' Messages and Secretaries' Reports. Congress has responded, though to much less extent than may be generally supposed.

For the last three years, the Government has kept seventy Indian students at Hampton, appropriating at first, \$167.00 (and transportation) to the yearly maintenance of each,—the School supplying the needed buildings, and all deficits. This appropriation was quickly cut down to \$150.00 by Commissioner Hayt, and has been kept at that figure, which, inadequate and unworthy small as it is, is still smaller in view of the fact that each \$150 paid for a student at Hampton, saves Government the amount of his rations,—in most cases \$70.00, on the reservation.

In the case of Carlisle, a government school, its support has been drawn so far from what is known as the Civilization fund. After two years of demonstrated and notable success, the existence of the school must henceforth depend on special appropriations, the Indian Civilization fund having given out. Let us hope that the fund of white civilization will be sufficient to supplement it. Some of the annoyances and sacrifices to which even this government school has been subject in its noble and successful efforts for the national good, may be seen from the following extract of a letter from a lady visitor to Carlisle, in reference to the actual suffering caused by the want of \$350.00 for heating the boys' school room.

"It made me heart-sick to see those delicate ladies going every evening, during the hours into that cold, unfurnished, desolate room. Pipes could be sent to that room under-ground from the steam engine, for the paltry sum of \$350. It seems as if the State of Pennsylvania ought to adopt that Carlisle school, and if the appropriation for necessary things such as sanitary works &c. fails, let private individuals see to it." The ultimate dependence of all this work is on the people, and Government will not lead public sentiment. It is for them to see that it follows it.

#### EDITORIAL CORRESPONDENCE.

Crow Creek Agency, Dakota, Oct. 10.

Saturday is ration day, when the usual solemn stillness of the Agency is broken by scores of Indian teams and hundreds of painted horsemen who pour in from the various camps up and down the Missouri river within a radius of 30 miles. The camps are distributed with reference to wood and water. The braves sit, clad in blankets or old clothes, wearing a picturesque variety of feathered hats, in groups or semi circles, and smoke and chat. The women busy themselves about the supplies, pressing into the door of the store-house where a row of clerks pour into the little bags they hold out, their coffee, sugar, flour &c. tossing upon their loaded arms a piece of tobacco and bacon, till a file of some two hundred women has passed, each carrying off food for a family of from three to ten.

Thus the morning passes. The scene is most lively and picturesque. Painted young squaws and long haired decorated young braves walk about with grimy faces, which streaks of many colored mud have made hideous except to the barbarian eye. A thousand Indians are brought together to get a week's supply of food for which they make no effort. The result is that they become very fastidious and fussy, and beg for more, making every possible excuse for an increase of rations. Nothing is earned by the sweat of the Indian's brow.

This is what he gets for keeping his peace. The vast storehouse filled with goods, he considers his own, and shrinks from no amount of haggling to get what he wants. He is learning a bad lesson. There is no such thing as subjugation of the Indian. It is all compromise; and a very weak business.

The following is the summary of rations issued to-day:

To 306 families, containing 1040 persons, seven days food or 7330 rations; of which these are the articles and quantities:

Baking Powder	30lbs.
Bacon	728"
Fresh Beef	2184"
Coffee	201"
Flour	2000"
Hard Bread	820"
Herring	281"
Salt	73"
Soap	73"
Sugar	510"
Tobacco	36"

When beef is issued on the hoof, the allowance is 3 pounds gross per day for each one; when dressed, 1½ pounds per day. The Indian prefers it on the hoof, and is never so happy as when allowed to drive it home to kill, for then he has a make-believe buffalo hunt, and cravily worries the poor cattle; but he seldom gets the privilege a second time.

Besides food, each one of the fifty thousand Indians who are totally dependent on Government, gets two suits of clothes every year, a single blanket and quilt, one pair of shoes, one overcoat, one hat and cap, one pair of suspenders, four shirts, two woollen and two "hickory," four pair socks and one pair woollen mittens; the women have a corresponding outfit which costs about three-fifths that of the men.

This agency issued last year fifty good cooking stoves, or at the rate of one to every forty-two Indians.

To every log house built, windows and doors are supplied, and, if of hewn logs, a shingle roof is added.

Wagons and harness are issued at the rate of about fifty a year to the eleven hundred Indians; which are repaired, and horses shod at the Government shops. Many horses have been supplied; wire fence is provided to protect the crops; plows and all needed farming utensils, and seed are given for the asking; but like all other supplies only once in so often to each one. At Cheyenne river, the Agent had orders to plow up 500 acres of land because the Indians had lost their working stock in the hard winter that had passed.

Each Indian has a cattle brand, and herding is encouraged; for this the Indian is especially adapted, and on this line can move on to self support perhaps more quickly than on any other.

At Crow Creek (called the "Model Agency") about one fourth live in log

houses, and have tables and regular meals. The log house is a great advance upon the "tipi" or tent, and is gradually displacing the latter, in which Indian life is at its lowest. When logs are hewn and carefully put up, they make the proper thing for the frontier. They may be partitioned off, and thus afford the conditions of respectable living.

A competent Agent can, in a few years, induce the majority of a tribe to abandon tents; but with constant changes in these officials, small progress is made toward a better way of living. The policy of low salaries for Agents is keeping the best men from being sent to help them, and has put back the cause of Indian civilization scores of years. In each of the six Agencies that Hampton deals with, there has been a new Agent within a year and a half. Why should the red man be cursed with such stupid, makeshift policy?

An interesting feature of ration day has been the applications of Indians for special grants over and above their regular dues. I took the following notes as they came into Agent Spencer's office, one by one, with their petitions.

Major Spencer sits in his arm chair, an interpreter by his side; his clerk, Mr. Etheridge, holds a record book, and reports promptly whether the applicant has already received all he has a right to; a most important check.

Beaver Woman—"My son wishes to make a stable, and wishes an ax and nails." "What about the ax you got last September?" "I broke the handle." A new handle is granted.

The Cloud wishes wire fence for ten acres of land he is cultivating, and gets it.

Pretty Woman is allowed a coffee pot, and cloth for a tipi.

Drifting Goose is granted a bedstead and a broom.

Left Hand, a shovel and hatchet.

Not afraid of Deer, an ax and handle. Surrounded, wishes a week's leave of absence, with rations for twenty-four Indians, to go on a visit to Red Cloud Agency; and a broom; granted.

Crow Man is allowed one pane of glass.

Fast Walker, a wash tub and hatchet.

Big Eagle, a neck-yoke for cattle.

Red Crow wants ten cedar posts, but the Agent needs them for the nine frame houses he is building for Indian chiefs, and refuses; but he gets five lengths of stove-pipe and two elbows.

Anoine Rounded gets a wash tub and Dutch oven.

White Crow Walker a grind-stone, and a spade.

Runs All over, a spade, nails, and file to sharpen his spade.

Good Winona (woman) will get a bedstead and chair if her house is good enough.

Oldest Child, six window panes, a bedstead and broom.

With Tail has forfeited his rations for killing a cow; he explains that the cow was his own, and demands his rations.

Charging Hawk has built a good house, and wants a bedstead, broom, table, chair, and hatchet; granted.

Kill Many wishes a plow and harness, which are loaned to him.

The remainder were like the above.

Thus the industrious are encouraged, and the idle and roving go without any comforts.

The following speeches were made through an interpreter by Chiefs at Councils, whom I met at Crow Creek and Lower Brule agencies.

The first is from the father of Ziewie, who had just returned from Hampton.

SPEECH OF DON'T KNOW HOW.

You all know me well. I once carried the most deadly weapons. I now lead a different life. You chiefs are all wise. In our wild state we wish our children to have education, and advise them well. My father gave me advice: it was bad advice. "Go on war path, and try and take a scalp, you'll be honored; if you get killed your name will be honored."

You know that was hard, but we tried all ways to obey our fathers. This friend of ours here gives us good advice. This advice if carried out will bring everlasting good. Look at my daughter who has come from Hampton; I am ashamed to appear beside her.

LETTERS FROM HAMPTON GRADUATES  
DESTITUTE CHILDREN. TEACHER  
AND FARMER. A THEOLOGICAL AGENT.  
"PRAISEING DON'T PAY." A SUNDAY  
SCHOOL WITH ONE BIBLE. THIRSTY FOR  
NEWSPAPERS. REPORT FROM SOUTH CAROLINA.  
FROM TWO OF THE HAMPTON  
SINGERS.

#### DESTITUTE CHILDREN.

The teacher who makes the following appeal for the suffering little ones around him, is one of the earliest graduates of Hampton—Class of '72—and has been faithfully teaching ever since his graduation. We have very seldom made this column a medium of direct appeal, but cannot shut it to this cry of the children, and shall be happy to send his address to any friend who may be moved to respond to it.

—Va., Nov. 19th, 1881.

#### My Dear Friend:

I returned to this place ten days ago, after an absence of three months. Passed the examination last week, and expect to re-open my school on Monday next, Nov. 23th. I have been visiting around among my scholars, giving them notice about the school, and I am sorry to state that I have actually found them suffering. The people here, as elsewhere in many parts of the state, have failed in their crops, and as farming is the chief business, as a matter of course, they are left in a destitute state. Many of the men have left their homes of late for the public works in order to support their families; and, dear friend, it is shocking to look into the homes of the majority of them and see the condition of their wives and children. This is the first time during my nine years of service in the field, as a teacher, that I have had an occasion to appeal to my distant Northern friends for assistance for my scholars, and whilst I feel a deficiency in so doing at this time, necessity, actually forces me. Now, if you know of any relief or society, from which I can obtain any relief such as clothes, hoots, shoes, books, cords, charts, &c., for the poor children, please inform them of the suffering condition of my scholars, by presenting them this; or inform me and I will write. My school numbers generally from 140 to 160. With little or no assistance, I have worked hard since I have been here, and I feel happy to inform you that I don't think my labors have been in vain. We stand greatly in need of teachers, in our Co. We could employ a dozen could they be gotten! Our Co. Sup't., told me that he had written to Hampton, but could not get any. There has been a protracted meeting in the vicinity and 18 of my scholars have been happily converted, therefore you know I must feel happy, as I have ever taught them that the greatest of knowledge is to know the Lord is the portion of their souls. I have a pleasant Sabbath school, but stand in need of Bibles and other necessary books and articles, to make such a school interesting. Please remember my kindest regards to Gen'l Armstrong, and Miss Mackie. For fear of wearying you, I will close, hoping to hear from you again soon. Your obedient servant, H.

A TEACHER AND FARMER.

Just the right man in the right place, writes the following letter. He has made no mistake in "planting himself," and deserves the encouragement he asks for. Let the one to send a good paper to.

—N. C., Nov. 6, 1881.

#### My dear friend:

I am now busy about harvesting my little farm. I taught four months this year and made a right good farm, but I had to work very hard to do so. I always thought where there is a will there is a way, and I believe I have found it so. I always think of what you used to tell students: "Be sure you are right and then speak." I wish I had the time to come out Christmas to see you all. I begin to want to see some of my dear teachers. I hope you had a nice trip to the old world last summer, and also to the West. General, these people make out very bad by working on shares. They make large crops, but at the end of the year there is nothing coming to them, so they are hard up from year to year. I saw how they were doing, and advised them to buy themselves horses; some of them listened to me and some would not; I think I came to my old State and planted myself down exactly where I was needed. I have been teaching here for six years and they still want me as a worker among them.

although I have had some very great discouragements and about give up sometimes. I hope you had a large school this year. I wish you would send some reading matter, and a catalogue of the school. I am working hard trying to buy me a home, too. I thought that would be an example and encourage others to do so. I shall be happy to hear from you at any time.

Yours, as ever, P.

#### A THEOLOGICAL AGENT.

A young man who has for several years since his graduation been working for himself, among good friends near Boston, feeling his responsibility towards his people, has now hunked on his armor and gone into the middle of the fight in a country settlement of the South. Some things naturally surprise him, yet he feels encouraged.

I organized a Sunday School last Sunday. Very few of the children have Bibles. I had the book hoard helps wonderfully when books are scarce. The colored people have no churches; only have preaching every three weeks. The height of his aim was to get a shout from the sisters. After the sermon he called on me to say a few words, which I did.

I met a colored man peddling around town, and buying rags, &c. During a conversation with him, he told me he was a Baptist minister and a graduate of the Theological Institute at Andover.

Just think of a man like that; for if there is any thing wanted among our people, it is educated preachers. The only reason he gave for his retrogression was, "preaching don't pay."

Many thanks for the offer to send me reading matter; but my Massachusetts friends keep me very well supplied with the Boston papers. If you could send me a Virginia paper occasionally I would be glad of it. I have talked with the best white citizens of the town as to the general condition of my people here. They say they have much little progress since the surrender. "It is true," said one, "the most of them own the spot they have their little huts upon, but outside of that they own nothing; the greener portion can scarcely make their points meet."

One scarcely sees a colored man decently dressed. When our people don't have a place to worship God in, we can pretty well guess how they are getting along. Says Dr. —, "A colored man's cabbage and religion stand first."

I was very sorry to see the people here so very fond of their dream. I hope to be able to speak to them on this subject soon. After all their faults I find them very anxious to have their children learn and make all the progress they can, which is very encouraging to me. I shall try, by the help of God, to do all the good I can. I undoubtedly do miss my pleasant Northern home. Sometimes it must be made to accomplish any good in this world. Please tell Gen. Marshall his letter was received. Many thanks for his kindness. Am sorry I could not come by Hampton. My best regards to all my dear Hampton friends. I could write more if time would permit.

Your pupil, C.

#### OFFERED A WHITE SCHOOL.

A young woman graduate writes to a kind friend, who sends us her letter:

—N. C., November, 28, 1881.

#### Mr. B.

My good Friend: I received the two papers and package of books by mail. Many thanks for them. I was more than glad to have the Southern Workman. I well remember President Garfield's speech at Hampton. I enjoyed that and many interesting pieces in the Southern Workman. I am getting on nicely with my school. It has increased very much. I had an offer of taking a white school near me, but I refused because I knew I had enough to do to teach my own color.

Yours gratefully, K.

#### A SUNDAY SCHOOL WITH ONE BIBLE.

A young woman who was a faithful student and is now a faithful teacher, gives a graphic account of the work she is pursuing under many difficulties, that might daunt many a Northern Normal School graduate.

—Va., November, 1881.

The people here are very anxious to have their children learn, although they are very poor, and have to work for very small wages. This is a new school and I have to labor under many difficulties. I am getting along nicely, and both parents and scholars seem to be highly pleased with me.

My school house is very uncomfortable. It

is an old house that was used for a dwelling house, with a large, open fire place in it, which I am glad to see when it is cold, as I have not any stove. My house is well ventilated with holes large enough in the sides of the house to look out of doors, and a large window, without either wood or glass in it; but the latter I expect to have in soon.

I have started a Sunday school, with only a few rough benches in it; without either maps, charts, blackboard, or any thing of the kind. By hard labor I have been able to get a blackboard, and some of the parents have promised to make the house more comfortable for the winter. I have taught here a successfully one month, and made out my report and sent it in. It was said to be correct.

I have started a Sunday school, with only a few rough benches in it; without either maps, charts, blackboard, or any thing of the kind. By hard labor I have been able to get a blackboard, and some of the parents have promised to make the house more comfortable for the winter. I have taught here a successfully one month, and made out my report and sent it in. It was said to be correct.

I have a very nice place to board, not very far from my school house. I like it very much and the people are real kind. Give my love to all of you old teachers, and tell them, I am trying to do all that I can to improve my race. I never will forget their kindness to me while at Hampton.

The people that I board with tell me that I ought not to work so hard, but I tell them, "The harvest is great and laborers are few, therefore I must do all that I can."

If Miss Cleveland had sent me my book before I left there, I find much pleasure in reading it, and so the people like to have me read for them, I take great pleasure in reading to them from this good book which they enjoy to hear.

The people only have church here once a month, so on Sundays the only thing I can find to interest me is to read when I do not attend church.

Please send me some papers, if you have any, for I am thirsty for some. Will you please inform me what they charge the graduates for the Southern Workman, by the year?

Your Scholar, child of '81.

#### REPORT FROM SOUTH CAROLINA.

A graduate of the class of '73, who after a two year's clerkship, took a school in his own state, sends the following report of the condition of things about him:

S. C., Nov. 28, 1881.

#### Dear Friend:

I have commenced my work earlier this year. The people in this state and especially this part, are doing remarkably well in some respects, but in others we find the same dark holes, which I am convinced are to be found the South over, and wherever the colored people are thickly settled and ignorant. Among a majority of them, I find eager desire to learn, everything pertaining to their advancement, but I am sorry to say there are some who have no desire to be educated or have their children so. Apparently they are satisfied with their present educational attainments, and seem to have ambition only so far as amassing property is concerned. I know several families who keep their children continually employed working, trying to get rich, saying if they can get rich they will be able to go where and do whatever an educated man can. Happily, this is not the idea of the majority.

In this county the colored people have a taxable property of some five or six million dollars, all collected since the rebellion, so you can judge from this that they have not been idle.

Most of all of them have nice, comfortable homes, and live chiefly by farming on the same rent system so common South. Yet quite a number have bought their own lands, and these farm independently, and rent to their neighbors at a cheaper rate than the whites, making land renting an interesting competition.

This year I am teaching by myself, and have some scholars who are well fitted for the middle class of Hampton.

Gen. Armstrong's name and Hampton Institute's have become now almost a household word with my pupils and their parents. Many of them are very anxious to come to H., but as usual poverty is the great preventive.

I find morality in a sad condition; also temperance.

The young men I have organized into a small debating society. We meet twice each week, when I read the important news from my paper, after which they discuss such subjects as they can master. Gradually I shall try and

work in a Temperance pledge. It is useless just now to attempt it.

If you see fit to give this a place in your "Workman," that my schoolmates may know I am not yet a deserter from the ranks of the Hampton Graduate phalanx, and that I am still hearing the same spurs, and battling with the common enemy who is so well fortified in this my "Palmetto State," I will be much obliged.

Sincerely yours, B.

#### FROM TWO OF THE HAMPTON SINGERS.

Two of the original band of "Hampton Students," who went through the North eight years ago, while the walls for Virginia Hall rose in time with their songs, write pleasantly of their present good work as teachers. One writes a joint letter with his wife.

—Va., Nov. 21, 1881.

#### Dear Teacher:

I have been teaching ever since I left Hampton, with the exception of two sessions; during which time I went to school at the Show University, for the purpose of completing a scientific course. I have a very large and flourishing school. My school numbers fifty-two pupils, and a prospect of a good many more after the people get through sowing wheat. I teach ten months in a year, and my wages are thirty dollars per month. The Board has given me two schools, and as soon as I finish one school the other one is waiting for me. The Board told me that they wanted me to teach all the time, and that I should have a school as long as I would teach for them. I am teaching in a poor community, and am surrounded by ignorance, vice and immorality.

I hope you will write and send me some good advice.

I am ever your loving pupil, B.

—N. C., Nov. 14, 1881.

#### Dear Friend:

The school here will not begin as early this year as it did last year, nor will it run so long.

The Committee have bought land and are building a large school house, which will cut the money short. It is generally desired that I should teach again, which I think of doing. Although the term will be comparatively short, want to teach that I may the better perceive the fruits of my first work.

I have lost my classmates. There are no Hamptonians nearer me than Greensboro. Rhoda is at Mt. Airy. Ello and I are doing the best we can; we have three children now. We live happy together, and to provide for our little ones and the future existence of our souls is our greatest aim.

The S. V. brings good news from Hampton. The Lord has blessed and continues to bless the school. Our love in you and our other friends there, for the older we get the more we love you for the good you have done us.

Your loving pupils, W. and E.

#### A FRIEND GONE.

The death of the Hon. Charles Benedict, of Waterbury, Conn., on his way home from a foreign trip, is to Hampton Institute the loss of a long tried and valued friend. A public-spirited, noble hearted man, holding the many interests in his own community which such men are always overburdened with, his vacant place there will be long mourned, as well as in the genial family circle whose centre he was. He has been for many years a steady giver to Hampton, an interested attendant at its anniversaries, and helper of its causes which were near his heart. His loss is personal and great to those who represent the school.

Ptolemy must have been mistaken in declaring there was no royal road to mathematics. Or, if there was none then, it has been laid out now, and Prof. Geo. A. Walton, and Edwin P. Seaver are the engineers who have "cast up the highway and gathered out the stones" for the progress of the young American sovereigns. If there is anything nearer perfection in the shape of a school book than their "Franklin Arithmetics"—Primary, Elementary and Written—published by Wm. Ware & Co., 47 Franklin St., Boston, we should be pleased to see it. We would were a child again for the fun of studying them. The Primary is used by the Practice Teaching class at Hampton Institute with great benefit.

## INCIDENTS OF INDIAN LIFE AT HAMPTON

There has never been a time when the Indians at Hampton could be reported on more favorably than now. Inquiring at the class rooms, work shops, and farm, I get this answer—"They are improving." The new Indian boys are doing creditably at their different occupations, and seem industrious as well as apt at their trades.

## "GOD GIVING DAY."

During the Thanksgiving week, I gave them an idea why the day was called "Thanksgiving"—and what every one's special duty was. I told them that perhaps several of us would be dead before another Thanksgiving rolled around, and before our next Thanksgiving, very few people who now live would be alive. I never saw a class so much interested in a little talk in my life as they were. While I was talking to them, I observed two boys in the class with tears in their eyes. The next day, the day before Thanksgiving, I thought I would see if they remembered what I had told them on Monday. I asked them what to-morrow would be.

A bright-eyed little boy from Arizona spoke up before the others and said—"God giving day." This answer caused some confusion at first; but I soon made them see that his answer was not so silly as they thought. The day after Thanksgiving, the most of them thought, after enjoying such a nice dinner, that it was a "God giving day."

## A BLACK HAWK.

In years previous, our Indians have been mixed, full blood and half breed; some were of English, French and Spanish parentage on one side; but not until now have we had any of African parentage. When Capt. Brown arrived, he brought with him a boy named Frank Black-Hawk, whose father was a colored man. Frank in his very bright boy, speaking very good English, but at the same time loves better his native tongue, the Sioux language. It seemed to cause general satisfaction among the colored students, when they saw him. He likes colored boys very well, but Indians better. He mostly associates with Indian boys, who seem to appreciate him as much as any among them.

## SKILLFUL FINGERS.

The Indian's power of imitation is wonderful. There is a boy among the two Indians who has learned the language of four different tribes, and who will soon speak English well. He is also very bright in other respects. His name in English is "Cracking Wing," a name containing eight of the most difficult letters of our alphabet. I wrote his name and told him (in signs) to copy it. He smiled pleasantly in my face as a sign of "All right." I passed on to my next boy, and so on until I had gone two-thirds around the class, when I felt some one pulling me by the coat-tail. I looked around and found Cracking Wing trying to call attention to his copy. I went over, and to my surprise I really found the name written straight, as well as plainly. Any person could have read it without the slightest difficulty.

The Indian can certainly use his fingers with great skill. Among the best writers in school, you will find some Indian boys.

## HABITS AND MANNERS.

Thursday of every week, a short time is devoted to "Habits and Manners." A committee is appointed, whose business it is to watch and note every unbecoming thing that is done at the table. The last report was given as follows, by a bright and very lady-like little girl. "I saw Indian girls leave their seats while eating dinner, without permission. I don't think that nice." It was put to vote and unanimously declared to be wrong. One of the boys reported that bread was thrown upon the floor. This was decided to be "very impolite," and at the last meeting, such things were only spoken of as things of the past.

The Senior Indian boys are happily engaged in preparing to get up their last little Christmas dinner, of which we will speak in our next number.

OPREDS McANDOO,  
in charge of Indian boys.

## THE GIRL'S ACHIEVEMENTS.

This month many new garments have been made by the girls, both old students and new—some good many undergarments, and some calico dresses. Two of the girls who have been here over two years, did every stitch of work on their dresses, (by hand), and cut them out themselves. They were very nicely done. Most of the girls did all the sewing but the button holes. Three others can sew very nicely on the machine, and one so well that she takes her regular work day in the industrial room with the rest of the colored girls. The girls are now greatly interested in finishing up "for Christmas" the flannel dresses which did not get quite done for Thanksgiving. The new girls are improving very much indeed—faster than any other set we have had. Some room with colored girls,

and they seem to like each other very much. The room work is divided between the room-mates—one has the washstand and scrapp-basket, and the other the table and floor—while each takes care of her own bed and wardrobe and bureau drawers.

All the girls wash and iron their own clothes. Some had probably never known such luxury as clean clothes, while others had been nicely trained—but they all do very well, even some of the smallest.

## WANTS TO COME BACK.

I have had this nice little note from one of the girls who went home to Dakota. We heard that she had gone back to the camp, rather than to take a place to work offered her at the Agency, but perhaps that was only because she wanted to be with her own people, as any girl would—or they wanted her. It seems at any rate from this note, that she appreciates Hampton:

Standing Rock Agency,  
Dakota Territory, Dec. 8th, 1881.

My dear Miss L. A. M.

I want to write to you a few lines. Please write to me so soon as you can. I always remember you, and Miss E. too. Please tell Miss E. and Gen. Armstrong, I want to come back at Hampton again. I don't like to stay at Dakota, I want come back, so bad. I stay think about you. I would not like to stay at Dakota Territory. Please tell Miss E. and Gen. Armstrong I want to come back at Hampton again. I am very sorry that I left Hampton. I want come. Please write to me, I will be glad to hear from you. Write to me soon as you can.

From your Indian.

Good by."

LOVEY A. MAYO,

In charge of Indian girls.

"CARPET BAG WORDS."

The delight of Alice in Wonderland in the discovery of remarkable "portmanteau words" has been shared by the advance guard of fashion explorers in the wonderful world of English language. They have had great pleasure and amusement in rolling up such bulky phrases as *In this place, in that house, at this time, on that occasion, in every place, before breakfast, after school time, and packing them away in their clever little carpet bags here and there, now and then, early and late, while sometimes they are amused to find they can take more out of the "wonderful bag" than they have put in, and get quite excited in seeing how many different things they can find in one. Such devices interest and help them in the connection of the language, and they are making new progress in mastering it. Here are a few specimens of their practice in packing and unpacking carpet bags, and two or three of the very nice and handsomely written notes they kindly sent to one of their teachers who has been disabled for awhile from the pleasant task of leading their explorations. All are uncorrected.*

"Carpet-bags given to unpack: *water, east, here, somewhere, everywhere, late.* They were unpacked as follows:

"That chair is made of wood."  
"It is getting light toward the east."  
"I study in this room."  
"I hear a noise—where is it?"  
"The little lambs go where they want."  
"The breeze blew very softly after sundown."

Indian Cottage, Dec. 9, 1881.

Dear Teacher,

I am very sorry you are sick. You do not know how much we miss you in the recitation room since you got hurt. We know that you like to teach us, and we feel bad you are not able to come and teach. But I hope you will soon get well is the wish of

Your pupil

Dear Madam;

I was thinking of you when I was studying Grammar because one of the sentences is very hard, and I don't know what it means that the reason I am thinking of you. I wish you were here so that you will tell me what it means. We are sad that you are sick and we did not see you several days.

Very Respectfully

Dear Madam;

I would like to say something about our grammar teacher, she teach us just as same as you do, and we are very glad to have it.

Very Respectfully—

And here are two notable notes to the Principal.

"General Armstrong,

Sir,

I want stay here four years because I want learn my trade very well so when I go back to my people I will try to teach my friends.

I get my money I will put \$50 in the office, so when I go home you will buy me some too's.

The original spelling of *beat* in the following rather turned the laugh from the girls on to the writer, though but a slip of the pen.

The eulogy was like copper-back.

General Armstrong,

Sir,

I want to say something about our rooms, our rooms are very clean, and we make bed very well indeed, and I guess we hit the girls in keeping rooms.

Very Respectfully,

## REMOVAL OF SITTING BULL.

St. Yates, D. T., Sept. 11, 1881.

A rumor of the intention of the authorities at Washington to remove Sitting Bull from this Post to Fort Randall had reached us some time ago, but was not credited by the officers of this command till the order actually came a few days since.

Whatever may be the motive or reason for this step, there can be no question about its expediency, nor its moral effect upon the Indians who remain at Standing Rock, as well as the little band who go with the downfallen chief.

A party of ladies and gentlemen from the Post were visiting the camp when Sitting Bull was informed that he was to go with his band to Fort Randall. He received the news in silent silence, and for considerable time made no demonstration, nor gave any sign of obedience to the order of the Sergeant of the guard to remove his camp to the river bank where he was to await the arrival of the steamer. He was very reluctant to leave Standing Rock, where many of his relations are located and where the rest of his once powerful tribe are comfortably cared for.

Allison, the interpreter, had either incidentally or intentionally deceived him, and "talked crooked" to him, and promised him that if he would come quietly from Fort Randall he should remain at Standing Rock with his friends. The order for him to remove his camp was repeated, but still he sat motionless and grave, till a troop of artillery which had been ordered out in fear of his resistance to the order, came dashing over the prairie from the Fort, half a mile distant. They halted at the edge of the little encampment where Sitting Bull stood in the midst of his handful of brave followers. Brave they undoubtedly are, and they stood by their chief with determined faces that gave no sign of fear. I think there are but fifty men in all, and of these, at least two-thirds were old and crippled.

With the air of a conquered emperor the old warrior drew his blanket around him and gave command to take down the tipis; then turning to Allison, he raised his brawny arm and waved him off, saying: "You have dealt falsely with me and talked fine ways." (which he indicated by expelling out his fingers.)

"Dare not to come to my tipi or *wee-suckee* *suckee* *nepe*, the lying white man dies! I was the last of my people to surrender, but my women and children were starving. I gave up and up and they promised me I should come and stay at Standing Rock, where all my people are. I have never killed a white man but in battle; and never hurt the women and children; but they send me away where there are no Indians, and drag my poor old people away to die among the soldiers. My heart is sad and I will die here where I belong. Let my women and children stay here, and take me and my horses. We will take the worst." These are as nearly as possible his exact words as Philip Wells interpreted them for me; and it would have been a hard heart indeed, that did not melt under his impassioned address. But the order was imperative, and he must move on to meet the boat. Again raising his hand he waved Allison off with great dignity and strode down the hill, followed by his little band, all waiting and moaning piteously. The company of infantry, (their usual guard) and a troop of cavalry moved behind them, and presented a sadly interesting picture.

For some reason the boat which was hourly expected was delayed for two days. During that time we visited the camp twice and talked with Sitting Bull and some of the young braves, with his niece, a young half-breed, for interpreter.

The last time I was there a young man, Star Voice, nephew of Sitting Bull, came up and took hold of my horse's bridle and examined the horse quite critically. After pronouncing him "wash-te," (good), he seemed disposed to linger near me, and as he was remarkably handsome, as well as brave, I felt somewhat flattered by his notice and asked him if he would like to stay. I shall never forget his look. So loyal and frank as he turned toward his uncle and said: "I will die where *de* dies." "Good," I all exclaimed, and I shook hands with him. Still he lingered beside me, and then I noticed that his eye was fixed longingly upon a little lead pencil which I had hung on one of the buttons of my riding habit, by the side of a little tin cap and ring on the end. Now, I had the secret of his admiring glances—alas for my vanity; it was my pencil he wanted. So I quickly untied the blue ribbon and presented it to him.

He was delighted, and drew from under

his blanket an old, worn, leather note book that some one had given him, in which he treasured up his pass, and laid the pencil beside it with the utmost care, and stowed them away again under his blanket. Age and shook hands as people do when perfectly understand each other, and was parted.

We took advantage of our opportunity to say a kindly word to Sitting Bull, and found him quite ready to listen and talk with us. His gallantry toward the fair sex is proverbial, and I have always found him good humored and ready to talk.

We expressed our regret at his going away and said we should cry, at which he laughed quite heartily, but soon relapsed into his usual sullen mood. After telling him we thought no harm would come to him or his people if he went quietly on the boat, he told his niece to tell us he believed what the women said, and had made up his mind to go. So we said "How" to all the braves and to some of the squaws who had crowded around us, and left the camp.

There being some apprehension that the Uncasapas, headed by Gall, would make an attempt to join Sitting Bull, and resist the military, a strong guard, consisting of both infantry and cavalry, were stationed round the encampment, and the entire force at the Post was held in readiness to be called out at a moment's notice.

Undoubtedly the Uncasapas were arming themselves with such weapons as they could command, and as we rode from the camp at sunset we met Gall, apparently reconnoitering on the bluffs. He did not greet us with the usual "How," and when I extended my hand to him I fancied a sardonic grin upon his face. We passed some anxious hours that night, for had the Indians dared to attack the Post we had but two small companies of infantry to defend it; the garrison being divided between the Post and the Indian camp down the river.

On the arrival of the boat the next day we started out, nothing daunted, to the bluffs where we had a good view (with glasses) of the landing. The Indian police had been sent out to keep the Agency Indians back from the bluffs, and we would see the crossing across the prairie in scores in every direction. No attempt was made however to pass the picket line. We waited with anxious hearts to see the tipis taken down—We were fearful that, at the last, Sitting Bull would become obstinate and carry out his threat to die here.

We could hear the weird cries of the women and children wailing and wailing, and once there was an unusual wailing and singing, which was very dismal. One of the squaws had frantically stabbed her papoose and was about to kill herself when the interpreter—Wells, interfered and prevented her. The poor baby was left dead on the ground, beside a man who was sick and too nearly dead to be removed.

After the boat moved off, some Indians from the outer camp came and removed the dead baby and dying man. Sitting Bull made a slight effort to run the guard, but finding it utterly useless he slowly and silently went on board without further trouble.

The garrison has been reinforced by one company from Lincoln and there is no longer any fear of present trouble. What the spring time may bring us, we know not. There is no doubt here but that Sitting Bull will come back if it be possible for him to escape the vigilance of his guard at Randall.

THE CHEROKEE INDIANS, the most civilized nation in the Indian Territory, number 20,000 actual citizens. They support 177 schools, in which the instruction is given in English, a boys' high school, a girls' high school, an orphan asylum, an asylum for the insane, blind and indigent, and other public institutions. Out of 5169 men over eighteen years of age, only 10 are hunters and five fishermen; 3536 are farmers, and the rest are professional men, merchants, mechanics and laborers.

## BIG INVENTION.

\$3 Map of Virginia for 25 Cents.

Lloyd, the famous map man, who made all the maps for General Grant and the Union armies, certificates of which he published, has just invented a way of getting a relief-plate from steel, so as to print Lloyd's Railroad, Counties, and Distance Map of Virginia for 1881 on one entire sheet of strong linen paper *four feet long*, on a lightning press, all colored in *countless* handsomely, and ready for mailing to any part of the world, for 25 cents, or, with rollers to hang on the wall, 50 cents. This map cost \$3,000 to make, it shows a million places on it—all the railroads, every railroad station, the name and length of each railroad, and mountain towns. It is a perfect traveler's guide and merchant's shipping map. Every house in Virginia should have a copy. Send it to me at T. T. Lloyd, Washington, city, and you will get a copy by return mail.

## SKETCHES OF MISSION LIFE.

BY MRS. C. C. ARMSTRONG.  
REMUS TO DONOLUO.

The first of August, 1840, found us camped down in a grass house in Honolulu waiting for Mr. Bingham to leave. Our oldest child, the little one who came to Duth's door on her way to Tahiti, was now eight years old, bright, active and well. She had been offered a home and education in the United States, and we dreaded to have her remain on the Islands where there were no English Schools, and where the inevitable contact with heathen manners and morals was almost certainly fatal to a child's purity of character.

My heart shrank from the sacrifices as never before in multiplied trials. How could I let my little one go, sever again to care for, care and guide her, never again to sympathize with and kiss away the childish sorrows which even her short life had already tasted? I understood as never before the meaning of "separating joints and marrow," but I trusted in the Everlasting Arm, while we watched our darling go from us, praying only that the bitter cup might never be repeated.

So we moved into the house left by Mr. Bingham, while our thoughts followed the birdling which had flown from the nest. I had obtained all the information I could from Mrs. Bingham in regard to her work, among the natives, in the hope of keeping it up until her return. But the birth of my seventh child, a daughter, and the period of feeble health which followed it, made it impossible for me to do more than to hold a weekly Bible class and prayer meeting for the women.

Before Mr. Bingham left he had gathered the materials for, and nearly laid the walls of, a new church, which was to be of coral stone, 144 ft. long and 80 ft. wide, and this building Mr. Armstrong undertook to finish. He had a congregation of 2000 people to look after, besides schools and various other duties, and as means were limited and the workmen inefficient, it is not to be wondered at that he was nearly two years in completing this undertaking, nor that having accomplished it, he should break down entirely, with symptoms, which, for some time, threatened death.

He gradually recovered, but there was always so much to be done! We had many more comforts in Honolulu than ever before, but here, besides our ordinary labors and duties, there was constant company to be entertained, which sometimes taxed our resources severely. Ships of war and whale ships brought visitors, often of distinction, and often agreeable, desirable acquaintances. Then, too, we tried to relieve each other as much as possible by receiving those of our little mission circle, who, on other islands, were worn out with hard work and isolation, and sometimes a temporary change in the shape of a visit to Honolulu, was often a great comfort. Not the least perplexing of our social duties was the entertainment of our chiefs, and altogether my life in Honolulu, with all my little children, was too much for my strength, and after my eighth child was born, I found it necessary to give up my family cares and go to a friend on another island for rest, quiet and change of air. I could not bear to leave my little ones to the care of friends, and though for myself I would have chosen rather the eternal rest, for the children's sake I made a desperate effort and embarked on one of the fifty schooners which were always a terror to me. I remember landing from it in a canoe and lying down on the sandy shore awaiting the friends who were to come for me, in such utter helplessness and loneliness I think I should never have rallied from, had it not been for the overpowering desire for cool air and water and to get away from the sea smells, which gave me strength somehow, to cling to the horse's back, when a sat my friends arrived.

A few days' rest and refreshment at the mission house helped me much, and I was preparing to go on to another station, when a sudden relapse came and brought me so low that as soon as I had recovered enough to be moved it seemed best to send me directly home rather than that I should die an outcast. When I reached Honolulu I was completely prostrated and was carried to the house, in an entirely helpless state. But it was so pleasant to meet my dear ones again, well and happy, that I revived once more, and acquiesced in the doctor's decision that I must go or to the island of Hawaii for weeks or perhaps months of rest and quiet. My husband met of course accompanied me, and the three oldest children we could place in the mission boarding school which had recently been established, while the little ones were left with friends.

Under these circumstances I started upon the only journey which I made to Hawaii during all the years of my residence on the Islands. Another schooner voyage of nine days, with the usual details of sickness, dirt, natives and discomforts, seemed hardly likely to prove beneficial, but when we landed, I found, after a few hours' rest in a tolerably clean grass house, that I was really better. Two

seaway horses, neither easy nor docile, were brought up, and we began to ascend the slopes of Hawaii through a path bordered by shrubs and woodlands. Soon the climate changed, and we were obliged to put on cloaks, and the mountain rain drove in our faces like New England sleet in autumn. A tiresome, but invigorating ride brought us to the door of a former chapman who received us most cordially. How refreshing was the cool, bracing air, in the midst of that beautiful country, where all around us we could see the results of the work of a faithful man and his wife. A rest of a few days was followed by another ride of twenty miles over a somewhat rough path, to another mission station. I remember the answer which the natives whom we met used to make to our inquiries as to the distance we had to go: "If you ride it is so far, (naming a certain distance.) If you walk, we don't know how far it is." And I remember too, how in those long rides, so free from noise, confusion and care, I would fancy myself once more a child on the dear New England farm, and live in by-gone days, till the surroundings, and my own frail body and mind, would collapse the bright vision, and nothing would be left but the intense desire which had given it birth.

At Kohala, with the Rev. Mr. Bond, we had another delightful rest, and then rode down to the coast to embark in a canoe for a day's somewhat dangerous journey. That night was spent in a grass house on a mat bed, with the unvarying accompaniment of dogs and fleas, and the next morning, wayward horses took us through a rough and hilly country to the house of friends near Kealahou Bay, the spot where Capt. Cook was killed. There is little doubt, I suppose, that his fate was the result of his reckless courage. He rode the enclosure which surrounded the sacred treasures of the natives and exasperated them. When they saw him smoke, they said, "He is a god," but when in anger they struck him and he screamed, they said "he is no god; he is like other men." And they no longer feared to kill him.

Next by was the spot where, tradition says, Henry Onohai was born, but there is nothing to mark the spot except a coconut palm which the natives told us was planted by him. I obtained a leaf from it and braded it into a fan, in memory of the boy whose life had always been interesting to me.

In order to pass over the broken lava which lay before us, remains of an old flow from Kilauea, we were obliged to use ropes, and the journey over the black and stony desert was depressing to the mind and fatiguing to the body. Towards night we arrived at a little native village, where there was fertile soil, banana, taro, sweet potatoes, and a grass house wherein the best bed (a few coarse mats with a stone pillow) was offered us. The invigorating air had given us appetites, and we managed somehow to enjoy the chicken and sweet potatoes which the natives cooked for us, while they very thoroughly enjoyed watching the awkwardness with which we used our fingers in place of knives and forks, of which there were none to be had. After supper they brought a Testament for Mr. Armstrong to hold family worship, and I shall never forget the delight they took in their own singing. The morning we resumed our journey, conducted for some miles by a voluntary escort of our native friends.

## THE CHATTER.

We went on up the mountain side, over the endless lava beds, with no adventure, except that my mule on arriving at one of the streams which we had to ford, entirely refused to move, as a result of which I had to be carried across on the back of a native, while the stubborn animal was literally shoved across by several men, who put the branch of a tree across his hind-quarters, and taking hold of the ends, walked him over, to his own great surprise. However, he redeemed his character afterwards by passing calmly over the cracks in the lava, which were really alarming, and walking steadily upon the very verge of the crater.

When we arrived at the little grass house which stood on the edge of the volcano, I was too exhausted to think of descending into the crater, and could only stand on the verge of the precipice and look down upon the surging, fiery billows which labored each other in awful fury, while the earth roared like thunder beneath my feet. A bank of sulphur lay near, glittering yellow in the sunlight, while steam poured everywhere from the crevices in the rocks, and every cranny was filled with the pure distilled water.

It was a sight full of terrible suggestions, making humanity seem weak and insignificant; but we had little time to spend in this contemplation, for we had found letters informing us that an English ship of war had arrived in Honolulu, and that great anxiety was felt as to its object. Every pastor was needed at his post, and the king and chiefs who were Mr. Armstrong's parishioners, stood in special need of counsel and advice. So after a lunch and short rest, we hurried

on over grass covered hills; through woodlands, where large and lofty trees, festooned with wild vines, were surrounded by thick shrubbery and bright flowers, following the stony, muddy trail. Now and then a wild bullock would appear, but he was more frightened than we, and our journey was undisturbed even by the song of birds, until night found us, protected from the rain by a grass house, where we were kindly received, and amidst general dampness and filth, were treated to chicken, which was principally feathers, and roast sweet potatoes which fortunately were eatable.

The natives dried our clothes for us, and as usual, seemed to like to have us join them in their simple worship, doing all that they could, according to their light, to make us comfortable. We started on the next morning over a rough trail, and after a long, wet ride, were glad to come in sight of the bright and verdant villages of Ilio, where a kind welcome to a good house, clean bed, and appetizing food, were indeed luxuries.

We were obliged to wait for a few days, as there was much to be done immediately, and it was most pleasant for us to find here as everywhere else on our journey, how good a work civilization and Christianity had done among the people. However, we were to go on to the influence and instruction of the missionaries.

## RETURN HOME.

It was delightful to get back once more to our own home, though I was still too weak to undertake family cares, and was obliged to leave my oldest child in school, while my poor little-piling baby was soon taken from me to better guardianship than mine. His death made Heaven seem nearer and earthly cares less pressing, but as I could not gather strength, I found no lack of work awaiting me.

The state of public affairs in Honolulu on our return is thus explained by a husband by "Peb. 30th, '43." For a few days past the "plaintive language of the Psalmist has been" "often on my lips 'Lo, then would I wander afar off and remain in the will strife in the' " "The excitement in Honolulu has been" "unparalleled, American, French, and English all concerned for their respective interests." "Lord Palmer has pressed such" "with such force, baying a frigate at hand" "to look him up, that the King and Chiefs" "yesterday ceded the government of the Islands provisionally, to her majesty the Queen" "of Great Britain, and at four o'clock yesterday afternoon the British flag was hoisted" "in the Fort." Although this action of Lord Palmer's was especially set aside by Admiral Thomas, who being on the coast of California sailed directly for the Islands, and on July 31st of the same year, lowered the English flag and restored the Hawaiian colors, yet the effects of it were not so easily overcome. The evil influences left by the English ship-of-war were hardly to be measured, and we soon found that it would have been well if the people who had here been so easily restored as was the flag of the nation.

Our church was scourged with immorality, and had it not been for the strength gained during his visit to Hawaii, my husband would have been quite overwhelmed by the work presented to him. I found that the native women had kept up the weekly prayer meetings among themselves, and I returned to my work there with renewed interest. At times I had as many as four or five hundred present, some of whom would walk several miles, with their Bibles and hymn books carefully wrapped up in bank cloth. I read to them from Scripture, making familiar explanations, and personal illustrations, encouraging them to ask questions and express their own views. They asked to be kept in subjection to the law, and they always took it kindly, the greatest difficulty being always the ludicrousness which in some form or other was sure to present itself, they, of course, having no sense of the incongruities which struck us so forcibly.

## CHRISTIAN FAMILIES.

There could be no doubt, I think, that the chief influence for good which was exercised over these people, was the example of Christian family life, and yet how difficult it was to train our own children in the midst of all this barbarian infanticide was common, and they seemed in no way to have any conception of home or permanent family ties. This was kept in subjection by the lower classes, some partly from the fact that the lower classes were kept in subjection by the chiefs, and could own nothing. Whatever they might accumulate might be taken from them at any moment by the whim of a chief, and this produced migratory habits, which the Gravelly gave lands to the people, and enabled those who had sufficient industry and determination, to own their own land, which they loved and cared for their children, was having its effect upon the natives, who were very

imitative, and I found that a very important part of my work came to consist in raising from house to house, commonly taking my children with me, a native woman carrying the baby.

It was pleasant to be out of doors, except just at midday, and as the years went on it was pleasant to see how the better class of the people collected comforts and conveniences about them, grew more cleanly, and grateful for suggestions as improvements. They would seek for advice as to the government of their children, and while the lower classes, as I have said, showed little affection and were very neglectful, it was noticeable that the children of the chiefs were petted and indulged far more than was good for them.

My own family was large, I had at this time eight living children, (all of whom lived to man and womanhood,) and the wonder was that I had survived the manifold vicissitudes of my life. After my last child was born, I had, as may be imagined, my hands full at home, but was loath to give up the special missionary work which I had undertaken, and opportunities seemed to come unasked for.

My husband broke down under his incessant care and hard work, and was obliged to go to Hawaii to rest. He was absent for seven weeks, and during this time, there was an increase of religious interest among our church people, which, to me, was too full of promise and hope to be disregarded. As the people came to us for instruction, I had not the heart to turn them away, and after much prayer and self-searching, I resolved for the time to lay down, as far as possible, my family cares, and devote myself directly to the church. I organized meetings for both sexes, visited the people in their homes, and was amazed at the strength given me to do what I felt sure was God's work. The King received us most kindly, and both he and the Queen were deeply interested, and I believed affected, by the influences at work around them.

When my husband returned he rejoiced greatly, and with his usual energy took up the work of which I no longer was the responsibility, leaving me free and glad to return to my domestic duties and quiet labor among the women.

Whatever the cause or the results of this outbreak of religious interest among us may have been, it was certainly a remarkable manifestation, and to me personally, was the most important experience.

## THE PENSIONERS EDUCATIONAL FUND.

The suggestions in the following extract from a letter of one of our Northern friends are worth consideration. The plan of helping a worthy student to complete his course by a loan, to be returned from future earnings, so as to be again used in the cause, is a good one. We hope other Pensioners whose pensioners are not required for actual needs, may follow our correspondent's examples.

Oct. 3d, 1881.

"I wish to make one condition, in the similar plan—that it is an advance only, and is to be returned by the student to the Institution or to myself, to be used in some way again. My belief is that the industrial education afforded at the school will increase the earning capacity of a person so much that it is not a hardship to exact this condition, and that a student is warranted in incurring the debt. Now for a suggestion or two. This money is from my pension, and I look forward to using more of it in the same manner. For the little additional book-keeping involved can you not keep this as a separate fund? Call it, say, 'Pension Fund' or 'Pensioners' Fund' and, without mentioning my name, advertise it as such in your publications, explaining that it is from Soldier Pensioners. The annual payment for pensions is, I believe, about \$70,000,000, and there must be others like myself who feel a loss of independence in going quarterly to the Government for a pension not required for actual needs. The pensioners' pensions to the education of the freedmen is a fit sequel to our former service, and it may need only the suggestion to bring you some little of this large amount. I would like to hear from you—on from you concerning her."

A good word is an easy obligation; but not to speak ill requires our silence, which costs us nothing.

## Horsford's Acid Phosphate in Indigestion.

We have used Horsford's Acid Phosphate in cases of indigestion, with good results. DR. MARSHALL & LONGACRE, Olney, Ill.

*My dear young friends :*

verse 10. I hope you will be encouraged to persevere in your work. Although the field forces here is vast both in this country and in heathen lands, many faithful laborers are needed. Let us endeavor to know to each other. Perhaps they are, like yourselves, sometimes disheartened by the little that appears to be accomplished. Let that little be the seed of a great harvest. Let that fall one by one on the hard rock, and sink into their crevices, finally crumble it to pieces. We are only seed sowers; yet, through the Divine blessing, the harvest will be great. Let us have a pure Christian life cannot be hid. The influence of the life is a real example of one who fears God and hates evil, cannot be too highly esteemed. Let us be diligent in our work by all means, even on despise the day of small things. He that is faithful in the little, is faithful also in much. With the New Year, therefore, we wish to see you in the armor of God, with the helmet of the whole armor of God, which is fully described by the Apostle Paul in his epistle to the Ephesians, chap. 1:—12. That you may be richly blessed in your work and in the desire of

our friend,

A year ago, the State Superintendent of Public Instruction of Alabama wrote to the Principal of Hampton Institute for a Hampton graduate to establish and superintend a new Normal School for colored teachers, for the Normal School to receive \$2000 for teachers' salaries. Mr. Booker T. Washington of the class of '76, then teacher in charge of Indian young men at Hampton, was heartily recommended for the position. He accepted the position, who, after a year at Hampton, graduated in the class of '78, and afterwards at the Framingham, (Mass.) Normal School, for his assistant. On assuming his charge, Mr. Washington considered the greatest duty of the Normal School to be the giving of selfhelp for his students, and an opportunity presenting itself to secure a small farm on reasonable terms, he ventured to try it, with help of a loan from a friend at Hampton. In the story we leave him to tell. In this courageous enterprise of

TUSKEGEE NORMAL SCHOOL,  
Tuskegee, Ala., Dec. 18, 1881.

Dear Friend:

not fail to do their part. The girls in our junior or highest class, originated the idea of their having a table of fairy candies. They thought it would be a thing which to carry they could plan, and from that table we realized a handsome sum. Some of the girls attended the table, while others would drum up customers. One girl played the piano, and another was the crowd, while one little fellow peddled apples for his share of the work, and another one candy. To make sure of a good attendance at the ball, these young men formed themselves into a committee to canvass for guests from all parts of the town. From the supper we cleared \$50.00.

Through the subscription papers we received aid from both white and colored. A few very prominent citizens or has promised to do either giving or has promised to do so soon. As a result of the exhibition, supper and subscription papers, we now have in hand \$94.00, and, before this letter is handed, expect to receive enough for rapid subscription to make this sum more than one hundred dollars.

Now that the farm is paid for, it should not be permitted to remain idle. Our students are too badly in need of the aid which can come from it. We want to put in a crop as soon as the weather permits. To do this we need stock, vehicles, tools, a stable, cash to pay for first year's labor, &c. What a lift up it would be to our students could we get the three or four hundred dollars needed to make this start.

One thing that probably retards the progress of education in the Normal and other high schools in the South more than anything else is the "in and out" system. Few students are able to remain in school an entire term because they are *not able to pay board*. More than once this term when students have stayed here till their last dollar was spent, have then come to me with tears in their eyes to say,

Yours faithfully,  
B. T. WASHINGTON

The procession on the opening day was headed by Gov. Jarvis, Montford McGehee, Commissioner of Agriculture, Dr. Charles Dabney Jr., State Chemist, Jay McGehee, State Quarantine Officer, Spence was made welcome by the Governor, the Commissioner, Dr. Dabney, Senator Vance, of N. C., Gen. Cox, Congressman from the district, and others. The speaker, after making an encouraging and friendly address (reported in the "News and Observer," "Whatever affected the colored race, which is one-third of our population, is one that affects the whole people, and the happiness of North Carolinians as a whole.") declared: "If you become industrious, enterprising and intelligent, all the white people share in your honor and glory as much as you yourselves." Gen. Cox then made the following declaration: "When we succeed, you succeed, and when you succeed we succeed, and when both succeed, North Carolina succeeds." A cheer for the Governor followed, and the speaker moved.

"The good effect of all such displays of material and industrial advancement among the colored people, is far reaching, and in two ways: it is an encouragement to them and an assurance to their more fortunate neighbors that they are to play a part in the history of the future. A healthy feeling of rivalry is so created, and every man who possesses a pride, is gradually drawn out and attempts to do better year after year.

A little paper with this cheering title, an motto borrowed from our late beloved President Garfield's address to the Hampton students: "LABOR MUST BE.—LABOR MUST

It is the organ of the Agricultural and Industrial Institute recently established there for the refugees by the large-hearted and self-denying exertions of Mrs. Elizabeth L. Comstock and Mrs. Laura L. Haviland. Johnathan E. Pickering and other noble and well-known friends of the freedmen. V

Columbus, Kansas."

**In Bilious Troubles.**

I have used HORSFORD'S Acid Phosphate, in bilious troubles, and it did all that was desired. I think it a valuable remedy.

Muncie, Ind. D. SCHAUB, M. D.

TABLE 1. *Continued*

Consumption, that scourge of humanity, is the  
great dread of the human family, in all civilized  
countries.

I feel confident that I am in possession of the only safe, infallible Remedy—now known to the profession—by which the most dangerous and fatal diseases, and its unendowed no emulations, viz. *Cataris, Asthma, Bronchitis, Nervous Debility, Dyspepsia, Dropsy, Rheumatism, and all the other ailments* may be called on old age. Believe me in this, that I have been a successful and experienced practitioner, in the best Consumption Hospital of the Old and New World, has taught me the value of proper medicine, both local and general, and that I have a great knowledge of my race. I have found it. But I am digressing. I started out to tell the suffering with Consumption or any of the above maladies, that they may be cured, and that I put in the hands of the great boon, without charge, and shall have the benefit of my experience in their hands as successfully treated. Put particular directions for preparation and use of the medicine, and the directions for successful treatment, in your new home, will be received by you at return of mail, free of charge, by addressing with stamp, to

## At Home.

SONGS OF LABOR.  
THE SHIP BUILDER.

BY JOHN O. WHITTIER.

The sky is ruddy in the East,  
The earth is gray below,  
And, spectral in the river-mist,  
The ship's white timbers show.  
Then let the sounds of measured stroke  
And grating saw begin;  
The broad axe to the guarded oak  
The mallet to the pin!

Hark!—roars the billows, blast on blast,  
The sooty smoky fars,  
And fire-sparks rising far and fast,  
Are feling with the stars.  
All day for us the smith shall stand  
Beside that flaring forge!  
All day for us his heavy hand  
The grouting anvil scourge.

From far-off hills, the punting team  
For us is toiling near;  
For us the raftsmen down the stream  
Their island barges steer.  
Rings out for us the axe-man's stroke  
In forest and still,  
For us the century circled oak  
Falls crashing down his hill.

Epl—In nobler toil than ours  
No craftsman bears a part;  
We make of Nature's giant powers  
The slaves of human art.  
Lay ribs to ribs and beam to beam,  
And drive the iron nails free;  
Nor faithless joint nor yawning seam  
Shall tempt the searching sea.

Where'er the keel of our good ship  
The sea's rough field shall plough—  
Where'er her tossing spars shall drip  
With salt spray caught below—  
That ship may feel her master's beck,  
Her helm obey his hand,  
And seem to tread her reeling deck  
As if they trod the land.

Her oaken ribs the vulture-beak  
Of Northern ice may peel;  
The sunken rock and coral peak  
May grate along her keel;  
And know we well the painted shell  
We give to wind and wave,  
Must float the sailor's casket,  
Or sink, the sailor's grave!

Hoi!—strike away the bars and blocks,  
And set the good ship free!  
Why lingers on these dusty rocks  
The young bride of the sea?  
Look! how she moves along the grooves,  
In graceful beauty now;  
How lowly on the breast she loves,  
Sinks down her virgin prow!

God bless her! where'er the breeze  
Her saucy wing shall fan,  
Aside the frozen hebrides,  
Or sultry Hiodon's fan,  
Where'er, in mart or on the main,  
With peaceful flag unfurled,  
She helps to wind the silken chain  
Of commerce round the world!

Speed on the ship!—But let her bear  
No merchandise of sin,  
No groning cargo of despair,  
Her roving hold within.  
No Lethean drug for Eastern lands,  
Nor poison draught for ours;  
But honest fruits of toiling hands  
And Nature's sun and showers.

Be hers the prairie's golden grain,  
The desert's golden sand,  
The clustered fruits of sunny Spain,  
The spice of Morning-land!  
Her pathway on the open main  
May blessing follow free,  
And give her welcome back again  
Her white sails from the sea!

Manlike! are very odd creatures. One-half  
censure what they practice, and the other half  
practice what they censure.

Though a taste of pleasure may quicken the  
relief of it, an unrestrained indulgence leads  
to inevitable destruction.

We may not pause at any part of this life  
and take it retrospect. Our full lives here  
are to be visible to our finished lives hereafter.

## Horsford's Acid Phosphate

Makes a much more delicious acid drink  
than lemon or limes, at the same time giving  
to the system the invigorating phosphates.

## Health and Humanity.

Our hearts' pure service, Love, be Thine,  
Who clothe all with rights divine.  
Whose great Soul burns, though ne'er so dim,  
In all that walk, or fly, or swim.

All-Father! who on Mercy's throne  
Hear'st Thy dumb creatures' faintest moan—  
Thy love be ours, and ours shall be  
Returned in deeds to thee and Thee.

Res. H. B. Carpenter.

## WINTER QUARTERS.

Now is the time to see that houses and  
barns, and the outbuildings which living crea-  
tures are to inhabit are in the best condition  
to protect from the winter cold and winds.  
Economy requires this; but humanity should  
prompt it even more. Leave no open places  
for want of missing boards, and see that every  
door of shed and barn is in such order that  
it can be tightly closed.

Remember the needs of all the crea-  
tures who look up to you, their owners, as unto a  
God. Do not let their trust be misplaced!—  
Our Dumb Animals.

## HUMAN EDUCATION.

Another respect in which it is of the great-  
est importance to follow in the tracks of the  
European societies is that of humane educa-  
tion. To some extent it has been followed in  
this country, particularly by a few of the  
prominent societies, but only by a few; and  
it is of the utmost desirability that every or-  
ganization in the United States, no matter  
how small, should exert itself to accomplish  
something in this direction, since, as it is a  
general principle that the whole is greater  
to the sum of all its parts, so humane educa-  
tion includes all branches of the work, and if once  
that is universally attained, but little further  
labor will be necessary in the effort to pre-  
vent cruelty, either to animals or human beings.

This matter of humane education embraces  
a wide field, but it is probably more easily at-  
tainable by work in Sunday and in secular  
schools than in any other way. A very excel-  
lent plan is the giving of prizes for composi-  
tions written by the scholars on "Kindness  
to Animals," or some kindred theme, and  
where this is not possible, the circulation of  
humane cards and publications, the print-  
ing of mottoes and sentiments of a humane  
tendency upon cards hung upon the walls, the  
introduction of articles of a humane nature  
into the reading books used in the schools—  
all these are steps in the right direction. In  
France the method has been lately adopted of  
printing little cards called "bons points,"  
and introducing them into the schools. On  
one side of these cards is a pretty picture of  
some animal, generally in company with a  
child, and underneath some humane senti-  
ment; on the other side a description of the  
animal, and sometimes an extract from the  
French law for the protection of animals.  
The card entitled "The Horse" presents a lit-  
tle boy in the act of carrying a bucket of oats  
to that faithful animal, while underneath  
the sentiment "Cruelty to animals renders  
the heart insensible to the sufferings of human  
beings." On the reverse is printed "The  
horse is the most useful servant of man. He  
brings to our service his vigor, his docility,  
his courage and his intelligence; but when he  
is outraged or loaded with a burden beyond  
his strength he loses his valuable qualities.  
The government that must be called to exercise  
over animals should be the government of gen-  
tleness, not of violence;" and then follows a  
list of the principal acts of cruelty that come  
within the application of the law. In all the  
schools the teachers are instructed to give  
one of these cards as a mark of appreciation  
when a child has recited a lesson unusually  
well or in any respect has gained approval;  
and the obtaining of this is rendered so easy  
as to be within the ability of every scholar in  
the school.

There is no society so limited in means  
not to be able to take some step toward hu-  
mane education, even if nothing more than  
obtaining permission to place cards upon the  
walls of the schoolhouses, with some such  
mottoes as that which has been used exten-  
sively by the Pennsylvania Society and by our  
Woman's Branch, viz: "I promise to protect  
dumb animals, and may God in His mercy  
protect me."—Our Dumb Animals.

The Choctaw Nation in the Indian Terri-  
tory have long had a law to prevent excessive  
cruelty to animals; inspired, it seems, not  
from any example of the whites, but from  
their own instincts of humanity. The penalty  
is a fine of thirty lashes.—Legal Adviser,  
Chicago.

## Teacher's Cable.

## HOW TO TEACH GEOGRAPHY.

BY J. F. HALL.

Superintendent of Schools in Dedham, Massachusetts,  
and formerly Teacher in the Quincy Schools.

Prof. J. Freeman Hall, whose clear and in-  
teresting lessons in geography and arithmetic  
at the Virginia Teachers' Institute held at  
Hampton Normal School has summer deligh-  
ted all who had the good fortune to attend  
them, has kindly sent us, for the benefit of our  
Teachers' Table, a synopsis of his method of  
teaching geography. It is the system used in  
the public schools of Dedham, of which Prof.  
Hall is Superintendent, and substantially that  
employed in the famous Quincy schools, in  
which he was Col. Parker's right hand man.  
The system is arranged for an Elementary and  
Scientific course, the first adapted to the B  
and C Primary, and to the A Primary—answer-  
ing about to the Virginia "Intermediate";  
the second to the "Grammar" grades. Some  
valuable general directions precede the synop-  
sis. We give these with the C and B Primary  
course this month, and the rest will appear in  
our next number.

## GEOGRAPHY.

The most common mistakes made in teach-  
ing geography are:

- 1st. Teaching, or attempting to teach, too many facts (details).
- "No small part of what children often have to learn in Geography might appropriately be labelled 'Tidbits from Father's Table.'"
- 2d. Failing to train the intellect properly; burdening the mind with disconnected facts, unmeaning disconnected knowledge. "A valuable general direction precedes the synop-  
sis in the learner's mind with complete function and barrenness."
- 3d. Losing sight of one of the great purposes of all teaching of school work,—which is to interest the pupils in the study of Nature, the world in which we live, its beauties and its resources.

## DIRECTIONS TO TEACHERS.

1. Teach facts which are GENERAL, TYPICAL, as many as your pupils can easily grasp and easily retain.

## Teach these Thoroughly.

2. Teach Physical Geography, "the basis of all true geographical teaching." FIRST. Each fact of physical administration, of commercial geography must ultimately connect itself with a right understanding of such matters as soil, climate, shape, size, &c.

There is no school study which furnishes better opportunities for the proper training of the intellectual faculties than the study of Geography. A SYSTEMATIC COURSE OF TEACHING will:

1. Begin with what is known and what is near, thus securing a basis of well known facts (gained by observation and experience from the child's own surroundings).
2. Arrange to have all new facts (gained either by observation, or through the exercise of the imagination or the conceptive faculty) directly associated with these in some order of correlation or dependence.

The facts of physical Geography will serve as ties to bind all other facts together.

3. Every exercise in the study of Geography, imagination, the conceptive faculty and reasoning requires:

- (a) Clear, distinct mental pictures of forms, places and people.
  - (b) Such a grouping and arranging of facts by COMPARISON and CONTRAST that every effort toward the acquisition of knowledge will insure some INCREASE OF MENTAL POWER.
- This Systematic Course may be accompanied by the INCIDENTAL teaching of many facts (names and position of places), which pupils need to learn as soon as possible, and need not wait to learn, if by lively interest and proper association it is possible to fix them at once.

3. Remember that you may make the "lives of your children rich and interesting according to the number of real things you lead them to know and care about."

Teach in a proper manner such names and facts as your children ought to know; but, above all, if possible, kindle in their minds such a spirit of inquiry, of enthusiasm and delight in the study of Nature that they may sometime learn of her what you have failed to teach.

## ELEMENTARY COURSE.

PURPOSE: TO AWAKEN AND CULTIVATE OBSERVATION, TO INTEREST CHILDREN IN THE STUDY OF NATURE, AND TO PREPARE THEM TO RECOGNIZE READILY AND FULLY THE ORDER, BEAUTY AND BEAUTY OF THE WORLD IN WHICH THEY LIVE.

## PRIMARY. (FIRST YEAR.)

ORAL INSTRUCTION. Systematic Course.

1. Let your children take little journeys alone or with you, and then lead them to tell what things they have seen on or about the earth, describing to them any new things they see.
2. Tell them interesting stories about the great forests, great plains and great rivers of the world; about the ocean, the air and the stars (seen everywhere, guide to travellers).

## PRIMARY.

Systematic Course. ORAL INSTRUCTION.  
1. Continue C Primary work, giving special attention to a.

- a. Let your children draw pictures (in outline) of surface (vertical forms) and of elevated or "bird's-eye" views (horizontal forms).

- a. Study carefully the schoolroom, school house, yard, street near by, &c. Describe—draw and model.

- a. Teach cardinal directions (with compass and magnetic needle) in this order: North, south, east, west. Northwest, northeast, south-west, southeast.
2. a. OBSERVATION LESSONS.—DIVISION OF LAND, Natural and Artificial: Land, water, schoolyard, yards, fields, pastures, gardens—plants growing in them, farms, lawns, streets, roads, gutters, woods, trees, hills, valleys, swamps, fences, rivers, brooks, ponds, lakes, plains, meadows, coast, beaches, banks.

- a. Neither give nor receive formal definitions.
- d. Make collections of different kinds of earth, soil, &c. (Color? Coarse or fine? Wet or dry?)

- e. Observation and conversation lessons on various occupations, on things manufactured, goods, clothing, &c.

- f. Incidental Teaching.—Teach outline, name and position (general) of town, county, state and country in which pupils live; names of towns adjoining their own.

(to be continued.)

## Agriculture.

## LIVE STOCK NOTES.

No one who has given any attention to the feeding of cows, but knows that as the cold season comes on there is a greater demand upon the actual economy for supplying heat, and a consequent call for an increase of food. As soon as a cow will become chilled from cold out of doors, she should be taken to the stable and kept there, except for an occasional run of a few minutes for exercise, until warm weather comes again. Cows should be housed, because it is cheaper to keep them warm that way, and in the second place, for their health and comfort they should have good shelter. The dairyman also knows full well that the quality of the butter depends in great measure upon the milk, whether it has been kept clean or not. If the milk becomes foul in the stable, no amount of neatness afterwards will bring back the flavor and the perfection that would otherwise have made it easy to obtain at a higher price in the market. The writer has seen cows milked, the milk from a single one of which would taint that from a large dairy. Not only should the cows be well fed and sheltered, but they need to be properly milked. This will require that they be cleaned before milking, that there may not be any dirt to fall into the pail. This cleaning and brushing should not be confined to the udder, but should extend over the whole body, as it is an important item in their healthful keeping, as well as a means of obtaining clean and pure milk.

The pig is frequently mentioned as being the domestic farm animal that is nearest to man in its anatomical structure. Whether this is so or not, the pig has a very sensitive nature, and any exposure to severe cold interferes seriously with its profitable keeping. The pig is a machine for making pork, and with this distinctly understood, no farmer who wishes to make his pig-pen pay should permit his swine to go half-way sheltered from the cold and storms. Any neglect to protect causes a greater drain upon the animal for supplying the necessary heat, in the same way as mentioned while speaking of the stabling of cows. The flesh already accumulated must be either be used to supply this heat, or an extra amount of food needs to be eaten. Other things being the same, the pig that has good, warm quarters and a sunny nest, will fatten much faster on the same rations than another pig that finds only the shelter of a crooked rail fence in the cold winter air.

The importance of keeping the hens warm and well fed cannot be negated too strongly. A fresh egg is the only one that can be trusted, and it is not a difficult thing to have it. The great enemy to fowls is lice, and one of the best preventives is a plenty of dust in which the hens can revel at their own free will. A knowing writer has said: "As for hen, they not only enjoy it, but it is necessary and luxury to them, just as a morning bath to civilized man. The dusting-box is their toilet-table—in fact, bath-tub, wash-bowl and pitcher, sponge, brush and soap—and it gives health and long life, as surely as the free use of water does to human beings." Hens that are in close quarters need a variety of food; they would have it if they were allowed a free run. Grain is their principal food, but cabbage, boiled potatoes, in fact anything green or like the forage which they gather in summer adds to the value of their diet. They must also be provided with plenty of lime in the form of finely-powdered oyster shell, plastering, &c. and last, but not least, an abundance of fresh water.—Country Gentleman.

# Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. XI.

HAMPTON, VA., FEBRUARY, 1882

NO. 2.

HOME. [From Harper's Weekly.]

## THE HOUSE IN THE MEADOWS.

It stands in a sunny meadow,  
The house so mossy and brown,  
With its cumbrous old stone chimneys,  
And the gray roof sloping down.

The trees fold their arms around it,  
The trees a century old;  
And the winds go chanting through them,  
And the sunbeams drop their gold.

Within, in the wide of the kitchen,  
The old folks sit in the sun,  
That creeps through the sheltering woodbine,  
Till the day is almost done.

*Louise Chandler Moulton.*

## THE HOMESTEAD.

I see the windows of the home-told, bright  
With the warm evening light,  
And by the winter fire  
I see the gray-haired sire  
Serenely sitting.  
Forgetful of the work-day toil and care.  
The old wife at his elbow with her knitting.

*Alice Cary.*

## A PICTURE.

A household, snug warm and wide,  
Shaming our modern manners,  
Where backwood monarchs side by side  
Flung up their rival banners,  
And send their gleaming cohorts fast  
The flying shadows after,  
Till warmth and comfort glow at last  
From shining floor to rafter.

*H. W. L.*

## THE HANGING OF THE CRANE.

O fortunate, O happy day!  
When a new household finds its place  
Among the myriad homes of earth,  
Like a new star just sprung to birth,  
And rolled on its harmonious way  
Into the soundless realms of space!  
So said the guests in speech and song,  
As in the chimney, burning bright,  
We hung the iron crane to-night,  
And merry was the feast and long.

*H. W. Longfellow.*

The world has nothing to bestow,  
From our own selves our joys must flow,  
And that dear hut,—our home.

*Nath'l. Cotton—1763.*

## I WILL ABIDE IN THINE HOUSE.

Among so many can be care?  
Can special love be everywhere?  
A myriad homes, a myriad ways,  
And God's eye over every place?

So many, and so wide abroad;  
Can any heart have all of God?  
From the great spaces vague and dim,  
May one small household gather Him?

I asked; my soul bethought of this:—  
In just that very place of his  
Where He hath put and keepeth you,  
God hath no other thing to do!

*Adeline D. Whitney.*

## VIRGINIA BOYS OUT WEST.

BY ORRA LINDHOLME.

Several years ago, four of my young cousins determined to take Mr. Greeley's advice, "Go West, young man, and seek your fortunes beyond the Mississippi."

Three of the boys were brothers, and the fourth, the eldest of the party, was a cousin of the others, himself an only son.

All were young men of fair average abilities, enjoying good health. John, the eldest, having had very good opportunities for education, first at the classical schools of his own state, and then in a Northern technical institute, where he gained considerable knowledge of engineering. The other boys, Charles, Will and Harry had suffered the disadvantages of irregular schooling, but each of them had had a term or two at some of the academies.

Like most of the old slave holders, our family is much reduced in circumstances, and though there was some property left after the war, the boys felt that they must shift for themselves and leave what remained of the old estates for the old folks, and the children growing up.

It was very sad for us all to have our dear boys go so far and for so long, but that Virginia ought to be a good field for brave hearts and strong hands, but, like most southern men, our people had only had professional men or planters among them for generations, and our young men had inherited the ideas and tastes of their forebears, were not prepared by education for the hard to hand struggle of the present days. Many accounts had come back to us of the wonderful success of Virginia boys who had left the Old Dominion for newer states, and our boys preferred trying their luck "Out West" to seeing what could be done at home.

Constant correspondence has been kept up with our wanderers, who have led an eventful life in the years of their absence, and though the fortunes they dreamed of have not yet been found, which deer brought experience has been gained, which will doubtless be of value to them in the future.

"Our boys," had too much of the feeling that they were "Virginia gentlemen" to undertake manual labor at home, they have certainly laid aside that sort of pride in the West, and at times have engaged in a variety of mechanical arts for which circumstances must have developed aptitude, as they all lacked training for such pursuits. John had at first apparently bright prospects. With the aid of a friend, he secured a place in the California mint, and by the time of leaving, in a few months had saved several hundred dollars in bank, and began to write of his plans for investing in land and securing a home for himself and his old father. The unwelcome labor of working a heavy machine, however, soon brought on serious illness, which consumed much of his savings, and the breaking of the bank swallowed up the rest. Since then, he has walked over several states, sometimes surveying for new railroads, sometimes mining, always keeping a stout heart, and writing cheerful letters about his life in a sturdy manner. "With all his earthly possessions in a pillow case," given him by a Virginia friend, whom he found living in a western city.

Charles has been "chasing the mountains," working mines, hauling wood in the mountains into the fast growing towns of mining districts, or doing any and every thing that came to hand.

Will, who wanted to find employment on a railroad, has at one time, "contracted to paint a hotel," in one of the magical cities of the west—San Francisco, the youngest, who was called "the fool" at home, from his grave and studious habits, worked awhile as a carpenter and then walked, sometimes bare foot and often hungry and weary, from Denver to the Mexican line, to join his brothers, and find work with or near them.

Whenever possible, "our boys" have kept together, and when one has found a little better luck than the rest of the party, he has always been ready to help the others. Thinking the readers of the Workman may have had such hard times in pursuit of Dame Fortune, I enclose some extracts from their letters, which are sent me from time to time, from Texas.

Tucson, Arizona, Oct. 23, 1881.

The summer has been very hot and long here, but it is about over. Every thing is very dull, and if I were not constantly employed, I should prefer being out on the hills again, even if I had to run the gamut of the Apaches.

The Indian war is considered about over, but there are still bands of savages roaming the eastern and south-eastern portions of the territory, and now and then some poor fellow is surprised and murdered by them. The outbreak has hurt the country considerably, from a mining point of view, as Eastern men and capitalists have a prodigious fear of poor Indians.

The Indians have, as usual, been badly treated, which caused the outbreak. The

troops out here are first — for dress parade, but seldom fit for active service — the field. They pursue the savages, but rarely catch up with them.

I had a nice little visit from Will lately. He was on his way to Lago, California, and stopped a night with me.

He was in very good spirits. Charles is now I think in the Huachuca Mts. I have not heard from him for ten days. Of Harry, I only hear through Charles, who writes once a week.

I have just had a pleasant visit from a friend whose acquaintance I made when in service with him in the State Irrigation department of Cal. We were several months together in that business. He was on his way to New York, but managed to stop a day or two with me.

I showed him the few interesting sights of this ancient town, which was begun centuries ago, and then drove him up the Santa Cruz Valley to visit the old mission church of San Xavier del Bac and the Papago Indian villages.

Everything seemed so strange and different from anything the youth had ever seen before, that he declared he almost believed himself transported to another world.

Tucson is now in mourning for our President, and almost every house is draped in black.

To-morrow appropriate services will be held. Away off here upon the border of our great country, the loss of the President is keenly felt as in the more populous and central regions.

FROM CHARLES.

Tombstone, Arizona, Oct. 6, 1881.

(Some of the Mexican names are too little for me to copy.)

Will and James Smith, from our old home in Virginia, landed at my place in Chiricahua Mountains with but one poor little flying pan, a little tea pot without a top, an oven, one fork and three knives, and one thin blanket between them.

Will had a tolerably good suit, somewhat worn, but James had no regular coat except a thin overcoat with the tail torn off. They had with them about four pounds of flour and a little meat. They had ridden in on an ox wagon from Silver City, New Mexico, to Tombstone, and walked from there to the mines. John and I soon fixed them up. Will went to work at once in our little assay office, and James picked up little jobs about the town.

The camp went down as we had to leave that region. Just as we were ready to start, the cow boys came along, and stole all my mules and saddle horses, with which I was well provided, having four uncles and two fine saddle horses.

So it took "the last button on John's coat" to get together two more horses to enable us to leave the camp. I still had my two-horse wagon, the entire assay outfit, tents, cooking utensils, etc. so with the two little horses I had gotten from a man that owed me, we set out for Tombstone, a distance of a hundred and fifty miles.

We were so heavily loaded that only the driver could ride up hill, but going down we had the pleasure of getting in, whenever we could find room. Sometimes the poor little horses would refuse to pull, and then all hands had to walk and push with might and main.

The second night found us at Fort Bowie, without feed for the horses, and we were told that there could be had for love or money. But an old acquaintance of mine managed to get me a sack of barley, and we set out refreshed the next morning. It took us seven long days to reach Tombstone, and we were glad enough to go into camp near the town, and after resting, John and I mounted the horses and looked about for a suitable place to locate.

After looking about us for a day or two, I selected a lot on 9th St., rather out of the business part of the town. Lots were selling pretty high at the time, and only \$10.00 (ten dollars) could be found in our crowd. I looked up the owner of the lot, who proved to be a carpenter, and I soon discovered that he was much in need of a set of harness. Coming along, Will had found an old set, and had thrown it into the wagon, so we flashed over my mind at once that we might make a trade.

Then I said to the old man, "I haven't any money just now, but I have a fine set of harness, which I am willing to exchange for your lot, and as I want to build a house, I may be able to throw some work in your way." The bargain was made, and we returned to camp rejoicing. Will got a job of painting, James found some work too, and John and I hauled wood from "Dry-goods mountain," fifteen miles away, and sold it in the town. Wood like ours, nice and dry, was worth ten dollars a load, and we could make a load every other day. All this time we lived in the tents, which were nearly worn out. For several weeks, I met a man who wanted just what we had, and we sold horses, wagon and all for two hundred and forty dollars cash. John took the money, and spent most of it

in lumber and nails, enough to build us a house 12 by 24. We boys built the house except three days' work put in by my friend the carpenter.

After that, John and I made sale of two mines, which brought in about two hundred dollars. By this time, Will and James were out of a job again, and I kept the ranch running, and from step to step we have been rising, and we feel that we are steadily gaining, though we are not yet very flourishing.

The Indian troubles have been exaggerated hitherto, but at present things really do look serious in the district. Several men were killed by Indians lately, within a few miles of the town, and people from the mountains are coming in now by hundreds.

The women and children are terribly frightened, and most of the men were up all last night organizing companies to go to the rescue of the ranchers, prospectors, wood choppers and hay cutters. I have been drilling with them. Some have already gone, but I do not mean to go or to fight either, unless they crowd me there are plenty of soldiers, whose business it is to look after Indians, and I have something else to do.

To-day I am alone in our little cabin, my only companion being a cat, which was very brave and cross when I first found him, but is becoming quite gentle and affectionate now. The other boys have all left Tombstone for the present. John has now a good place in the office of the Attorney General, and Will has found employment in California. James has traced his four horsewheels and have the ranch all to myself. Perhaps I shall be able to carry out my plan of going to New York on January 1st, and if I do, I shall be sure to find time for a run up to Old Virginia, and shall see my dear friends once more.

## WHAT IS EDUCATION?

Lecture delivered to the students of Hampton Institute by Dr. J. A. C. of Boston, Mass.

Plato says the great art of education is to dole correctly. People are talking at odd with each other about education because each important means a different thing. So I will begin my lecture by an illustrated definition.

## WHAT IS EDUCATION?

Education means three things, each of which is as absolutely essential to the whole as is a side of a triangle.

1st, It means To Know Something.

2d, To Do Something.

3d, To Be Something.

To know is to have a good many things and be a Do-something and a Be-something. A man may be perseveringly active at everything, yet work at cross purposes all his life for lack of intelligent and judicious character. A man may be religious and moral, as far as intentions go, yet be a fanatic, or an imbecile, for lack of mental power or executive push. The world is full of "head runners," and worse of failures that keep on their heels and won't come to be decently buried, for lack of one of these essential elements of education.

You are to be taught and trained — to educate children — to American citizens, after the pattern of that great and good and lovely man who only yesterday stepped from the summit of citizenship in this Republic to the freedom of the city that hath foundation in heaven. If you fail in either of these respects, your work will go to pieces and the names teacher and school become words of reproach.

1. Education means first to Know Something. What is it to know something? It is the common definition of people who have the charge of children that, if their minds can be filled with the contents of books, they are learned.

"He knows the books" is said of a famous lawyer. But a distinguished writer says that that's what the matter with the law schools; that their professors know the books but are not practical lawyers, and send their graduates out unable to face the docket and set a case.

So, many graduates of medical schools fail; they have read and heard lectures about the body, and seen it cut up after it was dead, but stand before a suffering, living man, and are unable to do him any good.

How many a person knows what all the authorities say about the Apostle Paul, but never caught a glimpse of the first great statesman of Christianity who organized the true religion into a working force on earth.

So, the young graduate of the Normal, who goes into a country school with a beautiful theory of the way to do it, and Prof. Timmy who sits at the front desk and crams a castle of fine methods to pieces before recess the first day.

The chronic curse of school keeping is the delusion that a child knows anything while its memory contains the contents of a book learned by rote and recited in the way it went in.

Before a child can learn anything it must first be awakened to a love of truth and a desire for knowledge.

A boy has a tremendous longing for a big peach he sees the other side the wall. He

measures the distance, climbs over the iron spikes and glass bolts, fringes and pockets his prize. He knows something about that peach. The first thing for the teacher is to awaken the curiosity of the child, the desire to know; then, to show the necessity of accurate knowledge, truth. That is a moral act, the basis of all moral instruction.

The second thing is to open the senses, educate the faculties of the child to deal with things rather than words—a tree is best learned by observing a tree—and so on. Wake up the faculties by inspecting the thing itself. You may teach music on paper a year, and not teach one to sing a note. Teach music by teaching sound and song. The same with language.

Your object should be to train the child to become a student in God's great University of Nature and Humanity; God's University which is always open and in which many of our greatest men, such as Lincoln and Washington, have been educated. Without dependence on human scholars. The teacher's greatest advantage is not in abundant scholastic learning but in skill in preparing the children to graduate from his school into God's.

2d. Education means to Do Something. Observe the difference between one who simply has knowledge, and one who puts his knowledge into his life. The mind often becomes the more helpless, the more that is crammed into it—like a sausage crammed full of herbs. Take a youth after fifteen years' such cramming—he can do nothing.

Teach the child to use his active powers all the time. How?—No industrial department in your school—Haven't you?

You have a house and lot, and that is a little kingdom to train and improve. Teach the children to call that place their home, to keep it and beautify it—like Adam and Eve.

Home is God's school of industry, and impress upon the child the obligations of love and duty. Home study is a curse if it interferes with these. You have no right to rob a child of this true life discipline to push him in his studies. Home obligations are highest. His father and mother want him—he may have a sick sister. But school of industry is God's school. Put knowledge into every day home life.

3d. Education means to Be Something. Little children have an idea that it is of no importance what they are. But Jack is the little pin that holds together a family, Jenny is the keystone of a camp of girls.

Each of our pupils is a creature endowed with a new chapter from the books of God to be a character unique and original. Try to let the child's character feature—exercise it—help it out into its true life.

## FROM DAKOTA.

The following report of some of Hampton's returned Indian students has been received from Rev. C. L. Hall, missionary at Fort Berthold Agency, Dakota. It was crowded out of our last number, and is several months old, but no less favorable news has been mean while received. The crucial point in the whole work for the Indian student is his return home, and its greatest hope is the care with which this point is guarded. It cannot be said to be a fair test of the value of education in itself, for him, anywhere than it would be for a white boy to be thrown into surroundings of evil temptations, but it is the test of the success of his training, and no pains should be spared to help him pass it.

By Berthold, D. T., Nov. 28, 1881.

My Dear Lieut. Brown: Yours was received in latter I had written to Hampton about the boys and girls, and I suppose you will have heard from Gen. Armstrong, when this reaches you.

Josephine does well, and does not know whether she wants to go back next year or not. The boys are at work, except the two young ones, who have now given up their work at the Agency saying they prefer to go to school this winter weather. Karunach and Ahkha have been ploughing and helping in general work at the agency, but now the Major is sowing Indian seed, and there will be ear-pentering for Ahkha. Laughing Face and Tom Smith are herding, and have been for some time 25 miles up the river from here. Josephine and Ahkha and Karunach attend quite well on Sabbath days, the others do not, two being away.

We had a beautiful day yesterday, Sunday, and a large number came out to hear about the "Serpent in the Wilderness." One said to Josephine, "I think what is said must be true." Surely our work will not be in vain. If it is the Lord's work he will (in spite of all our imperfections in it) establish the work of our hands.

Yours sincerely, C. L. HALL.

# Southern Workman.

TWELVE PAGE MONTHLY.  
(Reduced to eight pages from July to October,  
four months.)

S. C. ARMSTRONG, } Editors.  
H. W. LUDLOW, }

Mrs. M. F. ARMSTRONG, } Regular  
Mrs. G. A. ARMSTRONG, } Contributors.

Terms: ONE DOLLAR a year IN  
ADVANCE.

Specimen copies sent upon application.  
To secure safety, it is important that money  
should be sent by check. Post office orders, or  
registered letters. Write plainly; give name  
in full, and name of Post-office, County, and  
State to which the money is to be sent.  
A limited number of advertisements inserted  
at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 25	5 00	9 00

J. F. B. MARSHALL,  
Business Manager, Hampton, Va.  
Entered as Second-class Matter in the Post Office at  
Hampton, Va.

The Southern Workman, devoted to  
the interests of Negro and Indian civil-  
ization, is edited and managed by the officers  
of the Hampton Institute, and printed  
on the School Press by colored youth  
trained in the office. Subscriptions are a  
help to the School. It is sent on trial for  
four months for twenty-five cents. Job  
work, from all parts of the country, is so-  
licited, and will be done cheaply and well.  
Estimates will be sent on application.

In October last, forty-five Indian youth  
were brought from Dakota Territory to  
the Hampton Institute, to replace thirty  
all but two of whom had finished a three  
years course of training and been returned  
to their homes. For lack of funds, the  
Commissioner of Indian Affairs had au-  
thorized us to replace them with only an  
equal number, but the opportunity of se-  
lecting promising young Indians was so  
good that forty-five, fifteen more than the  
authorized number, were brought to  
school.

The following is a list of children, mostly  
Sioux, for whom no public provision  
has been made besides their expenses to  
Hampton:

## BOYS.

Medicine Bull, age 20, from Lower  
Brule Agency; son of the principal chief,  
is learning the carpenter's trade.

Tashkaneah, aged 16, from Chey-  
enne River Agency, nephew of Chief  
"Little No Heart," is learning the wheel-  
wright's trade.

Thomas Tuttle, aged 16, from Yankton  
Agency; son of "One Cat," from St.  
Paul's Episcopal School, is learning the  
carpenter's trade.

David Stricker, aged 16, from Yankton  
Agency; son of "Whirling Rock," a brave  
who has settled on a farm, is learning the  
wheelwright's trade.

Cracking Wing, aged 14, from Fort  
Berthold Agency; son of "Elk Feather,"  
a brave, speaks five Indian languages, is  
learning the tinner's trade. Is very bright,  
but not robust.

Many Birds, aged 13, from Fort Ber-  
thold Agency; son of the principal Chief,  
"Poor Wolf," works in the engineer's de-  
partment.

Joe Marsh, aged 12, from Peoria Bot-  
tom; his parents have taken a homestead;  
works on the farm.

Battiste Gabe, age 15, from Peoria Bot-  
tom; his parents are on a homestead; is  
learning the blacksmith's trade.

Joseph Arkambault, aged 10, from  
Standing Rock Agency, is learning black-  
smithing. The last two are half-breeds,  
sons of Frenchmen.

## GIRLS.

Mary Walker, aged 12 years, from  
Fort Berthold Agency;  
Susie Nagle, aged 12 years, from Fort  
Berthold.

Rosa Bear Face, age 16, from Standing  
Rock Agency.  
Maggie Yarrabee, age 10, from Peoria  
Bottom.

Zattie Rulo, age 16, from Yankton  
Agency.

All the girls are taught to cut, make  
and mend garments, do house-work of all  
kinds, and take cooking lessons. Boys  
and girls both go to school half the day,  
and study evenings, working the rest of  
the day. The above named are helpful  
pupils; among the best of their race. It  
was thought that means for their education  
would be supplied if the government were  
unequal to its duty in the matter.

The five girls are already provided for  
by a lady who feels that those whose lands  
were taken from the Indian, and whose  
fortunes were founded on the products of  
slave labor, have a duty to these races.

For the ten boys, no provision has yet  
been made, up to the last of June next,  
the end of our school and fiscal year.  
Not being on our hands the entire school  
year, the expense of each one for board,  
clothing, and manual and mental training  
will be not over one hundred and fifty  
dollars apiece.

From July next, it is expected that  
the government will take care of them, though  
there is no guarantee of it. Our friends  
do not realize how far it is from public ag-  
itation about, and interest in Indian  
education, and adequate public provision for them.

This statement is published in the hope  
that the ten Indian boys now unprovided  
for may find friends who will assume their  
school expenses till July, at the rate of  
\$150 apiece.

The following is an experience of two of  
these boys, as related by themselves:

## DAVID STRICKER.

I receive a letter from my friend. He says  
the governor's school was finished everything  
inside and outside. And the Agent got ten  
boys from Sitting Bull. When I heard that  
I am very glad. I think those people going  
to learn how to work. So many of them do  
not know any thing at all. I sometimes was  
told those people all the time because wild  
and poor.

When I come from Dakota I saw a great  
many things, cars and steamboats and every  
wonderful thing. I don't know how to go  
and stop. I didn't see how to make, and I  
never saw the cars before. When I go back  
to my home I going to tell all this.

## THOMAS TUTTLE.

My grandfather lives at Cheyenne, and I  
was eleven years old. I began to school at  
St. Paul's School.

I was a bird-boy in Sep, and I didn't go to  
school but I herded the cows and ponies all  
the time except on Saturday, because when I  
didn't herd them they all go to the Indians  
field, and ate the corn and oats.

I am very glad that I came here and I am  
going to learn a great many things.

We have before us copies of four sepa-  
rate bills introduced into the forty-seventh  
Congress, three of them to establish  
an educational fund from the proceeds of  
public land sales and the profits of the Patent  
Office, the interest of which shall be  
divided among the states for the first ten  
years on the basis of illiteracy; one  
third, however, being devoted to the  
Agricultural Colleges. The other, intro-  
duced by Senator Blair, of New Hamp-  
shire, enacts: "That for ten years next  
after the passage of this Act there shall  
be annually appropriated from the money  
in the Treasury the following sums, to wit:

The first year the sum of \$15,000,  
000 00, the second year the sum of \$14,000,  
000 00, the third year the sum of \$13,000,  
000 00, and there after a sum diminished  
\$1,000,000 yearly from the sum last ap-  
propriated until ten annual appropriations  
shall have been made, when all ap-  
propriations under this act shall cease;  
which several sums shall be expended to  
secure the benefits of common school edu-  
cation to all the children living in the  
United States." The bill specifies the  
rudimentary studies to be pursued;  
that the instructions given shall be  
free to all, but recognizes the separation  
of races by insisting that equal benefits

shall accrue to both, if separated, and that  
the entire amount shall be distributed  
according to the illiteracy of the several  
states as shown by the census of 1880.

The Secretary of the Interior is to have  
general charge; the money to be expend-  
ed upon the concurrent action of the  
Secretary and the Boards of Education of  
the states, each having a negative on the  
other.

One-tenth of the fund may be used in  
holding teachers' institutes and in aiding  
poorly students at higher schools, pro-  
vided they shall agree in writing, to teach  
at least one year. Non-sectarian public  
schools may be aided, or new ones, may be  
established.

The design of the act being not to es-  
tablish an independent school system but  
to help those in existence, it provides  
that no state shall, for the first five years,  
secure its allotted portion unless it shall  
appropriate of its own funds at least one-  
third of the government grant. For the  
next five years, it must supply an equal  
amount. To get a million, it must give a  
million.

Five per cent. of the fund may be ex-  
pended by the Secretary in renting or  
building school houses in destitute places.

Section 3 of the Act provides that  
The President shall appoint in  
each state a Commissioner of Schools,  
who shall be a resident thereof, to ex-  
ecute the provisions of this Act, co-oper-  
ating with state authorities. Salary  
from \$3,000 to \$5,000; to report direct to  
the Secretary of the Interior. The Na-  
tional Bureau of Education shall be the  
Secretary's medium of communication with  
the states.

Secretary Blair's bill, if passed, will, in  
ten years, give the sum of one hundred  
and fifteen millions of dollars to the cause  
of common school education in the United  
States; of this, about eighty millions  
would go to the former slave states, far  
more than doubling, for the first five years,  
their present annual provisions for com-  
mon schools.

A title of educational sentiment has at  
last reached Congress.

The South provided free schools as a  
necessity long before it believed in them,  
but for six years past has steadily increas-  
ed its faith and work in that direction. The  
North, since emancipation, has aided  
Southern schools by charity to the extent  
of seven or eight millions of dollars, for  
precisely the reason that government  
should have done it fifteen years ago—the  
need, the justice, the humanity of it.

The South is likely to be unanimous in  
support of Senator Blair's bill in spite  
of state right doctrines and their opposi-  
tion to centralizations.

Serious opposition is to be looked for  
only from the North, by reason of the  
their unwillingness to trust Southern men  
with so much public money.

We write on this subject chiefly to  
point to the fact that public sentiment in  
Southern States is keenly alert on the  
school question. Their own educational  
fund is watched with a jealous eye.

The Negro passion for education has  
quieted from a fustet or flood to a  
steady current: it is not universal but  
generally; many of the blacks are indifferent,  
but the best portion of them are still  
earnest, not blindly eager as formerly.

Since the war, not a little by the enthu-  
siasm and progress of the Negro, the  
common whites have felt an increasing  
care for the instruction of their children,  
and to day they appear to be quite as  
much interested as the latter in the  
school question. Separate schools are  
and long will be the order of the day. If  
they were not there would be no black  
teachers, and the best career now open to  
an educated Negro would be closed to him.  
Mixed schools would, we think, de-  
stroy the esprit de corps of Negro stu-  
dents. In spite of many disadvantages of  
separate schools, let them go on as they  
are.

Senator Blair's bill provides a sort of  
dual administration of the fund by way of  
government commissioners, who shall co-  
operate with state authorities. There  
might be friction from this, and perhaps  
Southern opposition to it as reflecting on  
their integrity.

Most undoubtedly, general inspectors

should be appointed to report to the Na-  
tional Bureau of Education.

Perhaps the best plan would be the ap-  
pointment by each State of two Commis-  
sioners who, with the Superintendents of  
public schools, would constitute a state  
board, who would advise the Secretary  
of the Interior, through the Governor,  
the most explicit, detailed statement of ex-  
penditures.

It would be best to create a wise sys-  
tem, and then put each state on its honor.  
It has been thought that the maximum  
appropriation should be in the third  
year rather than the first, so that the bet-  
ter preparation might be made for the use  
of it.

Public aid to any enterprise, but es-  
pecially to an educational one, has its bad  
side.

The Hampton Institute receives \$10,000  
a year from the State of Virginia, as an  
Agricultural College; \$10,200 from the  
United States, for educating 65 Indians,  
at \$150 apiece, but about thirty thousand  
dollars a year from private contributions,  
for current expenses; and, for the last three  
years, nearly the same amount for building  
purposes. Its strength is in the public  
sentiment it represents, which is its perpe-  
tual, increasing, and sure support, while  
well managed.

It cannot afford to take much more pub-  
lic money. The less institutions do not,  
as a rule, seek or wish it. Support means  
control, and control by politicians is not  
desirable. State school systems must de-  
pend on taxation, hence are creatures of  
government, but being wide spread and in  
direct relation with the people, get the  
benefit of the general public sentiment.

Whatever furnishes offices is dear to the  
heart of one who wishes votes, and to that  
extent is liable to suffer from the exigen-  
cies of political warfare.

Educational sentiment is in some States  
so far advanced that change of parties  
does not affect public institutions, which  
are, so far, at little or no disadvantage  
from such control. At any rate, it tends  
to dry up the springs of private benefi-  
cence.

There need be no points of contact be-  
tween the good will of the people as ex-  
pressed in clarity, and the black and red  
races of our country, for the sake of mutual  
benefit and interest.

Had not these millions been given to  
Negro education, the Northern sentiment  
that demands government aid would hard-  
ly have existed! Those that do the one  
call for the other, for they care most about  
it. The heart is where the treasure is.

The average Northern politician is the  
most indifferent and hopeless factor in the  
problem of Southern education. The  
Southerner can be counted on, for the needs  
of his people press up in him.

The political papers are remarkably  
quiet on this matter. What does one read  
in them these days, when four national  
educational bills are before Congress?  
Look at the New York and other city  
dailies.

They have hardly preached salvation  
for the South by ideas. Their aid would  
go far to insure the passage of one of  
these bills. The time has passed when  
salvation is of parties.

The Negro vote will, hereafter, rally  
around new and local rather than old and  
National centers. He will not stick much  
longer to his old guides. The howls that  
once came up from the South about black  
men's role will be echoed from the North  
when most of the work of the last ten ses-  
sions of Congress to secure his political  
rights resulting in his having them all,  
will seem farcical from the wild doings of  
Negro majorities in some Southern States.

They must go through all this, as men  
learn to swim by going into the water.  
But they have not the needed preparation,  
the ideas. Had public men cared as they  
should for the welfare of this race and of  
this country, they could now have done a  
great educational work from 1865 to 1882,  
trained three generations of Negro chil-  
dren at the rate of six years to all of the

children between eight and fourteen years of age. They gave three and a half million through the Freedman's Bureau, but dropped it as a troublesome burden and turned their wards, for all moral needs, over to Northern charity and to the tender mercies of the impoverished old owners, whose efforts for them have been, under the circumstances, truly wonderful.

#### EDITORIAL CORRESPONDENCE.

OHIO RIVER, STEAMBOAT "BOSTON."

Dec. 28, 1881.

En route from Cincinnati to Hampton, West Va., 100 miles up the river, thence by rail to Norfolk and Hampton, a trip of two nights and two days. Sitting away forward on the upper deck of a regular Western steamer, just away from the landing, and making good speed, in a current of six miles an hour—for it is "big water" these days.

The Kentucky shore on the right, is not as interesting as that of Ohio on the left, for the city of Cincinnati not only lies the bulk but retreats far back, and the hills in the rear are finely crowned with conspicuous, if not always elegant buildings. It is, as usual, nearly hid in smoke, which, with dirty soil, is the plague of house-keepers, and the bane of all municipal beauty. Soft coal is used, creating dark, smoky columns, which rise solemnly, perpetually, unless a city ordinance to the effect that factories shall consume their own smoke, prove a success. Its possibility is admitted, but its practicability is denied on the ground that it will in some way injure the furnaces. The city stretches for eleven miles along the much-heated river, and contains about 250,000 inhabitants.

These river craft are queer to one who has lived by the sea. They are more like moving houses; they are a mixture of land and water architecture; they are not meant for waves, and one is inclined to have a little contempt for them, while admitting their utility. The lower deck is open, noisy, and machinery is placed, or rather stowed, and freight is piled. Above is a long narrow saloon, state-rooms on either side, and a conspicuous notice that gambling is not allowed; then the upper deck, affording a fine view of the country around.

An old settler, with whom I seraped acquaintance, said that the Ohio side is occupied chiefly by Germans, who have small but excellent farms. Owing to slavery, they never moved to the opposite shore of Kentucky till recently. They are now spreading gradually over the latter, introducing a thrift unknown before. He said that the river was continually cutting into the farms on either side, carrying off many valuable acres. This is prevented, in part, by planting willows on the banks; miles of them are already protecting the shore.

As it grows dark, the saloon is lighted; passengers gather around the long row of tables in the centre, and read, or chat, or play cards, all in quiet and order. The scene is interesting, and becomes quite brilliant when a young lady performs on the piano. Children amuse themselves in the pleasant parlor of the saloon. Here is a space of 35x25 feet, full of cheerfulness, contrasting with the rougher side of life below. The one is convenient and proper, and does not entertain one long; the other is picturesque, and interests one at every turn. Negro hands group themselves around a stove, and smoke and chatter: some are stretched out sleeping, on rows of barrels. On each side, a gigantic beam conveys power from the engine to the wheel. Amidships are the boilers, heated by fiery furnaces, into whose glowing mouths a set of swarthy hands throw quantities of coal; their faces are lit up by the blaze; they seem trying to satisfy an insatiable monster; they hardly seem human as they labor in the world light.

A host of waiters flies into the saloon, tables are cleared, cloths are tossed into the air and come down smoothly on them; spoons are rung over the saucers, and in a few minutes, tea tables are spread out, and about a hundred passengers sit down to supper. The dexterity of a colored waiter with a loaded tray is wonderful; it flies through the air on the tips of his fingers, and at once a dozen dishes alight before you. The supper, as well as all the appointments, is good.

It is moonlight on the Ohio. Our lantern glides into the shadow of a high bank, or shoots across a sheet of silver. On the upper deck it is glorious, sweeping up this noble river, under the many lighted windows, indicating comfort and happiness—there, perhaps, is the "Old Kentucky Home." It is equally fascinating to stand on the lower deck and watch the water a little below. The sense of wilderness is exciting.

The boat whistles as we near a stopping-

place, then puts out a long banded iron hammer blazing with soft coal, illuminating the landing. This stream of fire, sometimes six and eight feet long, is the most picturesque thing in all this life.

This was the dead-line of slavery. Thousands were eager to cross it, but feared the bullet or bound that would follow. How they prayed and agonized on one side, and rejoiced as they reached the other. Here was the contrast that once shook the slave system in its centre. The thief of Ohio and the comparative poverty of Kentucky were clearly shown to be the results of free and slave labor, respectively.

The "Ruffner Pamphlet," which demonstrated this (written by the father of the present Superintendent and the creator of the Virginia School system) brought the Virginia Legislature, about thirty years ago, to within one vote of declaring gradual emancipation. But the invention of the cotton gin multiplied profits, doubled the value of the black man; the money argument was too strong. They claim, however, that, but for Northern agitation, they would have worked it out in time; that emancipation in the Northern states was a measure of economy rather than of humanity. The argument from justice, and humanity never seemed to have much force. Military action made the motion to emancipate in 1863; justice only scolded it. The North and South, as a whole, have always been morally very near each other on the question of slavery. The agitation was practically repudiated by both until the war. The North was wiser but not bolder in this issue.

#### Thursday morning.

The river is still broad and majestic; we pass many wide-awake looking towns on both sides: there are lots of iron foundries; we see their columns of smoke ascending, far up and down the stream. At ten o'clock, we reach Hampton, the original western terminus of the Chesapeake and Ohio railroad, which now reaches Cincinnati, and Louisville Ky., making at these points, far-reaching western and southern connections. The thriving town; a good future is predicted for it.

Now for Richmond and Hampton by rail, through the two Virginias, thirty-six hours more. I have long wished to take this trip, especially for the scenery of West Virginia, and can hardly realize the fact. But why this letter? What business have I to be on the Ohio at this time of the year?

The American Missionary Association of New York city, representing chiefly Congregationalism and the New England idea, has, under its charge, ten large chartered institutions for the higher education of the colored men, and twelve High and Normal schools, all, in spite of difference of plan or theory, working practically to the same end; the preparation of teachers for the colored race. They contain some six thousand pupils, and are a quiet but tremendous power for the welfare of that race and of the country. They cost about \$250,000 a year, most of which is wrung from the rocky hills of New England by toiling farmers, or made in manufacturing enterprises. Already, (since 1852) over four millions of dollars have been expended by them for this cause; a kind of cause, so far, hardly ignored; their staidity will be recognized later in our history. This work is coequal in importance with the Constitutional amendments, as a foundation for the success of emancipation and the salvation of the South. Though confined to the blacks, it has proved a stimulus to the whites; this most important, indirect result is far from being understood.

The officers of the American Missionary Association had long felt that a greater unification of their work was necessary. One of them stated his conviction that a loss of twenty per cent of possible results was occasioned for want of it. Accordingly, Presidents Ware, Alexander, Craveth and Pope, of the colleges at Atlanta, New Orleans, Nashville and Tallahassee, Ala.; the heads of ten Normal and High schools from Savannah, Mobile, Memphis, Tongoloo, Mecon, Charleston, Atlanta and other places were summoned, and met at the Fisk University, Nashville, Tenn., on Monday, Dec. 28, 1881, for a conference.

Ex. Gov. Washburne of Massachusetts, President Rev. Dr. Strieby and Rev. Dr. Ward, Secretaries; and Rev. H. W. Ward, Editor of the "Independent," of the Executive Committee, represented the Association. President Fairchild of Berea College, and myself were invited to be present. Both Berea and Hampton were originally under the control of the Association, but became, by mutual consent, independent, undenominational, always, however, keeping up the most cordial relations with the parent Society.

My own part was with special reference to industrial education, which the Association is more and more disposed to recognize as a

great need of the Negro, and to incorporate in their institutions. I arrived Tuesday morning, direct from Hampton and left for Hampton the same night, by the shortest route. Hence this letter from the Ohio river.

With reference to the higher or collegiate education, a uniform course of study will be adopted by the preparatory of high school; its carrying out will be supervised by the central power in New York city, and an almost ideal unity will be created in the Association's strong and splendid system of Southern institutions. There are no State officials to putter over it, no matter-of-course routine to follow. Wide-awake men—New England men—will have their way and do the best they can.

What wouldn't some Northern college presidents do for such a chance to organize the schools that feel their institutions.

It is notable that, in Western college work, there is no such unity; no grasp of the whole by a central Society in the East who collect and expend in good faith for the good of all, representing sundry calls from any one, and preventing disproportionate disunity or war.

The geographical distribution of the institutions of the American Missionary Association is very remarkable. The leading ones are: Hampton, wonderfully with the decisive battle-line of the war.

Hampton Institute was placed at the centre of all, representing sundry calls from any one, and preventing disproportionate disunity or war. The geographical distribution of the institutions of the American Missionary Association is very remarkable. The leading ones are: Hampton, wonderfully with the decisive battle-line of the war.

All these institutions are doing well; all are crowded with students as never before, need help more than ever, and justify their existence, not only by the direct work they are doing, but by the spirit of peace, and good-will in which they are conducted.

The little company in the parlor of Fisk University at Nashville, represented, in some measure, the agitators who had formerly exhibited the South, kindled its hatred, and unceasingly piled up the fagots that finally blazed out into civil war. There we were, every one of us, in the pleasantest relations with our Southern neighbors, and the representatives from New Orleans, whose college occupies a fine square in the most fashionable and attractive part of the city, having, perhaps, the most actively republican with the ex-slaveholders and ex-convicts.

Not one of us would entertain the experience "A Pool's Errand." The past had not been all peaceful, but so little men knew that time of civilization have such changes in thought and action been accomplished in so little time. Never did so ready a harvest of good come from so quick a sowing of seeds with the blood of men. To-day, the Southern movement, whether educational, moral and religious, or commercial, is going on grandly. But the South is carved with the people of this country have a peculiar relation and a duty that must be done: as much for one race as for the other. Help can be adequate only as Congress shall aid, but its inspiration, the effort and sacrifice that create inspiration, can only come from making this cause, which is everybody's duty as much as our own, personal to ourselves.

Tuesday last was mainly devoted to industrial interests. In various institutions, labor departments had been opened, and there was some fear of conflict of interests or claims, for the resources of the Association are for such a field, very limited, and the earnest workers who realized the need of practical education for a race who are destined largely to be farmers, and who, though now number many carpenters, masons and blacksmiths, (trained in slavery,) are gradually losing ground as mechanics for the want of opportunities to learn trades, pressed most vigorously the need of increased industrial education, and tools; and could not well be satisfied without more appliances.

It was understood that educating the hand and head together, costs more than educating the head alone; that instruction and not production is the main thing in industrial education; the money question was therefore serious. After a candid, full discussion, the industrial policy of the American Missionary Association was decided, about as follows:

Tongoloo University, Mississippi, with three hundred students, (the officers of this Society fully realize the uselessness of some of the high sounding titles given years ago by enthusiastic predecessors) has the best soil, a fine, large farm, a fair home market and a market in Chicago for all the strawberries the students can raise. It will probably be the

leading agricultural school of the Association, having the most favorable conditions for success in that direction. Its President, Mr. Pope, made an excellent statement of its case, pressing most strongly the need of an industrial education for the Negro. It has many ways that ought to be supplied at once. Tallahassee College, Alabama, (350 students, Rev. Mr. De Forest, President) has, like Tongoloo, a Normal course, and is also preparatory for the University at Atlanta or Nashville. It owns plenty of land, but the soil is poor. The agricultural department is, however, being pushed with energy and hope, under the best conditions, but it is so well worth doing, the effect of self-help on students is so marked and so desirable, and the management so wise and excellent, that the labor department of Tallahassee is likely to be sustained, but not very highly developed, to supply for home consumption only, as there is no good outside-market.

Prof. Steele, of the LeMay day school, at Memphis, Tenn., with about 300 students, gave an interesting account of his instruction of girls in the arts of cooking and household industries, nursing and caring for the sick, and clearly showed his claim to lead all the schools in the work of fitting Negro girls for the practical duties of life. Here was undoubtedly a work to be pushed, and the Association is likely to push it. Prof. Steele is thoroughly in earnest, and seems the man to develop a capital girls' training school.

President E. A. Ware of Atlanta University (of over 300 students) which is doing the largest work for the higher education of the blacks of any institution of the country, gave an interesting account of teaching his colored girls the art of cooking. Once a week, they give a dinner of their own cooking to teachers and students, and thus test practically their proficiency. He thinks that melon-cake training might be introduced, separate from the University, in the training of Atlanta. The idea struck me of high force. The Association could do nothing better than erect a plain, large shop, in a suitable locality, employ a few good foremen, get pickled young men to give their time for six months or a year, to learn the carpenter's, wheelwright's, blacksmith's, and shoemaker's trades;—they could well afford this;—then go on fair wages. This shop could compete for putting up cheap but sturdy wagons, horse and cart, and make shoes. It would require a considerable plant. It should have ten thousand dollars on the start, and not be expected to pay expenses. It probably would in from three to five years; but industrial education costs less than any other education. But it may work towards self-support, as Hampton will, I hope, ultimately.

Both indispensable: the latter, second, the man can create money, but money can't create a man. It is that the Association will establish the enterprise *excellent*, at Atlanta; for boys, as they will be the one for girls at Memphis, the agricultural side being maintained at Tongoloo and Tallahassee.

President Craveth of Fisk University, (nearly 300 students,) explained that there, as at Atlanta, all the students of every grade are required to work one hour a day as part of their payment for school bills. In both these institutions, much work is done by students, by way of wood cutting, grading and general duty. In all the schools of every grade, work is thus associated with study in varying degrees; the least work being done where the studies are the most advanced. In the latter case the students get their money mainly by teaching school, or from their own people, about one-fourth. Their needs being supplied by charity. They are by no means pauperized by this course, being, in the main, self-supporting. Still, I like it better as at Hampton, to reduce by giving work the charity aid to about one-tenth of the student's expenses. Then the discipline and skill acquired is a clear gain. All these institutions aim to supply to the colored race, intelligent, Christian teachers and leaders, who shall, by example as well as by precept, teach them the more excellent way.

All, but one of the above mentioned establishments, have a boarding department, which, in itself, is a great education, teaching right living and cleanliness, which are the conditions of godliness. In all, girls and boys are required to do some share of work. The average Negro student needs a regime which shall control the entire twenty-four hours of each day—only thus can the old ideas and ways be put to rest, and new ones take their place. The formation of good habits is fundamental in our work.

In a Northern school, these may perhaps be preapprehended; with us, they are an object, point one that is, however, easily reached, for the Negro pupil is, like the Negro soldier, most readily transformed under was control, into remarkable tidiness and good conduct generally. S. C. A.

## TONIO SOL-FA AT HAMPTON.

The new method of musical instruction known as the Tonic Sol-Fa system—new to this country but of forty years' growth in England, and now thoroughly established there—has been introduced at Hampton Institute. A description of the method as far as it can be described in a brief newspaper article will be found in another column from the pen of Prof. Theodore F. Seward, president of the American Tonic Sol-Fa Association, and chief agent in the introduction of the system in this country. Prof. Seward it will be remembered trained the celebrated Jubilee singers of Fisk University for their first going out. His assistant, Prof. B. E. Useldt, has given a month's course of lessons to the Hampton school, training also a class of teachers, by some of whom the instruction will be carried on at the Institute and in the Butler school. Prof. Useldt's work has been good and its results satisfactory considering the shortness of the course, which was only intended as an introductory one. The principal points of the system were gone over and quite enough done to prove its value and especial adaptation to this work. There is no limit to its application we understand, and in England chorales are written in it, and other difficult and classical music, and it is in very general use for chorus training. But its great advantage is naturally in removing the unnecessary stumbling blocks which in the old system clog the entrance to the beautiful art of music, to all who are not born geniuses. In these days of seeking after the laws of nature in mental growth, it is pleasant to know that a natural method has been found for teaching music as well as geography. While some musical experts who have forgotten or never experienced the difficulties which most beginners meet, may fail to appreciate the advantages of the new system, we believe that no one—no teacher especially—who with any sense of these difficulties intelligently studies it, can avoid a delighted conviction that this is the natural method for musical instruction. Its universal adoption in the training of the rising generation may make us a singing people and do much for the beauty and elevation of our home life. It is said to have been a great desire of its English originator, Rev. John Curwen, to see it employed for the colored race. It is now being introduced at Fisk, Atlanta, and Tallahassee as well as at Hampton. An unexpected incident of Prof. Useldt's Hampton course was his discovery of about twelve per cent. of the colored students unable to carry a tune, a larger proportion than one would expect to find in such a class. Is it any indication of change in their sensitive race characteristics, resulting possibly from contemplative abandonment of their own music because of its association with the days of slavery? If this is possible, and they thus throw away their wonderful gift of song, they will certainly live to regret it.

An interesting course of lectures on education has been delivered recently at Hampton Institute by Rev. Dr. A. D. Mayo, of Boston, editor of the New England Journal of Education. Dr. Mayo's labors for the last two years in the cause of education in the Southern states have made him widely known both North and South, and are giving impetus to the great educational revival out of which the New South is growing. Since he gave himself to this work, encouraged by Northern philanthropy and the endorsement of the President of the United States, the U. S. Commissioner of education and leading educators and public leaders of both sections, Dr. Mayo has traveled through many of the Southern states inspecting schools, white and colored, holding institutes, giving lectures to raise and instruct public sentiment, almost universally received with enthusiasm and gratitude. He has done much to introduce North and South to each other, and is well fitted to speak of the Southern question. He asserts that the growth of public approval of and interest in education for all classes is very real and general. There is, of course, much ignorance, and with it of

course, much apathy; not much active hostility to educational interests; but there is positive and remarkable awakening of thought on the subject, and in almost every place there will be found thoughtful men and women and young people eager for instruction and grateful for suggestion.

From Hampton, Dr. Mayo started up on another Southern tour to be more extensive than his previous ones.

## INDIAN VISITORS.

On the 24th ult. a party of six Pueblo chiefs, and the head chief of the Pima tribe, arrived at Hampton, from Arizona, under charge of Maj. B. M. Thomas, the Pueblos en route for Carlisle, to visit the children of their tribe and place two more bright little girls at school there. Eighteen Pueblo children are in the Carlisle school, and each of the six Pueblo towns they represent, had sent its visiting committee to look after them. They were a striking looking set of men, of shorter, stockier build than the Dakotas, but with large heads and friendly, intelligent faces.

Antonio, chief of the Pimas—another friendly, agricultural tribe in Arizona, about four thousand strong—accompanied the party to Hampton to visit his son Antonio, who, eighteen months ago, left his wife and baby, and farm of twenty acres, to his old father's care, and came to Hampton with his own little son and heir, and some other children of his tribe to encourage them, and "Learn more English and white man's farming." The meeting of father, son and grandson, was an interesting sight. Antonio is a progressive man, who lives up to his light, and tries to lift his people to his own level. He is a grey-haired man of over sixty, above medium height, with a good head, a thoughtful, serious face, and a simple dignity, quite impressive. When he started from home he had very long hair, coiled in braids almost covering his head. It had doubtless been his pride for many years, but when the party passed through Washburn, he slipped off by himself to barber's shop and had it all cut off, calling Major Thomas afterwards to see what he had done, and intimating by signs that he had thrown away one more Indian way. As he sat at one end of the chiefs' table at Hampton, with his son presiding at the other, a New Hampshire gentleman present remarked that he might easily be taken for one of the better class of New England farmers of the last generation, a man not afraid to stand before kings, self-respecting and respected for solid intelligence and worth. He had to ride four hundred miles alone to join the Pueblo party, and would like to have his son return with him, feeling his own need of him perhaps as well as the tribe's; but Antonio desires to stay longer to accomplish the object of his coming.

All the chiefs showed great interest in inspecting the school buildings, and class rooms and work shops, especially the latter, from which they could hardly be drawn away. Before the Pueblos left for Carlisle they were invited to the Principal's house for a talk. Their language is Spanish, and for want of a very fluent interpreter, not much was said beyond expressions of welcome and satisfaction. Major Thomas, however, who is a man of intelligence and long experience in Indian management as United States Indian Agent, under appointment of the Presbyterian church, and having lived eleven years among these people, gave a very interesting account of the Pueblos and of

## WHY VICTORIA WENT ON THE WAR PATH.

The Pueblos are self-supporting, living in towns, building houses of adobe or occupying the remarkable two and three story stone buildings left by their greater ancestors. They engage in agriculture in a simple way, and receive no rations and little attention from the Government, because they give it no trouble. They understand this well enough, and sometimes remark among themselves that if they should go out and kill a few white men, they would get presents too.

The Apaches number about nine thousand. Perhaps four hundred of them have been engaged in the recent fighting. The tribe is supported by the Government.

Major Thomas was Agent for those of this Agency which included Victoria's band. He says the Government kept Victoria's people on the move all the time, in a manner most unfair. The Apaches are a wild people, cruel in war and difficult to manage, but by no means unamenable to the proper influences. In the two years he was with them Major Thomas succeeded in starting them in industry. Victoria himself got to farming and working on irrigating ditches. They had at that time a delightful reservation and it had been promised to them and their children for ever. In the midst of these successful efforts, they were suddenly ordered to leave it. The decree of the Great Father was explained to the Chief. Victoria said, "yes, only give me some place and let me stay there." They were peacefully removed to the new reservation near the Rio Grande, after which, Major Thomas, disgusted with the break up of his successful labors and the unsuitableness of the new location, gave up the Agency, and procured a transfer to that he now occupies among the Pueblos. His successor, however, went to work, put up the Agency buildings and began farming operations. This made the Indians feel that they were settled, at last, and they began to go to work again. One pleasant morning all the troops at the Agency and in the neighborhood came crowding in and the stunning announcement was made, "You've got to go to Arizona." This was the first time, unwillingly, of course. Victoria and his band escaped, were pursued and driven into Fort Winnetka, there captured and taken back to their old Agency. From there they were of course ordered again to Arizona. Victoria said he would do anything the Great Father said but that. The same night he and part of his band took the cavalry horses and got away. About two hundred went on the war path. Not over fifty are now left alive.

It is the old story. White oppression and treachery and Indian retaliation. The tribe had been treacherously dealt with years before, by the army. Victoria thus described it. "The troops invited the braves into the Agency—gave them coffee to drink, and while they were drinking it, fired into the enclosure. They were so scared that the first they knew they found themselves in the hills with their cups still in their hands." The tribe never forgot it. "It took me a year," said Major Thomas, "to get them to go into a corral for a talk. Then they sent the women and children in, and the braves rode around outside to watch. The Apaches are naturally wild and warlike. I had hard work to bring them to anything like interest in civilization, but I was doing it, and it could be done for all. With ordinary good management the tribe would have been now self-supporting. There is no question of it. They were beginning to go to work. As for Victoria, he was always so quiet that I didn't suppose there was fight in him. I would have said he would be a coward; but when he really started on the war path he held out against two regiments of United States troops for two years." How long will it be before the knowing of these things means the righting of them?

## THE PUEBLOS WANT SCHOOLS.

The Pueblos are not ignorant of these things, but they have always been at peace with the Government and will continue to be. Three hundred years ago they drove the Spaniards out of their country, but were recaptured and reduced to a sort of slavery, in their mines. There are about 10,000 in all, occupying nineteen towns in New Mexico and seven in Arizona. They are supposed to be descendants of the Aztecs of Mexico, but their own ideas of their origin are vague. They make handsome pottery and good blankets. There are three schools open on the Arizona reservation, two day and one boarding school. The trouble is the irregularity of the attendance, yet the tribe is desirous of schools. Each of the three hundred could be had if there were accommodation for them. The best station for a large boarding and industrial school would be Albuquerque, and a donation of

land for one could be got from the town. The eighteen Pueblo children in the Carlisle School are counted among the very brightest there. This visit of their chiefs will have a great influence for good upon their tribe. They will have many wonders to tell around the lodge fires during the coming year. The sense of the white man's power, the desire for the white man's helping hand will be greatly increased. Have we no responsibility to meet it?

## THE BIRTHDAY OF LONGFELLOW.

To cultivate patriotism in the rising generation, a true devotion to their country, founded not on vanity, but on a just appreciation of its greatness and acquaintance with the men who make it great, is a part of educational work which has an important bearing on the country's future. There is danger in the reaction from American brag to a fashion of general cynicism. You can't make heroes out of sneerers, or useful citizens of men who have been brought up to believe in universal corruption. The tidal wave of feeling which rolled over the country when President Garfield was smitten down did a great deal to lift the whole nation to the higher level of a hearty enthusiasm. The best monument we can give our martyred President will be to keep his pure life, his golden words and deeds ever before the sight of American youth, growing up to American citizenship.

The nation is still in its early youth in some respects. While we have just celebrated our one hundredth political anniversary, some of the men who are the founders of American literature are still living. It is a graceful and admirable proposal of a well known Boston publishing firm that all the schools of the country shall unite in celebrating the birthday of our American poet laureate—Crawford with the first love of the people—Henry Wadsworth Longfellow—while the beauty of his living presence is still with us. The Hampton Normal School has for some years had its Longfellow days and the rest, Whittier, and Lowell days and the rest, devoted to recitations and readings from the works of the Masters, and very gladly joins in the coming Longfellow birthday celebration. We hope it will be generally observed, and gladly give place to Messrs Houghton and Mifflin's circular below:

The 75th birthday of the poet Longfellow, which will occur on the 27th of February, will be celebrated in many schools throughout the country by readings and recitations from his writings. To all schools which propose thus to observe this occasion, Messrs. Houghton, Mifflin & Co., of Boston, the publishers of Mr. Longfellow's works, offer to send gratuitously, copies of a neatly printed biographical sketch of the poet, with a fine portrait of him, and a picture of the famous and historic mansion at Cambridge in which he lives. Early application should be made, and the number required in each school stated. The Longfellow Leaflets, published by the same firm, are admirably adapted for these celebrations, and will be sent to any address, post-paid, on receipt of 50 cents, by the publishers. For 75 cents they will send the Leaflets and an excellent colored lithograph of Mr. Longfellow's house.

DIED.—At Waterville, Virginia, January 4th, of consumption, Werten G. Burke, a graduate of Hampton Institute in the class of '81.

An incident of his early school life is no index of the character of this young man. He entered the Preparatory class in '77, and at the end of the year failing of promotion, and being older than most of the students, was dropped from the school. The next October, however, back he came, and requested an examination, saying that he had been studying up all summer. He was examined, and to the general surprise, made the middle class, skipping the junior. The next year he was promoted to the senior class and graduated with an honor. Faithfulness in all things, and earnestness of purpose, carried him through, and would have made him a very useful man among his people. He was a conscientious, Christian man, and had intended to become a minister as well as a teacher. His health had long been failing however, and though he rallied for awhile and took a school, he held it only two weeks, dying in the harness.

## SCHOLARSHIP LETTERS.

The season has again come around when every student of Hampton who can write a letter in English, is asked to express his acknowledgment of the benevolent interest in his race which has prompted some distant friend to give the school the cost of his tuition. These letters, one of which is sent to every donor of a year's scholarship—\$70—are of double advantage to the student himself, in availing gratitude and a useful score, that what is free to him is paid for by somebody; to the school, in bringing its efforts and their results more directly before its friends; and further, we know some of these would say, to the givers, in adding to the interest and intelligence of their benevolence.

With their permission, we have been in the habit of publishing yearly a number of the most interesting of these scholarship letters, printed without correction, and representing the different grades and races in the school.

FROM AN INDIAN YOUNG MAN  
IN THE SENIOR CLASS.

Dear friend:

Having been steadily promoted in the past two years, I am now a member of those who are soon to go forth into the world as lights upon the sea shore, among their people;—this perhaps the last scholarship letter I shall endeavor to write. The time will soon arrive for me to leave the school which I have been so long under its care and instructions, and have become very much attached to it and its teachers; and of course it will naturally be a sad day to me, to feel somewhat lost. Although, while we are far away, it is very pleasant to remember and think with gratitude of those whom we loved for their faithful and liberal assistance in times of need, and those with whom we had been thrown into pleasant association for a length of time, but at the same time a very sad one. So will be to me of those, especially, from whom all my means of going through the course of instruction here have been obtained.

Yes, indeed, it will be very hard for me to come forth to bid my friends a farewell without a tear, as perhaps I shall never see them again. But when I see others are doing it, I must; and it is my duty to go forth into the darkness of the world to bring others into light; and in order to be noble and manly, I must fulfill what the school demands of me, and its responsibilities. On the other hand, it will be a great pleasure to meet with those of my people whom I left over two years ago, in the far west, where hardly any whites man, except very brave missionaries, ever penetrated the heart of its solitary plains, without a pillow of Winchester rifle;—not because I desire to put myself under their control, but because of my being well prepared, and desirous to control,—to uplift them from their blindness of barbarism, and low state of human life, into life of peace, prosperity, and self-supporting. Being first who shall have over graduated from higher school, and the tribe I represent, and it seems hard for one to be among the many who will dare not open their ears for the entrance of his words. But the City of Rome was not built in a single day, or in a single year, but year after year, and brick upon brick. I will simply trust in Him in whose hands all things are possible, and in whom all men are subjects; and will do the best I can to accomplish my mission. If it never come out as I wish during my days, what will it matter to me? I shall have done all my best. Others who are coming after me will surely take up the work and add a little to it until it shall all be finished.

It is a sad thing and I almost shed tears to think of the condition of my own race to-day. I know well the both sides of the hill—I am just standing its height upon which I am now standing above all people; looking to what is ahead, I see the broad and only way for peace and prosperity, which is education, open, free to all; but looking to what was left behind, I see nothing but darkness. Men are walking in blindness, poverty mingled with superstition; and in general degradation. I wish many a time that my people would think of themselves as much as I do; but when I come to think of this, that if they do, how can they know the better? They need training, they must be trained to use their intellectual as well as their muscular powers. There is something to be done and given for these before they will become judges of themselves. And what, is that? Educate them, and then Education and manual labor are the only remedies for such a class of men, and whatever things else will come spontaneously as they progress along.

There has been said, and is a great deal for the Indians in the way of proving his capability of being civilized and educated, for the last few years; and this will be sooner or

later, and has been partially proved, that an Indian is capable of being taught all the knowledge which white man is enjoying. He has the equal capacity for all learning taught. He wants the chance and time to make himself a man.

I will now bring my letter to a particular close, as it may be interesting to know of which nation the writer is a representative. The Shawnee are, as a general thing, willing to take hold of anything in the line of education or manual labor, that will be of benefit to them in the future; as they are the American civilization is approaching strongly and rapidly, and will soon sweep over their hunting grounds, like prairie fire, that drives away all sorts of game that comes near, and consumes everything which comes in contact. So will they be consumed unless preparation is made to meet the necessity of standing in the flames of civilization. There will be no more rambling over plains, hills and mountains in search of game. Since the beginning of the late war to the present time, over two-thirds of the whole tribe have learned considerably in the way of agriculture and stock raising, which are the principal occupations, and consequently they are self-supporting in every way, excepting in the maintenance of their school, which is supported by the Government. They receive no rations or help of any form from the Government, except their first agricultural implements given to them some nine or ten years ago.

Several served to the Federal army of the late rebellion, among whom was my father, who served three years in the army. From the constant meeting with cattle-men going back and forth into Kansas and Texas, they became quite well acquainted with the English language, so that my one who speaks English can get along well in some parts without the aid of an interpreter. But I am sorry to say that the very thing they learn to loathe, which is the nature of the result from mingling with criminals, murderers and other bad white men who are seeking to escape the punishment of law.

The first boarding school among them was established about five or six years ago, and the attendance has been since on an average of more or less the capacity of the school. A Government farm was also opened at the same time in which boys are required to learn the art of farming. A large pasture in which all the cattle for the use of the school are kept.

The girls are required to help in the laundry, and in general housework. Among the first to enter the school was myself, until little over two years ago, through the advice of Rev. Mr. E. Beard, missionary, I was sent here to complete my schooling.

I hope when I go home, to have more of my people represented here in school; for Hampton is doing such an immense amount of good which is needful to such races to strengthen and develop their mental and physical powers for the necessary wants of not only good and honest living, but giving good to others.

There will be no trouble of getting my people represented here, because I already received applications even from thirteen years old little girls, telling me to show to the Principal of the school their letters, which are written in an unknown tongue, and not taken as they are. I have not said anything to the Principal about them because there is no use the school is full to its utmost capacity, there is no room for more. I hope the little girls will be admitted later on.

Yours very respectfully, W.

## FROM A SENIOR GIRL.

Dear friend:

The last time I wrote you, I told you of a very pleasant vacation spent up North; this time I have the pleasure of telling you of a very pleasant one spent in the South, in the vicinity of Hampton. I left school on the 24th of May, got in a rowboat and was rowed across the creek in front of our school, to a house which I had often looked at from my window in front of Virginia Hall, and thought so pleasant looking, but had no idea of, living there.

My work wasn't so hard as it was the vacation previous. I had only to do the cooking and cleaning house, which was the easiest work I have had to do since I have been in school. This home on the farm was very pleasant, it reminded me of my old home before I came to Hampton.

The most of the people over there worked on farms, others fished and caught crabs, which seemed to be the support of a great many families, some depended altogether on the fish and crabs which they caught for a living. Quite a number of colored people live on Mr. Armstrong's land, they each occupy a piece of land with a small house on it, which they are allowed so much time to say for. They all work for Mr. P. M. Armstrong, and on Saturdays when they go for their money, they leave a part of it for

the paying of the land, and the rest they take for the support of their families. In this way they pay for the land, and support their families at the same time; and after a while they will each have a pleasant home.

Our school has undergone a great many changes since my first term. We have a great many more buildings, and quite a number more students. When I first came here I had to sleep on the floor for three weeks on account of school being crowded. I thought Hampton quite a hard place, but now I think different. I had rather sleep on the floor a whole term, than lose the experience which these four years in Hampton have given me. Not so much the lessons that I have learned here, but the strength and will that I have gained in this time, enables me to feel as I have worked out my own education, I can help others work out theirs.

When I first came here I was young, and did not feel able to help a child, but now I am a woman, I can work, I am not afraid of my hands. I can help others through the help of God, who has helped me. At first I thought it impossible to stay here; sometimes I felt very much discouraged, but just then there seemed to come into my heart these words: "God helps him who helps himself." This hope seems to stimulate me to go on, and now I am a Senior. I was promoted to the Senior class the tenth of last June; that was the happiest day I ever saw here. I came back to school on the 3rd of October, took up all new studies which I am still pursuing. I am in a class of sixty-two members, and while the school thought comes into my mind of leaving all my dear classmates whom I have become so attached to, there is still another thought forcing itself upon me, I feel very much in debt, saying: "What will be the next?" But I must go and leave them, because "the voice of the present says, and while the destiny of our race is being decided, can I stay? No I must go. Our school is very much crowded at present, more so than ever before. Besides the large day school, we have quite a large night school of young men and women, who work all day, and go to school at night.

The increase of our school shows in every respect, that the colored people are still rising out of darkness into light. We also have more new Indians, for a part of the old Indians, who have been here three years, left before school opened, for their homes in the West, and now they are scattered about in different places at home, helping their people.

There were no Indians here when I first came, but since then we have had quite a number from the far-off land in the West, to join us as brothers and sisters. I wondered how they would be able to do these things, coming looking people, when they came here with their long hair and blanket clothing, but they have told us in plain words, if we will help them, they too will rise and lift up their people. We have three Indian boys in our Senior class, Oakeney, Wildcat, and John Downing. They love us, and we love them too. They are not Indians with long hair and blanket clothing, but men with willing hands to work, and willing hearts to plan, and will soon go to their homes in the West, to tell others of the good of an education. I hope before long, not only to have Indian brothers in the Senior class, but sisters. As this is my last letter to you in school, I can hardly find words to tell you how thankful I am to you and all the rest of my dear friends up North, for your aid and kindness to me since I have been in this school.

I shall soon go out into the world to unite with those who have gone before, and my intentions are to do all I can for my race, in promoting their general welfare.

Respectfully yours, G.

FROM A NATIVE AFRICAN BOY IN THE  
MIDDLE CLASS.

Dear friend:

I am requested to give you a sketch of my life. I was born in Africa, in a place by the name of Freetown, Sierra Leone, in the year of our Lord eighteen hundred and sixty-six, on the nineteenth of November. My chief business at home is to sell. When I was four years old I began to go to school. The first teacher that taught me in school his name is Jeremiah Williams. I went to him for two years, then I stop from going to school. The object that made me stop from schooling to him was I did not like his mode of teaching. My mother was poor, and my father was not at home. When I reached to the age of six years, then I knew my father. When I stop from schooling I use to sell for my mother. Then when I commenced to school again I went to another teacher by the name of Obadiah Johnson. This teacher said to me, my mother, he taught me for two years. Sometimes I'll go to school another time I'll not; my mother say to me, "Boy

if you don't go to school, I'll report you to your teacher." About one hundred miles from my home the people are savages. Never put on any clothes with the exception of the women. I remember, once when there had not been the school, nor any one that could read the scripture and explain it to them. A tutor went there and he beckon to the King and said, "Call all your men around you." And the King called his men. The tutor said unto him, "What is the reason that you all worship idols and not God?" "Because we do not know anything about God and we have no one to tell us about him," was the reply. "Well," said the tutor, "I'll tell you about him." Then the tutor commenced to tell him how God sent his Son into the world to save mankind. When the King have heard this, he said to his people, "Take ye all your goods, and throw them into the river." And they did so. The King told the tutor that they will serve God and no other gods. From thence the King never allowed them to worship any idols. I went to Mr. Acker White, one of the graduates of Hampton School. He went to Africa as a missionary. When I went to him I stop in the Mission House with lots of missionaries in the house. A man by the name of Snelson sitting in the piazza he saw a Bondo devil passing by, he beckon to her and she came. When she comes, he told her to go to the chapel. And when she was going a man told her not to go and she went away. The Bondo devil is in most parts of Africa; it is not a devil, but it is a woman. She will go and black herself up; and then she will put on her clothes, which are made out of small strings. She will black this string too. After she has put them on, she will look as if she has the fever. When she is playing, very boys are not to look at her face; if they do, she will run after them, and if she catch any of them, she will whip them almost to death. Mr. White when he wants to come here, then he brought only two of us. The other one that is here with me has his name is Tucker. Both of us are in the Middle Class. I thank you very much for my schooling that you are paying for me.

Respectfully yours,

C.

## FROM A JUNIOR BOY.

Dear friend:

I am heartily glad of the opportunity (which presents itself to me) of telling you as much as I can of the history of my life.

I was born in Greensville County, Virginia, July 1st, 1865. At five years of age I became interested in books and learned very quickly to count, from my father, who, having been a slave from birth, had no way of obtaining an education for himself, therefore was unable to teach me anything about books. Shortly after my fifth birthday he died, leaving my mother with five children to care for. After said death she knew not exactly what to do, but she resolved to go to Petersburg, as that was the nearest city, and put herself in the service of some people by which she could earn money enough to support her children, that were not able to work.

She went to Petersburg and found employment, and afterwards went back and got her two smallest children, one of which was myself. After getting every thing nearly straight, she began to think that her children ought to be educated. It was resolved that the lady's daughter by whom she was employed, should begin to teach me in the first readers. I began to learn very fast and soon became ready to enter the Peabody Public School. I studied diligently, and learned very fast there, and at the end of the first term in the above named school, I received one of the highest distinctions that were issued in that grade, which was a silver medal for English.

After the vacation I entered school again and studied more diligently, and at the end of my last term I received the highest distinction issued, which was a gold medal for scholarship.

I then having passed through all the grades in the school, received also a diploma. As my mother was not able to pay for me to attend any higher school, it was resolved that I should work one year in order to attend school another year. But the Spirit of the Heavenly school, and also my teacher knowing my mother was not able to send me to school, wrote to General Armstrong, asking my case; they were ordered by him to send me along and he would do the best he could for me.

Therefore I came immediately and arrived here (at Hampton), Friday, Sept. 18th, 1881, and was examined shortly afterward, and entered the Junior Class from which I will try to be promoted to the Middle Class next term.

Thinking that I have written enough of my unimportant history, I extend my best wishes and thanks to you, and remain,

Respectfully yours, W.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

spoke of the expected pleasures of the Indians during Christmas, in our last number, and perhaps it will be pleasing to follow them through the holidays, in order to note the changes from last year.

Three or four weeks before Christmas, the scholars began to organize their "Christmas clubs."

Each member pays a specified amount for himself and body (and here let me add the amount is 92¢ to make extravagant.)

With the money thus raised, a few holiday suitcases are made, even used bills of fare, and the toys, extremely set and dressed with Christmas greens and ledly in emulation of each other, present a very pretty and festive appearance. This is considered the most agreeable time of the term—last year there were six different clubs, including the "Old mables" and "O. I. teachers."

There was some competition last year, and a great deal of taste was exhibited.

A few of the more advanced Indians wished to having the colored boys and form a club. They applied to Mr. Washington, and he (with

ished with things that were pleasant to the taste as well as to the eye.

In an hour after dinner every dish was washed, tables all set for supper, and they were up shares enjoying different games, and having a "general good time."

Two monitors were appointed to keep a look-out as to the general conduct of the Indian boys and girls during the holidays.

In their report they only two cases talked about.

The little girl said, "I saw one Indian girl stand up at the table and pass a note to an Indian boy, I don't think it nice."

The little boy said, "I saw a boy eating cake in the chapel."

We have organ a New Year feeling one of doing a great deal of solid work during the term.

The few days' vacation made but little difference when school and work days returned, they were met with pleasant faces and ready hands.

The name of our Indian club, was in Dakota, "Lajis si Mayowi Jayaki," (English, "Equal Rights to all.") This was their own selection, and I considered it very sensible and appropriate.

O. M. McADOO.

bella had died, he brought some Indians with him, but the Spanish treat the Indians very cruelly."

—No. 2—

"Columbus was born in Genoa in a country of Italy, and he discovered some water one of the Bahamas Island. His parents were poor, but he had a good talent and he made geography. He discovered in 1492, when he was on sea he had a shipwreck. When Columbus was sent back to his country his friend Isabella was dead and also he went back to a chain. The Priglinus father came over in month of December 21st in 1629. They settled at Plymouth in Mass., and they began to build huts with logs and they covered their roofs with long grass."

## TUCKING UP PAPAPOOSES.

Three of the youngest Indian girls were found one night, putting their beloved doll babies to bed in the Indian style, each one bound to a board with blanket string, tucked around its feet, and the head placed over its head. "Mamma tuck horse the baby on back—baby go up and down, up and down—So—never cry—that is good!"—gravely explained one of the dusky little women, and

in Dakota on their old reservation, or as near it as possible.

The Onasas decline to sell any more land and said they would rather sell to white settlers than to Indians.

The Winnebagoes gave a like answer. But White Thunder, speaking on behalf of all the Sioux tribes, said the land the Poncas wanted was only a small corner of their reservation. They would give it to the Poncas and please them as a part of their nation, having all the rights and privileges of the Sioux people.

Secretary Arkwood asked how much the Sioux wanted as compensation? White Thunder replied grandly: "You asked me to have pity on these poor Poncas, and they have begged and prayed me to do so. How can I have pity on them if I get take their money? No; that is not what I want. They are welcome, and I will charge them nothing for what I do for them."

This seems to be the same order of the long-ago-once Ponca nation."

RATION DAY AT AN INDIAN AGENCY.

my assistance) began to get ready for it. After he had made the necessary arrangements he found that there was great dissatisfaction among them.

The boys were not willing to take the Indian girls. To the school boys this was the only real pleasure, (of course.) Then some of the Indian boys wished the girls to take a share of the cost.

When dinner time came, we had an amusing time getting them down. There was a general confusion.

The year, an Indian "Business committee" visited me, asking if they could have a dinner. I told them yes, and we all began to make ready for it.

A meeting was called, and the money collected; each boy selected an Indian girl, and the list was handed to me. The girls all gladly accepted, except one small dandy who was found weeping because the right boy had not invited her.

The general conduct of the boys was superior to last year. Every boy saw that his lady was amply supplied with all that she desired, and instead of the confusion, the Indians were the first in the dining hall.

The table was very handsomely decorated with flowers and holy, besides lavishly fur-

## INDIAN COMPOSITIONS.

These exercises in history were written in the class some time ago. When the memories of some seemed to flag on the subject of Columbus, their teacher suggested "The coming of the Puritans," which accounts for the allusion to the "Priglin Fathers" in one of the compositions.

"Columbus was born in Genoa, and his family was very poor but had him well taught—he was a sailor when he was a man. I think when he went to school he study it about the stars and moon—the discovered America in 1492—before he went to America he went to the King of Portugal but the King thought that Columbus is crazy. Then he went to the King of Spain but the King was very busy with fighting, and then he was next to France, but the Queen Isabella sent some men after him and then she gave him three ships and some men too, so he start off. He traveled few weeks, at last all of his men got tired and they wanted turned back, but Columbus told his men that they must not discourage and also tell them that he would travel three more days, so they start on. Before in three days they found the land. After Columbus had return and his friend Is-

then the well behaved papooses were hugged once more and stood up against the wall in a row to shut their staring eyes when they felt like it.

## HOW AN INDIAN SETTLED THE PONCA QUESTION.

While we are slowly trying to make up our minds after a hundred years' deliberation, as to how much justice we can afford to put into the settlement of the Indian problem, it is well to remember the way in which one of our most perplexing Indian questions was settled for us by an Indian. A little infusion of White Thunder's idea of "pity" and sense of "noblesse oblige" would not be a bad thing for our white American civilization.

[Special dispatch to the Evening Post.]

WASHINGTON, August 18.—The second council with a large delegation of Dakota Indians now in the city took place at the Interior Department this morning. The object of the consultation was to secure for the Poncas, under Standing Bear, permanent homes

## RATION DAY AT AN INDIAN AGENCY.

"Saturday is ration day, when the usual solemn stillness of the Agency is broken by scores of Indian braves and hundreds of painted horsemen who pour in from the various camps up and down the Missouri river, within a radius of thirty miles—the camps are distributed with reference to wood and water. The braves sit in blankets or old clothes, wearing a picturesque variety of feathered hats, in groups or semi-circles, and smoke and chat. The women busy themselves about the supplies, resting into the door of the store house where a row of clerks pour in the little bags they hold out, their coffee, sugar, flour &c. tossing upon their forked arms a piece of tobacco and bacon, till a file of some two hundred women has passed, each carrying off food for a family of from three to ten.

Thus the morning passes. The scene is most lively and picturesque."

## Horsford's Acid Phosphate

is of great benefit to patients when run down by long continued brain work.

SKETCHES OF MISSION LIFE.

BY MRS. C. C. ARMSTRONG.

In this year, 1847, an important change in our work was initiated, of the results of which we, at that time, had little anticipation. Mr. Richards, who for some time had been a chief adviser of the King, found his health failing, and it soon became necessary to appoint in his place a person who was necessary to the King and chiefs. Mr. Richards expressed a strong preference for their pastor, my husband, and they were supported in this by most of the Government officers. A formal request was made to the mission for the services of Mr. Armstrong, and he accepted the offer to support the schools on the Islands, relieving the American Board, which had thus far sustained them.

I was very unwilling to leave the mission, perhaps more so than my husband, for I felt very strongly that as we had come out as missionaries, missionaries we ought to be, but the general meeting, which was just at hand, gave an opportunity for thorough discussion. The Government officers would not accept any substitute for Mr. Armstrong, and among our fellow missionaries there was so much difference of opinion as to the action to be taken, that at last the only possible way out of it seemed to be to leave the decision entirely with Mr. Armstrong.

entirely well. As I imagined, it was a season of great anxiety for us, for the change involved many risks. We were very poor, all that we had, indeed, was some well worn furniture and a few books. We were as worn as our furniture. So long as we were associated with the mission, we were sure of a support, in sickness as well as in health; to leave that support was to leave our only means of support. The position seemed a leap in the dark. On the other hand, we were both deeply interested in educational matters, and our opinion was that the opening was worth the risk. The New England school system into Hawaii. We felt sure after much consideration, that Mr. Armstrong could accomplish a greater amount of good than we could in any other open position. So we decided to trust Providence, and go.

My husband's journal at this time shows, better than any words of mine, how strong his feeling was in regard to the step we were taking, and I feel at liberty to make some brief quotations.

Agreeably to a request from the Government, I entered to-day the office of the Minister of Public Instruction, and stood in the place of the beloved dead, assisting Mr. Young, the Premier, to whom is committed the care of this department for the time being. A cast of melancholy rested upon my feelings through the whole day, not knowing to what results this step may lead.

June 7th, 1848. To-day, received from the King the office of Minister of Public Instruction. The subject of this office has cost me along and several mental conflicts. Accept it I could not, for I do not not only have no taste for it, but I have not with the Government has seemed extremely objectionable and repugnant to my feelings, and yet to let the school system go down, when it has succeeded beyond expectation, I could not. In the conflict forward; I could swim, I must now go forward. I trust my motives have been in a good degree upright. Were my object the honor that comes from men, it were madness to seek it in this office, and most enormous mistakes of opposition arise unawares, hurled at its occupant. I came more my object, I would not seek it in the midst of perplexity, care and trial that has laid a better man than I to the grave; as to enthusiasm, I do not measure and than had, as my support was sure and sufficient.

The grand impelling motive in my mind in this matter has been to do good to the Hawaiian race, and in this office I hope to be more useful than I could be as pastor of a single church, and now I pray God to give me grace to seek His glory in all I do, and not my own selfish ends; and that, like my Divine Master, I may go about doing good to the precious children and youth of these Islands, and that while I hold this office, my private and public character may be conformed to the will of Christ."

As soon as my husband sent in his resignation, was felt relieved, and glad to think that the money devoted by the Mission to our support could now be used for other objects. We moved at once into the house which Mr. Richards began building, and which proved to be a permanent home for us. Here my husband began his new work in earnest, visiting the different Islands, establishing and maintaining schools, working always in connection with missionaries, and preaching constantly. It is not too much to say that he organized a school system out of chaos, and was, through his untiring efforts, a successful worker.

I was myself obliged to give up the woman's meeting, in which I had worked for five years with so much pleasure, and it was hard to sever these ties, but there was enough also to be done, and I had no difficulty in devising new plans of usefulness. I organized a weekly meeting for prayer and Bible reading among the wives of chiefs, including the Queen, who was well disposed towards such endeavors, and I continued my Bible readings from house to house. The increased comfort in our family life did much for my health, and I could see plainly that our departure from the mission had rather increased than lessened my ability to work.

**POLITICAL DIFFICULTIES.**  
In 1849, we received a third visit from the French, who, on two previous occasions, in 1839 and 1842, had sent war vessels to the Islands, bearing most imperious and unjust demands against the Hawaiian Government. The non-compliance with these demands was the excuse for sending the frigate La Poursuivante, with power to take possession of and hold the Islands in the name of the French Government.

The marines landed with cannon, colors flying and drums beating, and on entering the Fort, demanded at once, from the officer in command, the surrender of men and arms. He told them that his men had gone home and taken their arms with them. The French officer, not believing this, again demanded the surrender of the Fort. The Governor replied: "You have everything; there is nothing more," and with a graceful bow, and possibly an inward chuckle, said good morning, and left the Captain and his marines in possession.

During the few weeks in which they staid, there were many depredations committed, some of them serious, and all contemptible. Their deeds were as inglorious as their demands, and even the children rejoiced when we were rid of them.

Our HOME. After much self-denial, and the strictest economy in every way, we had succeeded in paying for the two acres of land about it, and living with the two acres of land about it, and it was a great satisfaction to us to know that we had a permanent home. I soon made a beginning, and, before very long, my garden was enclosed in a charming spot. Very beautiful, in my eyes, at least, was the carpet of fresh green grass, with bright flowers scattered over it, under the shade of tamarind, mango, guava, papaya, algeroba, henanas and orange trees, and for many years have been permitted literally to enjoy the fruits of these pomegranate and fig tree."

"my own life and my own experience I had in it, and I trust my readers will not be shocked if I mention it here, for I must confess that it has provoked me to write." One day, when I was in my garden was in its youth, a native man called to look at it. I took him about, pointing out the various plants, telling him the names and uses of the various kinds, and in general trying to kindle an appreciation of Nature's beauty in his heart. He was delighted with it all, and capped my remarks with expressions of admiration, turning to me and saying, with the utmost politeness, "You are a Jam fool!" I could not believe my ears, and asked him to repeat what he said. He repeated it with great emphasis, and in complete perplexity I asked, "What do you mean?" In his own language he proceeded to explain to me that he had just learned to speak English, and that he was very anxious to please each other, and supposing it to be an expression of great admiration and respect, had used it. I should have known that he was ignorant by his knowledge of gardening. I tried to clear up his ideas on the subject, and trust, for his own sake, that I succeeded.

Our oldest son was now fourteen years of age, and I accounted it my duty to send him to pursue his education in the States. So it was decided that I should take him, place him in some school to prepare for college, and then begin his voyage round the world. He was now eleven years absent from me. I thought of another voyage round the Horn with shrinking and dread, but there was no other way. I must do it, or my children would be the utmost possible for my children, triumphed over all. Then too, my parents were growing old and weak, and if I was to see them again I must go. I was now a man, and cheerfulness, I at last embarked, persuading myself that this voyage must be more favorable than my first one. But, I told me; there were no comforts, indeed no proper food, and nothing revived me into the cold winds of Cape Horn struck us. They seemed to me to be a great deal more than the new world life, when one day a heavy sea struck the ship, threw me against a post which was lashed to the bulwarks, and left me powerless. I was much alarmed, and I saw at once that I had no one to depend on but myself. The seamen, particularly the Hawaiian sailors gathered round me, and I told them to lift me and

## LETTER FROM HONOLULU.

We are permitted to publish a brief extract from a recent letter from Mr. Wm. N. Armstrong, Attorney General of the Hawaiian Islands, written since his return to that country and assumption of the duties of Minister of the Interior in addition to those of his own office, in the absence of Minister Carter on Government business in Europe. One of the duties of this office being a general supervision of the measures by which the Government is taking to stamp out or rather hold in check the terrible scourge of the Islands, the leprosy, Mr. Armstrong will have special opportunities for observing its course. The lepers pronounced incurable, are isolated in a settlement on another Island. They are well provided for, but the exile is hopeless, and every effort is often made by their friends to hide the victims from the Government inspectors. In this way the disease is spread the faster.

Nov. 24th, Thanksgiving day.

The Tropics are putting on airs this morning. A cold rain has come down from the Arctic, and the morning sky looks white and cold, like an Autumn day in America. One feels even a little chilly. There certainly is a touch of higher latitudes in the air. It is so cool I have closed the door! The air is almost crisp.

November 28th.

This is a holiday, that of National independence, the day when England and France agreed to keep their hands off us. Dr. Hyde gave a *lecture* at the North Pacific Theological Seminary. There was some nice music; the choir of the men sang some of the hymns. The more I look into native faces the more I am struck by the remarkable sweetness of expression. The women are incomparably above the Oriental race in beauty and smile.

The steamer from the coast is due. There is a rain storm to-day, wind comes from the south. The deep, steady rain from the evening in and listening to the soft rain, and I enjoy it now!

My new appointment as Acting Minister of the Interior makes me President of the Board of Health and President of the Board of Emigration; so I have plenty to do. It has rained now heavily for a week. It is now (P. M.) raining in torrents. The wind is high and the air is almost chilly. The people here say it is winter. There must be a very heavy gale on the coast.

As I take office on Monday, I went with Mr. C.—this morning to see the lepers, brought in for examination. We have just completed an accommodation hospital. The lepers in the first stage are sent there, and then, if finally pronounced incurable, are sent to Molokai. The fact is, they are incurable, but they dread being sent away, and complain of harsh treatment. It was a sad affair this morning. More than forty in the room. Some were far gone. Their lips and eyes were swollen and their urine without color or odor. Some were very old people—some were very young. Some middle-aged native women had sweet, fine faces. What a terrible thing this disease is! The leper is hopeless. The patient must die. Many beg to be allowed to go home. One sweet little girl stood up silently and the great tears rolled down her cheeks as Mr. C.—told her she must be separated from home and friends and go to Molokai. Next week I shall have to do this business. As President of the Board of Health, I shall have the general supervision of the leper hospitals.

December 14th.

Went to the leper hospital yesterday. It is a large enclosure with a number of buildings within. The lepers were coming in to take their rooms. The advantage of the hospital is that it is a stepping stone to Molokai. The people don't wish to go there, but they can be educated up to it.

I went into office to-day as Minister of the Interior. One of the unpleasant things about the Board of Health matters is the necessity of refusing to admit the friends of the lepers to see them. A woman came to-day and piteously asked me to let her go into the hospital to see her husband. I had to refuse her. The natives are quite reasonable in their way, but the poor woman looked so much when she found she could get no further than the door of the hospital.

On Jan. 1st, we enter the Postal union, and there will then be some satisfaction in dealing with the Post Office. Went this morning to Kawaiahao church. Mr. P.—had received a letter from my mother and preached from it in the native tongue. I could get a fair idea of what he said. I like the old church.—It is so still; the air too is tranquil. The world seems a great way off. It seems as if I could almost believe that my father's spirit was about the place; if so, a very much disgusted spirit, for the church was nearly empty.

## LETTER FROM DAKOTA.

RETURNED INDIAN STUDENTS.

UNITED STATES INDIAN SERVICE,

Fort Berthold Agency, D. T., Dec. 19th, 1891.  
Lieut. Geo. L. Brown,  
Hampton Va.

My Dear Sir:

Your kind favor to the Major is received. As the Major is absent on 30 days leave, I will give you a short account of us, and leave the Major to answer your letter more fully on his return. Referring to the subject of your letter, an answer has been received from the department, allowing 40 cts. per day for use of horses for Thomas Smith and Laughing Face. This is 10 cts. less than we have been accustomed to pay our regular Indian handlers for use of their horses.

Since my return from the east I have noted carefully the department of the Hampton Boys. They are as much ahead of the Agency Indian in point of industry, helpfulness and general deportment, as the educated is above the uneducated white man. I am agreeably disappointed in the manner in which they are doing their work. The stock of leather has not yet been received, so Kormach has been using me with the form work. We shall have him work here in a few days and will then have him work at his trade. Alvina is steadily at work in the carpenter shop and does well, making doors, tables, beds, and assisting the carpenter generally. Thomas Smith is a valuable hand in taking care of the herd, and works well, seems thoughtful and is economical. What most recommends these boys is their habit of regular and continued labor and effort. These qualities are totally lacking in the Agency Indian, and are the foundation upon which to build a prosperous future. You are engaged in a noble work, and are destined to have grand results.
